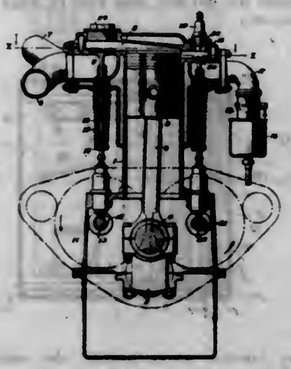
REISSUES

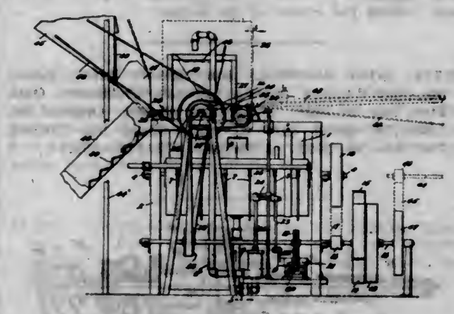
AUGUST 23, 1927.

16,709. RECOVERY OF OXIDES OF NITROGEN IN SULPHURIC-ACID MANUFACTURE. ANDREW M. FAIRLIE, Atlanta, Ga. Filed Aug. 24, 1926. Serial No. 131,305. Original No. 1,420,477, dated June 20, 1922, Serial No. 382,519, filed May 19, 1920. 33 Claims. (Cl. 23—161.)



1. A process of recovering the nitrogen oxides present in the exit gases discharged from a sulphuric acid manufacturing plant, which consists in first substantially completely removing the sulphur dioxide from such gases, thereafter oxidising the oxides of nitrogen to the higher state of oxidation and absorbing the same.

16,710. SHANK-BEATING AND STITCH-RUBBING MACHINE. LOUIS G. FREEMAN, Cincinnati, Ohio, assignor to Louis G. Freeman and Charles F. Freeman, trustees, Cincinnati, Ohio. Filed Nov. 23, 1926. Serial No. 150,359. Original No. 1,521,877. dated Jan. 6. 1925, Serial No. 515,068, filed Nov. 16, 1921. 15 Claims. (Cl. 12—17.)

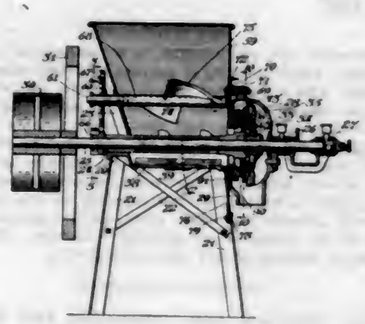


9. A shank beating and stitch rubbing machine, having in combination a guide, a beating iron, and a channel flap guard, said guide being adapted to engage the sole edge of a shoe.

16,711. CONSTANT-COMPRESSION INTERNAL-COMBUSTION ENGINE. ANDREW L. RIKER, Fairfield, Conn. Filed Oct. 13, 1925. Serial No. 62,227. Original No. 1,533,947, dated Apr. 14, 1925, Serial No. 459,807, filed Apr. 8, 1921. 9 Claims. (Cl. 123—75.)

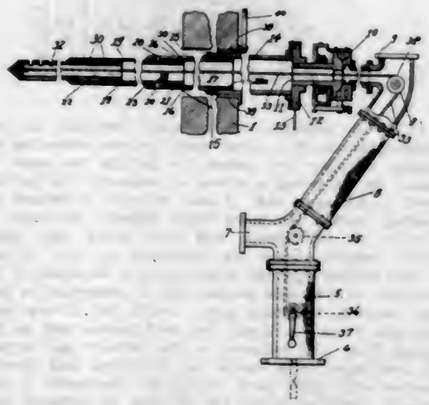
1. An internal combustion engine, comprising a cylinder affording a compression end and provided with a valve controlled exhaust outlet, a piston reciprocatable within said cylinder, an air inlet valve leading to said compression end and adapted to be maintained at fixed capacity, which capacity is adapted to freely supply said cylinder with a sufficient charge of air for any explosion therein regardless of the capacity at which the engine is working, a gaseous fuel inlet valve leading to said cylinder, and means for timing said gaseous fuel inlet valve relative to said air inlet valve whereby the operation of said valves can preferably be simultaneous when the engine is working at full capacity, or the operation of said gaseous fuel inlet valve can be retarded relative to the operation of said air inlet valve when the engine is working at less than full capacity.

16,712. PROCESS AND APPARATUS FOR MAKING CONFECTIONS. WILLIAM S. CLOUD, Berkeley, Calif. Filed Feb. 19, 1927. Serial No. 169,640. Original No. 1,462,883, dated July 24, 1923, Serial No. 636,071. filed May 2, 1923. 19 Claims. (Cl. 107—1.)



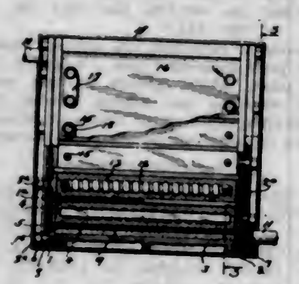
15. In an apparatus of the class described, in combination, means for moving candy centers comprising an endless conveyor and means for driving the same, of means for delivering a stream of preheated coating material to the upper side of said conveyor, a member extending beneath the upper flight adjacent the point of d livery of said stream and with which said upper flight contacts, means for regulating the rate of flow of said coating material with respect to the speed of the conveyor so that said centers will be submerged as they pass beneath the flood point, means for driving such conveyor at such a speed that said centers will be dislodged from said conveyor at the delivery end thereof by centrifugal force, means for showering said enrobed centers with edible units during the movement of said centers, tumbling means for effecting an intimate commingling of said enrobed centers and edible units so as to completely envelop said centers with edible units, and means for separating said enveloped centers from the excess edible units.

16,713. GRINDING MACHINE. JOHN HOLLAND-LETZ, Crown Point, Ind., assignor to The Letz Manufacturing Company, Crown Point, Ind., a Corporation of Indiana. Filed June 4, 1927. Serial No. 196,618. Original No. 1,602,760, dated Oct. 12, 1926, Serial No. 713,697, filed May 17, 1924. 19 Claims. (Cl. 83—8.)



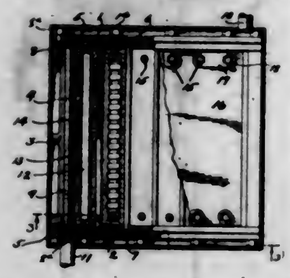
1. In a machine of the class described, the combination with a hopper, of a toothed concave secured at the bottom thereof, a shaft journalled concentrically with the concave, teeth on the shaft co-operating with the

teeth on the concave, a discharge outlet from one end of the concave toward which the material is fed by the teeth on the shaft, a second shaft journalled in the hopper



above the toothed shaft, and a projection on said second shaft designed to feed the material, passing some of it back toward the center of the hopper.

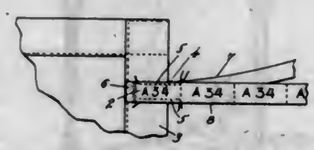
16,714. SOOT BLOWER. JOHN HENRY REEDY, Hamilton, and WILLIAM JOSEPH LICKERT, Cincinnati, Ohio. Filed Nov. 9, 1926. Serial No. 147,346. Original No. 1,591,779, dated July 6, 1926. Serial No. 674,982, filed Nov. 15, 1923. 4 Claims. (Cl. 122—392.)



3. In a soot blower, a tubular member located in the wall of a boiler, a series of straight telescoping tubes located within said tubular member with the outermost of the telescoping tubes keyed to said tubular member, means for keying each tube to another so as to maintain a slidable, but nonrotatable relation between them, means for extending the tubes and means for retracting the tubes each with relation to another so as to control the position of said tubes with relation to the tubular member, means for rocking the tubular member, means for injecting steam therein, and steam outlets located in spaced relation substantially throughout the series of tubes, so as to emit jets of steam substantially throughout the length of the telescopic structure, when the tubes are extended.

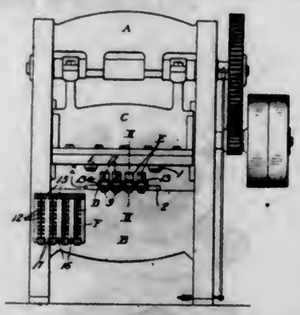
16,715. ELECTRIC WATER HEATER. SAMUEL D NESMITH, San Diego, Calif., assignor of part interest to A. S. Bridges, J. B. Osborn, Mrs. Kathryn Osborn, J. H. Bulmer, and Mrs. Mary E. Nesmith, San Diego, Calif.; Roger Welles and R. R. Richardson, Navy; E. J. Callahan, Guadalajara, Mexico; George H. Schmidt, Walter C. Stitt, F. F. Grant, H. M. Sammis, Paul J. Hartley, and R. C. Easom. Filed May 11, 1926. Serial No. 108,409. Original No. 1,574,053, dated Feb. 23, 1926, Serial No. 667,221, filed Oct. 8, 1923. 6 Claims. (Cl. 219—39.)

1. An electric water heater, including separate spaced apart supporting members, a plurality of water tubes extending between and through said supporting members, end members positioned on the outer sides of said supporting members and extending across the ends of all of said tubes, said supporting members being recessed to provide recesses between the supporting and end members for connecting the ends of certain of said water tubes with each other, and electric heating units positioned adjacent and between adjacent water tubes and spaced therefrom, said heating units being removably positioned between and adjacent said water tubes and electrically connected in series with each other.



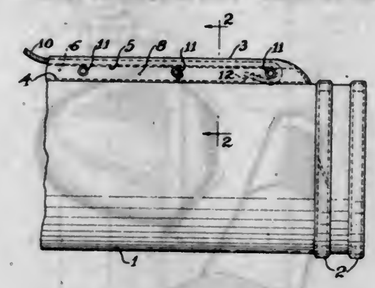
16,716. ELECTRIC WATER HEATER. SAMUEL D. NESMITH, San Diego, Calif., assignor of part interest to A. S. Bridges, J. B. Osborn, Mrs. Kathryn Osborn, J. H. Bulmer, and Mrs. Mary E. Nesmith, San Diego, Calif.; Roger Welles and R. R. Richardson, Navy; E. J. Callahan, Guadalajara, Mexico; George H. Schmidt, Walter C. Stitt, F. F. Grant, H. M. Sammis, Paul J. Hartley, and R. C. Easom. Filed May 11, 1926. Serial No. 108,410. Original No. 1,574,054, dated Feb. 23, 1926, Serial No. 691 953, filed Feb. 11, 1924. 3 Claims. (Cl. 219—39.)

1. In an electric water heater, the combination of a plurality of vertically extending open ended flattened water tubes, a supporting channel member at each end of said tubes provided with openings for the passage of water therethrough, said openings lying abreast of the openings in said tubes, a cover plate for said channel



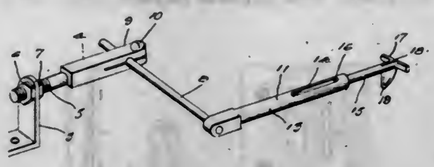
members to provide continuous water passageways across the ends of all of said tubes to thereby connect the said tubes in multiple, spacing members interposed between said supporting members, and means for removably attaching the cover plate, supporting members and spacing members to each other to provide a unitary structure.

16,717. LAUNDRY-MARKING TAG. CHESTER W. CANINE, Cincinnati, Ohio. Filed Apr. 13, 1927. Serial No. 184,130. Original No. 1,571,792, dated Feb. 2, 1926, Serial No. 462,565, filed Apr. 19, 1921. 7 Claims. (Cl. 40—2.)



1. A marking tag, comprising essentially strips of tape mounted upon opposed faces of an article to be identified and fastened together through the article by suitable fastening passing through the tape and the article, whereby the strips may be torn apart with the strain of the fastening confined to the tape and leaving the interlying article free.

16,718. MEANS FOR EMBOSSING. JAMES H. MATTHEWS, Pittsburgh, Pa., assignor to Jas. H. Matthews & Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 27, 1927. Serial No. 194,832. Original No. 1,145,251, dated July 6, 1915, Serial No. 8,496, filed Feb. 16, 1915. Reissue No. 15,279, dated Jan. 31, 1922, Serial No. 500,258, filed Sept. 12, 1921. 5 Claims. (Cl. 101—18.)



1. In combination with a press provided with a bed and a ram, a changeable die for said press comprising a lower die plate adapted to be removably mounted on said bed and an upper die plate connected to said lower die plate, but unattached to the ram and adapted to be forced down against the same by said ram, and means mounted on said bed and engaging said second die plate to raise the same when said ram is elevated.

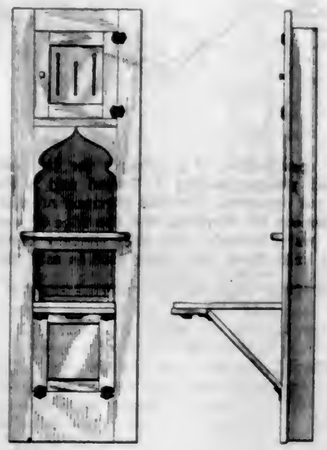
16,719. FLEXIBLE VENTILATING HOSE. WILLIAM HOOPER EVANS, Bridgeport, Conn. Filed Feb. 8, 1927. Serial No. 166,797. Original No. 1,586,418, dated Aug. 17, 1926, Serial No. 731,183, filed Aug. 9, 1924. 12 Claims. (Cl. 137—90.)

1. An air hose constructed of flexible fabric, sewn to form a longitudinal butt-joint, and having flexible joint-reinforcing means extending along said joint and secured to the hose, and suspension means co-operating with the butt joint and reinforcing means, whereby said reinforcing means receives the weight of the hose.

16,720. CLOTH GAUGE. WALLACE H. O'NEILL, Hazleton, Pa. Filed June 13, 1927. Serial No. 198,666. Original No. 1,613,289, dated Jan. 4, 1927, Serial No. 69,540, filed Nov. 16, 1925. 9 Claims. (Cl. 139—1.)

3. The combination of a plunger for the purpose set forth, said plunger having a T-head and a bifurcation between the oppositely directed portions of said T-head, and an element for dropping over the edge of woven cloth and into warp threads; the said element being in the form of a knife blade, and being fixed in said bifurcation.

DESIGNS



AUGUST 23, 1927.

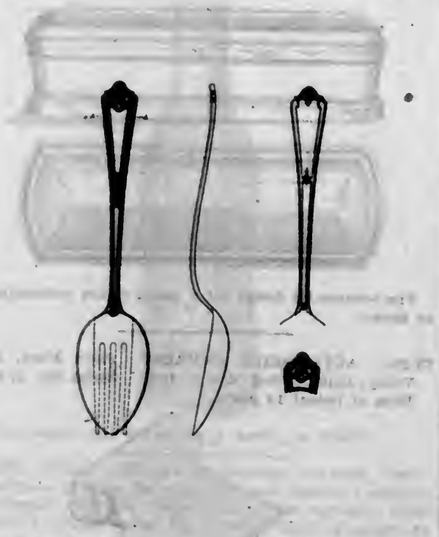
73,275. CHAIR. JOHN B. ADLER, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed May 18, 1927. Serial No. 22,028. Term of patent 14 years.

The ornamental design for a chair as shown.

73,276. TELEPHONE CABINET. ROY C. BENNETT, Hendersonville, N. C. Filed Mar. 25, 1927. Serial No. 21,348. Term of patent 14 years.

The ornamental design for a telephone cabinet, as shown.

73,277. STATUETTE. SAMUEL I. BERGER, Newark, N. J. Filed May 11, 1925. Serial No. 13,402. Term of patent 7 years.

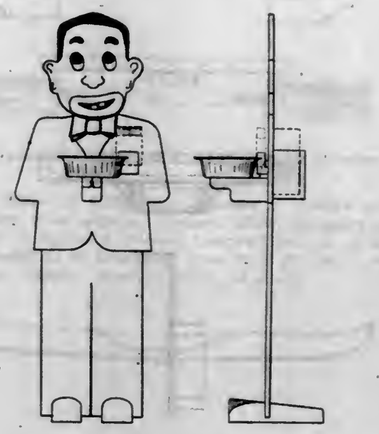


The ornamental design for a statuette as shown.

73,278. BOTTLE OR SIMILAR PERFUME CONTAINER. RUBY T. BREWSTER, New York, N. Y. Filed Apr. 30, 1927. Serial No. 21,804. Term of patent 3½ years.

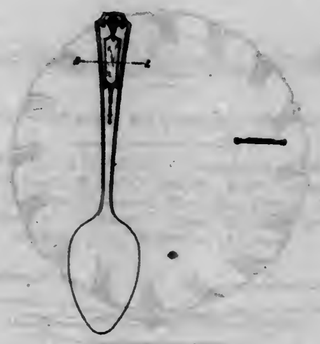
The ornamental design for a bottle or similar perfume container, as shown and described.

73,279. SPOON OR SIMILAR ARTICLE. WILLIAM T. BROWN, Attleboro, Mass., assignor to The Watson Company, Attleboro, Mass. Filed May 17, 1927. Serial No. 22,013. Term of patent 14 years.



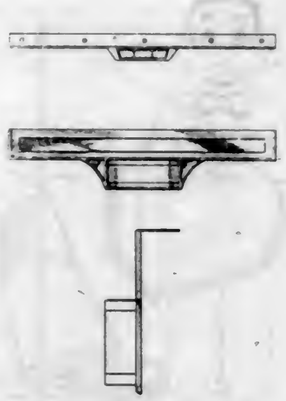
The ornamental design for a spoon or similar article as shown.

73,280. FLOWER BLOCK. RAY C. COBLE, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a Partnership. Filed May 3, 1927. Serial No. 21,849. Term of patent 14 years.



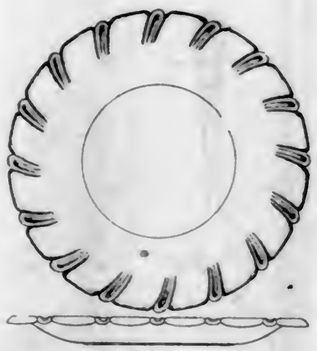
The ornamental design for a flower block, as shown.

73,281. SMOKER'S STAND. JOHN C. CRAMER, Dayton, Ohio. Filed Apr. 13, 1927. Serial No. 21,578. Term of patent 3½ years.



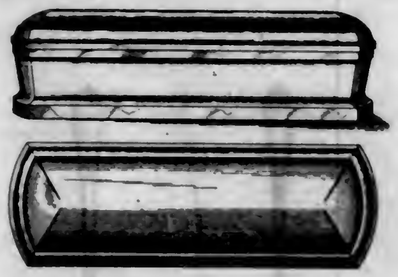
The ornamental design for a smoker's stand substantially as shown.

73,282. SPOON OR SIMILAR ARTICLE. ROY L. DANKS and MAX L. BAKER, New Haven, Conn., assignors to The Regal Silver Mfg. Co., New Haven, Conn., a Corporation. Filed Dec. 4, 1926. Serial No. 19,932. Term of patent 14 years.



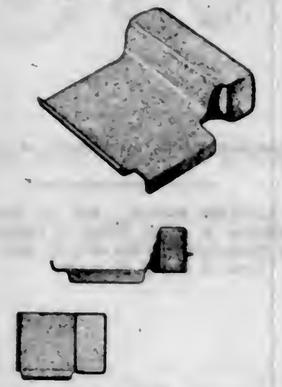
The ornamental design for a spoon or similar article as shown.

73,283. WALL POCKET OR SIMILAR ARTICLE. RUDOLPH DE BOER, Grand Rapids, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed May 13, 1927. Serial No. 21,962. Term of patent 7 years.



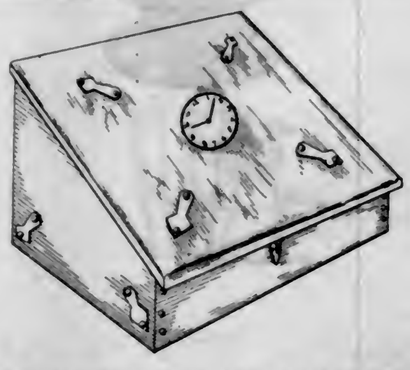
The ornamental design for a wall pocket or similar articles substantially as shown.

73,284. DISH OR ANALOGOUS ARTICLE. RICHARD DIMES, Jr., Everett, Mass., assignor to Richard Dimes Co., South Boston, Mass., a Corporation of Massachusetts. Filed June 21, 1927. Serial No. 22,509. Term of patent 3½ years.



The ornamental design for a dish or analogous article, as shown.

73,285. BURIAL CASKET. JOSEPH E. FALCK, Pittsburgh, Pa., assignor to National Casket Company, Incorporated, Pittsburgh, Pa., a Corporation of New York. Filed May 7, 1927. Serial No. 21,877. Term of patent 14 years.

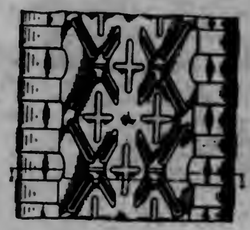


The ornamental design for a burial casket substantially as shown.

73,286. AUTOMOBILE ARMREST. JOHN FINN, Mill Valley, Calif. Filed May 9, 1927. Serial No. 21,886. Term of patent 14 years.

The ornamental design for an automobile armrest substantially as shown.

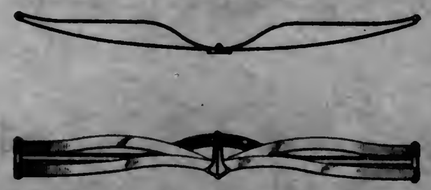
73,287. BOX. FRANCIS F. HAMILTON, Indianapolis, Ind. Filed Oct. 14, 1926. Serial No. 19 352. Term of patent 3½ years.



The ornamental design for a box, as shown and described.

73,288. BOTTLE. JAMES F. HARRISON, Chattanooga, Tenn., assignor to Chattanooga Bottle & Glass Manufacturing Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed May 18, 1927. Serial No. 22,034. Term of patent 14 years.

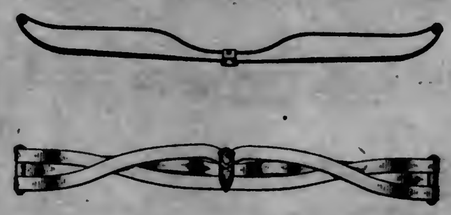
The ornamental design for a bottle, as shown.



73,289. TIRE. WILLIAM C. HOOVER, Norwalk, Conn., assignor to The Norwalk Tire and Rubber Company, Norwalk, Conn., a Corporation of Connecticut. Filed May 7, 1927. Serial No. 21,881. Term of patent 14 years.

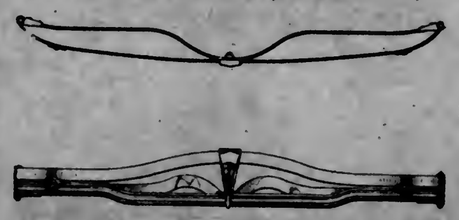
The ornamental design for a tire, as shown.

73,290. VEHICLE BUMPER. HERBERT S. JANDUS and ROBERT A. FLUM, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,046. Term of patent 14 years.



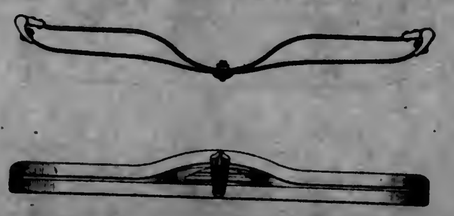
The ornamental design for a vehicle bumper, as shown.

73,291. VEHICLE BUMPER. HERBERT S. JANDUS and CHARLES E. RASMUSSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,047. Term of patent 14 years.



The ornamental design for a vehicle bumper, as shown.

73,292. VEHICLE BUMPER. HERBERT S. JANDUS and EVERETT RUSH KESLER, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,051. Term of patent 14 years.

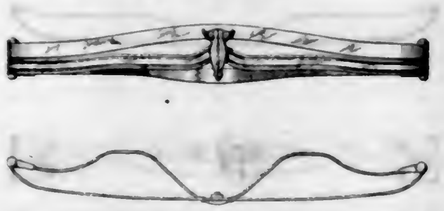


The ornamental design for a vehicle bumper, as shown.

73,293. VEHICLE BUMPER. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,054. Term of patent 14 years.

The ornamental design for a vehicle bumper, as shown.

73,294. VEHICLE BUMPER. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,055. Term of patent 14 years.

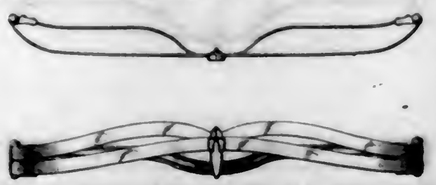


The ornamental design for a vehicle bumper, as shown.

73,295. VEHICLE BUMPER. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,056. Term of patent 14 years.

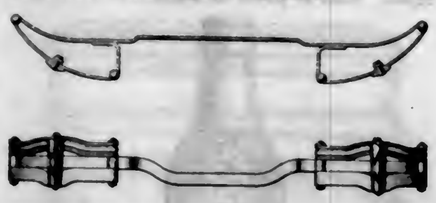
The ornamental design for a vehicle bumper, as shown.

73,296. VEHICLE BUMPER. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,058. Term of patent 14 years.



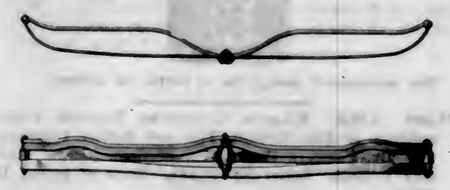
The ornamental design for a vehicle bumper, as shown.

73,297. VEHICLE BUMPER. HERBERT S. JANDUS and CHARLES E. RASMUSSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,059. Term of patent 14 years.



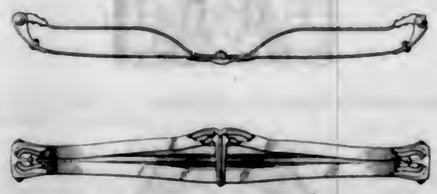
The ornamental design for a vehicle bumper, as shown.

73,298. VEHICLE BUMPER. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,060. Term of patent 14 years.



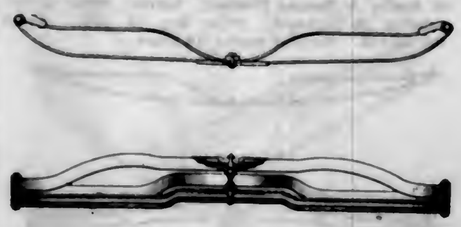
The ornamental design for a vehicle bumper, as shown.

73,299. VEHICLE BUMPER. HERBERT S. JANDUS and EVERETT RUSH KEELOR, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,063. Term of patent 14 years.



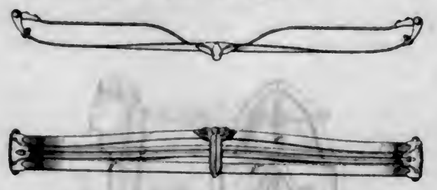
The ornamental design for a vehicle bumper, as shown.

73,300. VEHICLE BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,064. Term of patent 14 years.



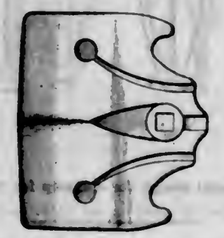
The ornamental design for a vehicle bumper, as shown.

73,301. VEHICLE BUMPER. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,065. Term of patent 14 years.



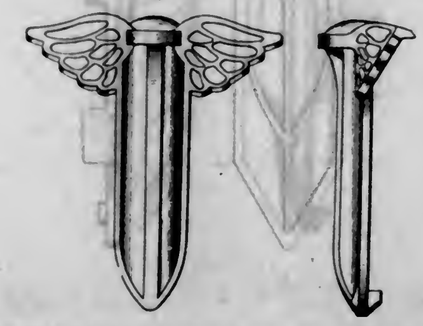
The ornamental design for a vehicle bumper, as shown.

73,302. VEHICLE BUMPER. HERBERT S. JANDUS and CHARLES E. RASMUSSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,066. Term of patent 14 years.



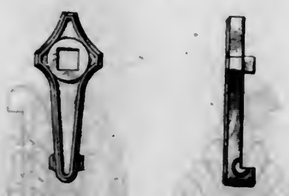
The ornamental design for a vehicle bumper, as shown.

73,303. VEHICLE BUMPER. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,067. Term of patent 14 years.



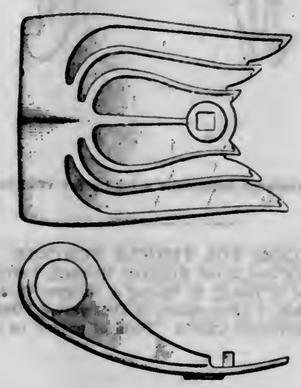
The ornamental design for a vehicle bumper, as shown.

73,304. PLATE FOR VEHICLE BUMPERS. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,069. Term of patent 14 years.



The ornamental design for a plate for vehicle bumpers, as shown.

73,305. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,070. Term of patent 14 years.

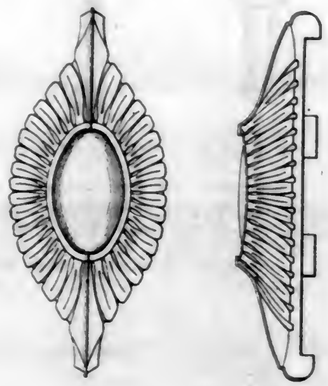


The ornamental design for a clamp for vehicle bumpers, as shown.

73,306. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and CHARLES E. RASMUSSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,072. Term of patent 14 years.

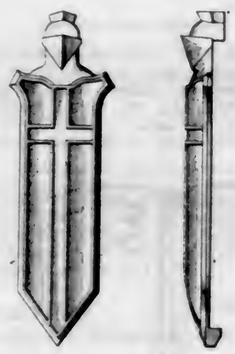
The ornamental design for a clamp for vehicle bumpers, as shown.

73,307. PLATE FOR VEHICLE BUMPERS. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,073. Term of patent 14 years.



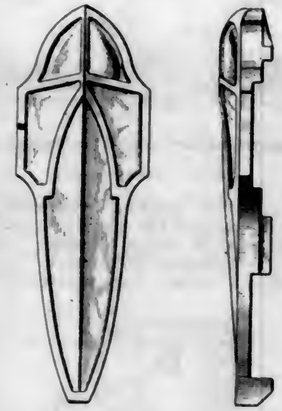
The ornamental design for a plate for vehicle bumpers, as shown.

73,308. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,074. Term of patent 14 years.



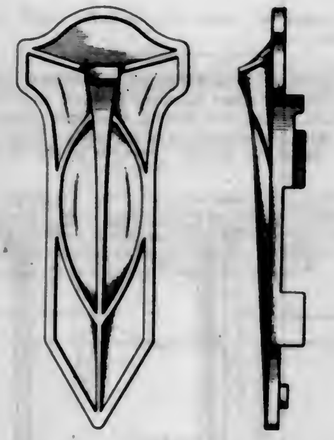
The ornamental design for a clamp for vehicle bumpers, as shown.

73,309. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,075. Term of patent 14 years.



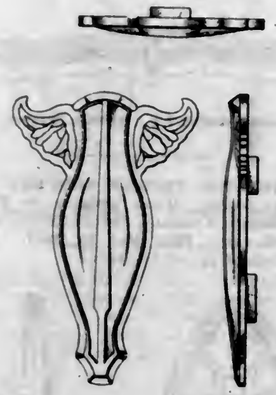
The ornamental design for a clamp for vehicle bumpers, as shown.

73,310. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,076. Term of patent 14 years.



The ornamental design for a clamp for vehicle bumpers, as shown.

73,311. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,077. Term of patent 14 years.

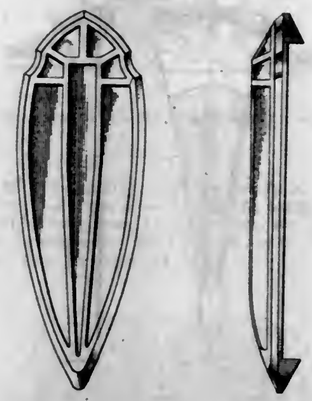


The ornamental design for a clamp for vehicle bumpers, as shown.

73,312. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,078. Term of patent 14 years.

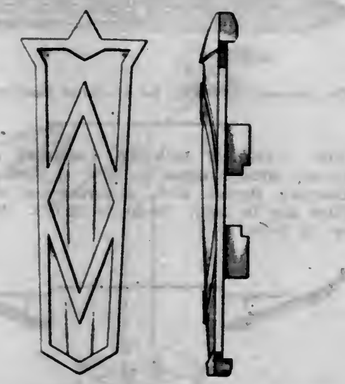
The ornamental design for a clamp for vehicle bumpers, as shown.

73,313. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,079. Term of patent 14 years.



The ornamental design for a clamp for vehicle bumpers, as shown.

73,314. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and EVERETT RUSH KEELOR, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,082. Term of patent 14 years.

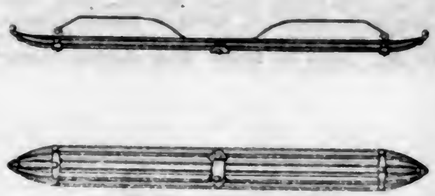


The ornamental design for a clamp for vehicle bumpers, as shown.

73,315. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and EVERETT RUSH KEELOR, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich, a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,083. Term of patent 14 years.

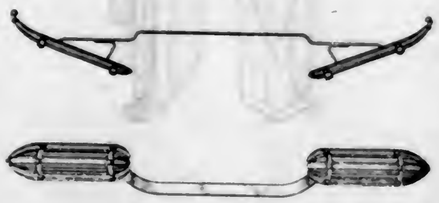
The ornamental design for a clamp for vehicle bumpers, as shown.

73,316. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich, a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,085. Term of patent 14 years.



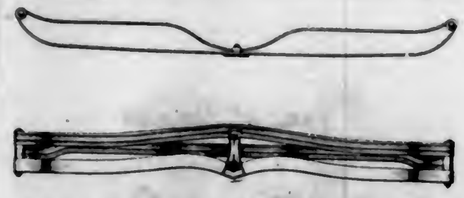
The ornamental design for a clamp for vehicle bumpers, as shown.

73,317. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich, a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,086. Term of patent 14 years.



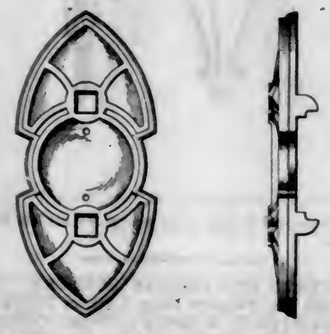
The ornamental design for a clamp for vehicle bumpers, as shown.

73,318. VEHICLE BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,087. Term of patent 14 years.



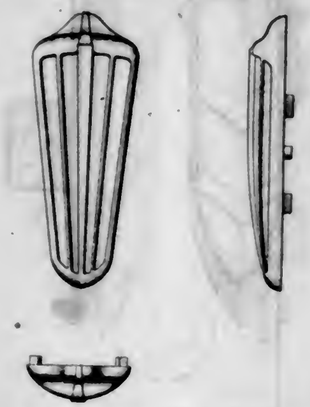
The ornamental design for a vehicle bumper, as shown.

73,319. VEHICLE BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,088. Term of patent 14 years.



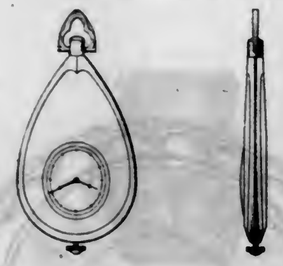
The ornamental design for a vehicle bumper, as shown.

73,320. VEHICLE BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,091. Term of patent 14 years.



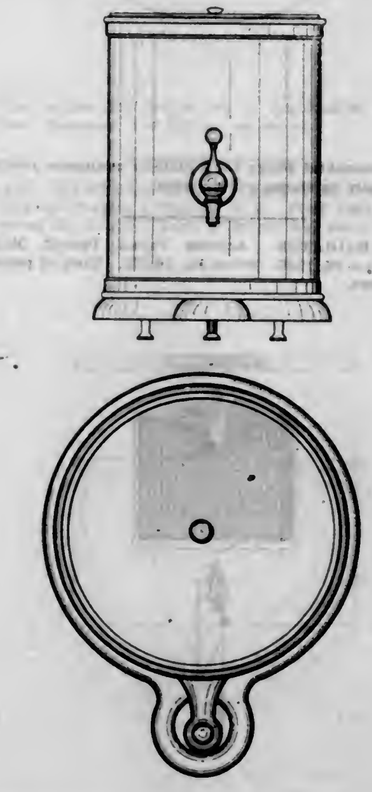
The ornamental design for a vehicle bumper, as shown.

73,321. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,095. Term of patent 14 years.



The ornamental design for a clamp for vehicle bumpers, as shown.

73,322. CLAMP FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed June 4, 1927. Serial No. 22,334. Term of patent 14 years.

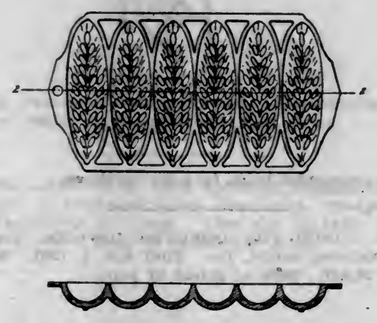


The ornamental design for a clamp for vehicle bumpers, as shown.

73,323. WATCH. JOSEPH B. KISLINGER, New York, N. Y., assignor to Marie B. Kislinger, New York, N. Y. Filed Nov. 20, 1925. Serial No. 15,485. Term of patent 14 years.

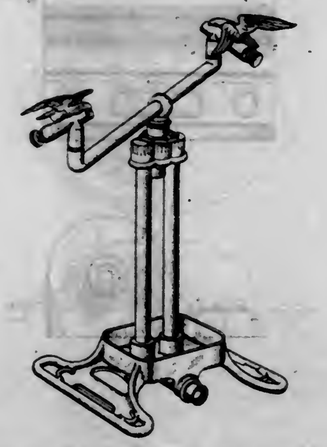
The ornamental design for a watch substantially as shown.

73,324. BEVERAGE-DISPENSING CONTAINER. WILLIAM E. LEIBING, Oakland, Calif., assignor to Magnus Fruit Products Co., San Francisco, Calif., a Corporation of California. Filed Apr. 28, 1926. Serial No. 17,491. Term of patent 3½ years.



The ornamental design for a beverage dispensing container, as shown.

73,325. MEDALLION FOR CHANDELIERS. CHARLES W. LOGAN, Kenmore, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 21,751. Term of patent 3½ years.

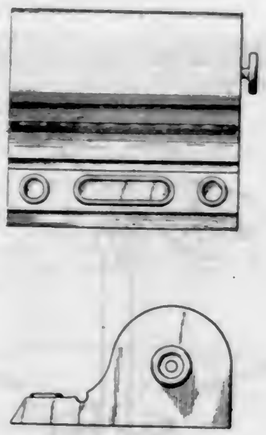


The ornamental design for a medallion for chandeliers, as shown.

73,326. METAL BAKING PAN. CHARLES A. MASSING, Mill Creek Township, Erie County, Pa., assignor to The Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1925. Serial No. 15,803. Term of patent 14 years.

The ornamental design for a metal baking pan, as shown.

73,327. SPRINKLER. MICHAEL W. MCARDLE, Chicago, Ill. Filed May 20, 1927. Serial No. 22,105. Term of patent 14 years.

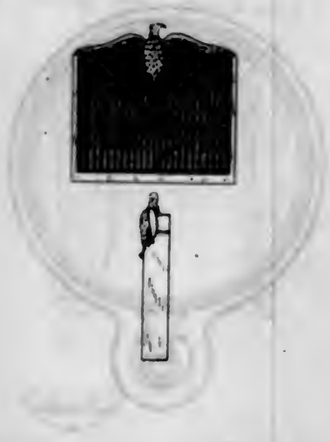


The ornamental design for a sprinkler as shown.

73,328. TOY. FRANK MUCCI, New York, N. Y. Filed June 1, 1927. Serial No. 22,268. Term of patent 14 years.

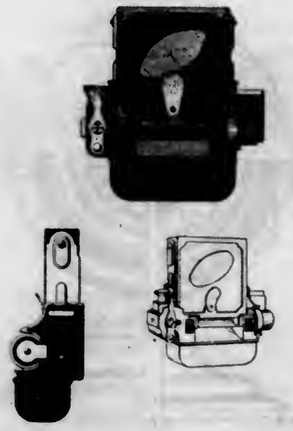
The ornamental design for a toy, as shown.

73,329. CASING FOR COMPUTING DEVICES. SAMUEL O. NATIONS, Snyder, Tex. Filed Apr. 4, 1927. Serial No. 21,447. Term of patent 14 years.



The ornamental design for a casing for computing devices, as shown.

73,330. PLATE OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed May 18, 1927. Serial No. 22,029. Term of patent 7 years.



The ornamental design for a plate or analogous article, substantially as shown and described.

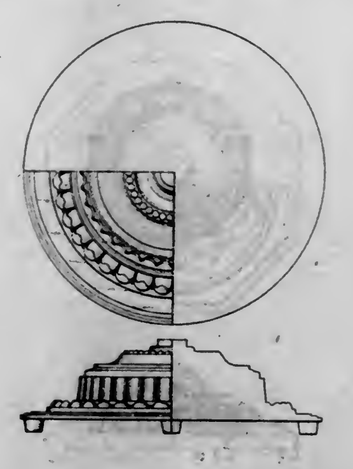
73,331. RADIATOR. ANDREW PALKA, Detroit, Mich. Filed Jan. 26, 1926. Serial No. 16,272. Term of patent 3½ years.

The ornamental design for a radiator, as shown.

73,332. COMBINATION CIGARETTE HOLDER, DISPENSER, AND LIGHTER. LEWIS PENGILLY, Oakland, Calif. Filed Feb. 16, 1927. Serial No. 20,787. Term of patent 14 years.

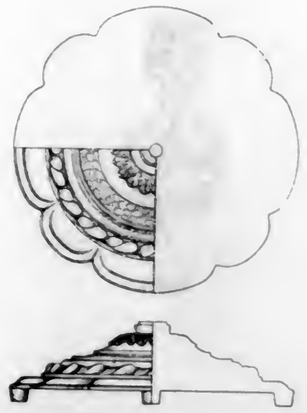
The ornamental design for a combination cigarette holder, dispenser, and lighter, as shown.

73,333. HAND-BAG FRAME. ERNEST B. PORTER and EDWARD PORTER, Irvington, N. J. Filed June 9, 1926. Serial No. 17,997. Term of patent 3½ years.



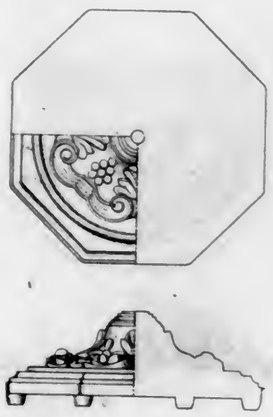
The ornamental design for a hand bag frame as shown.

73,334. BODY FOR LANTERNS OR ARTICLES OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed June 3, 1927. Serial No. 22,305. Term of patent 3½ years.



The ornamental design for a body for lanterns or articles of similar nature substantially as shown.

73,335. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1927. Serial No. 21,689. Term of patent 3½ years.

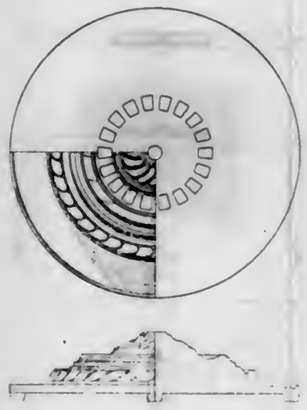


The ornamental design for a lamp base, substantially as shown.

73,336. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1927. Serial No. 21,690. Term of patent 3½ years.

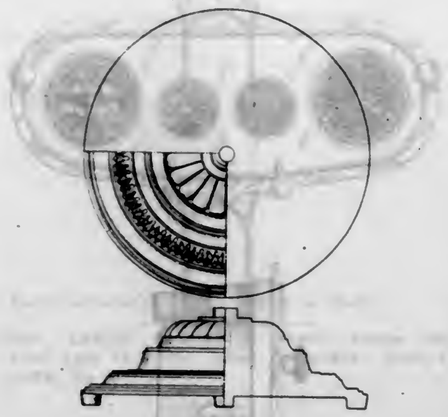
The ornamental design for a lamp base, substantially as shown.

73,337. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1927. Serial No. 21,691. Term of patent 3½ years.



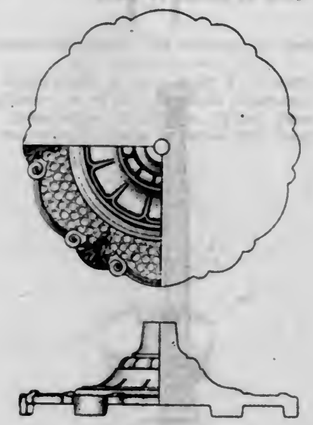
The ornamental design for a lamp base, substantially as shown.

73,338. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1927. Serial No. 21,692. Term of patent 3½ years.



The ornamental design for a lamp base, substantially as shown.

73,339. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1927. Serial No. 21,693. Term of patent 3½ years.



The ornamental design for a lamp base, substantially as shown.

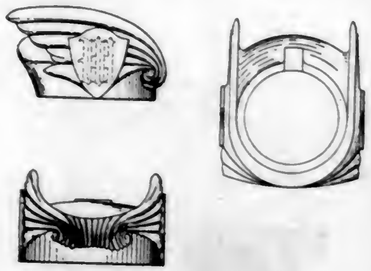
73,340. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1927. Serial No. 21,716. Term of patent 3½ years.

The ornamental design for a lamp base, substantially as shown.

73,341. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1927. Serial No. 21,717. Term of patent 3½ years.

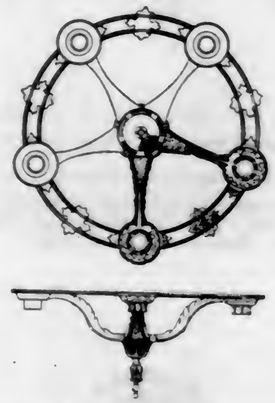
The ornamental design for a lamp base, substantially as shown.

73,342. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1927. Serial No. 21,718. Term of patent 3½ years.



The ornamental design for a lamp base, substantially as shown.

73,343. LIGHTING-FIXTURE ROSETTE. MORRIS SCHLEPP, New York, N. Y. Filed May 12, 1927. Serial No. 21,945. Term of patent 3½ years.

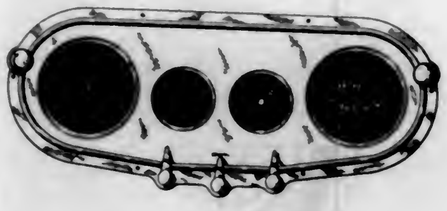


The ornamental design for a lighting fixture rosette, substantially as shown.

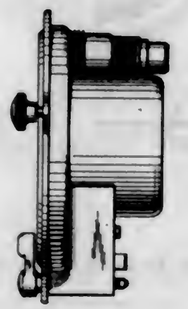
73,344. RADIATOR CAP. WILLIAM H. SCHULZE, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 18, 1925. Serial No. 13,161. Term of patent 7 years.

The ornamental design for a radiator cap substantially as shown.

73,345. LIGHTING FIXTURE. HARRY SHARDLOW, Los Angeles, Calif., assignor to Solar Lighting Fixture Co., Los Angeles, Calif., a Corporation of California. Filed May 4, 1927. Serial No. 21,858. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.



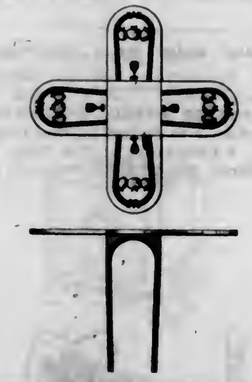
73,346. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed June 4, 1927. Serial No. 22,325. Term of patent 7 years.

The ornamental design for a gas heater, as shown.

73,347. INSTRUMENT-BOARD PANEL. ALLAN GORDON SMITH, London, England, assignor to S. Smith & Sons (Motor Accessories) Limited, London, England. Filed June 22, 1926, Serial No. 18,137, and in Great Britain May 14, 1926. Term of patent 7 years.

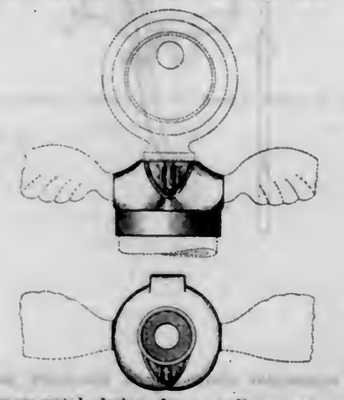
The ornamental design for an instrument board panel as shown.

73,348. LIGHTING POST. WESTERN UNDERWOOD, Los Angeles, Calif. Filed May 31, 1927. Serial No. 22,249. Term of patent 14 years.



The ornamental design for a lighting post, as shown.

73,349. CHAIR. CHARLES W. WESTON, Pampa, Tex. Filed June 13, 1927. Serial No. 22,411. Term of patent 3½ years.



The ornamental design for a chair, as shown.

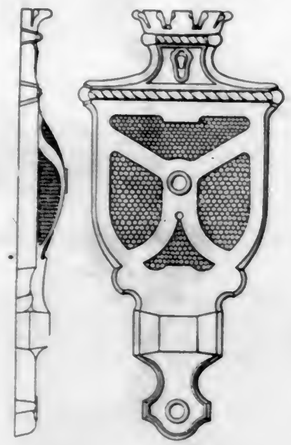
73,350. TABLE. CHARLES W. WESTON, Pampa, Tex. Filed June 13, 1927. Serial No. 22,413. Term of patent 3½ years.

The ornamental design for a table, as shown.

73,351. RADIATOR CAP. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed June 8, 1925. Serial No. 13,704. Term of patent 3½ years.

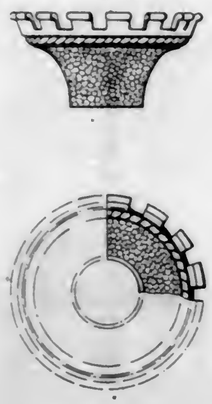
The ornamental design for a radiator cap substantially as shown.

73,352. CHANDELIER. FRANK YOKEL, Cleveland, Ohio, assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 21,742. Term of patent 3½ years.



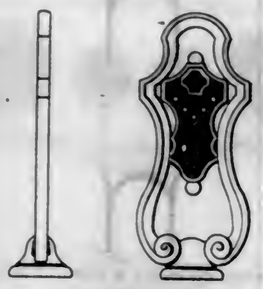
The ornamental design for a chandelier, as shown.

73,352. CHANDELIER. FRANK YOKEL, Cleveland, Ohio, assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 21,743. Term of patent 3½ years.



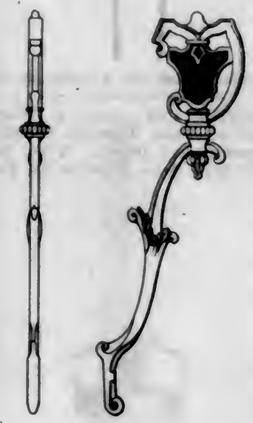
The ornamental design for a chandelier, as shown.

73,354. WALL PLATE FOR ELECTRIC-LIGHT FIXTURES. FRANK YOKEL, Cleveland, Ohio, assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 21,744. Term of patent 3½ years.



The ornamental design for a wall plate for electric light fixtures, as shown.

73,355. HUSK FOR INCANDESCENT LAMPS. FRANK YOKEL, Cleveland, Ohio, assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 21,745. Term of patent 3½ years.



The ornamental design for a husk for incandescent lamps as shown.

73,356. CHANDELIER LOOP. FRANK YOKEL, Cleveland, Ohio, assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 21,746. Term of patent 3½ years.

The ornamental design for a chandelier loop, as shown.

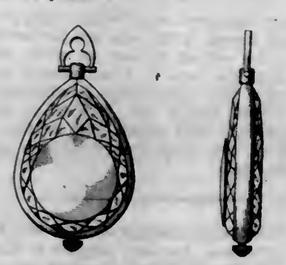
73,357. CHANDELIER BRACE. FRANK YOKEL, Cleveland, Ohio, assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 21,748. Term of patent 3½ years.

The ornamental design for a chandelier brace, as shown.

73,358. TABLE LAMP. LORIN W. YOUNG, New York, N. Y. Filed Apr. 5, 1927. Serial No. 21,457. Term of patent 3½ yeaars.

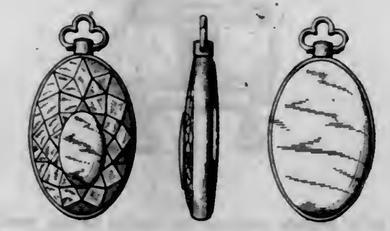
The ornamental design for a table lamp as shown.

73,359. ELECTRIC RANGE. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartsbaugh Manufacturing Company, Toledo, Ohio, a Corporation. Filed Jan. 24, 1927. Serial No. 20,484. Term of patent 14 years.



The ornamental design for an electric range as shown.

73,360. WATCH CRYSTAL. JOSEPH B. KISLINGER, New York, N. Y., assignor to Marie B. Kislinger, New York, N. Y. Filed Jan. 9, 1925. Serial No. 11,982. Term of patent 14 years.

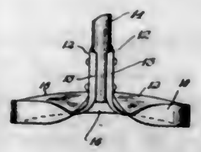


The ornamental design for a watch crystal substantially as shown.

73,361. WATCHCASE. JOSEPH B. KISLINGER, New York, N. Y., assignor to Marie B. Kislinger, New York, N. Y. Filed Jan. 12, 1925. Serial No. 12,013. Term of patent 14 years.

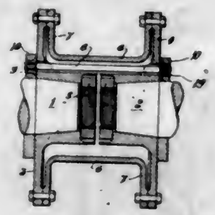
The ornamental design for a watchcase substantially as shown.

73,362. LOCKET. JOSEPH B. KISLINGER, New York, N. Y., assignor to Marie B. Kislinger, New York, N. Y. Filed Jan. 30, 1926. Serial No. 16,338. Term of patent 14 years.



The ornamental design for a locket substantially as shown.

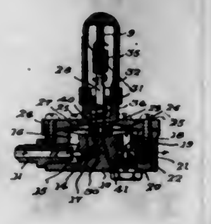
PATENTS



GRANTED AUGUST 23, 1927.

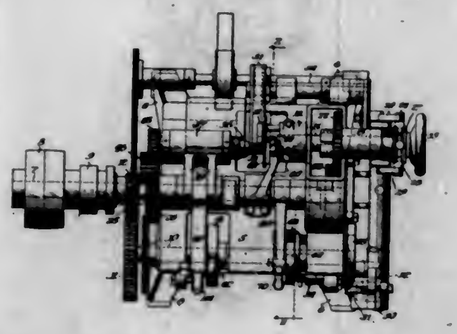
1,639,643. GARDEN IMPLEMENT. GEORGE F. ARVEDSON, Carpentersville, Ill. Filed July 17, 1926. Serial No. 123,075. 2 Claims. (Cl. 97—68.)

2. A garden implement comprising a long narrow thin strip of metal having a flat side and a convex side and of uniform cross section thruout its entire length, said strip bent near its ends to form parallel shanks and twisted between said shanks and intermediate blade to bring the curved convex side thereof on the outside of said shanks and said shanks bent to form rounding socket members, said blade curved between said shanks into bow-shape form.



1,639,644. FLEXIBLE COUPLING FOR SHAFTS. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 4, 1922, Serial No. 540,963, and in Great Britain Mar. 24, 1921. 8 Claims. (Cl. 64—96.)

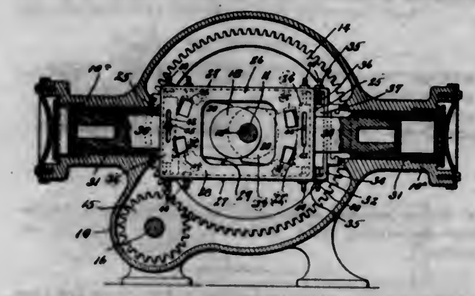
1. In a flexible coupling for shafts having ends disposed in proximate relation, the combination of coupling heads rigidly secured to each of the shafts, said coupling heads having extending flange portions remotely disposed from the shaft ends, a flexible torque-transmitting means connecting said extending flange portions, and means including a bolt associated with the heads for transmitting thrust between them.



1,639,645. PRESSURE FUEL-FEED SYSTEM FOR HYDROCARBON ENGINES. ALBERT E. BERDON, South Orange, N. J., assignor to Self-Feeding Vaporizer Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1924. Serial No. 702,002. 1 Claim. (Cl. 103—150.)

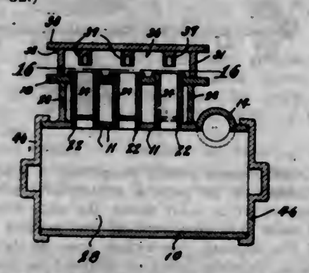
In combination, a fuel supply source and a fuel receiving element, a pumping mechanism disposed between the two comprising a chamber having a diaphragm therein, a rod secured to said diaphragm, a spring connected to said rod and an operating mechanism secured to said spring for flexing said diaphragm in one direction, a spring disposed around said rod and having fixed bearings at either end thereof, whereby when said latter

spring is compressed it may flex said diaphragm in the opposite direction and inlet and outlet passages connecting said chamber with said fuel supply source and said fuel receiving element.



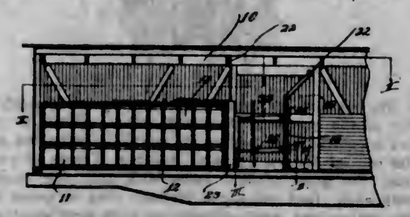
1,639,646. MACHINE FOR OPERATING UPON SHEET-METAL CAPS. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1924. Serial No. 725,569. 14 Claims. (Cl. 153—72.)

1. In a machine of the character described, the combination of means for performing a threading operation upon a sheet metal body, and means adapted to be automatically moved into contact with said body to trim the same subsequent to the threading operation.



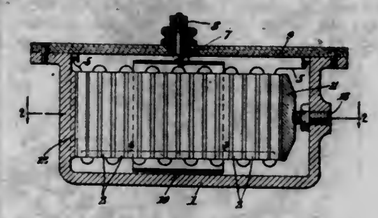
1,639,647. DRIVING MECHANISM. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 9, 1924. Serial No. 691,566. 11 Claims. (Cl. 74—14.)

1. A driving mechanism comprising an eccentric, a pair of oppositely disposed members having concave inner ends for partially engaging the peripheral face of said eccentric and having convex outer ends disposed eccentrically to said inner ends, and reciprocating members



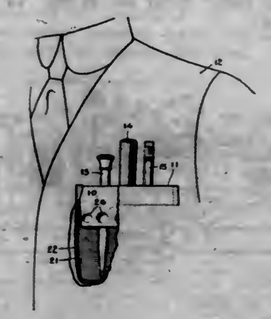
having faces inclined from vertical engaged by the outer convex ends of said first mentioned members at points disposed on the opposite sides of the horizontal axis.

1,639,648. COMPRESSOR HOUSING. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 29, 1925. Serial No. 53,441. 4 Claims. (Cl. 230—32.)



1. As a new article of manufacture, a compressor housing comprising an open-ended tubular body portion, a box-shaped cylinder casing disposed radially thereto and having the lower edges of its side walls permanently secured to the peripheral face of said body portion, a plurality of open-ended cylinders seated in the aligned openings formed in the upper face of said cylinder casing and in said tubular body portion, and a box-shaped cylinder head common to and enclosing all of the outer ends of said cylinders, the inner ends of the latter opening into said body portion.

1,639,649. LOADING DEVICE. IRVEN FRANCIS DAINS, Monmouth, Ill., assignor to Western Stoneware Company, a Corporation of Illinois. Filed Oct. 25, 1926. Serial No. 143,859. 10 Claims. (Cl. 105—369.)

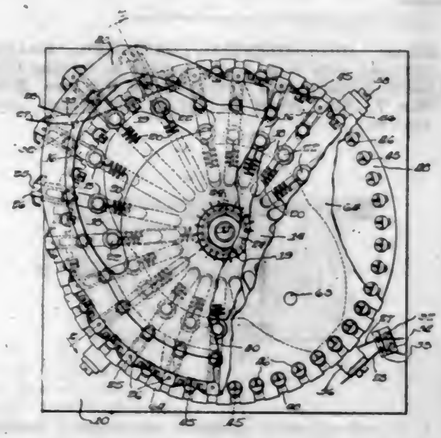


1. The combination with a container adapted to receive articles therein, of means for compactly arranging said articles, said means including a movable member for confining said articles within a portion of said container, a vertically disposed stationary member fixable to said container, and means slidable on said stationary member for urging said movable member against said articles.

1,639,650. HIGH-POTENTIAL CONDENSER. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Filed Mar. 7, 1919. Serial No. 281,183. 32 Claims. (Cl. 175—41.)

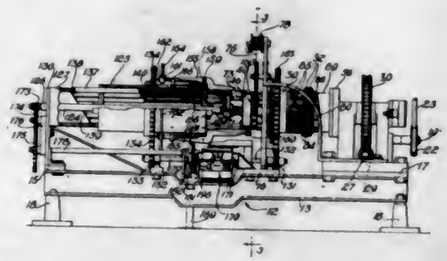
1. A high potential condenser comprising a metallic casing, a plurality of sets of condenser units therewithin said sets being connected in parallel, each of said sets comprising a plurality of condenser units connected in series, the high potential units of each of said sets being disposed in the central portion of the casing, and the low potential units being disposed adjacent to walls of said casing.

1,639,651. POCKET AND PENCIL CLASP. JOHN A. EWEN, Brooklyn, N. Y. Filed Apr. 20, 1925. Serial No. 24,319. 9 Claims. (Cl. 24—12.)



1. A clasp for pens, pencils and the like comprising oppositely arranged members disposed relative to one another to provide receptacle-like spaces therebetween, the upper portions of said members being flared outwardly from one another and a plurality of projecting members extending within said receptacle-like spaces for engagement with the articles inserted therein.

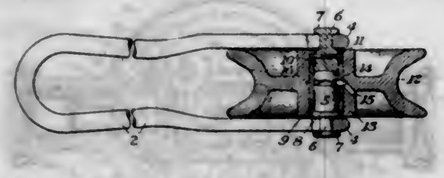
1,639,652. METHOD OF AND MEANS FOR FORMING COMPOSITE ARTICLES. JOSEPH WILLIAM FAY, Villa Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 9, 1924. Serial No. 725,044. 28 Claims. (Cl. 140—112.)



1. The method of forming composite articles, which

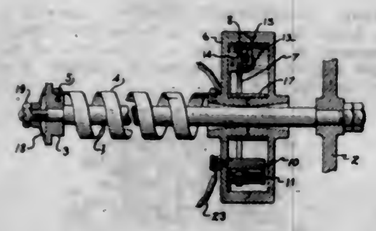
consists in causing a plurality of wires to contact with each other at spaced points, subjecting said wires at the engaged points to an electric current to cause them to be

fused together, and simultaneously therewith subjecting one of said wires to an electric current for severing it intermediate its ends.



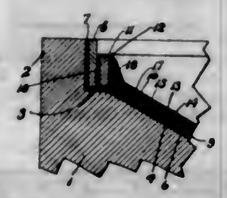
1,639,653. METHOD OF AND APPARATUS FOR WELDING METAL STRANDS. JOSEPH WILLIAM FAY, Villa Park, and CHARLES WALES, La Grange, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1925. Serial No. 51,752. 14 Claims. (Cl. 140—112.)

1. The method of welding metal strands, which consits in welding a length of metal strand to the ends of and extending across an open loop in another length of metal strand, and then shearing the first-mentioned length of strand intermediate the sides of the loop.



1,639,654. SPUDDING WHEEL. CHARLES M. HEETER, Butler, Pa. Filed Apr. 30, 1923. Serial No. 635,531. 4 Claims. (Cl. 308—106.)

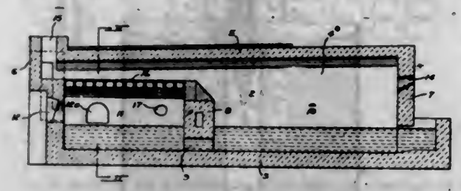
2. In a spudding wheel, an axle assembly having a yoke-engaging portion adjacent each end of the axle, a shoulder on the axle intermediate said portions, a sleeve rotatable on said axle and abutting said shoulder at one end, said sleeve having an external diameter slightly greater than the diameter of said shoulder, means on the axle engaging the opposite end of said sleeve for holding the same in position, a pulley having a driven fit with said sleeve, said axle assembly being arranged to



be driven into the wheel as a unit, and a yoke detachably cooperating with said axle, substantially as described.

1,639,655. THERMOSTATICALLY-CONTROLLED ELECTRIC SWITCH. CLARENCE M. HOLLEY, Highland Park, Mich., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Feb. 23, 1922. Serial No. 538,726. 7 Claims. (Cl. 200—138.)

1. A thermostatic switch comprising a support adapted to be turned on an axis, a switch arm pivoted to the said support at a point below the axis thereof, a contact on each side of a vertical line passing through the axis of the support, the switch arm, on turning of the support on its axis, being unbalanced to fall by gravity to engage one or the other of the contacts depending upon the direction in which the support is turned, and an element adapted through influence of temperature change to turn the support in one direction or the other.

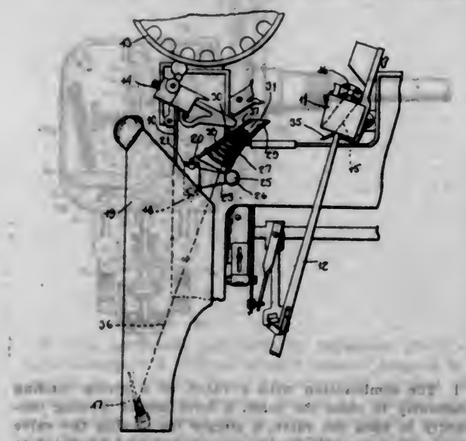


1,639,656. SOUND-AMPLIFYING CONSTRUCTION. JACOB KERSTEN, Allegan, Mich. Filed Dec. 14, 1925. Serial No. 75,192. 7 Claims. (Cl. 154—2.)

4. The method of forming a conical paper amplifying device of the character described, which consists in providing a conical mold having an upwardly extending plug at its central lowermost point, placing a sheet of paper against the sides of said mold with the plug passing therethrough, then placing a circular ring of paper material against the edge portions of said first sheet and cementing the same thereto and thereafter applying a plurality of sheets of paper one over the other above said first sheet and cementing the same together and to said first sheet and turning their edge portions upwardly

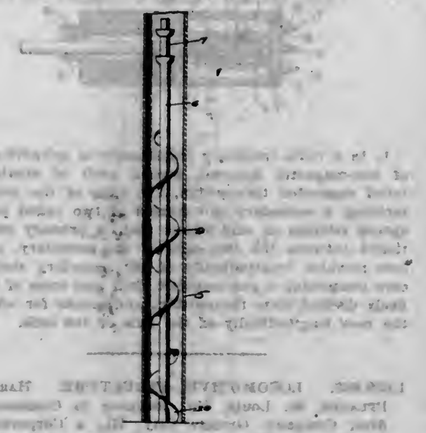
along the inner sides of said ring, excepting the innermost sheet, its edge portions being passed over the upwardly extending edges of the intermediate sheets of paper between the innermost and outermost sheet.

1,639,657. GLASS FURNACE. GREGORY D. MANTLE, Pittsburgh, Pa., assignor to Mantle Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1926. Serial No. 140,269. 10 Claims. (Cl. 49—54.)



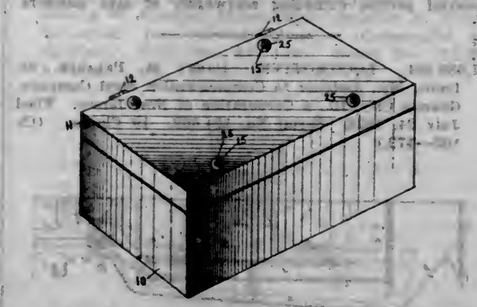
10. A glass furnace of the continuous type having a melting chamber and a working chamber, said chambers being separated by a bridge wall of less height than the interior of the furnace whereby the upper portion of the furnace is continuously open to the passage of gases therethrough, and a partition extending horizontally over the working chamber, said working chamber being provided with auxiliary heating means.

1,639,658. IMPROVED PROCESS FOR THE MANUFACTURE OF PERYLENE. CHARLES HENRI MARCHALK, Paris, France. Filed Dec. 13, 1923, Serial No. 680,302, and in France Dec. 21, 1922. 4 Claims. (Cl. 260—168.)



1. The manufacture of perylene by treating betadinaphthol with phosphorus oxychloride and zinc powder, and thereafter distilling the intermediate product thereby obtained.

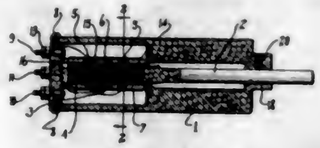
1,639,659. FILLING-ATTACHMENT FOR LOOMS. GEORGE HAYWORD MCRAE, Manchester, Ga., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 19, 1926. Serial No. 89,490. 4 Claims. (Cl. 139—255.)



1. A guide attachment for depleted bobbins in automatic filling replenishing looms comprising a base adapted to be secured to a loom frame, an arm projecting rearwardly therefrom in the direction of the loom lay, a shaft projecting laterally from the end of said arm, a pair of sleeves on said arm, straps extending from said sleeves, a guide chute carried by said straps, a collar fixed on said shaft, a torsion spring on said shaft having one end fixed to the collar and the other end engaged with one of the straps to urge the chute in one direction around said shaft, a stop on said arm limiting the movement of said chute under the influence of said spring, and filler catching bristles in said chute extending downwardly from the upper side of said chute in contact with the bottom side thereof.

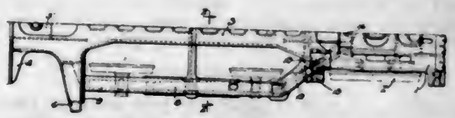
1,639,660. TUBING CLEANER. ALBERT E. NEUMEIER, Morris, Okla. Filed Feb. 9, 1927. Serial No. 166,874. 3 Claims. (Cl. 255—28.)

1. A tube cleaner for removing paraffin from well tubings comprising a stem having means whereby the same may be incorporated in a pumping rod, and separate upper and lower spiral scraping blades formed on said stem and being coiled in opposite directions.



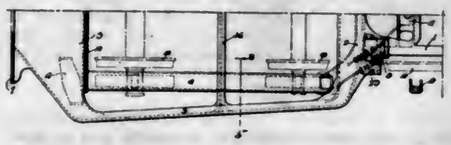
1,639,661. FASTENING DEVICE FOR SEALED CONTAINERS. ALCONZO D. NEWCOMB, Whitman, Mass., assignor to North Land Cedar Chest Company, Acushnet, Mass., a Corporation. Filed Mar. 15, 1926. Serial No. 94,887. 1 Claim. (Cl. 292—251.)

In a container comprising a receptacle and a cover, fastening devices, each comprising a holder, rigidly secured to the cover; a clamping bolt therein, rotatively and axially movable, and extending through the cover; a cooperating member rigidly secured within the receptacle; a projection formed within the holder and adapted to engage the clamping bolt for the purpose of limiting its axial movement; a collar rigidly secured within the



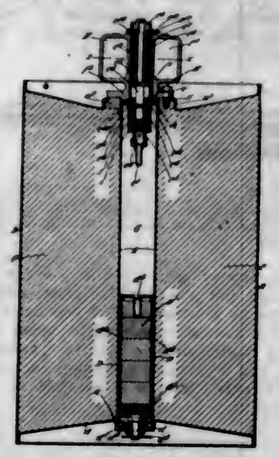
holder; a spring, bearing on the collar and reacting on the clamping bolt for the purpose of withdrawing it within the holder when disengaged from the cooperating element; and a key element by means of which the clamping bolt may be rotated and engaged with the cooperating element, for the purpose of clamping the cover to the receptacle.

1,639,662. TRANSFORMER. ROBERT L. OSBORNE, Mount Clemens, Mich., assignor to Dongan Electric Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed July 7, 1922. Serial No. 573,307. 3 Claims. (Cl. 171—119.)



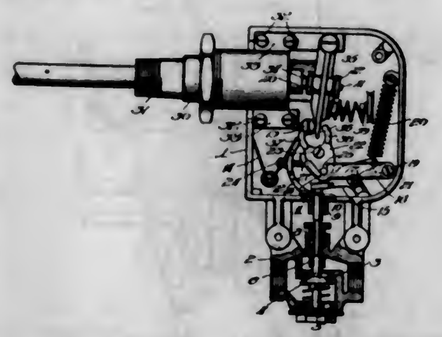
1. In a radio frequency transformer, a cylindrical shell of non-magnetic material, second shell of similar material supported therewithin, the axes of the shells coinciding, a secondary coil formed of two coiled parts in spaced relation on said second shell, a primary coil positioned between the two coils of the secondary, an iron core movable longitudinally of the secondary shell, said core comprising a non-magnetic shell and mass of iron in finely divided state therewithin, and means for adjusting the core longitudinally of the axis of the coils.

1,639,663. LOCOMOTIVE STRUCTURE. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed July 14, 1926. Serial No. 122,375. 17 Claims. (Cl. 105—172.)



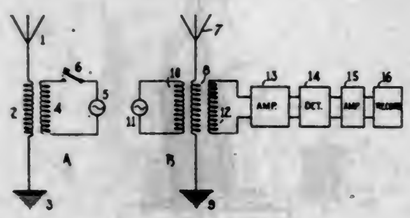
1. A one-piece cast locomotive frame comprising a front portion having longitudinal side members, and a central portion extending rearwardly of said members.

1,639,664. LOCOMOTIVE. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed July 24, 1926. Serial No. 124,662. 19 Claims. (Cl. 105—172.)



1. In a locomotive cradle, a forward load-supporting transverse beam member, a rear load-supporting transverse beam member, and longitudinal side members connecting the ends of said bolsters outside of the load supporting points and adapted to receive a trailer truck frame between them.

1,639,665. DEPTH CHARGE AND LIKE SUBMARINE EXPLOSIVE BODY. HARTLEY BLYTH PRATT, Barrow-in-Furness, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Oct. 1, 1925, Serial No. 59,808, and in Great Britain Oct. 3, 1924. 8 Claims. (Cl. 102—3.)

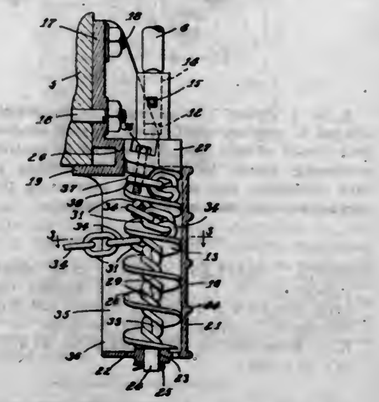


1. A depth charge or like submarine body comprising members movable relatively to one another under the influence of the hydrostatic pressure, means for automatically exploding the body when said members come into contact with one another and means for varying the volume of air compressed by said members in moving into contact with one another so as to vary the depth at which automatic firing takes place.

1,639,666. VALVE-CONTROLLING MECHANISM FOR WATER HEATERS. THEODORE J. RADER, Oak Park, Ill. Filed Sept. 28, 1925. Serial No. 58,989. 11 Claims. (Cl. 236—48.)

1. The combination with a valve, of a spring tending constantly to close the same, a lever means tending constantly to open the valve, a trigger for locking the valve open, and a movable device constructed and arranged to hold the trigger in its release position and the lever means in an idle position in one position of the device and permit the trigger to assume a locking position and the lever means to open said valve in another position of said device.

1,639,667. METHOD FOR RADIO POSITION FINDING. RICHARD HOWLAND RANGER, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 8, 1924. Serial No. 697,800. 2 Claims. (Cl. 250—2.)

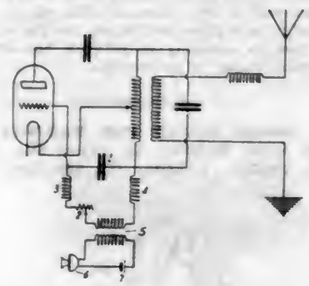


1. A method of determining distance or position of a radio receiver with reference to a plurality of stationary transmitters operating at substantially constant frequency which consists in receiving said transmitted frequencies, combining with each of said received frequencies currents of substantially constant frequency adapted to produce beats therewith when the transmitter and receiver have been relatively moved a predetermined distance, rectifying and recording such beats and determining the position of the receiver by obtaining the distance from said transmitters from the record of such beats and finding position therefrom.

1,639,668. VERTICAL ADJUSTER FOR SHADE AND CURTAIN HANGERS. LULA H. ROBINSON, Dallas, Tex. Filed Nov. 28, 1925. Serial No. 71,904. 2 Claims. (Cl. 156—27.)

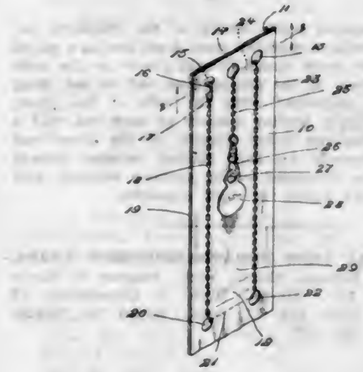
2. In a horizontal and vertically adjustable shade and curtain support, a vertical notched member adapted to be secured to a window frame; a channeled notched slide engaging said vertical member having an enlarged upper end provided with lugs on its face; a rotatable rod carried by said slide and vertical member provided with a knob at its lower end and having a curved pin at its upper end adapted to engage any of said notches and designed to vertically adjust the channeled slide with relation to the vertical member; a horizontal member adjustably engaged by said upper end of the channeled slide including slots to receive the lugs on the upper end of said slide, a series of apertures between the slots, a bracket to receive the end of a shade roller adjustably mounted in one of said slots, and a projection for supporting the end of a curtain rod; a hinged plate on the upper end of the channeled slide provided with a lug adapted to engage any of the apertures in the horizontal member, a slot in the hinged plate, and a member on the upper end of the channeled slide adapted to engage the slot in said plate and fasten the plate over the horizontal member securing it between the slide and plate and maintaining it in position.

1,639,669. BRAKE DEVICE FOR RAILWAY CARS. FRANK C. RUTZ, Rockford, Ill. Filed May 5, 1926. Serial No. 106,790. 1 Claim. (Cl. 254—149.)



A hand operated brake device of the character described, comprising a rotatable mast drum having a spiral groove, a brake chain wound in said groove on the mast drum, the bottom of the groove from end to end being approximately coincident with the axis of the drum, the drum having a bearing member at each end, and a casing enclosing the spiral portion of the drum and providing a bearing for each bearing member thereof and having an elongated chain opening between said bearings through which the chain emanates.

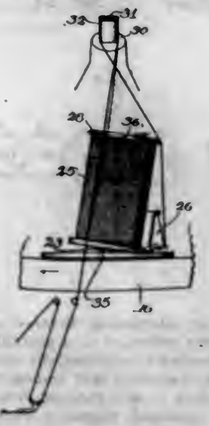
1,639,670. AIR VENT FOR TRANSMISSION UNITS. GUSTAF W. RYDNER, Alpena, Mich., assignor to Huron Industries, Inc., Alpena, Mich., a Corporation of Michigan. Filed Dec. 17, 1925. Serial No. 75,929. 3 Claims. (Cl. 137—111.)



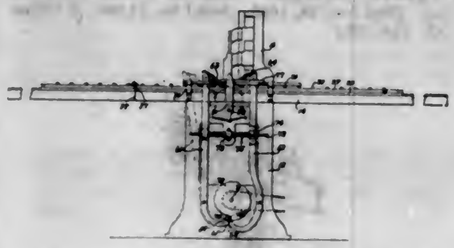
3. An air vent for transmission units, or the like, comprising a single piece conduit, a cap enclosing one end of said conduit, the other end of said conduit being inserted in the transmission housing, and air filtering means positioned in said conduit between the ends thereof, said cap and conduit having aligned vent openings in their side walls which are positioned above the filtering means.

1,639,671. VACUUM-TUBE OSCILLATOR. WALTER SCHAFFER, Berlin, S. W. 11, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Nov. 16, 1922, Serial No. 601,261, and in Germany Nov. 21, 1921. 6 Claims. (Cl. 179—171.)

1. In a circuit arrangement, a thermionic tube arranged to produce oscillations, a grid condenser in the grid circuit of said tube, a grid leak in parallel with said condenser, means for applying modulating potential to said condenser, and means for preventing the inflow of carrier current into said first means.



1,639,672. DISPLAY CARD. CARL SCHRAYSSHUEN, Providence, R. I., assignor to Speidel Chain Co., a Firm composed of Frederick Speidel and Eugen Speidel, Pforzheim, Germany, doing business in Providence, R. I. Filed Sept. 8, 1925. Serial No. 54,970. 3 Claims. (Cl. 211—34.)

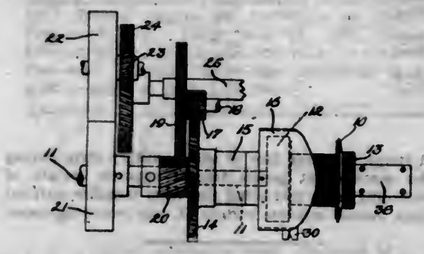


1. A display card for chains for personal wear having two openings at one end and three at its opposite end, and a sticker on the front of the card between said groups of openings to which the snap fastener end of the chain may be releasably connected.

1,639,673. METHOD OF AND APPARATUS FOR BRAIDING. GEORGE ALLEN SEELEY, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,278. 7 Claims. (Cl. 96—6.)

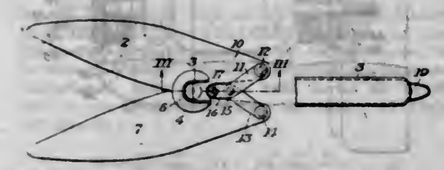
1. In a braiding machine, a plurality of oppositely revolving turrets, a plurality of members on each of said turrets for supporting a supply of strands to be supplied to a braiding point, the members on one of said turrets being inclined in the direction of rotation thereof and toward the braiding point, and means on the inclined members for engagement with the strand from the other turret at two elevated positions to effect maximum deflection of the strand, one of the positions of maximum deflection being in advance of the other with respect to the direction of rotation of one of the turrets.

1,639,674. MACHINE FOR MAKING WIREBOUND BOXES. JOHN SHELLENBERGER, Chicago, Ill. Filed Apr. 30, 1926. Serial No. 105,715. 15 Claims. (Cl. 1—8.2.)



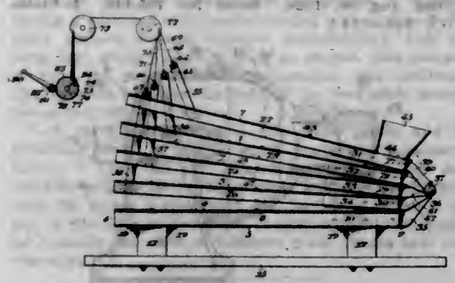
1. A boxblank making machine comprising a form for assembling box boards, means for quickly adjusting said form to the desired size of boxblank, means on the form for holding binding wires in position to be attached to the box boards, and means for operating said form so as to permit the stapling of the binding wires to the box boards to form a wire bound boxblank while the form is traveling through the machine in either of two opposite directions.

1,639,675. RUDDER FOR BOATS. WILLIAM J. SNADECKI, Westover, Va., assignor to Richard Crane. Filed Aug. 28, 1924. Serial No. 734,696. 1 Claim. (Cl. 115—34.)



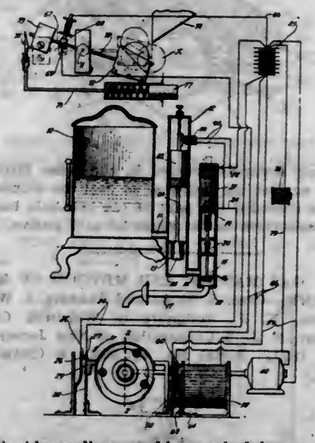
In combination with the rudder of a self-propelled vessel, vertically spaced vanes projecting laterally from both faces thereof, said vanes curved about a transverse axis.

1,639,676. METHOD OF AND MECHANISM FOR WINDING STRAND MATERIAL. SIGURD THRONSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,302. 2 Claims. (Cl. 242—25.)



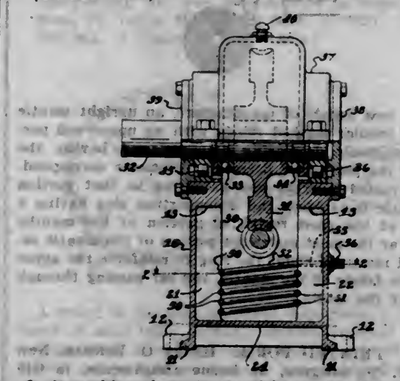
1. In a mechanism for storing tinsel ribbon in such manner that it may be withdrawn from storage without tangling, an arbor for receiving a take-up spool, means for rotating said arbor, a distributor, and means rotated about the axis of said arbor at a speed to cause the movement of said distributor so that the tinsel ribbon is wound on the spool in helices having approximately a 50% overlap.

1,639,677. SHEARS. THOMAS M. VAUGHAN, Salem, Ohio. Filed Jan. 14, 1926. Serial No. 81,181. 5 Claims. (Cl. 30—13.)



1. A hand shear, comprising a pair of blades, toggle links connecting the blades, one of the links having an extension so disposed that a point thereon moves in a substantially straight line, and means connected to the extension at such point for actuating the toggle links.

1,639,678. MULTIPLE DECK SCREEN. HERBERT S. WOODWARD, Carbondale, Pa. Filed Aug. 21, 1924. Serial No. 733,269. 11 Claims. (Cl. 209—40.5.)

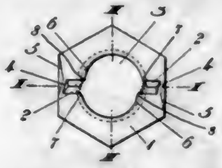


1. A screen comprising relatively spaced perforated diaphragms, and a plurality of spacing units hingedly connected to be relatively moved about a common axis disposed away from said units, and between which units the margins of said diaphragms are extended and removably engaged when the screen is arranged for operative use.

1,639,679. COIN-CONTROLLED LIQUID-VENDING MACHINE. JULIUS ZSOLDOS, Brooklyn, N. Y., assignor to Automat Equipment Corporation, a Corporation of Delaware. Filed Aug. 25, 1920. Serial No. 405,920. 11 Claims. (Cl. 221—95.)

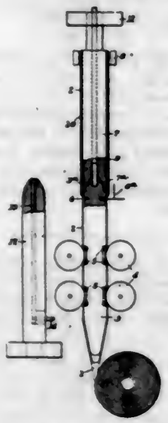
1. A liquid vending machine embodying a reservoir, provided with an outlet, and means controlled by the liquid level in the reservoir for automatically regulating the area of the outlet to render the flow of liquid through said outlet uniform irrespective of the differences in hydrostatic pressure due to the receding liquid level in the reservoir as the same recedes when the liquid is drawn off, and means for stabilizing the operation of the liquid flow controlling means.

1,639,680. MACHINE ELEMENT. GEORGE H. ACKER, Cleveland, Ohio, assignor to The Cleveland Worm and Gear Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 15, 1924. Serial No. 755,854. 6 Claims. (Cl. 184—104.)



1. A machine element comprising a housing, a moving member therein, a plurality of ribs extending inwardly from the inner face of the housing, and a cooling coil sprung into place within said ribs.

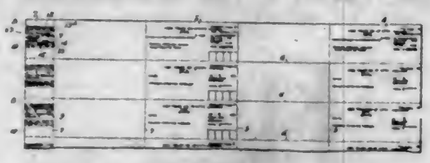
1,639,681. SELF-LOCKING NUT. DAVID WERNER BERLIN, Rasunda, Sweden. Filed Dec. 17, 1925, Serial No. 75,998, and in Sweden Sept. 11, 1925. 6 Claims. (Cl. 151—21.)



1. A lock nut comprising a nut body provided with a central, screw-threaded bolt hole formed therein, a groove formed in the top portion of the nut-body and extending

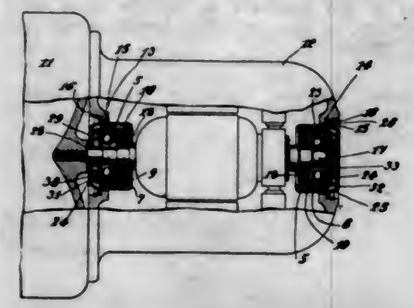
from said bolt hole towards the outer edge of the nut and ending at a sufficient distance from said edge so that an end wall for said groove is there formed, the material of said upper part of the nut at the one side of said

groove being inwardly pressed in the same direction as the groove against the bolt-hole so that the corresponding inner screw-threaded top part of the bolt-hole has an eccentric cross-section in the plane of said groove.



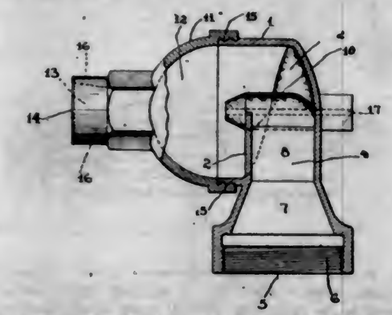
1,639,682. GAS MANTLE AND METHOD OF MAKING THE SAME. CARL E. BLISS and FRANCIS A. WEGENER, Gloucester, N. J., assignors to Welsbach Company, Gloucester, N. J., a Corporation of New Jersey. Filed July 6, 1921. Serial No. 482,693. 6 Claims. (Cl. 67—100.)

1. As a new article of manufacture, an upright mantle formed of tubular meshed fabric with an upper end portion of gradually decreasing diameter and having the meshes of the portion of decreasing diameter correspondingly contracted whereby any gathering in that portion of the fabric is avoided, and a supporting ring having a cross bar at the most restricted portion of the mantle, the fabric at the most restricted portion of the mantle being turned inwardly about the ring to reinforce the upper part of the fabric of the mantle, the bar passing through the fold of the fabric.



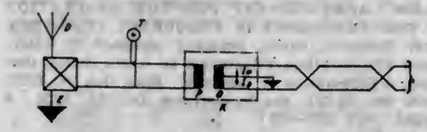
1,639,683. PRINTED FORM. HENRY O. BONNAR, New York, N. Y., assignor, by mesne assignments, to Gilman Fanfold Company, Limited, Niagara Falls, N. Y., a Corporation of Ontario, Canada. Filed Aug. 26, 1922. Serial No. 584,406. 5 Claims. (Cl. 282—12.)

1. In combination, a composite traveler manifolding strip including a plurality of superposed record strips, each of a plurality of said superposed record strips having a series of blank forms thereabong arranged respectively in superposed manifolding relation to provide a series of sets of superposed form leaves with registering blank forms, said blank forms including fixed incomplete data with accompanying recording areas for receiving inscriptions to complete said data, and an auxiliary strip connected along its longitudinal edge to one of said superposed strips and overlapping certain parts thereof, said auxiliary strip having a series of blank forms arranged thereabong and positioned for registering respectively with certain parts of the blank forms of the superposed



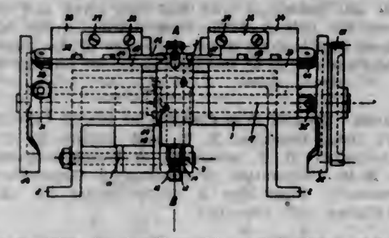
record strips, the back face of said auxiliary strip having transfer material at points thereof opposite certain of said recording areas and being free from transfer material at points thereof opposite certain of said recording areas.

1,639,684. MOUNTING FOR ANTIFRICTION BEARINGS. GEORGE R. BOTT, Stamford, Conn., assignor to Norma-Hoffman Bearings Corporation, Stamford, Conn., a Corporation of New York. Filed July 10, 1926. Serial No. 121,521. 18 Claims. (Cl. 308—184.)



1. In combination with a support, a bearing receiving casing adapted to be arranged in projecting relation to the support and engaged at one of its ends therewith, and a retaining member for said casing adapted to be forced under pressure into clamping engagement with the said casing end and having a resiliently yieldable part automatically interlocking with said support to fixedly hold said casing in assembled relation therewith.

1,639,685. SPRAY NOZZLE. BARTON H. COFFEY, Elizabeth, N. J., and GEORGE S. DAUPHINEE, New York, N. Y. Filed Aug. 30, 1924. Serial No. 735,118. 1 Claim. (Cl. 299—114.)

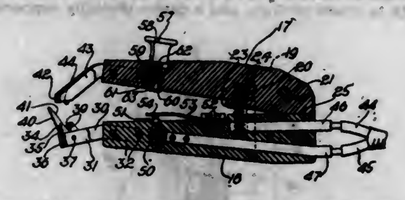


In a spray nozzle the combination of an inlet passage having unequally converging side walls, one of the walls terminating in a lip, whereby said inlet is contracted, a helical waterway operatively connected to said inlet passage, a vortex chamber communicating with said waterway, means axially of said helical waterway to admit air to said vortex chamber, and a throat leading from said vortex chamber, said throat having a flared mouth.

1,639,686. WIRELESS-TELEGRAPH STATION. HENRI JEAN JOSEPH MARIE DE REGNAULD DE BELLESCIZE, Toulon, France. Filed Aug. 29, 1921, Serial No. 496,532, and in France Jan. 22, 1919. 5 Claims. (Cl. 250—9.) (Granted under the provisions of act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a duplex wireless system, composed of a transmitting station and a receiving station having receiving apparatus intended to work simultaneously with the transmitting apparatus, means at said transmitting station for indicating the received signals, a connecting line between said indicating means and the receiving apparatus of the receiving station, and means located at said receiving apparatus for decreasing the distributing effect on said apparatus of currents in the connecting line originating from the transmission station on the one hand and passing the received signal effects to the connecting line on the other hand, said last mentioned means consisting of a ground in the circuit of the connecting line.

1,639,687. MACHINE FOR SECURING PLATE-SHAPED ELECTRODES TO CARRIERS. HENDRIK DE JONG, Eindhoven, Netherlands, assignor to Naamloose Vennootschap Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed Dec. 15, 1923, Serial No. 680,998, and in the Netherlands Dec. 22, 1922. 10 Claims. (Cl. 29—34.)

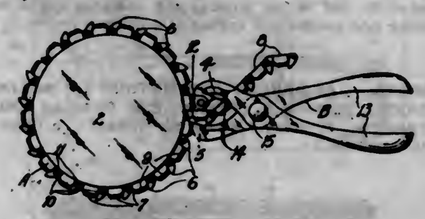


1. A machine for bending thin metal plates and for attaching them to carrier-wires comprising a mandrel having a bore and slot communicating with said bore, the outer surface of said mandrel corresponding with the form into which the plate is to be shaped, dies movable to bend the plate around the mandrel, and additional dies movable to press the ends of the bent plate around the carrier wires.

5. A machine for bending thin metal plates and for attaching them to carrier-wires comprising a mandrel having a bore and slot communicating with said bore operable to initially bend the plate and then temporarily hold the same, a stationary die, having a recess in its top, in the path of movement of said mandrel, and means for pressing the ends of the bent plate around said carrier-wires.

1,639,688. WELDING TOOL. GEORGE WILLIAM DUNCAN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1925. Serial No. 68,071. 8 Claims. (Cl. 219—4.)

1. A hand welding tool comprising a pair of spaced electrodes, means for bridging said electrodes with a plurality of metal strands engaging the electrodes at spaced points longitudinally along the strands, and means for

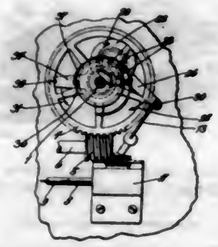


causing electrical current to flow between said electrodes longitudinally through said strands for effecting a weld therebetween.

1,639,689. SIGN. ALEXANDER C. ELPHINSTONE, Orange, N. J. Filed July 20, 1926. Serial No. 123,660. 3 Claims. (Cl. 40—125.)

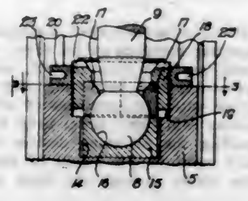
1. A device of the class described comprising a sheet metal body, projecting members on the edges of said body and foldable upon one side face thereof, said members having small apertures and said body larger apertures adapted to register with the apertures of said members, whereby in securing said sheet metal body to a suitable support and passing the fastening devices through the apertures of said members, the heads of said fastening devices will pass freely through the large apertures in said body.

1,639,690. PISTON-RING COMPRESSOR. JULES L. FLORI, St. Louis, Mo., assignor of one-fourth to William Hurdlebring, Jr., and three-fourths to Henry R. Fuerborn, St. Louis, Mo. Filed Sept. 2, 1924. Serial No. 735,389. 1 Claim. (Cl. 29—86.4.)



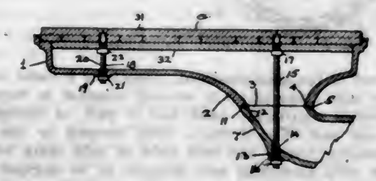
A device of the kind described, comprising a chain composed of solid links pivotally secured together to form a substantially continuous band and a pair of clamping levers, one end of said chain being secured to one of said clamping levers, and said links of said chain being provided with projecting lugs adapted to be engaged by said other clamping lever.

1,639,691. CLOCK-WINDING MECHANISM. ARNO W. FOWLER, Collinsville, Ill. Filed Aug. 16, 1926. Serial No. 129,364. 10 Claims. (Cl. 58—41.)



1. The combination with an actuating shaft and a spring for actuating said shaft, of a gear wheel on said shaft for winding said spring, an electric motor for rotating said gear wheel to wind said spring, a circuit for said motor, a switch for opening and closing said

circuit, a support, a device pivoted on said support and operated by said spring in one direction for moving said switch to closed position, and a device pivotally supported

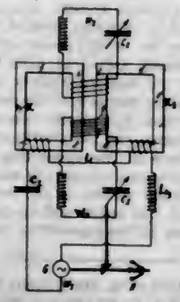


by said shaft and operated by said gear wheel in the opposite direction from said first device for moving said switch to open position.

1,639,692. BEARING. ERNEST GAUTHIER, Chicago, Ill., assignor to Western Electric Company, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1922. Serial No. 590,758. 7 Claims. (Cl. 287—87.)

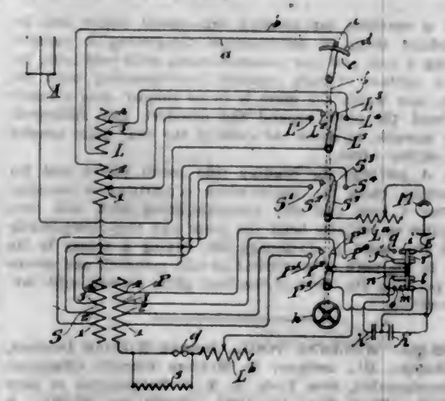
6. The combination with a pitman and the co-operating reciprocating slide of a punch press or similar reciprocating mechanism, of a bearing comprising a self-aligning block carried by said slide and having a substantially flat surface in engagement with said slide, said block being formed of metal harder than the metal comprising the adjacent portions of the slide, said blocks shaped to receive the end of the pitman, and clamping means for holding said pitman end against said block.

1,639,693. GAS BURNER AND METHOD OF MAKING SAME. BERNARD A. GEUZINK, East Cleveland, Ohio. Filed Dec. 10, 1924. Serial No. 754,887. 2 Claims. (Cl. 158—99.)



1. A gas burner comprising an elongated casing open at its upper side, a pair of interfitting members forming a top plate for closing said casing, a rib extending longitudinally of each of said members, a series of lateral extensions on each side of said longitudinal ribs, means for securing said members to each other so as to provide laterally extending orifices on each side of said top plate in staggered relation to the orifices on the opposite side, and means for supplying a fuel mixture through said casing to said orifices.

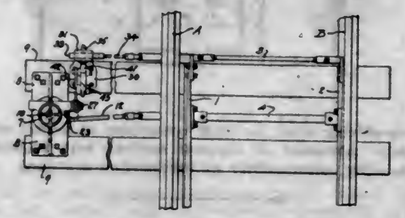
1,639,694. PROCESS OF RUST PROOFING AND ARTICLES PRODUCED THEREBY. MATTHEW GREEN, Detroit, and HOBART H. WILLARD, Ann Arbor, Mich., assignors to Parker Rust-Proof Company, Detroit, Mich., a Corporation of Michigan. Filed May 10, 1926. Serial No. 108,162. 5 Claims. (Cl. 148—6.)



1. Iron or steel or articles composed or having a surface of iron or steel furnished with a coating or deposit of phosphates of iron and of manganese, there being at least one-half as much manganese as iron in the coating.

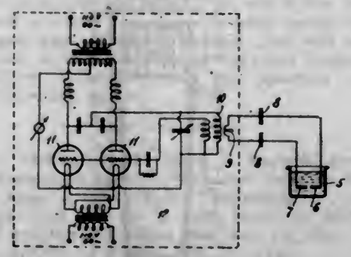
1,639,695. ARRANGEMENT FOR THE REGULATION OF THE FREQUENCY IN FREQUENCY CHANGERS. KURT HEEGNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Oct. 23, 1925, Serial No. 64,321, and in Germany Oct. 31, 1924. 6 Claims. (Cl. 250—36.)

1. In a system for generating oscillations of a constant frequency, the combination of an alternating current generator, two iron cores adapted to be oppositely magnetised by said generator, a compensating oscillating circuit associated with said iron cores, a working oscillating circuit also associated with said iron cores, and means to vary the tuning of the compensating circuit in accordance with changes in the frequency of the generator whereby the tuning of the working circuit remains fixed.



1,639,696. MEANS FOR CHANGING WAVE LENGTHS. GUY HILL, Brooklyn, N. Y., and GEORGE H. CLARK, Washington, D. C., assignors, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed May 3, 1915. Serial No. 25,354. 16 Claims. (Cl. 250—40.)

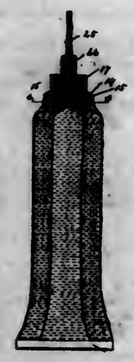
1. The combination with an antenna, of primary and secondary windings of an oscillation transformer, switches and connections therefrom to said primary and secondary



windings for maintaining predetermined couplings between them for each of a plurality of different oscillation frequencies, a plurality of capacities in circuit with one of said windings, and switches for altering the relations of said capacities to the circuit including them, and means common to all of said switches for actuating them in unison.

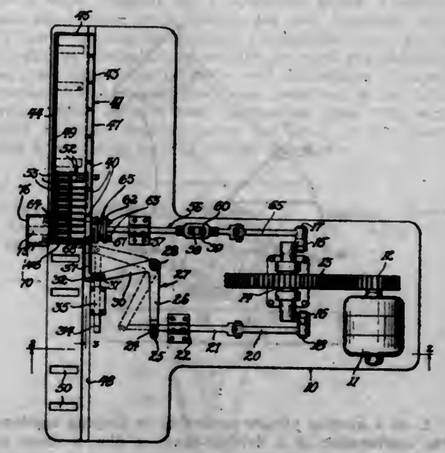
1,639,697. SAFETY LOCKING DEVICE. PAUL HOFFMAN, La Grange, Ill., and JAMES B. STRONG, Suffern, N. Y., assignors to Ramapo Ajax Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1926. Serial No. 151,047. 7 Claims. (Cl. 246—147.)

1. In combination with a switch stand, a safety lock device comprising a base, locking members on said base for holding a switch in operative position, one of said locking members having an abutment, a latch member pivoted on said base and adapted to engage said abutment to lock said locking members in locked position, said latch member having a projection to be engaged by one of said locking members when it is moved to unlocked position, said engagement tripping said latch member to position resting on said abutment, so that, when said abutment is moved to locked position, said latch member will move to locked position.



1,639,698. ELECTRON-EMITTING CATHODE AND PROCESS OF PREPARING THE SAME. FREDERICK HOLBORN, Hoboken, N. J., assignor to Haseltine Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Jan. 14, 1926. Serial No. 81,163. 6 Claims. (Cl. 250—27.5.)

5. The process of preparing an electron-emitting cathode which consists in "sputtering" a metal of the alkali-earth group in pyridine, electrically depositing the "sputtered" metal from the pyridine on a conductor, and subjecting the conductor to heat to evaporate the pyridine.



1,639,699. ARTICLE OF MANUFACTURE COMPRISING CONTAINER AND CONTENTS THEREFOR. NEVIL MONROE HOPKINS, New York, N. Y., assignor, by mesne assignments, to Gilmont Products Corporation. Filed Aug. 29, 1923. Serial No. 660,029. 3 Claims. (Cl. 221—60.)

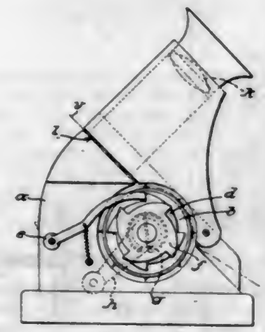
1. The herein described new article of manufacture comprising a pair of concentrically disposed collapsible tubes containing a plurality of viscous bodies the mobility of the inner body being sufficiently less than the mobility

of the outer body as to cause both bodies when pressure is applied to be extruded from said tubes at the same speed.

1,639,700. MACHINE FOR ASSEMBLING PARTS OR ELEMENTS OF FABRICATED ARTICLES. WALLACE INGERSOLL MARTIN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1924. Serial No. 734,941. 3 Claims. (Cl. 29—84.)

1. In an assembling machine for assembling core and tubular members, a carrier for a plurality of members to be assembled, means for bringing the carrier into an assembling position, yielding means for forcing a core member into a tubular member when the carrier is in the assembling position, and yielding means for holding tubular members in position during the forcing operation.

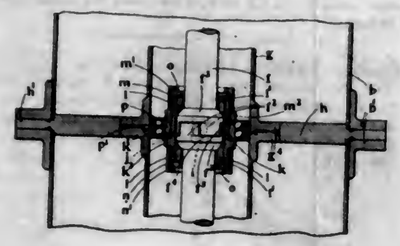
1,639,701. LAMP. CHARLES W. MEEHAN, Pittsburgh, Pa. Filed Aug. 29, 1925. Serial No. 53,486. 1 Claim. (Cl. 240—81.)



In a lamp, a number of upstanding angle-irons forming a support for the stem of the lamp, a metal base-plate having a series of up-turned tongues formed thereon, each

one of which connects with one of the angle-irons, for holding the latter in rigid relation to each other, a bent-metal cap-plate rigidly connecting the upper ends of the

angle-irons to each other, an enclosing shell of cement and tile, covering the lamp stem and base, and a removable conduit passing through the stem and base of the lamp.

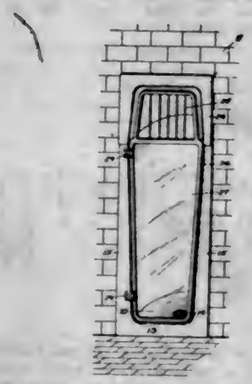


1,639,702. MOVING-PICTURE PROJECTING OR PEEPING APPLIANCE. WALDEMAR PORAK, Vienna, Austria. Filed Apr. 18, 1924, Serial No. 707,464, and in Austria Sept. 1, 1923. 4 Claims. (Cl. 88—18.)

1. In a moving picture projecting or peeping appliance the combination of a driving shaft, a film, a drum for moving the picture film, a spring connecting the shaft to the drum, a wheel secured to the drum, a second wheel secured to the shaft, a pawl for engaging and checking the first named wheel, said pawl being actuated by the second named wheel for disengaging the pawl from the first named wheel after said second wheel has performed an angular motion of a predetermined extent.

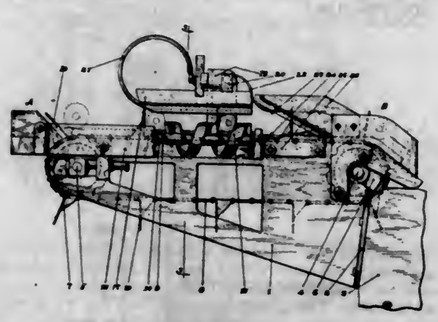
1,639,703. DEEP-WELL-PUMPING INSTALLATION AND THE LIKE. ARTHUR CRAWLEY POTTER, Grantham, England. Filed Feb. 19, 1925, Serial No. 10,378, and in Great Britain Feb. 26, 1924. 7 Claims. (Cl. 103—102.)

1. A deep well pumping apparatus comprising a tube serving as a bore hole delivery pipe, a rotary pump mounted upon the lower end of the said tube, a pump driving shaft disposed concentrically within the said tube and provided in sections of determined length, and a joint between the respective adjacent sections of the



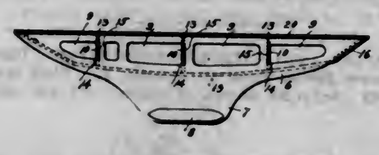
pump driving shaft for their connection to permit slight angular movement of adjacent sections with respect to each other, substantially as hereinbefore described.

1,639,704. PROCESS OF BLEACHING CELLULOSIC MATERIAL. GEORGE A. RICHTER and MILTON O. SCHUR, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 27, 1924. Serial No. 716,153. 7 Claims. (Cl. 8—2.)



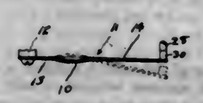
1. A process of bleaching wood pulp to produce a product high in resistant or alpha cellulose, which consists in subjecting such pulp to the action of a bleaching liquor in the presence of an alkali sufficient in amount to maintain a distinctly alkaline condition in the pulp throughout the bleaching operation.

1,639,705. BATH APPLIANCE. VICTOR E. SCHMIEDEKNECHT, Louisville, Ky. Filed Dec. 2, 1926. Serial No. 152,118. 6 Claims. (Cl. 4—145.)



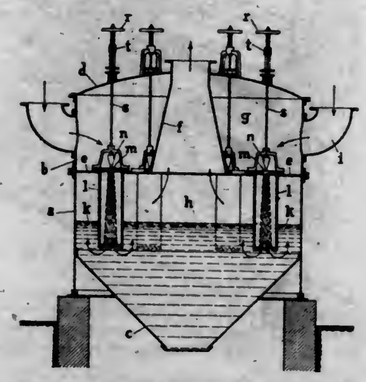
1. A shower bath structure including a body cast as a unit and having an open front, said body having a base provided with an upstanding flange at the open front portion of the structure, said body being open at the top, and a cap member covering the top and also cast as a unit seated on the upper part of the body and having its walls engaging corresponding walls of the body to form a downwardly extending joint on the inner portions of said walls, said cap member having a hollow boss in its upper part for the passage of a water pipe.

1,639,706. MACHINE FOR HANDLING AND TREATING CORN. MILLAR W. SELLS, Buffalo, N. Y., assignor to Peerless Husker Company, Inc., Buffalo, N. Y. Filed Sept. 13, 1924. Serial No. 737,579. 24 Claims. (Cl. 146—84.)



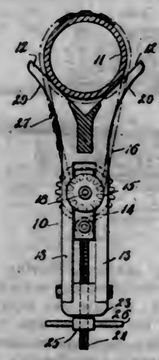
23. A machine for butting corn comprising a conveyor system for moving ears, continuous rotary means operated from contact with said conveyor system for aligning said ears and butt removing means for removing the butts after alignment.

1,639,707. MODEL YACHT. ROY F. B. SHAVER, Los Angeles, Calif. Filed Nov. 20, 1926. Serial No. 149,743. 1 Claim. (Cl. 46—37.)



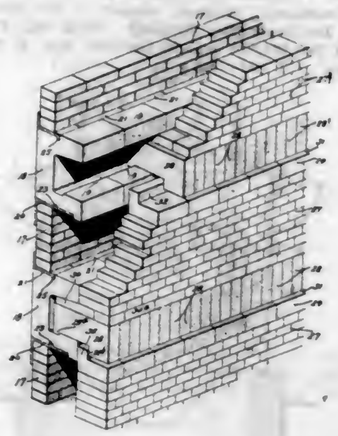
A toy yacht construction comprising a keel member formed of one piece of sheet material provided with a plurality of apertures; a plurality of cross frame members provided with oppositely disposed top and bottom notches adapted to engage with the top and bottom edges of said keel apertures; a transom member resting adjacent the rear edge of said keel member; and wall members adapted to form the body of the yacht formed of sheet material secured to said keel members; cross frame and transom member.

1,639,708. THERMOSTAT. JOHN A. SPENCER, Revere, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Original application filed Apr. 8, 1921, Serial No. 459,773. Divided and this application filed Mar. 12, 1923. Serial No. 624,598. 5 Claims. (Cl. 297—15.)



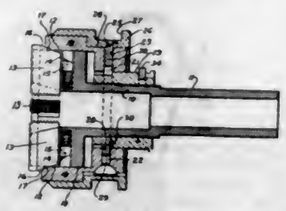
1. A thermostat comprising a sheet of composite thermostatic material, means for confining a portion of said material against free change of shape, thereby setting up internal stresses the magnitude of which changes upon change of temperature, the thermostat reaching a condition of instability when it is cooled to a predetermined temperature, the material then abruptly changing its shape due to release of internal stresses theretofore stored up in the material, said portion being spaced from at least one end of said sheet, and means for supporting the sheet at one side of said portion.

1,639,709. SATURATING RECEPTACLE. CARL STILL, Recklinghausen, Germany, assignor to the Firm: Carl Still, Recklinghausen, Germany. Filed Aug. 24, 1921, Serial No. 494,849, and in Germany Aug. 8, 1919. 4 Claims. (Cl. 261—123.)



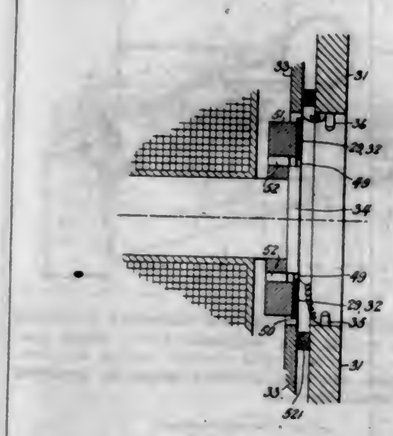
1. A saturating receptacle for producing solid salts by treating gas with acids, comprising in combination a cylindrical middle member, a cover, and a cone-shaped bottom member, a partition dividing said cylindrical middle member into an upper gas distributing chamber and a lower chamber for a saturating liquid, a central tube for leading away treated gas and connected with the lower chamber and passing through the cover, and a plurality of vertically and parallel arranged gas distributing pipes communicating with said distributing chamber, arranged to have their lower ends immersed in the saturating liquid, each of said distributing pipes being provided at some distance above the level of the liquid with a restricted opening axially disposed.

1,639,710. WRENCH. PRESTON D. STOWELL, South Braintree, Mass. Filed Nov. 16, 1925. Serial No. 69,877. 10 Claims. (Cl. 81—57.)



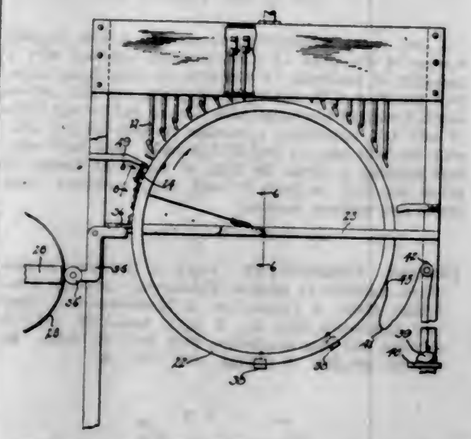
1. In a device for rotating cylindrical work, a frame having spaced abutments for receiving the work therebetween, a flexible loop for rotating the work, means for positioning and driving said loop while said frame remains stationary, said loop being so disposed as to force the work toward said abutments along a line passing therebetween.

1,639,711. FURNACE WALL. CLARENCE A. STRACHOTA, Chicago, Ill., assignor to Liptak Fire-Brick Arch Company, Chicago, Ill. Filed Dec. 20, 1924. Serial No. 757,176. 6 Claims. (Cl. 72—101.)



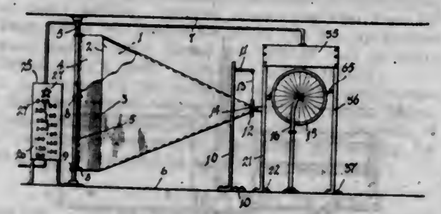
1. A wall structure comprising an outer wall and an inner wall, said outer wall comprising refractory anchoring channels and intervening brick belts, and said inner wall comprising vertically spaced horizontal rows of shelf-forming blocks extended therefrom into the anchoring channels of said outer wall and supported thereby, and upper and lower anchor plates anchored, respectively, to the tops and bottoms of said refractory anchoring channels.

1,639,712. SELF-OPENING DIE HEAD. ROYCE M. STRICKLAND, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn., a Corporation. Filed July 29, 1926. Serial No. 125,664. 4 Claims. (Cl. 10—95.)



1. A self-opening die-head, having a body; chasers mounted therein; a reciprocating operating-sleeve for moving the said chasers; a plate-like locking-member extending transversely of the die-head and formed with a segmental locking-surface and having movement transverse to the axis of the die-head for holding the said operating-sleeve in its chaser-closing position; a tripping-sleeve mounted upon the said operating-sleeve and having rectilinear movement with respect to the said body and operating-sleeve in a path substantially at a right angle to the path of movement of the said locking-member and adapted to move said locking-member into its unlocking position.

1,639,713. REPRODUCTION OF SOUND. ADRIAN FRANCIS STYKES, New Barnet, England. Original application filed Nov. 16, 1920, Serial No. 424,421, and in Great Britain Nov. 18, 1919. Divided and this application filed Apr. 10, 1924. Serial No. 705,713. 15 Claims. (Cl. 179—115.)



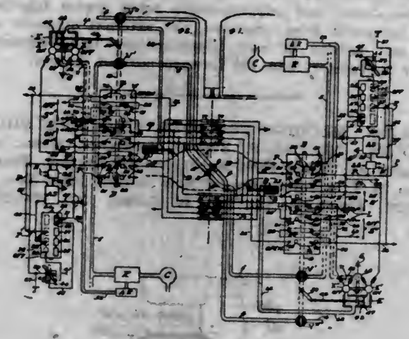
10. In means for reproducing sound, the combination of a field magnet producing an annular field, an annular sheet suspended in the field and a conductive winding distributed on the sheet.

1,639,714. GOLF-STROKE-REGISTERING DEVICE. GEORGE IRVING THOMSON, Chicago, Ill. Filed May 15, 1925. Serial No. 30,593. 7 Claims. (Cl. 265—20.)

1. In a device of the type described, a supporting frame, a funnel-shaped member secured to said supporting frame and being spaced therefrom so as to prevent a golf ball from striking the supporting frame, an impact member, means for movably securing said impact member to said support, said impact member being adapted to be moved by the impact of the golf ball, means for returning the member to initial position after it has been struck by the golf ball, means for conveying the golf ball back to the player, and means associated with said member for preventing the rebounding of the golf ball and for delivering the golf ball to said means.

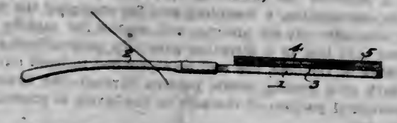
1,639,715. GOLF-STROKE-REGISTERING DEVICE. GEORGE I. THOMSON, Chicago, Ill. Filed Apr. 9, 1924. Serial No. 705,291. 8 Claims. (Cl. 265—20.)

1. A golf stroke registering device of the type described comprising a striker plate, a flexible cord for suspending said striker plate in mid-air thereby permitting the free movement of the plate and maintaining said striker plate free of contact with any member, and means for accurately registering the speed and movement of the striker plate when under the influence of the impact of a golf ball, said means including a striker lever having one end in registration with the mid-point of said striker plate and at a slight distance behind said plate, whereby said striker plate is projected into engagement with said lever by the impact of said golf ball.



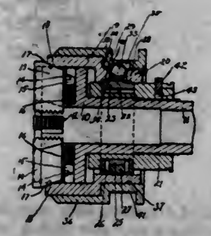
1,639,716. METHOD AND MEANS FOR ORNAMENTING GLASS AND LIKE TRANSPARENT SUBSTANCES. MAURICIO MOISE ASSAEL DE GUEDALIA, Paris, France. Filed Oct. 28, 1925, Serial No. 65,478, and in France Aug. 8, 1925. 4 Claims. (Cl. 41—19.)

1. Method of ornamenting articles of glass and like transparent substance which consists in guilloching the face of the article to be ornamented which is to be concealed from view in the finished article, reproducing artistic designs upon parts of the guilloched face and coating said face with a number of colouring and protecting layers.



1,639,717. CAR-COUPLER SYSTEM. REX G. AVERILL, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Feb. 12, 1925. Serial No. 8,679. 18 Claims. (Cl. 213—212.)

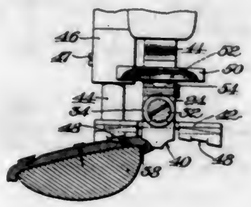
1. In a system of two coupled cars each provided with car, air and electric couplers and electric motors, the combination therewith of pneumatic circuits and electric circuits leading to the air and to the electric couplers and motors, means to control the opening and closing of the electric circuits, means to control the current to the electric circuits leading to the motors to operate the cars,



means to operate said first controlling means to the open or closed position and means to prevent the functioning of the operating means to open said first controlling means while said motors are energized.

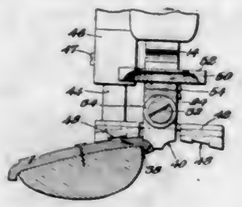
1,639,718. LATHERING DEVICE. FREDERICK W. BACORN, Butte, Mont. Filed Apr. 11, 1925. Serial No. 22,411. 2 Claims. (Cl. 15—210.)

1. A lathering device comprising a thin elongated back member, a strip of fibrous fabric permanently adhesively secured thereon near one end thereof, said fabric being permeated with a soluble saponaceous compound forming a substantially permanent constituent thereof.



1,639,719. SELF-OPENING DIE HEAD. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Company, New Haven, Conn., a Corporation. Filed Sept. 16, 1926. Serial No. 135,754. 11 Claims. (Cl. 10—95.)

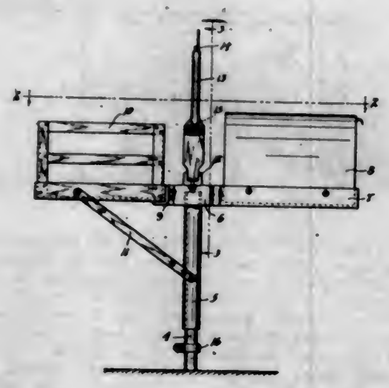
6. A self-opening die-head having a body reduced in diameter back of its forward end to provide two parallel external bearing-surfaces of different diameters; radially-movable chasers installed in the forward end of the said body; an axially-movable chaser-operating sleeve embracing said body and having chaser-closing and chaser-retracted positions, the said sleeve being reduced in internal diameter back of its forward end to provide two parallel internal bearing-surfaces of different diameters; a



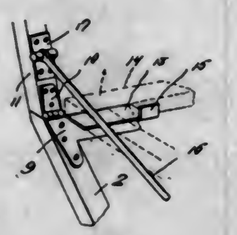
releasable locking-member for holding the said sleeve in its chaser-closing position; and an axially-movable cup-shaped tripping-sleeve embracing said operating-sleeve and reduced in internal diameter back of its forward end to provide two parallel internal bearing-surfaces of different diameters; said reduced portions of the body, operating-sleeve, and tripping-sleeve being nested together and prevented from cramping, the external diameter of the rear portion of said tripping-sleeve being substantially no greater than the forward portion thereof.

1,639,720. MACHINE FOR OPERATING UPON SHOE SOLES. MICHAEL F. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 4, 1920. Serial No. 421,750. 19 Claims. (Cl. 12—22.)

1. A machine for operating upon channeled soles having, in combination, a moulding tool for engaging the face of a sole adjacent its margin, and means for rapidly vibrating said tool in a direction generally perpendicular to the plane of the sole, the tool being shaped to bend out of the path of a sewing needle passing through the channel the marginal portion of the sole as the latter is presented to the tool.



1,639,721. METHOD OF MAKING SHOES. MICHAEL F. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Nov. 4, 1920, Serial No. 421,750. Divided and this application filed Oct. 18, 1923. Serial No. 669,427. 8 Claims. (Cl. 12—142.)



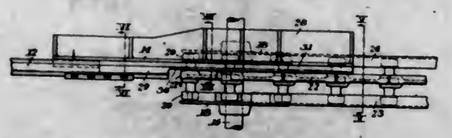
1. The method of preparing turn soles for lasting which comprises assembling a turn sole with a last, and breaking down the entire shank and forepart margin of the sole by pressure on that portion of the margin which projects beyond the edge of the last prior to the first lasting operation.

1,639,722. RURAL-MAIL-RECEIVING APPARATUS. FRANK J. CLARK, Harmony, Minn. Filed Sept. 4, 1923. Serial No. 660,676. 2 Claims. (Cl. 232—40.)

1. A mounting for mail receiving apparatus comprising an oscillatory substantially horizontal head adapted to be mounted for swinging movement on a vertical axis, said head having an elongated angle seat at one side of its axis to which a parcel receptacle is adapted to be secured, and having an oppositely disposed substantially rectangular seat on the other side of its axis adapted to support a mail box and said head also having a transverse channeled portion intersecting the axis of said head to which an upstanding main plate holder is adapted to be secured.

1,639,723. FOLDING-CHAIR HINGE. ORIN H. COLE, Ashland, Oreg. Filed Sept. 15, 1925. Serial No. 56,503. 1 Claim. (Cl. 16—167.)

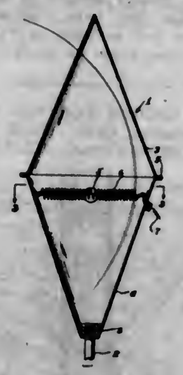
As a new produce of manufacture, a special hinge adapted to be used in association with a foldable chair of the class described, wherein said chair embodies, among other parts, a back adapted to be hingedly connected to the upper end of the legs of one pair, said hinge embodying pivotally connected leaves, the lower one of which is provided with an inwardly extending plate-like extension having a horizontal supporting flange equipped with an upstanding retaining projection.



1,639,724. PROCESS FOR THE MANUFACTURE OF DIARYLGUANIDINES. CECIL JOHN TURRELL CRONSHAW and WILLIAM JOHNSON SMITH NAUNTON, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed June 28, 1926, Serial No. 119,266, and in Great Britain July 4, 1925. 4 Claims. (Cl. 260—125.)

1. In the manufacture of diphenylguanidine, the process which comprises treating aniline with liquid cyanogen-chloride in the presence of water, with cooling and violent agitation, and subsequently condensing the cyan-aniline so obtained to form diphenylguanidine by raising the temperature to 90° C.

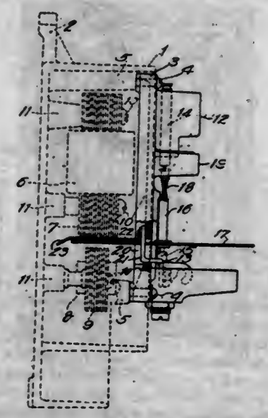
1,639,725. PROCESS FOR THE MANUFACTURE OF DIARYLGUANIDINES. CECIL JOHN TURRELL CRONSHAW and WILLIAM JOHNSON SMITH NAUNTON, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England, a Corporation of Great Britain. Original application filed June 28, 1926, Serial No. 119,266. Divided and this application filed Mar. 2, 1927, Serial No. 172,198, and in Great Britain July 4, 1925. 5 Claims. (Cl. 260—125.)



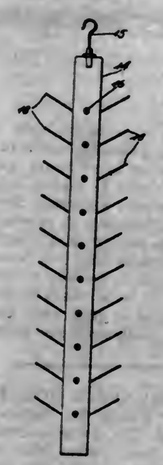
1. A process for the improvement in the manufacture of diarylguanidines, which consists in treating monosmines of the benzene series with cyanogen bromide in the presence of water and condensing by heating the cyanarylide so obtained to form a diarylguanidine.

1,639,726. CAR-TRANSFER APPARATUS. LOUIS E. ENDSLEY, Pittsburgh, Pa., assignor to Fort Pitt Mine Equipment Company, a Corporation of Pennsylvania. Filed Aug. 31, 1926. Serial No. 132,696. 10 Claims. (Cl. 104—137.)

1. The combination with a chain rail conveyer for flanged wheels, of a track approach having a rail head portion spaced from and in approximately longitudinal alinement with the chain rail and having a portion for supporting a wheel flange when the wheel is passing across the space between the chain rail and said rail head portion.



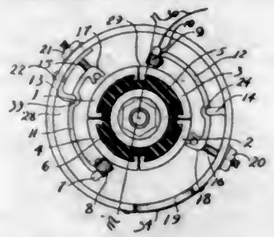
1,639,727. AERIAL. MALCOLM ERNEST FRASER and LOUIS SCHULTZ, Detroit, Mich. Filed Feb. 23, 1926. Serial No. 90,179. 2 Claims. (Cl. 250—33.)



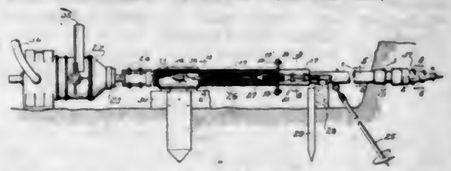
1. In a device of the class described, a spear shaped structure formed of two cone shaped sections and permanently joined in the middle base to base, wire coils at right angles to each other attached to lugs within the lower section, one of the coils having a conductor leading to the exterior of the structure, a support and means for attaching the said structure to the said support.

1,639,728. INDUCTION ELECTRICITY METER. JESSE HARRIS, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a Corporation of Illinois. Filed Jan. 25, 1926. Serial No. 83,579. 8 Claims. (Cl. 171—264.)

1. In an induction electricity meter, the combination with a driving element including a pressure electro-magnet and a current electro-magnet spaced apart from the pressure electro-magnet; of a main support upon which said electro-magnets are mounted; a metallic armature disc extending into the space between said magnets; a spindle carrying said disc; a supplemental support secured to the main support; spindle bearings carried by the supplemental support; and a guard structure carried by the supplemental support and also extending into the space between said electro-magnets and beyond the periphery of the disc and across the periphery of the disc.

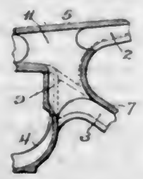


1,639,729. SEED-CORN HANGER. CHESTER N. HILL, Richmond, Ind. Filed Mar. 21, 1927. Serial No. 177,156. 1 Claim. (Cl. 34—26.)



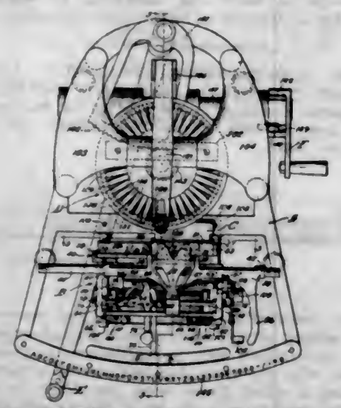
In a device of the kind described, a hanger element consisting of a slat of substantially rectangular cross-section arranged to provide two relatively narrow edges and two relatively wide sides, said slat having a plurality of openings extending therethrough from side to side and a second plurality of openings extending therethrough from edge to edge, the second openings intersecting the first openings diametrically and the first openings being considerably larger than the second openings, a series of wires each having points at each end and extending through a respective second opening, said wires being bent to S-shape within each respective first opening and having the end portions projecting beyond the edges inclined upwardly, and means to suspend said slat.

1,639,730. CIRCUIT BREAKER. HUBERT HINDS, Springfield, Ill. Filed Oct. 31, 1925. Serial No. 66,001. 2 Claims. (Cl. 200—26.)



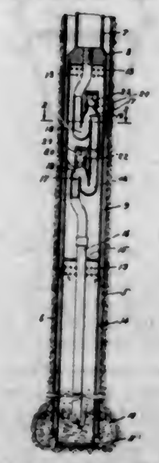
1. A circuit breaker of the character described comprising a rotor member having oppositely disposed metallic segments electrically connected molded within a circular disc of insulation material; said oppositely disposed connected segments insulatably spaced from adjacent segments of like kind in the disc also electrically connected; a pair of contact brushes mounted within a casing secured to the end of corresponding leaf springs adapted to substantially and resiliently urge said brushes into contact with the segments of a disc; said springs supporting said brushes adjustably mounted within a casing so as to provide variation in the circumferential space relation between said brushes.

1,639,731. MEANS FOR INSTALLING GROUND PIPES. JOHN M. HUMISTON, Berwyn, Ill. Filed Apr. 18, 1922. Serial No. 555,529. 3 Claims. (Cl. 225—20.)



1. A power device for placing rods or pipes in the ground, comprising a threaded shaft to which the rod or pipe may be attached in co-rotary axial alinement, a non rotary threaded sleeve to receive said shaft in effective screw relation, ground anchorage means whereon said sleeve may react longitudinally to prevent backing of said sleeve, said anchorage means being longitudinally adjustable whereby new sleeve setting may be made as the work progresses, power means to forcibly rotate said shaft, and a pilot-head adapted to be attached to and carried by the forward end of the rod or pipe when the latter is to be driven forward into or through the ground.

1,639,732. CAST CAR-TRUCK SIDE FRAME. GEORGE T. JOHNSON and HARRY W. STERTZBACH, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Mar. 25, 1926. Serial No. 97,340. 3 Claims. (Cl. 105—205.)

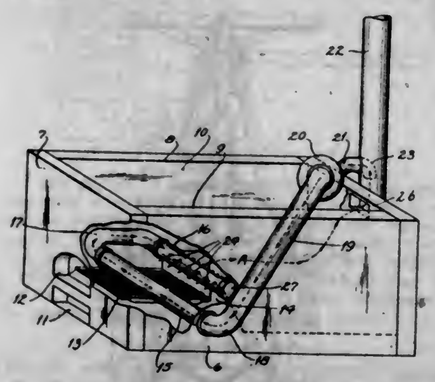


1. A cast side frame for car trucks having a compression member, a tension member, and a journal box, the compression and tension members having the form of inverted channels and the top of the tension member merging into an upwardly extending web in the region of the journal box which web extends above the plane of the top of the box and unites the side walls of the compression member and terminates below the top of said member.

1,639,733. EMBOSSING MACHINE. JOHN E. JOHNSON, Chicago, Ill., assignor to The Speedaumatic Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 8, 1923. Serial No. 617,740. 20 Claims. (Cl. 197—6.7.)

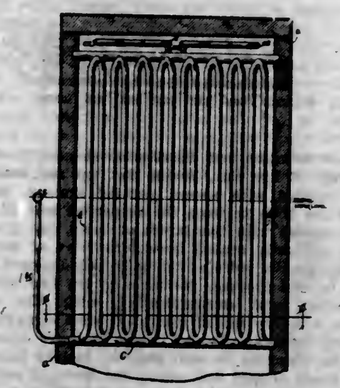
1. In an embossing machine, a die holding member, a substantially vertical pin having a yoke pivoted thereon, said yoke having an arm, a substantially horizontal lever pivotally mounted on said arm, said yoke also having a forked arm opposite said first named arm and embracing said lever, means fixed to said yoke for positioning said die holding member in response to horizontal oscillation of said lever, and means positioned adjacent said lever and actuated by vertical oscillation thereof for controlling power to operate the dies.

1,639,734. GAS ANCHOR FOR OIL WELLS. FLOYD P. JONES, Torrance, Calif. Filed Dec. 11, 1926. Serial No. 154,183. 6 Claims. (Cl. 103—179.)



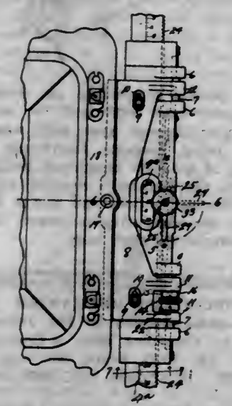
1. In an oil well, an oil suction pipe; and a gas anchor interposed in said suction pipe, said gas anchor having a gas collecting dome formed thereon and a valve located in said dome.

1,639,735. ADJUSTABLE BEAM HANGER. FLOYD P. JONES, Torrance, Calif. Filed Dec. 11, 1926. Serial No. 154,184. 1 Claim. (Cl. 255—11.)



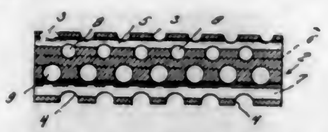
An oil well rigging having in combination a walking beam; a hook pivoted on said walking beam; a clevis engaging with said hook; an internally threaded sleeve pivoted on said clevis; an externally threaded rod threaded into said sleeve; a thrust bearing secured to said threaded rod and a valve rod depending from said thrust bearing and cooperating therewith.

1,639,736. SMOKE CONSUMER. JOHN T. JONES, St. Louis, Mo., assignor of one-half to F. G. Stephens, St. Louis, Mo. Filed Oct. 6, 1926. Serial No. 139,939. 1 Claim. (Cl. 110—49.)



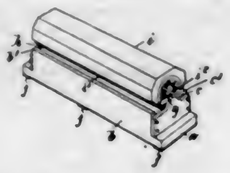
In a device of the type described, a furnace having a fire box in which is positioned a grate and a bridge wall and having in addition a smoke stack, horizontal pipes positioned in said fire box in the horizontal plane on the top of the bridge wall, said pipes being in fluid communication with each other and in fluid communication with the smoke stack, said pipes having perforations therein, the perforations in one pipe being so positoned therein as to emit a gas passing therethrough downwardly on the grate bars and the perforations in the other pipe being so positioned as to emit gases passing therein horizontally and above the gases emitted from the perforations in the first of said pipes.

1,639,737. GENERATING PLANT. LEO I. KELLY, Detroit, Mich. Filed Aug. 19, 1922. Serial No. 582,869. 4 Claims. (Cl. 122—332.)



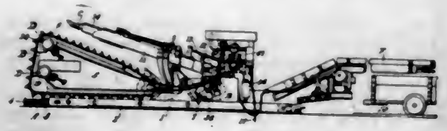
2. A steam generator having a water pipe bent into a spiral with upright coils having straight, parallel uprights and short curves at the top and bottom, a transverse member extending above said coils and said coils opening laterally into said transverse member so that the moving water shall pass along said spiral pipe and the steam escape laterally into said transverse pipe.

1,639,738. MACHINE FOR MAKING PRESS PLATES. ALEXANDER T. KOPPE, Chicago, Ill., assignor to Directoplate Corporation, Chicago, Ill. Filed July 13, 1925. Serial No. 43,837. 6 Claims. (Cl. 95—73.)



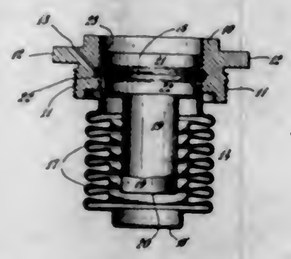
1. The combination with a negative carrying frame, movable members for positioning said negative carrying frame, toothed guide bars on which said movable members are slidably mounted independent of the teeth of the bars, of adjusting means between the movable means and the guide bars, said adjusting means comprising spring detents, noses carried by the detents and cooperating with the teeth of the toothed bars, members carried by said detents, a rotatable shaft carried by the movable means and disposed between the detents and provided with a recess adapted to receive the members carried by the detents to cooperate with the teeth of the toothed bar, and means cooperating with the shaft for locking the same against rotation.

1,639,739. HEAT RETAINING AND DISTRIBUTING ELEMENT. JAMES B. LAUGHLIN, Bradford, Pa. Filed Jan. 13, 1927. Serial No. 160,922. 1 Claim. (Cl. 126—214.)



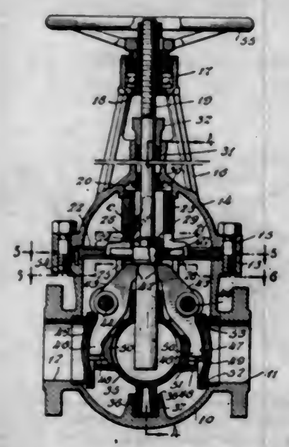
A heat retention and distribution element in the form of a body of fire clay, having flat top and bottom surfaces provided with spaced parallel grooves, that portion of the body between the respective sets of grooves being provided with two layers of bores, one group comprising vertically spaced horizontal rows of bores open through opposite sides of the body and disposed at right angles to said grooves, the bores of the two outer rows intersecting and communicating with the adjacent grooves, and the second group of bores comprising two vertically spaced horizontal layers of boxes extending in the same direction as said grooves, and at right angles to the bores of said first group, the bores of said second group intersecting and being in communication with the top and bottom rows of bores in said first group and also intersecting and being in communication wtih the intermediate row of bores in the first group.

1,639,740. BALL CLEANER. JAMES EDWARD LAWLER, London, England. Filed Aug. 8, 1925. Serial No. 49,068. 8 Claims. (Cl. 15—160.)



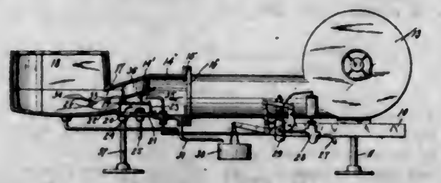
1. A ball cleaner comprising an elongated body, a cleaning element upon said body, a second elongated body, a cleaning element upon said second body, said second body being movable backwards and forwards longitudinally of the first mentioned body whereby balls placed between the respective cleaning elements are subjected to a cleaning action, and means at each end of the first body for preventing movement of the balls beyond the limits of the first body.

1,639,741. DISLODGING MECHANISM. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 13, 1920, Serial No. 403,376. Renewed Jan. 4, 1926. 12 Claims. (Cl. 262—9.)



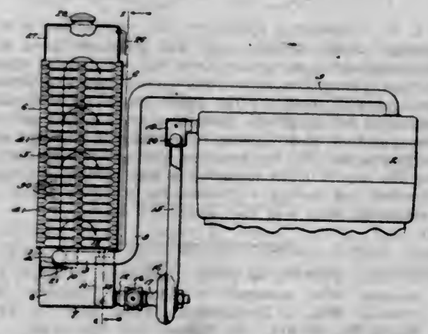
1. In a mining machine, the combination with a cutter frame, a cutter chain carried by said cutter frame and adapted to form a kerf in the mine wall, a transversely extending cylinder attached to said cutter frame and adapted to be carried therewith into said kerf, a plunger movable longitudinally of said cylinder, hydrostatic means to force said plunger outwardly of said cylinder, and resilient means outside of said cylinder arranged to force said plunger inwardly of said cylinder.

1,639,742. EXPANSIBLE COLLAPSIBLE ELEMENT. HARRY C. MALLORY, deceased, Bellport, N. Y., by Sue R. Mallory, administratrix, Bellport, N. Y.; said Harry C. Mallory assignor, by mesne assignments, to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Aug. 31, 1920, Serial No. 407,211. Divided and this application filed July 25, 1925. Serial No. 46,105. 14 Claims. (Cl. 297—8.)



1. A device of the character described comprising a support, an expansible-collapsible element having a closed end and an open end; said element having its open end secured to said support, and a closure for said open end and sealed thereto beyond the point of securement of said element to said support, substantially as specified.

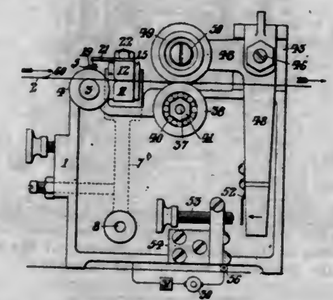
1,639,743. VALVE. KARL MARSCHEIDER, Berlin-Tegel, Germany, assignor to A. Borsig G. m. b. H., Berlin-Tegel, Germany, a Corporation of Germany. Filed Nov. 15, 1924, Serial No. 750,029, and in Germany May 3, 1923. 12 Claims. (Cl. 251—102.)



1. A valve of the type having a valve casing provided with an inlet and an outlet, a valve carrying member rotatably mounted in said casing and provided with a conduit adapted when the valve is in its fully opened position to provide a direct communication between said outlet and inlet, valves carried by said member, a spindle projecting outwardly of, and connected with, said casing for rotatable and longitudinal sliding movement relatively thereto for actuating said member and valves; characterized by the provision of means non-rotatably secured to the valve casing and cooperating with said spindle for positively guiding said valve carrying member in all of its positions of movement.

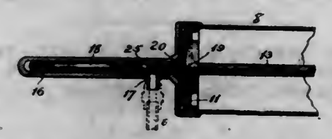
1,639,744. OIL BURNER. AUGUSTUS MISCH, New York, N. Y. Filed June 16, 1925. Serial No. 37,454. 4 Claims. (Cl. 158—28.)

1. A liquid fuel burner comprising a combustion chamber, a pan disposed outside of said combustion chamber, means for heating said pan for vaporizing the fuel, means for atomizing the fuel outside of said combustion chamber and causing the heavier particles settling on to the bottom of said pan to move along with the atomized fuel, and means for causing a stream of air to flow on top of the atomized fuel stream as the latter enters said combustion chamber.



1,639,745. PROCESS OF AND MEANS FOR COOLING INTERNAL-COMBUSTION ENGINES. WELLINGTON W. MUIR, Lockport, N. Y. Filed Oct. 11, 1924. Serial No. 743,158. 11 Claims. (Cl. 123—174.)

1. The process of operating an engine cooling system comprising a jacket and an upflow radiator which consists in supplying to said jacket while the engine is running alternately too little and too much cooling fluid to continuously maintain the jacket temperature at a predetermined point; and alternately subjecting the fluid to a cooling action in the radiator varying with the pressure of said fluid leaving said jacket.

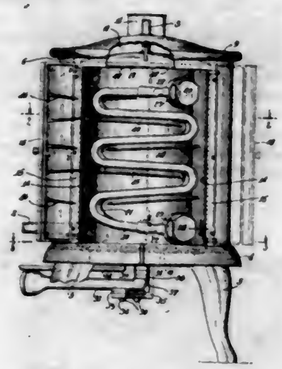


1,639,746. INK-RIBBON STOP MECHANISM. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed Aug. 6, 1925. Serial No. 48,686. 5 Claims. (Cl. 192—127.)

1. In a ribbon stop mechanism, the combination with a base frame; of an adjustable ribbon guide comprising a stationary stud in said frame, and a collar axially adjusted on said stud; a swing frame pivoted at its one end in said base frame and carrying a rigid finger bar at its other end, extending parallel with said guide stud; a loose finger bar extending parallel with said rigid bar; means operatively connecting said bars for relative movement; a spring connected at one end to said swing frame and at its other end to said loose finger bar and arranged to press a ribbon between said bars; a spring connecting said base frame with said swing frame, arranged to normally hold the latter in opposition to the stress of the ribbon passing between said finger bars; means forming an electric circuit gap on said base frame, arranged to be closed by movement of said swing frame, when the latter is displaced from its normal position in the direction of the traverse of said ribbon between said finger bars; said electric circuit including a tripping device arranged to stop the traverse of said ribbon; a stationary roller stud projecting from said base frame in parallel relation with said guide stud and finger bars; an idle roller mounted on said roller stud and having an annular groove in its circumference; a roller frame, comprising a lever fulcrumed on said base frame and carrying a roller in parallel relation with

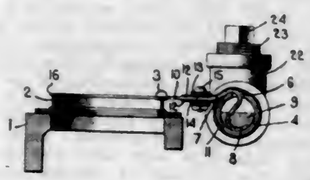
said other roller; said second roller having an annular rib flange, adapted to register in the annular groove in said first roller; means forming another gap in said circuit on said base frame and arranged to be closed by movement of said roller frame; whereby, said circuit is arranged to be closed by movement of said finger bars and swing frame whenever a ribbon passing between said bars presents a defect increasing the normal stress of the ribbon upon said bars, in the direction of the length of said ribbon, and said circuit is also arranged to be closed by movement of said roller frame whenever a ribbon passing between said rollers presents a mark increasing the normal thickness of said ribbon and thereby lifts said flanged roller, in a direction transverse to the length of said ribbon.

1,639,747. DOOR-CONTROL MEANS. ARTHUR A. NELSON, Burlington, Iowa, assignor of one-fourth to Luke Palmer, Burlington, Iowa. Filed Oct. 8, 1924. Serial No. 742,493. 4 Claims. (Cl. 121—44.)



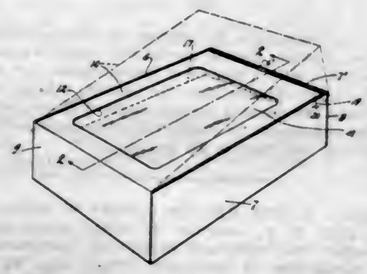
1. A mechanism for the purpose set forth comprising a cylinder, a piston therein, means for connecting one side of the piston with a part to be moved, means for creating suction in the cylinder upon the opposite side of the piston, means for checking the movement of the piston under suction, and means for accelerating the movement of the piston near the close of its stroke.

1,639,748. WATER HEATER. HENRY W. O'DOWD, Jersey City, N. J., assignor, by mesne assignments, to Standard Gas Equipment Corporation, Baltimore, Md., a Corporation of Maryland. Filed May 23, 1924. Serial No. 715,285. 8 Claims. (Cl. 122—14.)



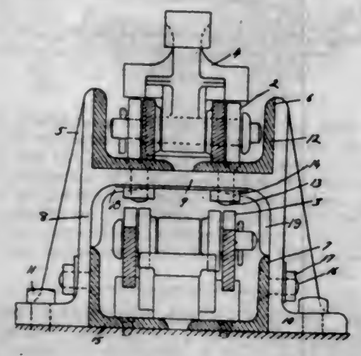
1. A water heater including in combination a cylindrical storage tank, a cylindrical casing surrounding and spaced from said tank and formed in one side with a

recess constituting a shallow segmentally-shaped combustion chamber, a cover for said chamber forming a curved continuation of the casing, a water circulating



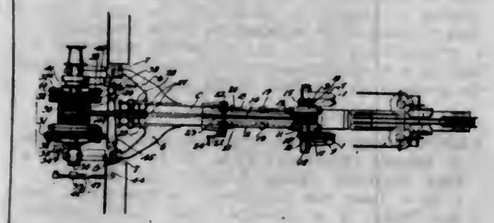
coil arranged in said chamber and contained wholly within the cylindrical contour of the casing and communicating at its ends with the interior of the tank, and means for generating heat in said chamber.

1,639,749. OILING TRAVELER OF SPINNING FRAMES. CLARENCE A. PIERCE, Lowell, Mass. Filed Sept. 18, 1926. Serial No. 136,207. 6 Claims. (Cl. 118—59.)



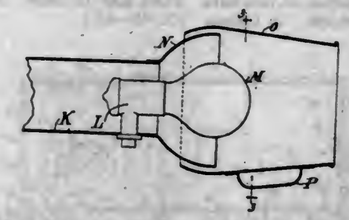
1. In an oiler for spinning ring travelers, the combination with a ring rail, of a plurality of spinning rings thereon, each having a traveler, an oil reservoir extending longitudinally of the ring rail, and a plurality of wicks each having one end immersed in the oil in the reservoir and the other end adjacent the path of a traveler.

1,639,750. MERCHANDISE-DISPLAY BOX. FRANK A. PORTMAN, Chicago, Ill. Filed July 5, 1924. Serial No. 724,202. 7 Claims. (Cl. 206—44.)



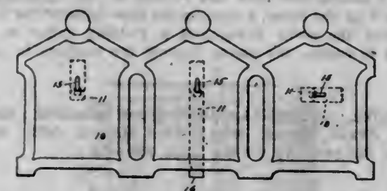
1. The combination with a box body, of a display top arranged to be supported thereon, said display top having an open end and being provided with depending sheets fitting within, contacting with and reinforced by the sides of the box, and a tray supported on said sheets in relation to said display top and removable through said open end.

1,639,751. CONVEYING APPARATUS. NORMAN H. PREBLE, Detroit, Mich., assignor to The Cecil R. Lambert Company, Inc., Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1923. Serial No. 667,386. 3 Claims. (Cl. 198—129.)



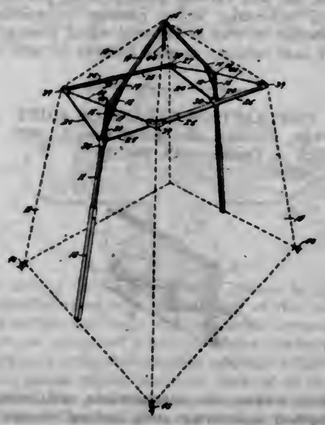
1. In a conveying apparatus, the combination with a sprocket chain, having upper and lower portions, of a standard having upright portions and an integral lateral portion connecting said upright portions intermediate their ends, a track for the upper portion of said chain supported by the lateral portion, a second track for the lower portion of said chain in engagement with the supporting surface for the standard, and means for positioning the second track including a web integral with said standard and having a downwardly extending projection engageable with said last mentioned track.

1,639,752. POWER SHOVEL. LESLIE A. RUSSELL, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Aug. 16, 1923. Serial No. 657,818. 22 Claims. (Cl. 214—135.)



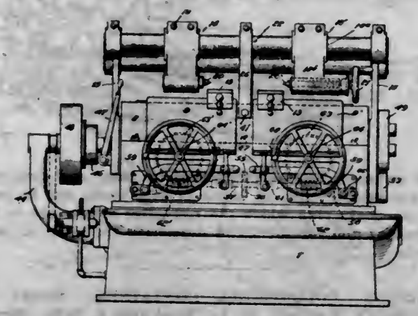
1. In a power shovel, in combination, a boom, a dipper shovel mounted thereon and comprising a handle, shipper mechanism mounted on said boom, cable thrust means cooperating with said shipper mechanism, and means for effecting bodily adjustment of the shipper mechanism relatively to the boom for taking up slack in the cable thrust means.

1,639,753. HAIR DRIER AND THERAPEUTIC LAMP. WILLIAM G. SHELTON, New York, N. Y. Filed Nov. 28, 1925. Serial No. 72,065. 2 Claims. (Cl. 174—177.)



1. In a device of the character described, a therapeutic lamp unit comprising a tubular member, a lamp socket mounted in said member, a reflector open at its rear carried by said member, and a second reflector carried by and movable with respect to the first reflector.

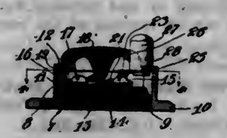
1,639,754. DISPLAY DEVICE. ALFRED JOS. SMITH, Mount Vernon, N. Y. Filed Mar. 3, 1926. Serial No. 91,909. 2 Claims. (Cl. 211—24.)



2. In a clamping and supporting device for display cards; a flexible metal strip having one end bent rearwardly and downwardly and terminating in a tongue of reduced width, said tongue bent forwardly through an opening formed in the body of the strip and upwardly after passing through said opening; and the other end of the strip extending downwardly and rearwardly to form a support for the card.

1,639,755. TENT. FRANK M. STOLL, Denver, Colo., assignor to Stoll Manufacturing Company, Denver, Colo. Filed June 18, 1925. Serial No. 37,965. 9 Claims. (Cl. 185—4.)

1. Means for supporting the covering of a tent having four sides and a top, comprising poles adapted to extend upward substantially on a medial line on two opposite sides of said tent; arms extending oppositely outward from each of said side poles to the four corners of said tent; poles connecting the extremities of said arms and adapted to support the remaining two sides and upwardly projecting truss arms carried by said side poles and adapted to support the top of said tent and means for tying the extremities of each pair of oppositely extending arms together.

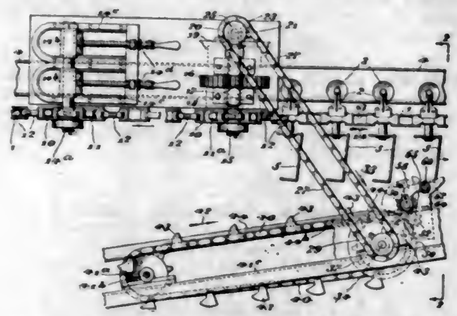


1,639,756. LATHE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor, by mesne assignments, to Sundstrand Machine Tool Co., Rockford, Ill., a Corporation of Illinois. Filed Nov. 17, 1922. Serial No. 601,469. 33 Claims. (Cl. 82—2.)

1. A lathe having a bed, an overarm rigidly supported above the bed near the forward edge thereof, a front tool carriage mounted upon the forward side of the bed, a rear tool carriage mounted upon the upper side of the bed, a pair of tail stocks suspended from the overarm above and in spaced relation to said carriages, and means also supported by the overarm and secured to the bed for engaging the work between its ends to rotate it.

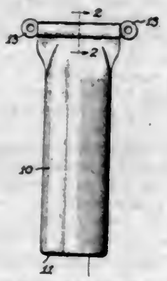
8. A lathe having a bed, a tool carriage mounted on the bed, means for rotatably suporting the work including a casing having an opening therethrough, an overarm carried by the bed and having said casing suspended therefrom, means carried by the casing adapted to clamp and engage the work to rotate it, a shaft mounted within the bed and extending longitudinally thereof, said casing having a depending part mounted on said shaft.

1,639,757. PUSH-BUTTON SWITCH. OLUF THESEN, Philadelphia, Pa. Filed Nov. 16, 1923, Serial No. 675,114. Renewed June 21, 1927. 4 Claims. (Cl. 200—5.)



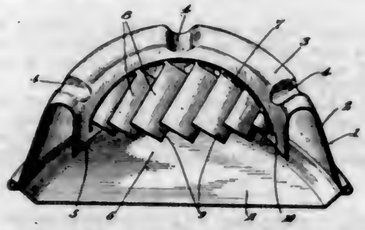
1. A push button switch including a casing; an insulating base within the casing; a stationary contact secured to the base; movable contacts secured to the base and adapted to engage the stationary contact; a main button slidable in the casing for moving one of the movable contacts, and an auxiliary button extending above the main button and slidable in a guide channel between the main button and casing for moving the other contact.

1,639,758. OVERHEAD LOADING MECHANISM. JERVIS B. WEBB, Detroit, Mich. Filed Feb. 12, 1925. Serial No. 8,607. 9 Claims. (Cl. 198—20.)



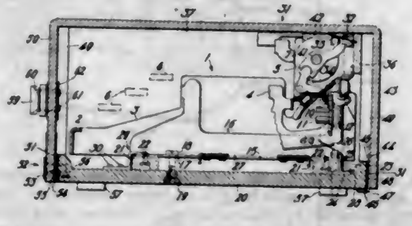
1. In overhead loading apparatus, the combination of an overhead endless traveling conveyer chain having supporting hooks depending at intervals therefrom, means

for elevating objects into position adjacent the line of travel of said supporting hooks, driving means intermediate the said conveyer and the said elevating means, means actuated by the said conveyer for actuating the said driving means to operate the said elevating means,



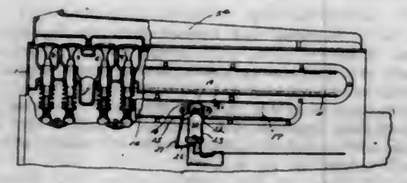
and means for removing said objects from said elevating means into the line of travel of said hooks and in rear of the hooks onto which the respective objects are to be deposited and for thereafter depositing the same on said hooks.

1,639,759. COLLAPSIBLE CONTAINER. SIDNEY S. WHELAN, Westbury, N. Y. Filed July 6, 1923. Serial No. 649,810. 1 Claim. (Cl. 229—66.)



In combination, a substantially tubular normally sealed container constructed of foil and adapted to be collapsed to conform to diminishing volumes of the contents, one end of said container being flattened, and folded upon itself, and a shearing device having a shearing portion enclosed by said flattened and folded end of said container wholly exterior of the container.

1,639,760. ASH RECEPTACLE. JOHN S. WISE, Jr., New York, N. Y. Filed Apr. 2, 1926. Serial No. 99,198. 2 Claims. (Cl. 131—51.)

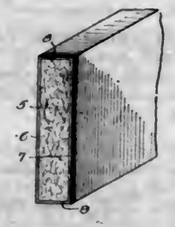


1. An ash receiver comprising a shell and a grating carried thereby having an obstruction to the vision through the same, comprising parallel overlapping bars having flanges depending therefrom, said flanges being inclined at an angle to the horizontal plane.

1,639,761. TYPEWRITING MACHINE AND CASE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 11, 1920. Serial No. 380,486. 10 Claims. (Cl. 45—52.)

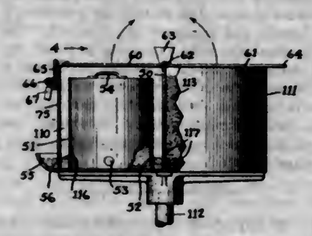
1. A casing to carry a typewriting machine including a platen carriage, a removable cover including sides for said casing, a base for the casing, an upturned rib extending around the margin of the base over which the sides of the cover fit, hooks on the cover to engage the base on the side parallel to carriage travel, corner stiffening pieces joining the sides and resting on the upturned rib to hold up the cover, a lock on the side opposite the hooks to hold the cover down, and a yielding buffer on the cover to engage the platen to hold the machine in place.

1,639,762. INTERNAL-COMBUSTION ENGINE. EDWIN R. EVANS, Detroit, Mich. Filed Mar. 5, 1923. Serial No. 623,048. 11 Claims. (Cl. 123—52.)



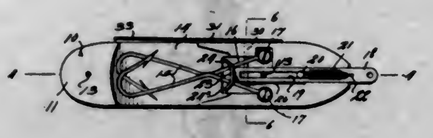
1. In an internal combustion engine, a cylinder block having a series of exhaust ports and an open sided longitudinally extending exhaust passage substantially entirely therewithin, the said exhaust passage being provided with a vertically extending water passage intermediate its ends, a deflector secured to the said water passage, and a closure for said exhaust passage secured to said cylinder block.

1,639,763. CONTRACTION EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 73,932. 6 Claims. (Cl. 94—18.)



1. A joint between concrete sections, comprising a vertically disposed separating strip having wooden dowels projecting from opposite sides thereof, the dowels on one side of the strip having a diameter greater than that of the diameter of the same dowels projecting from the opposite side of the strip.

1,639,764. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed Aug. 21, 1926. Serial No. 130,686. 7 Claims. (Cl. 94—18.)

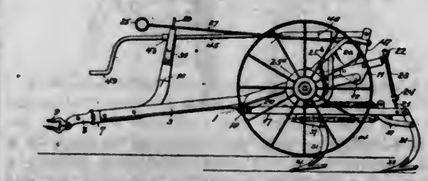


1. An expansion joint comprising a preformed compressible structure enclosed in a jacket of plaster which is permanently rigid after hardening.

1,639,765. TEE BOX. HAROLD A. FISHER, Denver, Colo. Filed Aug. 21, 1923. Serial No. 658,535. 7 Claims. (Cl. 273—32.)

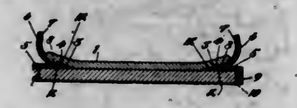
1. A tee box comprising in combination, a water receptacle, a sand receptacle in communication with said water receptacle below the water level, and means comprising a water reservoir for automatically supplying water to said water receptacle when the water in the latter descends below a predetermined level.

1,639,766. FISH LURE. HARRY L. FISHER, Muscatine, Iowa. Filed Mar. 15, 1927. Serial No. 175,589. 7 Claims. (Cl. 43—35.)



1. A fishing lure comprising a hollow body having a slot communicating with the interior of the body, a hook pivoted within the body and swingable outward through said slot to projected position, means constantly urging the hook to a retracted position entirely within the body, a sliding shank within the body adapted to be connected to a fishing line and engaging the hook and causing the projection of the hook through said slot when strain is placed upon the line and the shank is shifted relative to the body in one direction, means latching the sliding shank in a retracted position, and means acting to release the latching means when a fish has grabbed the lure.

1,639,767. BOW TIE. LOUIS FRIEDMAN, New York, N. Y. Filed July 14, 1924. Serial No. 725,815. 1 Claim. (Cl. 2—151.)

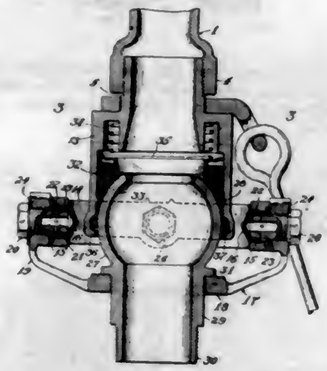


In a ready-made bow tie, the combination with an outer cover, of a lining disposed within the outer cover, and a stiffening member of zig-zag formation interlaced in the lining.

1,639,768. CULTIVATOR. ARTHUR D. GALLAGHER, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed July 23, 1924. Serial No. 727,743. 3 Claims. (Cl. 97—184.)

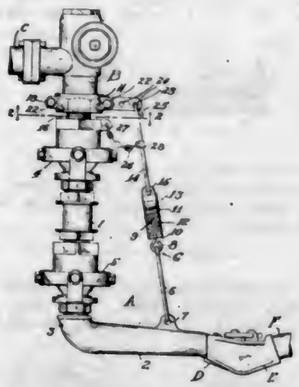
1. In a cultivator, the combination with a frame, of two cultivator gangs, both connected with the forward portion of said frame, each gang unit including a beam portion and a standard portion pivoted to the beam portion, and spring tripping mechanism between the beam portion and the standard portion of each gang unit, the springs of the tripping mechanism for the rear gang units being located under the beam portions thereof and the springs of the front gang units being located above the beam portions thereof.

1,639,769. SHOE-BOTTOM CONSTRUCTION. LORENZO H. GILSON, Brockton, Mass. Filed Feb. 14, 1923. Serial No. 618,944. 4 Claims. (Cl. 36—43.)



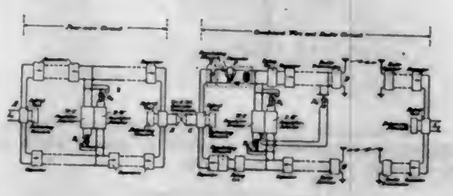
1. In combination with a shoe having a channeled innersole presenting a triangular open channel, a strip of triangular cross section and uniform from end to end filling said channel.

1,639,770. INNERSOLE CHANNEL FILLER. LORENZO H. GILSON, Brockton, Mass. Filed Apr. 26, 1924. Serial No. 709,171. 4 Claims. (Cl. 36—43.)



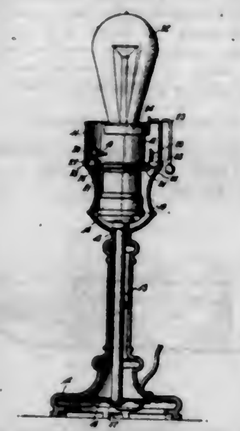
4. The method of making an innersole channel filler strip which comprises securing together layers of grain leather to from a continuous length of two ply material, the flesh sides of the plies being in contact, and cutting the length along a diagonal to form a pair of filler strips each of triangular cross section each edge of which is from the grain side portion of the leather.

1,639,771. FLEXIBLE JOINT. EGBERT H. GOLD, Evanston, and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor of his one-half to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed Mar. 17, 1922, Serial No. 544,448. Divided and this application filed Mar. 18, 1926. Serial No. 95,805. 3 Claims. (Cl. 285—93.)



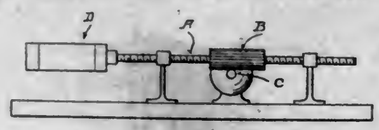
1. In combination with the articulated elements of a flexible metallic conduit, a pivot construction forming a part of said articulation comprising a bushing set into one of said elements, the inner end of which is closed, and a pivot stud secured to the other element and projecting into said bushing, the pivot stud being provided with lubricant ducts leading from the inner end of the same to the bearing surfaces of said stud and bushing.

1,639,772. SUSPENSION DEVICE FOR FLEXIBLE JOINTS. EGBERT H. GOLD, Evanston, and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor of his one-half to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Mar. 18, 1926. Serial No. 95,806. 14 Claims. (Cl. 285—7.)



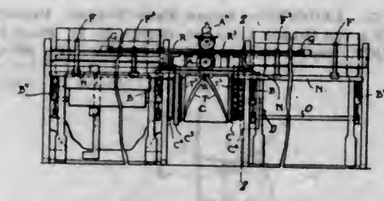
1. In a flexible metallic conduit structure adapted, when coupled with another conduit structure, to make the connection between the train pipes on adjacent cars of a railway train, the combination of a plurality of tubular elements flexibly articulated, and a flexible supporting member for holding up the lower outwardly projecting portion of said structure when uncoupled, said supporting member being attached at its lower end to the outer end of the structure, and a supporting bracket for the upper end of the flexible supporting member comprising an arm projecting outwardly above the outwardly projecting portion to a point substantially over the center of gravity of the conduit structure, the flexible supporting member being attached to the outer end of this arm.

1,639,773. TWO-WAY TELEPHONE TRANSMISSION. HAROLD S. HAMILTON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 24, 1926. Serial No. 150,496. 2 Claims. (Cl. 250—6.)



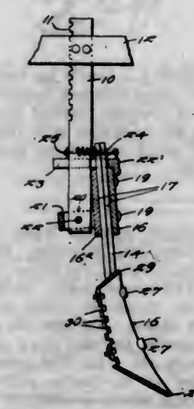
1. In a two-way telephone system including a four-wire circuit having two paths adapted for transmission in opposite directions and a combined wire and radio circuit having outgoing and incoming wire paths connected to said four-wire circuit, the method of preventing the application of static and noise to the four-wire circuit which consists in disabling said incoming path of the combined wire and radio circuit in response to currents of a predetermined value in said outgoing path, and regulating the currents entering said outgoing path so that they will have the predetermined value whatever may be the strength of the voice currents applied to said path from the four-wire circuit.

1,639,774. PORTABLE REGULATABLE LAMP. WILLIAM A. HARVEY, Scranton, Pa. Filed July 2, 1923. Serial No. 649,148. 2 Claims. (Cl. 240—1.)



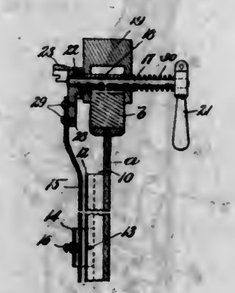
1. In an electric lamp, the combination of a housing; a standard socket rigidly mounted in said housing; a regulatable socket having a member removably received in said standard socket, and a regulating member oscillatably mounted thereon, said first named member being provided with a projecting arm; and anchoring means rigid with said housing and standard socket, engaging said arm to prevent the unintentional disengagement of said first named regulating socket member from said standard socket.

1,639,775. FILM-PIERCING SPARK UNIT. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Jan. 2, 1925. Serial No. 221. 1 Claim. (Cl. 178—18.)



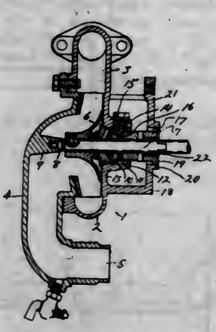
The combination of a rotating cylinder, a threaded shaft to rotate and to advance said cylinder, a wide-faced gear for rotating said shaft, said gear having a face equal to the longitudinal movement of said shaft.

1,639,776. LOOM FOR WEAVING. EDGAR KILNER, Manchester, England. Filed June 17, 1924, Serial No. 720,534, and in Great Britain June 28, 1923. 5 Claims. (Cl. 139—127.)



1. The combination with a loom, of a traversing member movable to and fro across the running board of the loom, means carried by said member for automatically gripping, and cutting a thread and carrying the same across the running board of the loom, and means for operating said traversing member.

1,639,777. CULTIVATOR ATTACHMENT. OSCAR J. LEWIS, Canton, Ill. Filed Oct. 21, 1926. Serial No. 143,233. 2 Claims. (Cl. 97—184.)

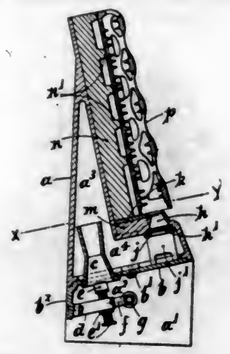


1. In an attachment for cultivators, a standard having means whereby it may be vertically adjustably connected with the frame bar of a cultivator, a transversely extending tine support pivotally connected at its rear face in spaced relation to its upper edge with the lower end of the standard and a spring connection between the upper edge of the tine support and standard normally maintaining said upper edge in engagement with the standard, a guide secured to the tine support and extending rearwardly therefrom, said guide having a slot within which said standard operates.

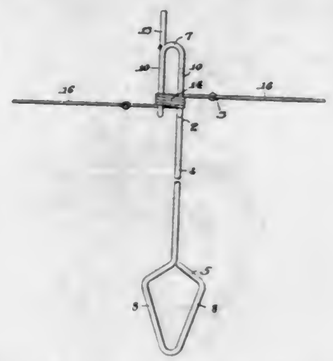
1,639,778. WINDOW WIPER. ERNEST P. LOCKE, Boston, Mass. Filed July 23, 1926. Serial No. 124,376. 1 Claim. (Cl. 15—255.)

A window wiper comprising a wiping member for engaging the glass of a window, a shaft to which said wiping member is secured, a hub through which said shaft is extended and in which it is capable of rotary and axial movements, a plate attached to said hub and provided with a substantially semi-circular flange having a notch, and a lug attached to and movable with the wiping member and adapted to enter said notch when the said shaft is moved axially and rotated to thereby lock the latter against rotation.

1,639,779. PUMP. EARLE S. MACPHERSON, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed July 14, 1924. Serial No. 725,976. 6 Claims. (Cl. 308—134.)



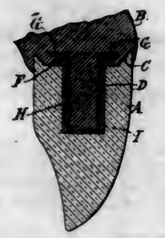
1. In a pump, the combination with the body having spaced inner and outer walls provided with aligned openings and a rotor shaft extending through said openings, of packing within the opening of said inner wall and surrounding said shaft, and a nut having an inner portion carried by said inner wall and an outer portion fitting in the opening in said outer wall, said nut being insertable through the opening in said outer wall and forming a bearing substantially in the plane of said outer wall in which said shaft is journaled.



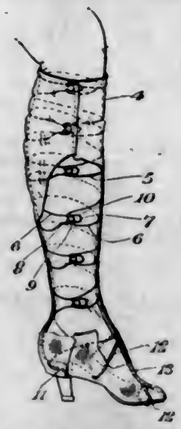
1,639,780. INCANDESCENT GAS FIRE. JOHN MULHOLLAND, Whitley Bay, England. Filed Feb. 14, 1927, Serial No. 167,973, and in Great Britain Feb. 25, 1926. 4 Claims. (Cl. 126—92.)

1. An incandescent gas fire comprising a hollow support of L-section, a refractory back plate in front of the upright portion of said hollow support, burners along the

upper face of the forwardly-projecting portion of said hollow support, upstanding radiants disposed over said burners in front of said refractory back plate, an upright inductance tube carried by said hollow support, the upper end of said inductance tube extending into the upright portion of said hollow support to a height above that of the angle between the upright and forward portions thereof, and means for supplying gas to said induction tube.



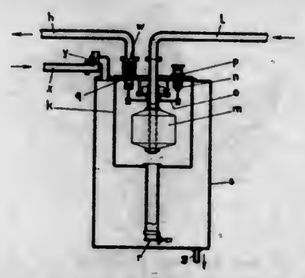
1,639,781. PLANT SUPPORT. OTTO A. MÜLLER, Ambler, Pa. Filed Dec. 16, 1925. Serial No. 75,714. 4 Claims. (Cl. 47—47.)



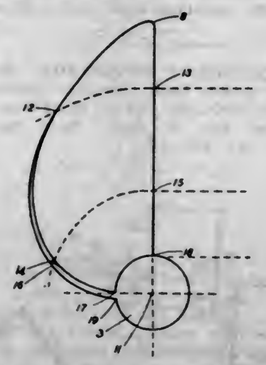
1. In a plant support, the combination of a standard having two upwardly extending projections each of a width greater than the thickness thereof and one being set substantially at right angles to the other, and a plant supporting member having an elongated loop constructed to surround and engage either projection of the standard and to be thereby supported and prevented from turning.

1,639,782. ARTIFICIAL DENTURE. FREDERICK HAROLD NIES, Brooklyn, N. Y. Filed Mar. 17, 1924. Serial No. 699,923. 13 Claims. (Cl. 32—9.)

1. A post for artificial teeth, comprising a substantially tubular member adapted to enter a socket in the tooth, said tubular member having near its outer end a transversely extending part adapted to project beyond the base of the tooth so as to permit the material of the plate to pass beneath it whereby such part becomes embedded in the plate, and forms an anchorage for the tooth, a portion of such transversely extending means being adapted to hold the post with a portion of such part separated from the base of the tooth.



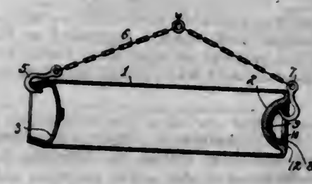
1,639,783. LEGGING. FOLKE FRED NORDEN, Brooklyn, and WALTER GILSON LOAN, St. George, N. Y. Filed Feb. 17, 1927. Serial No. 169,036. 6 Claims. (Cl. 36—2.)



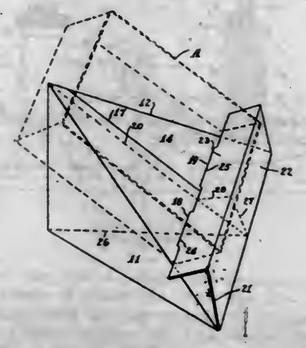
6. A legging comprising a flexible leg and shoe covering and a resilient wire frame attached thereto consisting of a connected series of openable resilient leg, toe and heel embracing members all collapsible with the covering into a substantially flat bunch or package around the ankle or for transportation.

1,639,784. CHARGING DEVICE FOR COMBUSTION MACHINES. FERDINAND PORSCHE, Stuttgart-Unterturkheim, Germany, assignor, by mesne assignments, to Daimler-Benz Aktiengesellschaft, Berlin, Germany. Filed Jan. 14, 1925, Serial No. 2,458, and in Germany Apr. 30, 1923. 1 Claim. (Cl. 158—36.1.)

A fuel feeding system for that type of auto vehicle construction in which the main fuel reservoir is lower than the carburettor of the engine and in which the normal vacuum in the intake manifold is intermittently changed to over-pressure by the use of a supercharger, comprising, a vacuum tank communicating with a main fuel reservoir, an auxiliary tank communicating with the carburettor of the engine, said auxiliary tank being in one-way communication with said vacuum tank to receive fuel from the latter, a conduit connecting said vacuum tank with a region of the engine in which the normal vacuum alternates with overpressure from the supercharger when the latter is operated, a conduit connecting said auxiliary tank with a region of the engine subject to over-pressure of the supercharger, and a check valve in said first named conduit operative upon the simultaneous application of over-pressure to both said conduits, to close said first named conduit against communication with the main fuel reservoir.

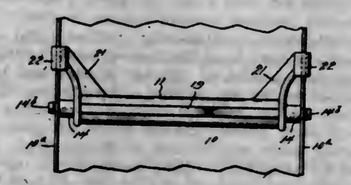


1,639,785. PROPELLER. BENJAMIN URZÚA SEPÚLVEDA, Santiago, Chile. Filed Jan. 16, 1923. Serial No. 612,909. 5 Claims. (Cl. 170—159.)



1. A helical propeller blade having its maximum propelling surface near the hub end, the leading edge of the blade being in a straight line extending radially from one end of the hub and the exit edge being in a line extending helically from the opposite end of the hub and intersecting the leading edge at a point approximately in a line passing through the longitudinal center of the hub.

1,639,786. GRIPPING MEMBER FOR CYLINDERS. JOSEPH A. STEINMETZ, Philadelphia, Pa. Filed Sept. 22, 1923. Serial No. 664,287. 3 Claims. (Cl. 220—3.)

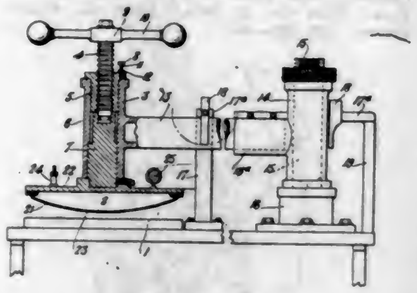


1. A seamless drawn steel cylinder having a body portion and an integral drawn head closing one end of the cylinder, said head provided with a recess extending inwardly beyond the plane of the end of the body portion, and a handle secured upon said head located entirely within said recess.

1,639,787. VENDING DISPLAY SUPPORT. EDWARD O. TINSLEY, New York, N. Y., assignor to Robert Gair Company, New York, N. Y., a Corporation of New York. Filed Oct. 2, 1925. Serial No. 60,060. 12 Claims. (Cl. 211—24.)

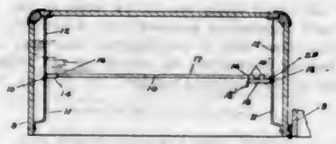
1. In a display support formed by folding a blank, in combination, a triangular back for superposing the display support on a plane surface, triangular side walls each foldably connected along one of their sides to the back and supported thereby, an upwardly extending and rearwardly inclined triangular display face foldably connected along two of its sides to the sides of the side walls opposite to their sides of connection to the back and supported by the side walls, the display face being free at its base, a supporting member foldably connected along one of its sides to the base of the back, and a ledge foldably connected along one of its sides to the opposite side of said supporting member and detachably engageable on its other side to the display face near the base of said face or supporting an article on the ledge at the inclination of and bearing against the display face.

1,639,788. DEVICE FOR LIFTING ICE CANS. MICHIEL J. ULINE, Toledo, Ohio. Filed Jan. 31, 1927. Serial No. 164,878. 7 Claims. (Cl. 294—81.)



2. In a device of the kind described, a lifting bar having bolts at their opposite ends for engagement with the opposite sides of an ice can, and arms rigid with the lifting bar and having hooks at their ends for engagement with the edges of the can at points spaced from the engagement of the bolts with the sides of the can.

1,639,789. PRINTING APPARATUS. GEORGE HENRY WALTERS, Bristol, England, assignor of one-half to George Mann and Company Limited, London, England. Filed Jan. 18, 1927, Serial No. 161,778, and in Great Britain Jan. 20, 1926. 6 Claims. (Cl. 101—41.)

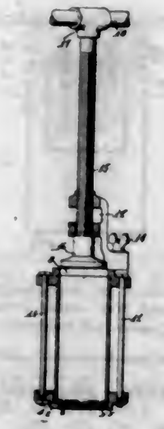


1. A printing apparatus comprising a hollow resilient pad adapted to be distended by fluid and adapted to be

pressed alternately upon a flat printing surface so as to receive an impression of the printed matter and upon a flat surface to which the impression is to be transferred, means for correctly aligning the pad with the printing surface and the receiving surface so that successive

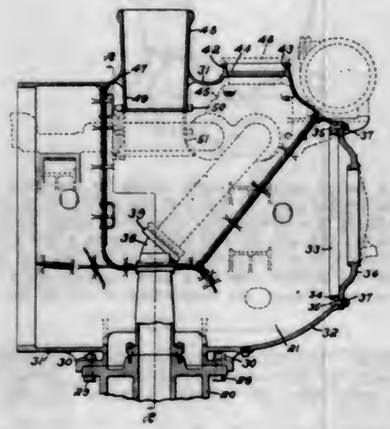
impressions received and applied by the pad correspond accurately with each other, and means to ensure that the pressure applied for transferring the printing matter to the pad corresponds with the pressure applied in transferring the printing matter from the pad to the surface to which the impression is to be transferred.

1,639,790. GARMENT RETAINER. GEORGE HENRY WHEARY, Racine, Wis., assignor to Wheary Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed June 18, 1921. Serial No. 478,587. 1 Claim. (Cl. 190—36.)



The combination with a pair of spaced guide members having spaced openings forming locking shoulders, a bar member extending longitudinally between said guide members, an integral band like locking member extending around one end portion of the bar member and having with relation to the bar member a fixed forwardly projecting bolt formed with an outwardly extending hook shaped end which extends into one of the bolt openings of the adjacent guide member and is disengageable therefrom only by forwardly swinging motion of the bar member, the openings engaged being of less diameter than the length of the hook portion another integral band like locking member extending around the opposite end of the bar member and having guide fingers which engage the upper and lower edge portions of the adjacent guide members, and a spring actuated bolt member yieldingly mounted in said last mentioned locking member and extending between the fingers and entering one of the openings of the adjacent guide member

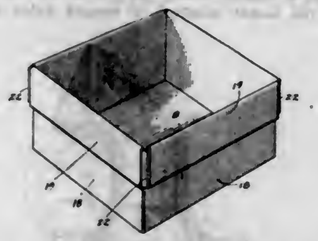
---



1,639,791. PRESS. RAFFAELE BACCELLIERI, Philadelphia, Pa. Filed May 7, 1925. Serial No. 28,611. 4 Claims. (Cl. 107—14.)

3. A press including an attaching head having an opening and counter-bore, a die head having an opening and a counter-bore, a cylinder having its ends in the counterbores clamped between the heads and communicating with the openings, the opening of the die head being of less diameter than the cylinder to provide a

shoulder, a die resting on the shoulder, a piston bracket mounted on the attaching head, and a piston in the bracket.

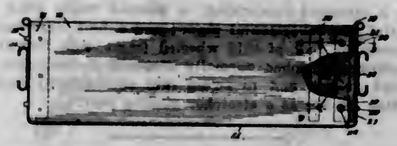


1,639,792. LOCOMOTIVE SMOKE BOX. WILLIAM L. BEAN, West Haven, Conn. Original application filed Mar. 5, 1925, Serial No. 13,242. Divided and this application filed Nov. 19, 1926. Serial No. 149,377. 18 Claims. (Cl. 105—37.)

1. A locomotive smoke-box comprising a casting having a circumferential wall which is thickened at its lower part where the products of combustion travel along the internal surface of said wall toward the stack.

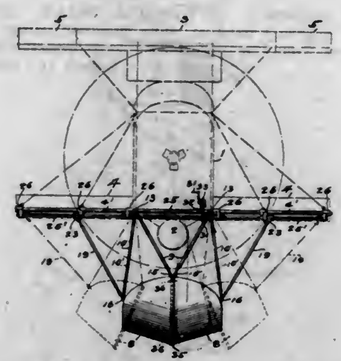
1,639,793. BOX. ALFRED H. BEYER, Cleveland, Ohio. Filed Aug. 11, 1926. Serial No. 128,675. 1 Claim. (Cl. 229—30.)

A box comprising a bottom, sides integral with said bottom and upturned therefrom, a flat band in the form of a closed loop around said sides and adjacent the upper part thereof, said band having a width less than the height of the sides, and extensions integral with said sides folded around the upper and lower edges of said band and extending from the lower edge of said band



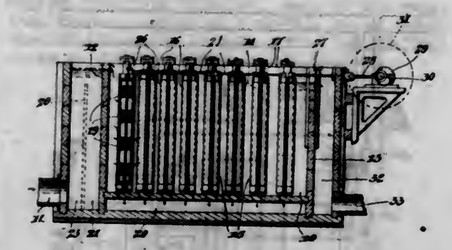
sufficiently upward between the band and the sides to hold the band in place without the use of fastening means, said box being of cardboard.

1,639,794. SPINNING, TWISTING, AND LIKE FRAME. THOMAS ALEXANDER BOYD, HAROLD ARTHUR BOYD, and JAMES BOYD, Glasgow,, Scotland. Filed Sept. 4, 1925, Serial No. 54,440, and in Great Britain Dec. 5, 1924. 3 Claims. (Cl. 118—51.)



1. In a flyer spinning or like frame, in combination, a rotatable bobbin, a rotatable bobbin carrier to support said bobbin laterally, said carrier supported entirely independently of said bobbin and having no driving connection with said bobbin, a flyer mounted separately from said carrier, means independent of said bobbin for transmitting rotation positively to said carrier and means for effecting traverse of said carrier and bobbin relatively to said flyer without longitudinal movement of said bobbin relatively to said carrier.

1,639,795. ADJUSTABLE PARTITION. JAMES R. CLARK, Rochester, N. Y., assignor to Yawman & Erbe Manufacturing Co., Rochester, N. Y., a Corporation of New York. Filed Sept. 5, 1925. Serial No. 54,626. 5 Claims. (Cl. 45—7.)

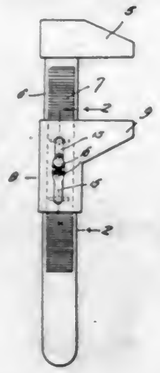


1. The combination with a drawer having spaced apertures in the sides thereof, a double walled partition member having lugs fixed at one end and adapted to project through the apertures in one side, a bar slidable between the walls of said partition member and having lugs adapted to project into apertures in the other side, and resilient means tending to hold the slidable bar in engagement with the side of the drawer.

1,639,796. AIRCRAFT. CLEM H. CORGDON, Cleveland, Ohio. Filed Feb. 28, 1927. Serial No. 171,477. 10 Claims. (Cl. 244—2.)

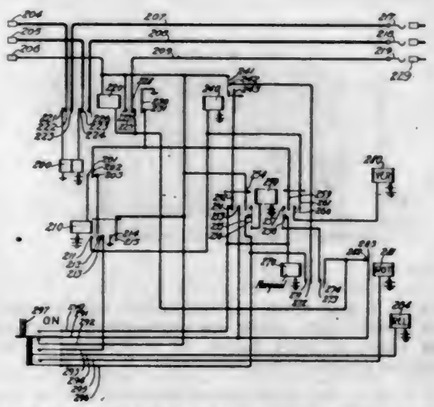
4. In combination with an aircraft, a central divisible float, laterally extending oppositely threaded shafts, guide fittings operable on the shafts, and means for imparting motion to the fittings along the shafts whereby the float is caused to divide.

1,639,797. PULP SCREEN. JOHN ARTHUR DICKINSON, East Angus, Quebec, Canada. Filed May 3, 1926. Serial No. 106,485. 17 Claims. (Cl. 92—29.)



1. In a pulp screen the combination with a tank or vat provided with intake and discharge pipes and having adjustable weirs therein, of a series of pivotally mounted screening units intermediate of said weirs.

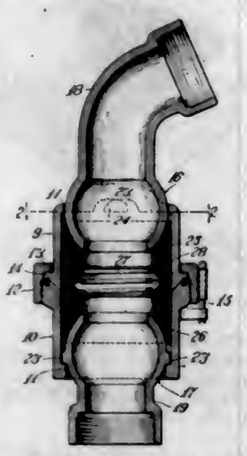
1,639,798. WRENCH. FRANK DOMINELLI, Olean, N. Y. Filed May 20, 1926. Serial No. 110,456. 1 Claim. (Cl. 81—145.)



In a wrench of the class described, a handle, a stationary jaw formed on one end thereof, there being transversely extending spaced teeth formed on one side of the handle, a jaw carrying sleeve slidably mounted on the handle, said sleeve having transversely arranged sockets formed in one side thereof adjacent its upper and lower ends, said sockets communicating at their inner ends with the bore of the sleeve, an annular flange in the outer end portion of each socket, a pin arranged in each socket, a bevelled head on the inner end of each pin, a coil spring encircling each pin and disposed between the bevelled head on the inner end of the pin and the annular flange in the respective socket for normally holding the bevelled heads of the pins in engagement with the teeth of the handle, means upon the outside of the sleeve for moving the pins out of engage-

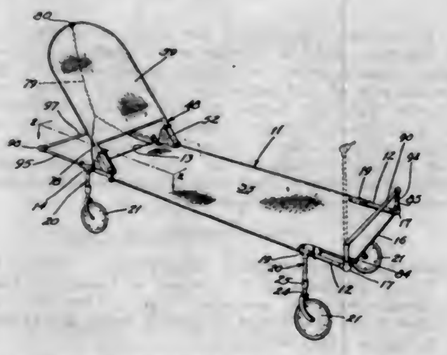
ment with the teeth, said means comprising a pair of metallic strips secured at their outer ends to the respective pins, the outer end portions of the strips en-

gaging the respective annular flanges in the sockets, said strips being bent outwardly at their inner ends in order that the same may be rocked upon the sleeve.



1,639,799. AUTOMATIC TELEPHONE SYSTEM. OTTO A. FRIEND, New York, N. Y., and GEORGE E. DUSTIN, Woodcliff, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 24, 1923. Serial No. 670,558. 7 Claims. (Cl. 179—18.)

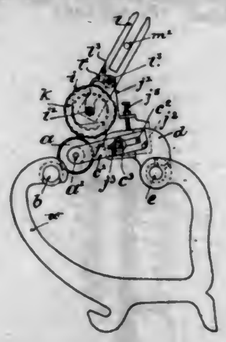
1. In a digit absorbing selector having a primary movement in response to more than one series of impulses and an automatic secondary movement, means for dissipating the first series of impulses, a relay, a circuit for operating said relay after the first series of impulses received by said selector has been dissipated, a magnet, and a circuit controlled by said relay for closing the circuit of said magnet so that the subsequent series of impulses will initiate the primary movement of the switch.



1,639,800. FLEXIBLE JOINT. LAWRENCE H. GILLICK, St. Paul, Minn., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed July 26, 1920, Serial No. 398,882. Divided and this application filed July 2, 1925. Serial No. 41,052. 12 Claims. (Cl. 285—92.)

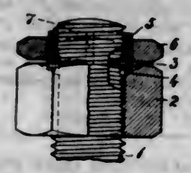
1. A flexible joint comprising two internally cylindrical socket members, a ball member in the outer end of each socket member, means for preventing withdrawal of the ball members through the outer ends of the socket members and serving to permit a limited swinging motion and a limited rotary motion of the ball members within the socket members, a flanged union secured by

screw threads upon one of said socket members and embracing a flange upon the other socket member for securing said two members detachably together, and gaskets slidably mounted between said ball members and movable in opposite directions into contact with the ends of said ball members respectively.



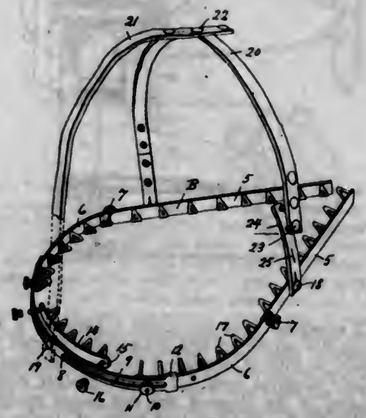
1,639,801. STRETCHER. WILLIAM H. HEISE, Los Angeles, Calif. Filed May 9, 1925. Serial No. 29,051. 4 Claims. (Cl. 296—20.)

1. A stretcher comprising: a wheeled frame lying substantially in a horizontal plane; and a foot frame mounted upon the foot of said wheeled frame, said foot frame including a member normally disposed horizontally and pivoted at one end to swing into substantially vertical position for use as a stretcher guiding post.



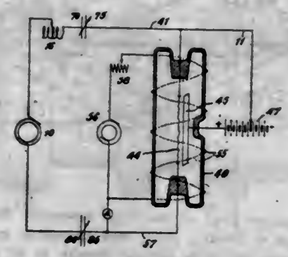
1,639,802. DETACHING ROLLER OF COMBING MACHINES FOR COMBING COTTON AND OTHER FIBROUS MATERIALS. NORMAN JONES and STANLEY JONES, Bolton, England. Filed Nov. 2, 1926, Serial No. 145,763, and in Great Britain Nov. 13, 1925. 3 Claims. (Cl. 19—140.)

1. In connection with the detaching rollers of combing machines, the employment of a revolving stripping clothed roller co-operating with a revolving clearer roll, and means to positively and automatically actuate the re-



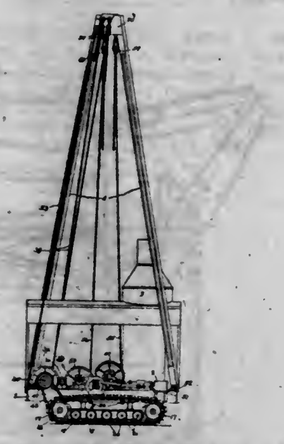
volving stripping clothed roller to strip the revolving clearer roll, the waste being stored on the revolving stripping clothed roller.

1,639,803. NUT LOCK. GUSTAF EMIL JONSSON, Halmstad, Sweden. Filed Feb. 1, 1926, Serial No. 85,293, and in Sweden Feb. 4, 1925. 2 Claims. (Cl. 151—19.)



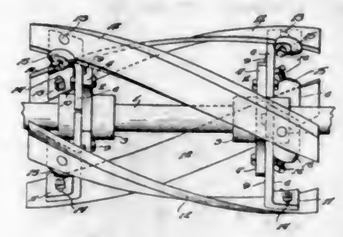
1. In a work holding nut with a nut-lock, recesses in the upper flat end of said work nut, a split ring with inside threads of the same size and pitch as those of said work nut and with outside threads on a substantially conical surface co-acting with a locking nut with corresponding threads, the split ring being provided with projections co-acting with said recess in said work nut.

1,639,804. HAIR-BOBBING DEVICE. FELIX LEWIS, St. Petersburg, Fla. Filed Sept. 20, 1926. Serial No. 136,575. 3 Claims. (Cl. 132—45.)



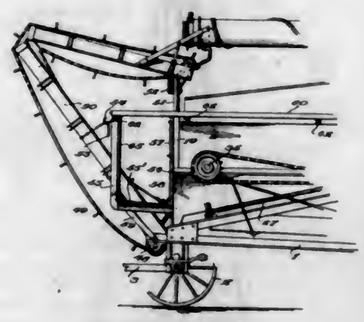
1. A hair bobbing device comprising a pair of side bands divided into sections, a back section adjustably connected to the side sections, a harness associated with the bands, and a plurality of teeth projecting inwardly from the band.

1,639,805. RADIO APPARATUS. FREDERICK S. MCCULLOUGH, Cleveland, Ohio, assignor to Glenn L. Martin, Cleveland, Ohio. Filed Jan. 9, 1920. Serial No. 350,362. 11 Claims. (Cl. 250—27.)



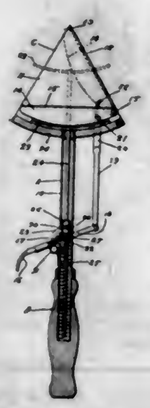
1. In a radio apparatus, the combination of a filament, a glass-like wall surrounding said filament, means for heating the filament; means for heating the wall; said filament and heating means constituting electrodes of an electrical circuit.

1,639,806. TRACTOR SKIDDER. JOHN R. MCGIFFERT, Duluth, Minn., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Oct. 19, 1921. Serial No. 508,989. 9 Claims. (Cl. 254—145.)



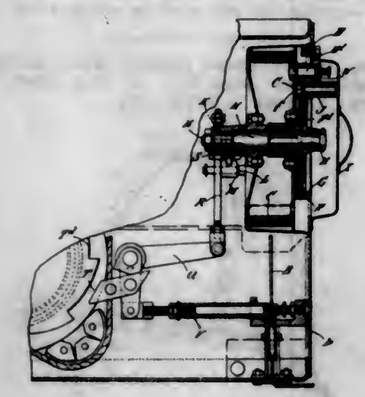
1. In a machine of the character described, the combination with a portable base frame of general rectangular form; of a boom mounted thereon, said boom consisting of two legs inclining toward each other and connected at their upper ends, the lower ends of said legs being attached to said frame at diagonally opposite corners.

1,639,807. CUTTER HEAD. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed Dec. 13, 1924. Serial No. 755,689. 3 Claims. (Cl. 146—106.)



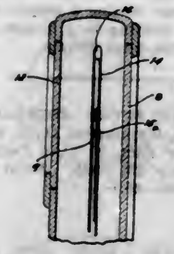
3. In a cutter head of the type described, heads to be secured upon a driving shaft and including radially extending spokes, brackets having shanks to be detachably secured to transverse sides of the spokes of the heads with their inner ends resting upon the hubs of the heads, seats at the outer ends of the brackets extending laterally with respect to the brackets and curved circumferentially with respect to the hubs of the heads, and cutter members resting at their ends upon and secured to said seats, the brackets being of different lengths and interchangeable whereby a cutter or a shredder may be used without changing the radius of the circle described by the cutting edge.

1,639,808. CONVEYER. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Original application filed Nov. 29, 1924, Serial No. 753,007. Divided and this application filed Apr. 13, 1926. Serial No. 101,795. 3 Claims. (Cl. 198—115.)



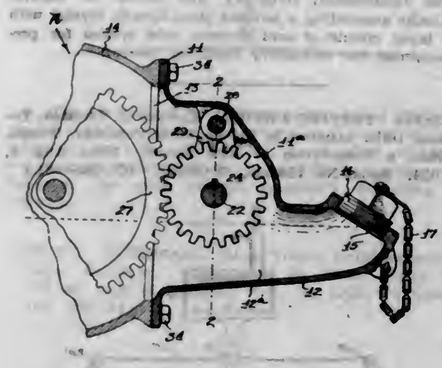
1. In a corn-husking machine, the combination of a frame, an ear conveyer mounted for rocking movement in a vertical plane at the front end of the frame, platform-supporting arms secured to the front end of the frame and projecting forwardly therefrom beyond the lower end of the conveyer and then upwardly, and flexible conveyer-supporting members attached to the upwardly extending portions of said arms and engaged with the conveyer, the conveyer passing between said arms when in raised position.

1,639,809. ICE-CREAM SCOOP. GEORGE T. PARR, St. Paul, Minn., assignor to Parr Pie Company, a Corporation of Minnesota. Filed May 1, 1922. Serial No. 557,502. 6 Claims. (Cl. 107—48.)



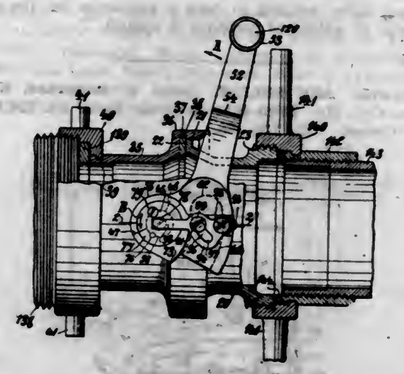
1. An ice cream cutter including a cutter adapted to cut and receive a layer of ice cream, a handle member, means for supporting said cutter to said handle, and means for cutting ice cream from the walls of said cutter, means for ejecting the ice cream after it is free from adherence to said cutter.

1,639,810. DEPTH-SETTING GEAR FOR SUBMARINE MINES. HARTLEY BLYTH PRATT, Barrow-in-Furness, England, assignor to Vickers Limited, London, England, a British Company. Filed Jan. 5, 1926, Serial No. 79,340, and in Great Britain Jan. 7, 1925. 8 Claims. (Cl. 102—3.)



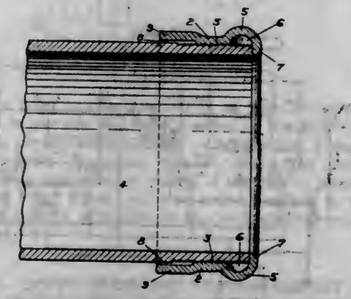
1. A submarine mine comprising a plummet, a drum, a plummet line wound on said drum and connected to said plummet, a pair of contiguous members adapted to be angularly displaced relatively to one another during the unwinding of the plummet line and means brought into operation after a predetermined degree of relative angular displacement of the said members for stopping the paying out of the plummet line.

1,639,811. WEIGHING SCALE. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 13, 1924. Serial No. 737,603. 5 Claims. (Cl. 116—129.)



3. In a device of the class described, in combination, a relatively movable chart and indicating hand, a portion of said chart bearing value computations and lying back of a cooperating portion of said indicator hand, an offset portion of said hand having surfaces lying in the plane of the surfaces of the chart and adjacent one edge thereof, and a series of weight indicia adjacent one edge of said chart adapted to co-operate with indicia on the surfaces of offset portion of said indicating hand.

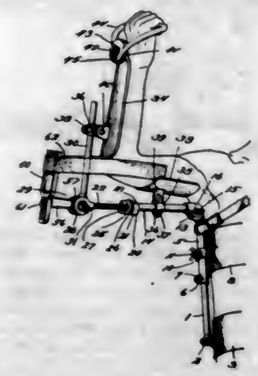
1,639,812. POWER TAKE-OFF DEVICE. HENRY J. RIACH, St. Paul, Minn., assignor to Grant Waldref, St. Paul, Minn. Filed Nov. 24, 1922. Serial No. 603,130. 1 Claim. (Cl. 74—7.)



In combination with a transmission gear and a gear casing therefor having a hand opening in one side near the bottom thereof, a closure for said opening forming a housing, a take-off shaft journaled in said housing, a driven gear mounted on said shaft adapted to mesh with said transmission gear, said driven gear being arranged to one side of said transmission gear with the lowermost portion thereof positioned above the lowermost portion of said transmission gear, and a spout formed on said closure communicating with said housing, a filler neck formed on said spout, the bottom of said spout extending below said driven gear and inclining towards said hand opening for successively conducting lubricant deposited therein from one gear to the other, said neck being positioned below said take-off shaft.

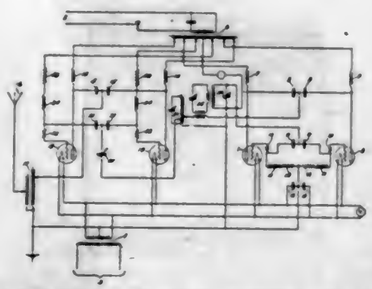
1,639,813. HOSE COUPLING. RALPH SCHAWROW, Bayonne, N. J., assignor to National Standard Threadless Coupling Corporation, Rockaway Park, N. Y., a Corporation of New York. Filed June 16, 1925. Serial No. 37,450. 2 Claims. (Cl. 285—172.)

1. In a coupling the combination of a male member and a female member, a pair of journal lugs extending from one of said members, a pair of clamping lugs extending from the other member, a locking head supported on each of said journal lugs, each of said locking heads having a curved wall adapted to coact with one of said clamping lugs, to clamp or disengage the members of the coupling, a ratchet wheel fastened to one of the journal lugs in one of the locking heads, a locking latch slidably supported in the latter head adapted to lock with the teeth of the ratchet wheel, a spring in the latter head bearing against the locking latch to force it into engagement with said ratchet wheel, an operating handle for said latch with one end thereof pivoted to its locking head, said handle having a curved guide opening formed therein, and a guide screw extending from said locking latch through the guide opening in said handle.



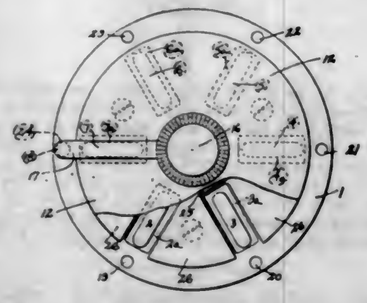
1,639,814. THREAD PROTECTOR. PETER J. SHRUM, Monaca Heights, and HAROLD A. HENIGEN, Rochester, Pa., assignors to Colona Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed July 15, 1922, Serial No. 575,167. Divided and this application filed June 29, 1923. Serial No. 648,493. 3 Claims. (Cl. 137—91.)

2. A pipe thread protector consisting of a metallic sleeve having an interiorly threaded intermediate cylindrical portion adapted to be screwed onto and protect the intermediate portion of the pipe threads to be protected, a skirt at one end of said threaded portion adapted to extend over threads to be protected and out of engagement therewith and having an inside diameter



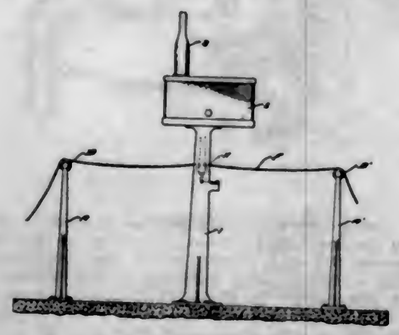
at its mouth which is materially greater than the outside diameter of the pipe whereby the skirt of the protector may be readily applied over the end of the pipe preliminary to screwing the protector onto the threads, and an outwardly flared terminal portion at the other end of the intermediate portion terminating in an inturned flange adapted to form a protection for the end of pipe to which the protector is applied.

1,639,815. ARM SPLINT. JOHN R. SIEBRANDT, Kansas City, Mo. Filed June 30, 1924. Serial No. 723,174. 8 Claims. (Cl. 128—88.)



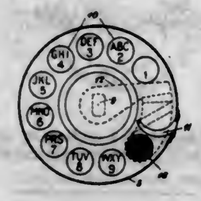
1. An arm splint comprising a main support for securement to the body of a patient, an upper arm support carried by the main support and adjustable to swing horizontally and vertically with respect to said main support, a tractor member longitudinally and rotatably adjustable around an axis coinciding with the axis of said upper arm support, a forearm support pivotally adjustable on the tractor member, shelves rotatively and longitudinally adjustable on the upper and forearm supports respectively, and a hand-grip.

1,639,816. RADIO SIGNALING CIRCUIT. ALBERT H. TAYLOR and LEO C. YOUNG, Washington, D. C., assignors to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 7, 1925. Serial No. 1,056. 3 Claims. (Cl. 250—17.)



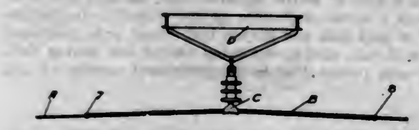
1. In a radio signaling system, thermionic tubes consisting of oscillating tubes and amplifier tubes connected to a radiating system, both groups of said tubes having plate, grid, and filament circuits, means for supplying alternating currents to all of said circuits, both groups of tubes associated with each other whereby oscillations generated in the oscillating tubes are amplified by and radiated through the amplifier tubes, and means in said circuits for keeping the radiated wave in a pure sinusoidal form, said last means consisting of an intermediate circuit between the grid circuit of said power amplifier and oscillator tubes and means for providing said grids of said power amplifier with alternating current voltages from the same alternating current source as the plate voltage, the said grid voltage bearing a proper proportion to the plate voltage and varying in a proper proportion with the variations in the plate voltage.

1,639,817. PIEZO-ELECTRIC CRYSTAL SYSTEM. ALBERT H. TAYLOR, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed July 29, 1925. Serial No. 46,802. 12 Claims. (Cl. 250—20.)



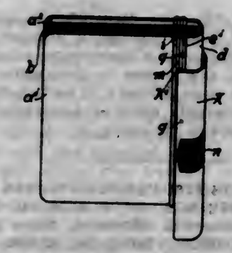
1. In an electron tube system the combination of an electron tube having grid, filament and plate electrodes, input and output circuits interconnecting said electrodes, a plurality of piezo electric crystals each having a different fundamental frequency, and means for electrostatically associating a selected piezo electric crystal with the input circuit of said electron tube system for predetermining the oscillatory condition thereof.

1,639,818. TESTING DEVICE. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Aug. 1, 1924. Serial No. 729,520. 5 Claims. (Cl. 265—61.)



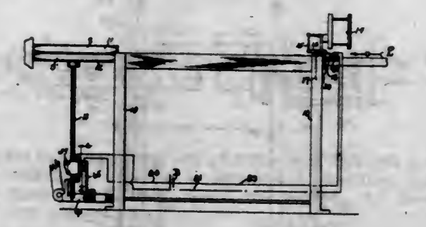
1. In a device of the class described, in combination, a pedestal, a housing mounted thereon, load-counter balancing and indicating mechanism within said housing, a frame suspended from said load-counterbalancing and indicating mechanism below said housing, and a roller supported by said frame and adapted to engage and support a portion of a strip of material to be tested.

1,639,819. CLEANING DEVICE FOR DIALS OF TELEPHONE INSTRUMENTS. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 7, 1925. Serial No. 48,834. 3 Claims. (Cl. 179—90.)



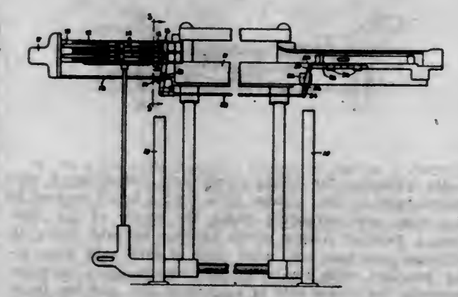
1. In a calling device having a number plate, a shaft, a finger wheel rotatably mounted thereon and movable concentrically with respect to the number plate, said finger wheel being provided with a plurality of finger holes, and means affixed to said shaft and rotatable with said finger wheel to form a wiping contact with the number plate upon the depression thereof through one of said finger holes.

1,639,820. METHOD OF AND APPARATUS FOR PROTECTING AERIAL CABLES. THEODORE VARNEY, Sewickley, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 16, 1924. Serial No. 737,990. 8 Claims. (Cl. 173—13.)



1. The method of protecting aerial cables from vibrations which consists in applying to a length of cable adjacent its point of support, a plurality of wires wrapped thereabout so as to materially increase the mass of the cable without materially increasing its rigidity.

1,639,821. NOTEBOOK. MAX VOGEL, Frankfort-on-the-Main, Germany. Filed Aug. 20, 1926, Serial No. 130,488, and in Germany Nov. 11, 1925. 4 Claims. (Cl. 129—37.)

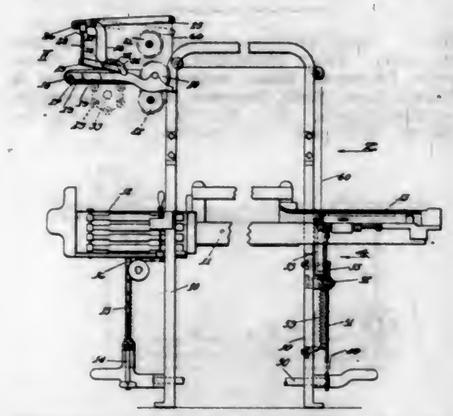


3. A note book comprising in combination with a cover, a C-shaped clamping spring slidable longitudinally of and embracing the cover and adapted to hold the leaves within the book, and longitudinally-extending rails guiding said clamping spring on said cover, said guide rails formed with longitudinal grooves and said clamp formed with rounded edges engaging in said grooves.

1,639,822. BOX-MOTION-CONTROLLED ELECTRO-MAGNETIC WEFT DETECTOR. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1924. Serial No. 758,904. 16 Claims. (Cl. 139—273.)

1. In a loom, shifting shuttle boxes, an electro-magnetic weft detector, and means controlled by the position of the shuttle boxes to render the magnetic attraction of said detector greater when said boxes are in one position than when they are in another position.

1,639,823. YARN-IMPINGING LAY-ACTUATED WEFT DETECTOR CONTROLLED BY BOX MOTION. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1924. Serial No. 758,905. 8 Claims. (Cl. 139—284.)



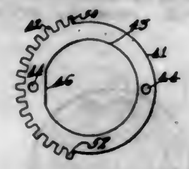
1. In a loom having a plurality of shuttle boxes each of which is movable to active position, a lay, shuttles for the boxes having a weft supply to be detected, a detector having a yarn impinging member and a lay actuated member, and means under control of the shuttle boxes and dependent upon which box is in active position to determine the time of actuation of the said member actuated by the lay.

1,639,824. WEFT DETECTOR CONTROLLED BY PATTERN MECHANISM. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1925. Serial No. 16,780. 6 Claims. (Cl. 139—284.)

1. In a weft detector for looms having a plurality of shifting shuttle boxes and shuttles carrying wefts of different sizes, pattern mechanism to determine which of

said shuttle boxes shall move to active position, a detector capable of assuming different adjusted positions, and

connections between the pattern mechanism and said detector to effect the change from one adjusted position to another prior to the movement of the boxes.

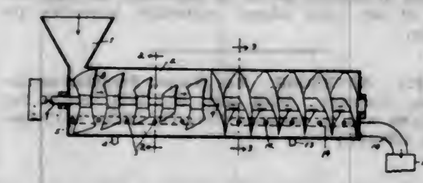


1,639,825. APPARATUS FOR OPERATING EXTENSION TABLES. THOMAS WALL, Tacoma, Wash., assignor to Gregory Furniture Mfg. Co., Tacoma, Wash., a Corporation of Washington. Filed Nov. 23, 1925. Serial No. 70,838. 1 Claim. (Cl. 45—0.)

An apparatus for lifting a table top, comprising a supported table frame; a loose table top; a board secured to the frame and extending under the center of the table top; a pair of lifting levers pivoted to said board in reversed positions, the outer ends of each said lever being provided with two sparated upward-acting branches engaging the under side of said table top, and the inner ends extending adjacent each other; a forcing lever pivoted to the under side of said board and simultaneously engaging the inner ends of both said lifting levers to raise all four of said branches, whereby said table top is raised in level position; and operating means engaging and actuating said forcing lever.

1,639,826. DOBBY CYLINDER. WILLIAM M. WATTIE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 27, 1926. Serial No. 98,016. 8 Claims. (Cl. 139—77.)

1. In a loom pattern mechanism having a vibrator lever and a vibrator gear therefor, a cylinder to actuate the vibrator gear, said cylinder having a reversible element thereon a portion of which is provided with teeth to engage the gear and a portion of which is blank, and positive driving connections between the element and the cylinder, the teeth of the element and the driving connection thereof between the same and the cylinder being symmetrical with respect to a diameter of the element to the end that said element may be reversed on the cylinder and have the toothed section in the same relative angular position with respect to said cylinder and vibrator gear.

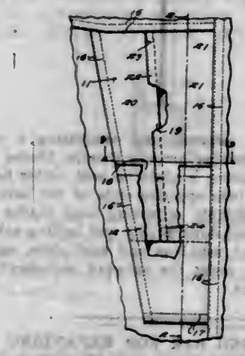


1,639,827. RESILIENT WHEEL. HERBERT N. WAYNE, Santa Monica, Calif. Filed Feb. 26, 1924. Serial No. 695,151. 4 Claims. (Cl. 152—29.)

1. In a resilient wheel, a rigid hub member, a disk comprising a wall of elastic material carrying said hub member, and a series of flexible spokes embedded in the material of said disk and having their inner ends associated with said hub, said spokes being curved and having their outer ends terminating in the peripheral portion of said disk.

1,639,828. PROCESS FOR TREATING CHEESE. JOHN H. WHEELER, Plymouth, and HENRY MURRAY SCOTT, Waldo, Wis., assignors to Brookshire Cheese Company, Sheboygan, Wis. Filed Sept. 24, 1923. Serial No. 664,382. 9 Claims. (Cl. 99—11.)

7. The process of treating cheese which consists in passing a stream of cheese through a chamber, admitting steam to said chamber at a temperature adequate to reduce particles of said cheese to substantially a liquid state immediately upon exposure of such particles to the steam, and momentarily exposing substantially all particles of said cheese to the steam.



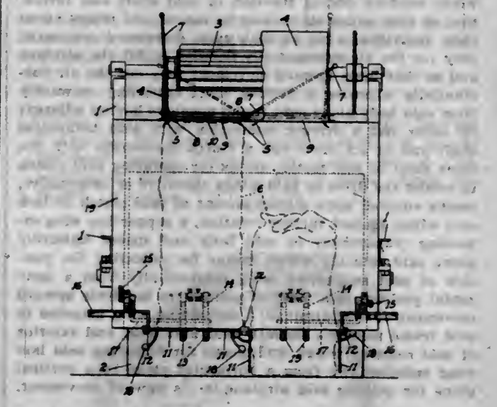
1,639,829. MEANS FOR PREVENTING SAG AND PROTECTING BEARINGS OF PLATFORM WEIGHING SCALES. MARLON H. WINSLOW, Terre Haute, Ind. Filed Jan. 19, 1926. Serial No. 82,206. 4 Claims. (Cl. 265—72.)

1. The combination with the girders of a platform weighing scale, of bottom bearing blocks under said girders, top bearing blocks above the bottom bearing blocks and in position to support the girders, and a wedge block adapted to be driven in between each set of top and bottom bearing blocks and released therefrom,

each top bearing block having a longitudinal chamber in its underside for receiving, guiding and holding the wedge block in place on the bottom bearing block.

1,639,830. POCKET. CHARLES R. WOOD, Detroit, Mich. Filed June 15, 1926. Serial No. 116,194. 3 Claims. (Cl. 2—247.)

1. A safety pocket comprising an outer wall formed in upper and lower sections and an inner wall, the upper section being formed of two pieces of material and being stitched about its side and top edges to the inner wall, adjacent edges of the pieces of material being secured to one another adjacent the top and bottom of the pieces and being left unsecured intermediate these points to provide a pocket opening, the lower section at its upper end overlapping the upper section, said bottom section being secured to the inner wall at its side and bottom edges only.

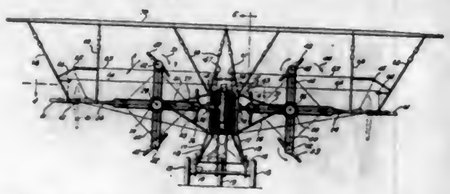


1,639,831. WRENCH. JOHN ZILLIOX, Orchard Park, N. Y. Filed Mar. 1, 1926. Serial No. 91,323. 1 Claim. (Cl. 81—164.)

A wrench comprising a front jaw, a shank projecting rearwardly from the front jaw and provided with an external screw thread, a rear jaw provided with an opening which receives said shank and a rearwardly projecting tubular neck surrounding said opening and having an external screw thread, a tubular handle having an internal screw thread which receives the external thread of said shank and also provided with an external annular groove, a split spring ring arranged in said groove and forming a rearwardly facing shoulder, a coupling sleeve the rear part of which surrounds said handle and the central part of which is provided with an internal forwardly facing shoulder engaging the rear side of said ring and the front part of which has an internal screw thread engaging the external thread of said neck, the connection of said sleeve with said neck being constructed to permit of drawing said handle forwardly so that the front end of the latter is clamped against the rear end of said neck and the handle is thereby held against turning, and means for permitting said sleeve to make only a partial turn

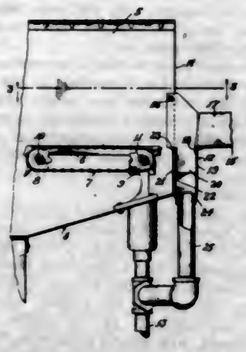
on said neck comprising a notch arranged at the front end of said sleeve, and a stop projecting laterally from said neck into said notch.

1,639,832. SACKING APPARATUS FOR POTATO HARVESTERS. ROSCOE C. ZUCKERMAN, Stockton, Calif. Filed May 3, 1926. Serial No. 106,581. 10 Claims. (Cl. 226—61.)



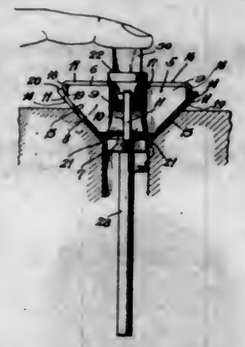
4. In combination with a harvester having a conveyor on which the produce as harvested is carried, a hopper into which the conveyor discharges, and platform means mounted in connection with the harvester disposed under the hopper and arranged to support a sack in vertical alinement with the hopper, said platform being displaceable downwardly to allow a filled sack to drop to the ground in an upright position.

7. In a potato harvester having a conveyor onto which the potatoes as harvested are carried; a fixed hopper at the rear end of the conveyor into which the latter discharges, such hopper having a discharge opening, a plate extending longitudinally in the hopper and arranged to be partially supported by one side wall of the hopper, and means for moving the lower end of the plate transversely across the discharge opening.



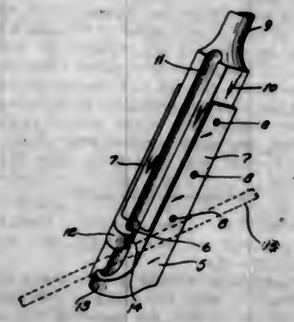
9. In a potato harvester having a conveyor onto which the potatoes as harvested are carried; a fixed hopper at the rear end of the conveyor into which the latter discharges, such hopper having a discharge opening, a plate extending longitudinally in the hopper and arranged to rest against one side wall of the hopper, another similar plate disposed longitudinally in the hopper toward the opposite side thereof, and means connecting the plates in a manner to enable the lower end of one plate to be drawn transversely across the adjacent portion of the opening, while the lower end of the other plate is moved toward the opposite side of the hopper, and vice versa.

1,639,833. AVIATION. CHARLES L. ANDERSON, Reno, Nev. Filed June 21, 1924. Serial No. 721,402. 10 Claims. (Cl. 244—25.)



10. In an aerial machine, in combination, an airplane body, a motor mounted adjacent the forward end thereof, a propeller adapted to be driven from said motor to propel said airplane in a forward direction, lateral frame members extending outwardly from said body adjacent said motor, a horizontal shaft rotatably mounted in said frame members, a plurality of wings spaced about said shaft and connected therewith to revolve therewith about the axis of said shaft, said wings being rotatably mounted about individual axes substantially parallel to the axis of said shaft, driving means connecting said shaft and said wings adapted during rotation of said shaft and revolution of said wings thereabout to rotate said wings about their individual axes so that upon downward movement they cut the air substantially flatwise to lift the airplane and so that upon upward movement they cut the air substantially edgewise, a driving shaft extending outwardly from said body along said frame members having adjacent its outer end a driving connection with said transverse shaft and at its inner end a clutch connection with the drive shaft of said motor, means for operating said clutch to render the drive of said wings operative or inoperative, means adapted upon disengagement of said clutch to lock said wings against further rotation, a supporting wing extending transversely of said body and spaced upwardly above said rotating wings, means for adjusting the position of said supporting wing substantially from a horizontal position to a vertical position to facilitate upward movement of said airplane, a supporting wing mounted in said frame members beneath said first wing and exterior of said rotating wings, and means for adjusting said last wing substantially from a horizontal plane to a vertical plane for guiding said airplane in its upward movement.

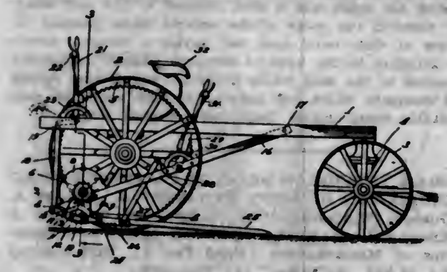
1,639,834. DISHWASHING MACHINE. GEORGE P. ANASTAS, Oak Park, Ill., assignor to G. S. Blakeslee & Co., Cicero, Ill., a Corporation of Illinois. Filed May 2, 1925. Serial No. 27,421. 5 Claims. (Cl. 141—9.)



1. A washing machine comprising a tank for wash water, means extending over said tank for supporting the articles to be washed, means extending across the front wall of the tank adjacent to the article-receiving opening thereof and arranged to receive loose refuse matter for preventing such refuse matter from passing into the water in the tank, and an overflow pipe communicating with the tank at one side thereof, said last named means communicating with said overflow pipe.

1,639,835. VALVE-SEAT-REFACING TOOL. LAWRENCE O. BEARD, Lancaster, Pa. Filed Oct. 9, 1926. Serial No. 140,614. 4 Claims. (Cl. 90—12.5.)

1. A valve seat refacing tool comprising a centrally bored cutter head having grooves therein, blades adapted to seat in said grooves, a plate on said cutter head, and members screwing into opposite ends of the bore in said cutter head for slidably adjusting said blades in said grooves upwardly and downwardly and locking said blades between one of said members and said plate, said plate adapted to flexibly resist the outward movement of said blades in said slots.

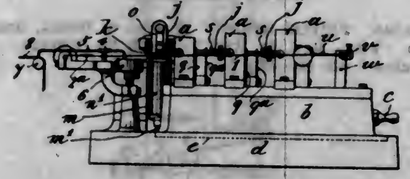


1,639,836. TAMPING BAR FOR EXPANDING EARTH ANCHORS. JASPER BLACKBURN, Webster Groves, Mo. Filed Nov. 22, 1926. Serial No. 149,858. 6 Claims. (Cl. 189—92.)

1. A tamping bar comprising a head, a handle secured to said head, hooks projecting from one face of said head and longitudinally spaced apart whereby said head can be loosely interlocked with a fixed member against accidental disengagement therefrom when said head is moved up and down.

1,639,837. CORNSTALK SHREDDER. THOMAS E. BURNES, Carthage, Ill. Filed Jan. 12, 1925. Serial No. 1,771. 8 Claims. (Cl. 56—129.)

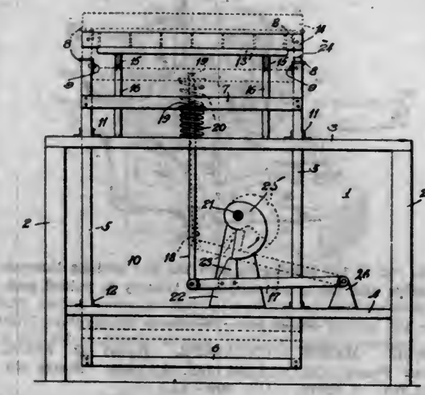
1. In a corn shredder, the combination with a frame mounted on ground wheels, having gears mounted thereon, of raking teeth manually adjustable from the frame for collecting the stalks from the ground, a gear driven shredding assembly having gears meshing with internal gears on the ground wheels to drive the shredder and



manually operated means for raising the assembly and removing the assembly from driving relation with the ground wheels.

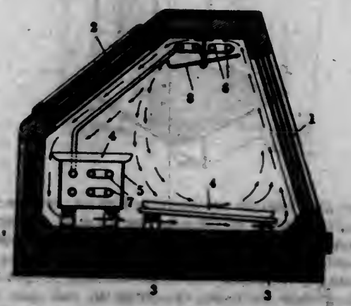
1,639,838. BRAKE SHOE. JOHN R. CAUTLEY, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 9, 1927. Serial No. 173,813. 11 Claims. (Cl. 188—250.)

5. A brake shoe comprising, in combination, an outer arcuate band, and stiffening means for the band including two generally-parallel spaced-apart web portions each of which is integral with a continuous flange underlying and secured to said band.



1,639,839. APPARATUS FOR AMPLIFYING SMALL MOVEMENTS. FREDERICK GEORGE CREED, Croydon, and AXEL ORLING, Streatham, London, England. Filed Jan. 29, 1926, Serial No. 84,721, and in Great Britain Feb. 5, 1925. 18 Claims. (Cl. 178—91.)

1. For amplifying small movements, apparatus comprising a fluid pressure receiver having an inlet and an outlet for fluid under pressure, a movable device, subject to small forces, arranged opposite to and at all times out of contact with the outlet of said receiver and adapted by its movement to control the exit of fluid therefrom and pressure responsive means subject to variations of fluid pressure within said receiver and means responsive to movement of said pressure responsive means.

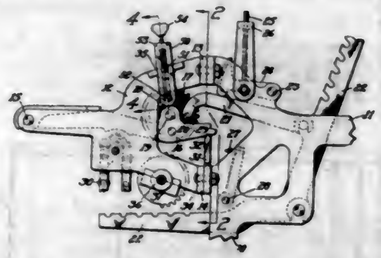


1,639,840. INERTIA STRIPPER. ROY PAUL MILLER DAVIS, Mount Union, Pa. Filed Aug. 14, 1926. Serial No. 129,179. 7 Claims. (Cl. 25—1.)

1. In a device for stripping molds from molded brick, a frame work, a support mounted on said frame work for receiving a pallet with brick containing mold thereon, a stripper frame reciprocably mounted in said frame work provided with lifting tracks normally beneath and out of contact with said mold, and means for projecting

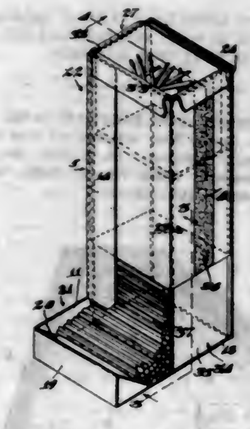
said stripper frame upwardly with great rapidity thereby causing said tracks to strike said mold and lift the same with great rapidity away from said brick.

1,639,841. REFRIGERATOR DISPLAY CASE. EDWARD F. DEACON, St. Louis, Mo., assignor to Gus V. Brecht Butchers' Supply Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 6, 1926. Serial No. 86,378. 8 Claims. (Cl. 62—37.)



1. In a refrigerated display case, the combination of means forming a refrigerating chamber having a transparent front wall, means for supporting in the lower part of the chamber the products to be refrigerated, refrigerating coils located in the upper part of the chamber, and a deflector plate beneath the coils and sloping laterally toward the rear of the chamber, said plate being dimensioned to provide air passages between it and the rear and front walls of the chamber.

1,639,842. TOOL FOR KNOWLES LOOMS. THOMAS H. DONNELLY, Dover, N. H., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 29, 1926. Serial No. 105,598. 4 Claims. (Cl. 139—77.)

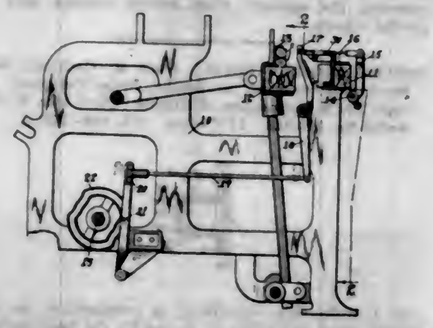


1. A tool for use with a loom pattern mechanism having bearings in the upper portion thereof for a cylinder, a plurality of vibrator levers and vibrator gears therefor each provided with an arcuate slot and having also a comb for spacing the vibrator gears, said tool com-

prising a pair of spaced rods one of which is received in the bearing and the other of which passes through the arcuate slots in the vibrator gears, and means supported

by the rod in the bearing to hold the bar passing through the gears and the gears supported thereby in raised position.

1,639,843. MATCH CONTAINER. HARRY D. FINCH, Long Beach, Calif. Filed Jan. 9, 1923. Serial No. 611,593. 1 Claim. (Cl. 206—31.)

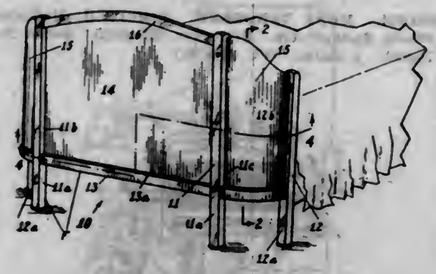


As a new article of manufacture, a receptacle for matches, comprising a casing having an open top, an open-seam front, a forwardly projecting, open-topped, pocket at its lower end, and a stop projecting into the casing above said pocket, a receptacle, for burnt matches, shaped to conform with and for bodily insertion in the open top of the casing, means carried by the receptacle for sectionally stiffening the casing at its open-seam front, and to limit its insertion in said casing.

1,639,844. SPINNING DEVICE. STANKO GJANKOVICH, New York, N. Y. Filed Mar. 4, 1927. Serial No. 172,745. 6 Claims. (Cl. 46—32.)

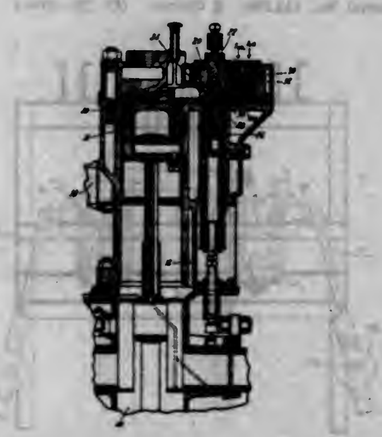
1. In a device of the character described, a suitable frame structure having horisontal supporting members mounted therein, and removably affixed to the said supporting members, rotatable sound producing units, each of the said units comprising a base element, a vertical spindle, a winding element and a casing enclosing the same, and a cord secured to the said winding element, the cords of the several units grouped together at their outer ends and having a common means for gripping in the hand, a pressure element adjustably mounted in the said frame structure and having spring end members which are adapted to bear upon the said rotatable units and to limit their vertical play.

1,639,845. DEVICE TO DELAY TRANSMISSION OF AN INDICATION OF WEFT EXHAUSTION. ALBERT A. GOADON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 11, 1925. Serial No. 74,844. 8 Claims. (Cl. 139—229.)



1. In a weft replenishing pick and pick loom having a weft detecting mechanism and having means by which substantially exhausted shuttles may be presented to said detecting mechanism on successive picks of the loom, the combination of means to transmit an indication of weft exhaustion from the first substantially exhausted shuttle, thus presented to said detecting mechanism, and means to prevent transmission of a second indication upon the next succeeding pick of the loom.

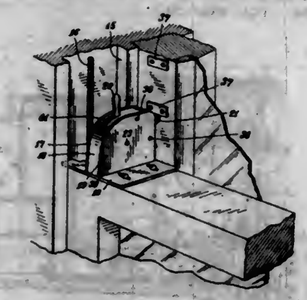
1,639,846. TRIPOD MOUNT. SAMUEL G. GREEN, Gray, Ga. Filed Mar. 31, 1927. Serial No. 180,020. 4 Claims. (Cl. 89—40.)



4. In a mount, a central head, a post rigid therewith, a plurality of legs attached to the head, a brace connecting each leg and the post, and a second brace connecting each leg and post and perpendicular to the leg.

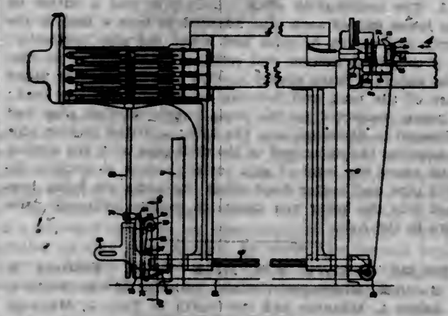
1,639,847. METALLIC BEDSTEAD. WOLF GREENMAN, Brooklyn, N. Y. Filed Dec. 30, 1925. Serial No. 78,293. 5 Claims. (Cl. 5—181.)

1. In a bedstead, a framework comprising pairs of spaced tubular middle and end stanchions having the lower end portions thereof adapted to serve as legs for the bed, and a single tubular stretcher member extending transversely to interconnect said stanchions above said legs, said member passing through the middle stanchions and anchored thereto and to the end stanchions forming a substantially braced structure.



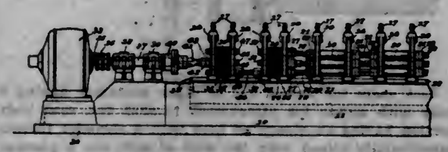
1,639,848. ENGINE. JOHN D. HAY, South Bend, Ind., assignor to Gernandt Motor Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 28, 1925. Serial No. 65,293. 2 Claims. (Cl. 103—83.)

1. A fitting to be inserted in the cylinder head of an engine, and formed with a vertical cylinder for a fuel-feeding plunger, a horisontal passage opening into the side of said cylinder, an air passage opening into the bottom of said horisontal passage and thence horisontally and thence upwardly to the top of the fitting, and a fuel passage leading from the top of the fitting and opening into the air passage just below said horisontal passage.



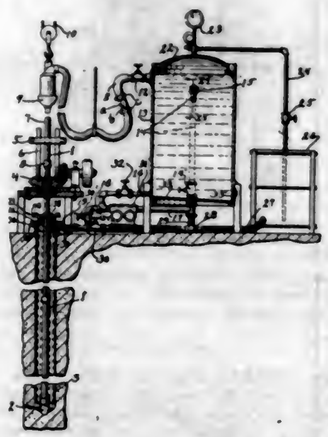
1,639,849. WINDOW LATCH AND DRAFT PLATE. GUSTAV HELGE, Brooklyn, N. Y., assignor of one-half to George W. Nuneman, Brooklyn, N. Y. Filed Oct. 5, 1926. Serial No. 139,628. 4 Claims. (Cl. 292—40.)

1. A combined window latch and draft-plate for double-hung windows comprising an erect, narrow casing with a beveled roof, said casing embracing a control-lever engaged by contact members, and actuating means, the



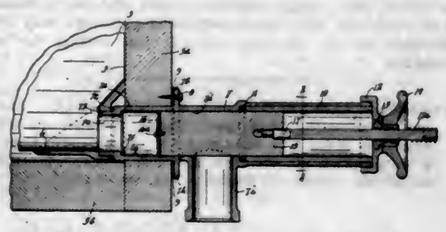
said casing being integrally mounted on a flat, substantially rectangular draft-plate, the latter having the edge of one side indented, as and for the purpose described.

1,639,850. NEEDLE FEELER FOR LOOMS. LOUIS F. HOFFMAN and WALTER H. WAKEFIELD, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 2, 1925. Serial No. 28. 12 Claims. (Cl. 139—276.)



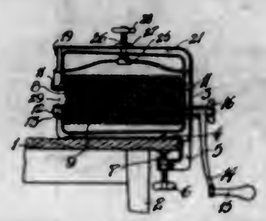
1. In a loom having a plurality of shuttles, shifting shuttle boxes to move any one of the shuttles to active position, a detector to cooperate with the shuttle which is active, and means coordinated with the shuttle boxes and dependent upon which shuttle is active to vary the pressure of the detector against the surface to be detected.

1,639,851. VARIABLE-SPEED ROLLING MILL. DANIEL A. KEATING, Bridgeport, Conn., assignor to The American Tube and Stamping Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 27, 1925. Serial No. 71,820. 5 Claims. (Cl. 80—54.)



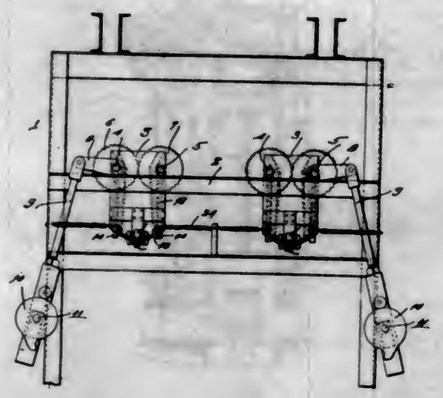
5. In a driving mechanism for a rolling mill, gearing for driving the rolls of the mill, a plurality of different diameter meshing gears, a motor drive connected to said gears, and means for connecting any one of said gears to said roll driving gearing.

1,639,852. APPARATUS FOR SINKING AND CLEANING OIL AND WATER WELLS. MILFORD A. KING, Los Angeles, Calif. Filed Jan. 24, 1927. Serial No. 163,099. 5 Claims. (Cl. 255—24.)



1. The combination with a drill pipe and a cutter on the lower end of such pipe adapted to bore a hole in the earth and means to raise and lower the pipe vertically; of a combined suction and settling tank adapted to contain water; a pump supply suction pipe open to the upper part of the tank and forming an outlet from the tank; a pump connected to the pump supply suction pipe and arranged to discharge into the hole; a lifting suction pipe connecting the upper end of the drill pipe with the suction tank above the level of said outlet; means to revolve the drill pipe and cutter head while the same are being lowered into the hole; and means to confine hydraulic pressure in the hole.

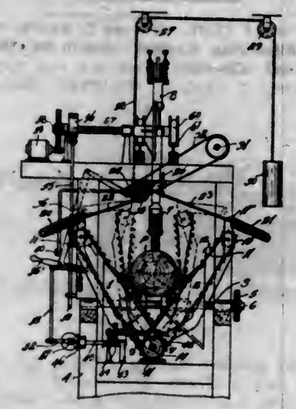
1,639,853. VALVE FOR MILK VATS. DEDRICK A. MAANUM, Minneapolis, Minn., assignor of one-fourth to Anton A. Maanum and one-fourth to Thor A. Maanum, Minneapolis, Minn. Filed July 23, 1926. Serial No. 124,378. 6 Claims. (Cl. 137—21.)



1. A valve for a milk vat or other container having a body with means for attachment to said vat, said body portion having an elongated bore with a shoulder therein substantially alined with the wall of said vat, a passage extending from said bore into said vat, said body having an outlet opening at one side of said bore, a plunger movable in said bore over said opening and against said shoulder, a stem secured to said plunger having a smooth portion and threaded at the outer end thereof, a revoluble nut at the outer end of said body through which said stem projects, and means for turning said nut to move said threaded portion therethrough whereby said stem may then be engaged manually and said plunger manually moved.

1,639,854. MEAT TENDERER. SAMUEL H. MCBRIDE, Siloam Springs, Ark. Filed Nov. 23, 1925. Serial No. 70,899. 1 Claim. (Cl. 17—26.)

The combination with a rectangular frame having an open end, of parallel shafts and studded rolls on said shafts, the lower one of said shafts having stationary bearings and a crank arm, slidable bearing blocks for the ends of the upper shaft and guide slots in the frame for said blocks, a spring engaging the upper faces of said guide blocks, and a screw bar threaded in the frame and secured to the spring for varying the tension of said spring.



1,639,855. HOPPER LATCH. WILLIAM H. MCCLELLAND, Huntingdon, Pa., assignor to Davis Brick Machinery Company, Mount Union, Pa. Filed June 2, 1926. Serial No. 113,280. 2 Claims. (Cl. 25—103.)

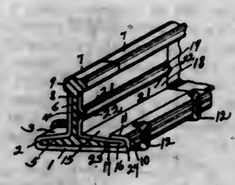
1. A hopper of the class described having a bottom composed of two sections adapted to move one away from the other, means for moving said sections to a closing position, a magnet supported by said hopper and adapted to be engaged by armatures carried by each of said sections, and means controlled by the first said means for energizing said magnet to hold the sections in a closed position.

1,639,856. TURNING DEVICE. CHARLES S. NELSON, Sandpoint, Idaho, assignor to Malvern L. Bruce, Sandpoint, Idaho. Filed Sept. 14, 1926. Serial No. 135,328. 10 Claims. (Cl. 144—208.)

1. The combination with a pole-supporting bed, of a pair of pivoted frames arranged on opposite sides of the bed and adapted to swing toward and from a vertical plane in which the axis of a pole lies, oppositely moving endless chains in said frames adapted to frictionally engage the surface of the pole, means for swinging said frames to operative position, and means for swinging said frames to inoperative position.

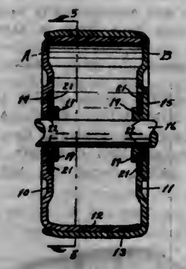
1,639,857. BOTTLE COOLER. WILLIAM PLANSKI, Kellogg, Idaho. Filed June 28, 1926. Serial No. 119,117. 1 Claim. (Cl. 257—178.)

A bottle cooler comprising a body of truncated cone shape and having a concavo-convex top forming a receiving reservoir and adapted to be seated in the recessed top of a bottle, said body adapted to surround a portion of the bottle, an annular turned up flange forming a trough at the lower edge of the body having perforations therein for the purpose described.



1,639,858. PLUG. EARL F. POTTER, Glencoe, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1924. Serial No. 719,465. 8 Claims. (Cl. 179—91.)

6. The combination of a two conductor spring jack and a three conductor plug, a pair of instruments connected to said plug, said plug and jack cooperating to permit either of said instruments to be operatively associated with said two conductor jack independent of the other, two of the contacts of said plug having grooves therein

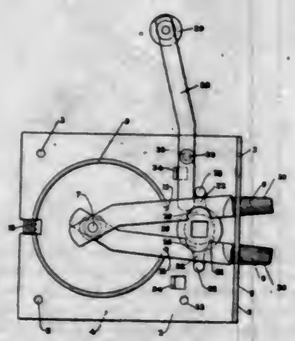


for cooperation with one of the springs of said spring jack to maintain said plug in either of its operative positions.

1,639,859. RAIL JOINT. EDWARD W. PRICE, Warren, Ohio. Filed May 7, 1924, Serial No. 711,644. Renewed July 15, 1927. 1 Claim. (Cl. 238—198.)

In a device of the class described, a pressed steel metallic yoke, an inwardly and upwardly turned portion of said yoke, inwardly pressed lugs on said upwardly extending portion, a second pressed steel portion slightly wedge shaped functioning within said yoke and a portion of the same functioning between the outer lower flange of a railroad rail and an upwardly and inwardly turned portion of said yoke member, an outwardly pressed bond housing formed in this upwardly extending portion, substantially as described for the purpose set forth.

1,639,860. CASTER WHEEL. EDWARD SCHULTZ, Chicago, Ill., assignor to James B. Ladd, Des Moines, Iowa. Filed June 21, 1926. Serial No. 117,373. 2 Claims. (Cl. 16—45.



1. A wheel comprising side walls and a tread portion, said side walls being formed with central bosses, lugs struck laterally at the center of each boss to form an axle aperture, a washer mounted in each of said bosses concentrically of said aperture, said lugs being upset against the face of said washer.

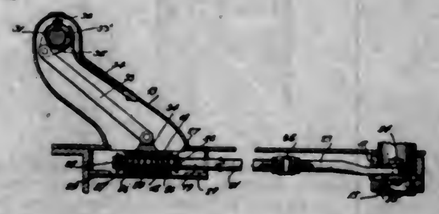
1,639,861. PROCESS OF MAKING A RUBBER COMPOSITION FOR LINING TUBES AND USING THE SAME. JOHN SCHWAB, jr., Winnipeg, Manitoba, Canada. Filed June 24, 1925. Serial No. 39,323. 5 Claims. (Cl. 134—17.5.)

5. The process of making a rubber composition for lining tubes which consists in providing a first mixture consisting of twelve parts of melted rubber, six parts of vulcanizing cement and one part of honey, then providing a second mixture of one part of vulcanizing cement and one part of sulphur, then mixing together equal parts of the aforesaid mixtures to provide a third mixture, then heating the third mixture a period of time at a temperature above boiling point and finally adding a quantity of vulcanizing cement to the third mixture after the temperature has dropped below boiling point, the quantity of vulcanizing cement laterally added being approximately equal to one third of the whole mass.

1,639,862. LATCH. CARL S. SHILLING and DUFFEY B. LOUZON, Chicago, Ill. Filed Jan. 15, 1923. Serial No. 612,616. 5 Claims. (Cl. 292—49.)

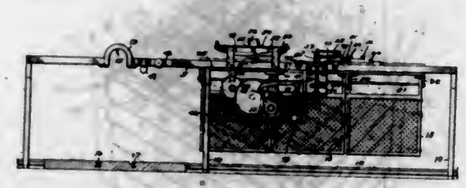
1. A latch of the class described having, in combination, a casing, a pair of pivotally supported opposed latch bars, a spring yieldingly holding said bars a predetermined distance apart, a cam operable to force said bars together, said cam comprising a plate pivotally mounted in said casing with an axis transverse to the plane of said bars and having a pair of arms oppositely extending from said plate with a lateral projection formed thereon adapted to engage the outer edge of the latch bars, a shaft on which the cam is mounted, a handle for rotating said shaft, a lever mounted on the casing so as to rotate the cam independently of said shaft, and a keeper adapted to receive and automatically lock said bars when the door with which said latch is associated is moved to closed position.

1,639,863. ARTIFICIAL BAIT OR LURE AND METHOD OF FINISHING THE SAME. CLYDE C. SINCLAIR and FLOYD A. PHELPS, Paw Paw, Mich., assignors to Moonlight Bait Company, Paw Paw, Mich. Filed July 16, 1926. Serial No. 122,871. 4 Claims. (Cl. 41—36.)



2. The method of finishing artificial baits or lures, consisting of applying a background coating, applying shellac and sprinkling thereon flake-like particles of light reflecting material prior to the setting of the shellac, and finishing with a transparent water resisting coating.

1,639,864. GOLF CLUB. WALTER L. SMITH, New York, N. Y. Filed July 8, 1926. Serial No. 121,090. 4 Claims. (Cl. 273—80.)



1. A golf putter, including a head having a striking face and a shaft secured to said head, said shaft presenting a circular portion adjacent its lower end and a blade-shaped rectangular portion adjacent its upper end, such latter portion having certain of its faces disposed parallel to the plane of the striking face of the head, the thickness of such portion being reduced to a substantially minimum amount consistent with the maintenance of rigidity of said shaft, and the width of the portion being such as to provide an adequate bearing surface for the fingers.

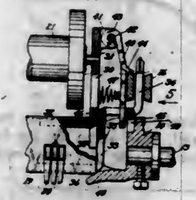
1,639,865. DIRIGIBLE HEADLIGHT. WILLIS M. SWEET, Niles, Mich. Filed Dec. 7, 1926. Serial No. 153,160. 2 Claims. (Cl. 240—62.)

1. In combination, a pivoted steering arm, a crosshead mounted for reciprocation, stops limiting the movement of said crosshead, a connecting rod having one end connected to the steering arm and slidable through said crosshead, said arm being arranged to move between limits greater than necessary to move the crosshead into engagement with its stops, spring means connecting the crosshead and rod arranged to hold the crosshead normally central between points on the rod and to permit it to move against the influence of said means to each of said points, a spot light, a shaft carrying the spot light and journalled to pivotally support said light, a rock arm on said shaft, an arm on said crosshead, a link connecting said rock arm and the last mentioned arm, and yieldable pawl means normally holding the spot light in central position between the limits of its movement.

1,639,866. GATE FOR RAILROAD CROSSINGS. VINCENT SZUCH and JOE SZUCH, Ravenna, Ohio. Filed Dec. 15, 1926. Serial No. 154,941. 7 Claims. (Cl. 39—7.)

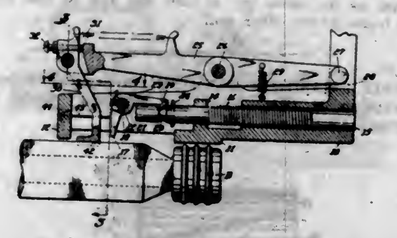
1. A protecting gate for railway crossings comprising a support, a gate movable with respect to said support, means for bodily moving the support and gate to protecting position with respect to a crossing and means for mounting the gate with respect to the support in such manner as to permit it to yield laterally outward but to resist inward movement.

5. In a crossing gate structure of the character described, the combination with a longitudinally movable, gate-carrying frame and a motor for moving the same, of a pole changing mechanism for the motor comprising a spring actuated part, lugs upon the frame for engaging said part and moving it partly to pole changing position, a detent for preventing movement of said part completely to pole changing position and a member upon the frame adapted to engage said detent when the frame reaches a predetermined point in its travel to release the detent and permit the pole changing mechanism to move the pole changing position.



7. A protecting device for railroad crossings, comprising an elevated trackway and frame mounted to travel longitudinally thereof in substantial parallelism with the railroad track, depending gates carried by said frame lying upon opposite sides of the railroad track, said gates being so mounted with respect to the frame as to permit them to yield laterally outward but to resist movement inwardly, a motor and connections between the motor and the frame whereby the frame is caused to travel upon the trackway when the motor is energized.

1,639,867. SECTIONAL CONDUIT. DAVID D. TRACY, Jackson, Mich. Filed Nov. 18, 1925. Serial No. 69,887. 5 Claims. (Cl. 72—53.)

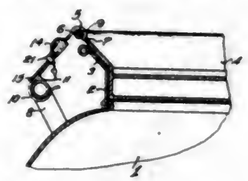


5. A conduit section having a flat face at one end and an external top joint channel and an internal bottom joint channel at the other end, coupling hooks projecting into said joint channel with their bills disposed vertically and flush with the end of a section, and eyes projecting from the flat end of the section adapted to be engaged with the bills of a coacting section.

1,639,868. TUBE FRAME FOR AXMINSTER LOOMS. KENNETH J. UNWIN and WALTER H. WAKEFIELD, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 8, 1926. Serial No. 146,938. 10 Claims. (Cl. 139—10.)

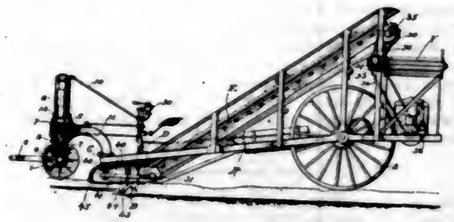
1. In an Axminster loom, a transporting chain, a tube frame comprising a longitudinal bar having yarn tubes secured thereto, a spool mounted on the tube frame and having the axis thereof spaced from the axis of the bar, and means for detachably connecting the tube frame to the chain, said means and chain having contact with each other at a point between the axis of the bar and the axis of the spool, whereby a part of the weight to be supported by said means lies on each side of the point where the same engages the chain.

1,639,869. LATERALLY-MOVABLE DETECTOR IN LOOM TRANSFERRERS. KENNETH J. UNWIN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,077. 4 Claims. (Cl. 139—271.)



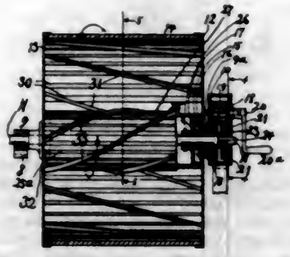
1. In a weft detecting mechanism for a loom having a supply of weft movable back and forth therein and a transferrer arm movable toward the supply of weft in a direction transverse to the movement of the latter, a detector having a loose pivotal connection with respect to the transferrer arm, and yielding means to hold said detector normally in a given transverse position with respect to the transferrer, said detector being movable transverse of the path of the transferrer arm in a direction substantially parallel to the path of the weft, and against the action of said resilient means.

1,639,870. CLOSURE FASTENER. MARTIN J. VALSVIG, Spokane, Wash., assignor of one-half to Joseph Lee, Spokane, Wash. Filed Oct. 30, 1926. Serial No. 145,205. 1 Claim. (Cl. 292—257.)



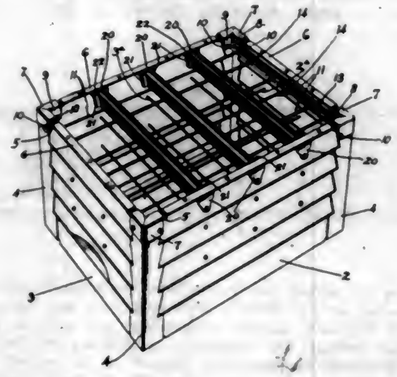
The combination with a slotted slide plate having an end hook, and a rack plate having a lug for coaction with the slotted slide plate, and provided with an end hook,

of a pair of side plates on the slide plate, a spring pressed pawl pivoted in the side plates for coacting with the



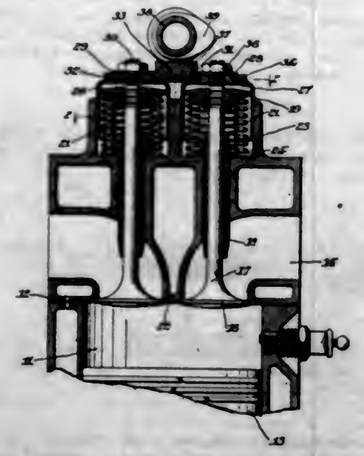
rack plate, a latch pivoted in the side plate for engagement with the pawl, said latch at its free end having means for encircling the side plate and rack plate.

1,639,871. DITCH-DIGGING MACHINE. JACOB S. WALCH, Oakland, Calif. Filed July 30, 1925. Serial No. 47,051. 8 Claims. (Cl. 37—102.)



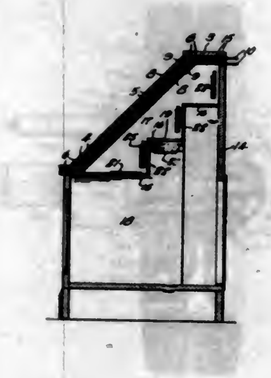
1. In a machine of the character described, a pair of side frames, a front and a rear cross frame connecting the forward ends of the side frames, a bottom cross-bar, a plurality of digging teeth secured thereto, and a link secured to the cross bar at one end and to the front cross frame at the other end.

1,639,872. WASHING MACHINE. ALBERT G. WANEK, Wahpeton, N. Dak. Filed July 30, 1926. Serial No. 125,937. 2 Claims. (Cl. 68—18.)



1. In a clothes washing machine a frame, a horizontal shaft journaled in the frame, a comparatively small washing cylinder fixed on the shaft, a larger cylinder spaced concentrically about the small cylinder and having its heads rotatable on the shaft, a gear housing on the frame and about one end of the shaft, a set of meshing gears driven by suitable means and arranged to rotate the cylinders in opposite directions, each cylinder having its clothes contacting face provided with a series of longitudinal corrugations and a number of spirally arranged ribs projecting above the corrugations.

1,639,873. CRATE. CHARLES A. WOOLSEY and HENRY V. BOWMAN, Minneapolis, Minn., assignors to Northwestern Collapsible Carrier Co., St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 12, 1923. Serial No. 674,358. 13 Claims. (Cl. 217—36.)



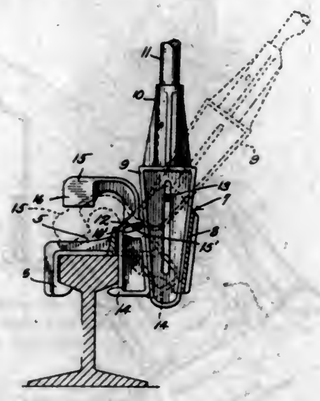
5. The combination with a crate, of a grid comprising rods having bent ends, plates having holes therein and longitudinal groves intersecting said holes to receive said bent ends and brace said plates, said plates fitting the surfaces of the inner walls of said crate and rivets for securing said plates to said walls.

1,639,874. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 7, 1923. Serial No. 643,874. 8 Claims. (Cl. 123—90.)

1. In combination in an internal combustion engine, a pair of poppet valves, a yoke member, guide means surrounding the stem of each valve detachably secured to the yoke member, and a cam adapted to actuate the yoke member to operate the valves in unison.

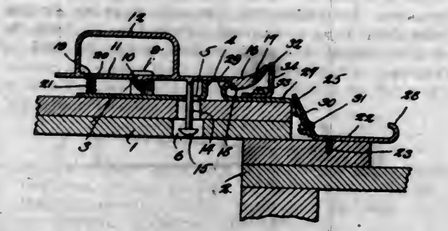
1,639,875. SHOW CASE. CHARLES J. ABELN, St. Louis, Mo. Filed Apr. 28, 1924. Serial No. 709,384. 11 Claims. (Cl. 211—25.)

1. In a show case, a horizontally movable door adapted to open or close the front of the case, a handle rigidly connected to the door and projecting outside of the case at the rear thereof adapted to operate the door.



1,639,876. VACUUM CLEANER. JOSEPH WHITE L. ACOSTA, San Francisco, Calif. Filed June 11, 1925. Serial No. 36,378. 1 Claim. (Cl. 15—15.)

A pneumatic cleaner comprising a head provided at one side with an intake nozzle and at its opposite side with an exit opening, a partition wall located in the head above the nozzle and below the exit opening and disposed transversely across the head between the nozzle and the opning, said partition wall having an enlarged central opening therein, a shaft rotatably mounted in the head and extending through the central opening, fan blades mounted on the shaft and arranged in the head above the partition wall, means for rotating the shaft, a handle composed of perforated sections hingedly connected at their inner ends to the sides of the head and extending around the opening, clasp means for securing the outer ends of the handle sections together, a bag frame secured to the head and located within the handle sections, and a bag carried by the bag frame and surrounding the opening in the head, said bag being housed between the handle sections.

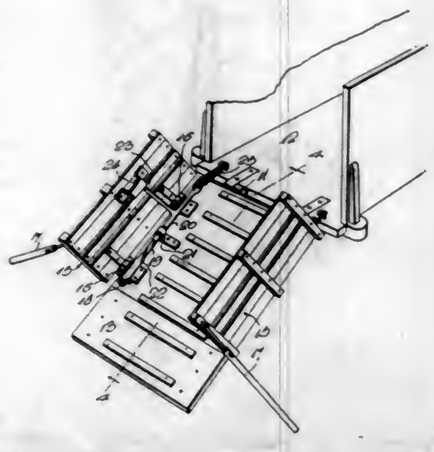


1,639,877. RAIL-CLAMP SIGNAL. MORITZ A. ANKELE, Danville, Ill. Filed Dec. 21, 1926. Serial No. 156,141. 5 Claims. (Cl. 246—477.)

1. A removable staff support including a body portion, a jaw formed integral with the body portion, a pivoted jaw mounted on the body portion, means for normally holding the pivoted jaw in its inactive position, a wedge-shaped member having a socket to receive a staff, said wedge-shaped member being pivotally supported by the

body portion, and said wedge-shaped member adapted to engage the pivoted jaw to move the pivoted jaw into clamping relation with the first mentioned jaw.

1,639,878. LATCH. HARRY BENTROTT, Wheatland, Iowa. Filed June 4, 1926. Serial No. 113,777. 1 Claim. (Cl. 292—128.)



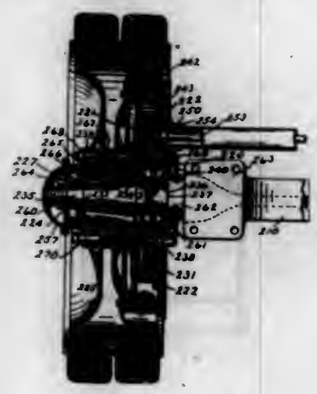
A keeper of the class described, comprising a carrying plate and a supplemental plate provided at their outer ends with latch-engaging fingers, the plates being arranged in oppositely-projecting approximately parallel relation, and being supplied at their inner ends with overlapped angular flanges, means for connecting the flanges adjustably to accommodate the keeper to doors of different thicknesses, and detachably whereby the carrying plate can be turned end for end and used alone, an outstanding member having an opening for the reception of a latch-engaging securing device, and means for mounting said member on either plate at the will of an operator.

1,639,879. COMBINED END GATE AND RAMP. LEONARD C. BUFFINGTON, Golden City, Mo. Filed Apr. 1, 1926. Serial No. 99,101. 6 Claims. (Cl. 296—61.)

1. A loading and unloading attachment comprising a ramp including a body, means for hingedly connecting the upper end of said body to the bed of a truck or wagon to permit said body to be swung upwardly to a tail-gate

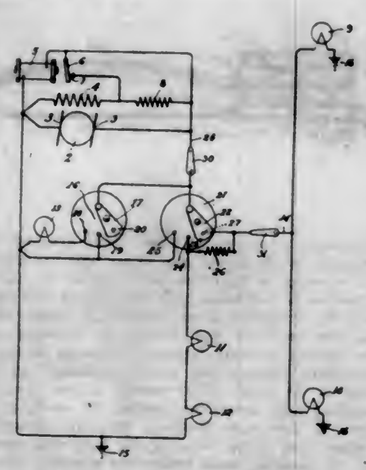
forming position, a pair of side walls hingedly connected to said body, means for automatically swinging said side walls inwardly towards said body when the latter is swung upwardly and outwardly to operative position when the ramp is swung downwardly, said means comprising

longitudinally movable and rotatable members mounted on said ramp body and having connection with its side walls, and means for turning said rotatable members when longitudinal movement is imparted thereto whereby the side walls of the ramp are raised or lowered according to the direction of turning of said rotatable members.



1,639,880. TOOTHBRUSH. JOSEPH BERNARD BUTLER, Whitehall, London, England. Filed Feb. 19, 1926, Serial No. 89,501, and in Great Britain Feb. 20, 1925. 3 Claims. (Cl. 15—167.)

3. A toothbrush comprising a handle provided at one end with an elongated tuft carrying back terminating in an inclined widened portion, the back having an arcuate face, one or more rows of bristle tufts mounted on the arcuate face of the inclined portion of the back, the rows being disposed transversely thereof and the tufts being disposed perpendicularly to said inclined widened portion, the tip of each tuft being conically pointed, and a plurality of rows of bristle tufts, mounted on the arcuate face of said back inwardly of the inclined portion, each of said last named rows terminating in a chisel pointed working surface, there being more tufts to a row in the first named rows on the inclined portion than in the last named rows.

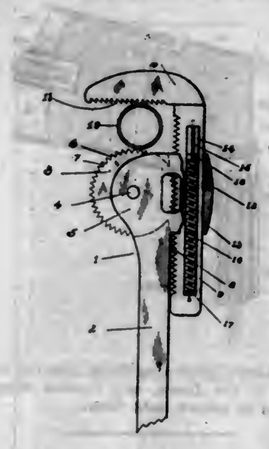


1,639,881. MOTOR VEHICLE. HAROLD D. CHURCH, Fairfield, Conn., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Oct. 12, 1917, Serial No. 196,183. Divided and this application filed Sept. 28, 1922. Serial No. 591,200. 2 Claims. (Cl. 74—7.)

1. In a motor vehicle axle construction, the combination of a load carrying member having spindle portions at its ends, a road wheel for each spindle portion comprising inner and outer hubs detachably connected together, and separated bearings between each spindle portion and its

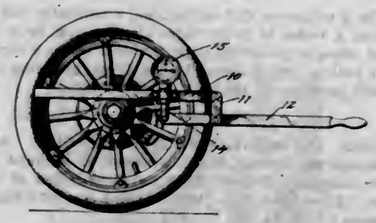
wheel, one of said bearings being between the inner hub and said spindle portion and the other said bearing being between the outer hub and said spindle portion.

1,639,882. ELECTRICAL SYSTEM. WILLIAM B. CHURCHER, Cleveland Heights, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 20, 1925. Serial No. 51,283. 5 Claims. (Cl. 171—97.)



1. In an electrical system compriaing a shunt wound generator, a load therefor, a switch having a set of "make-before-break" contacts having the "make" contacts thereof connected directly across the generator output terminals, and the "break" contacts in the circuit of said generator and load.

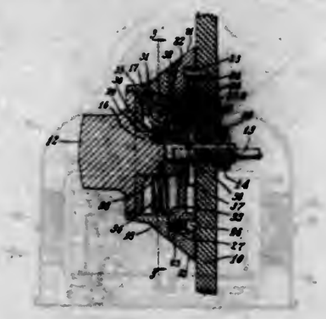
1,639,883. PIPE WRENCH. JOSEPH E. CONWAY, Baltimore, Md. Filed July 5, 1923. Serial No. 649,664. 6 Claims. (Cl. 81—96.)



1. A wrench of the character described consisting of a fixed jaw and a movable jaw, an operating shank upon

which said last jaw is rotatably mounted, a short shank upon which the first jaw is fixed, said last shank having

a rack, said movable jaw having a toothed periphery for cooperation with the rack, said short shank having a slot and means therein for urging the jaws together.

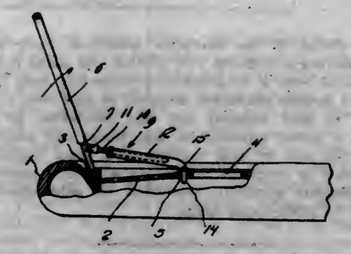


1,639,884. BRAKE TESTER. FRANK DOWRELIO, Oakland, Calif. Filed Nov. 18, 1926. Serial No. 149,027. 1 Claim. (Cl. 265—1.)

A brake testing device comprising a lever adapted to be arranged diametrically of a wheel over the hub thereof, one end of the lever being adapted to engage a rim lug of the wheel, a handle disposed substantially parallel to the lever, a link connecting the lever to the handle, the point of connection between the link and the handle being disposed intermediate the ends of the latter, a pressure gage secured to the lever, said pressure gage having a reciprocable plunger, a connection between said plunger and the inner end of the handle whereby pressure brought to bear on the outer end of the handle will operate the gage and through the gage impart turning movement to the lever to rotate the wheel.

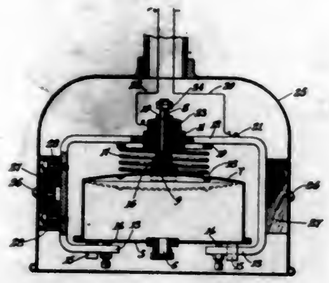
1,639,885. PRECISION ADJUSTMENT DEVICE. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 13, 1922. Serial No. 587,928. 7 Claims. (Cl. 74—7.)

5. In an electrical instrument adjusting device, a dial, a shaft rotatably mounted in the dial and to which the movable member of the instrument is attached, a second shaft rotatably mounted in the dial, means for operating



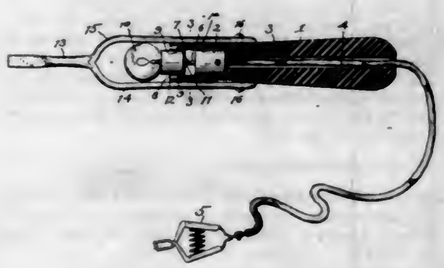
the first from the second shaft for moving the member on the first shaft and means for rendering the dial inoperative when the second shaft is operated.

1,639,886. AUTOMOBILE RIM. BENTLAND DELILE GORDON and WILLIAM HENRY ESTON PEAREN, Medora, Manitoba, Canada. Filed Nov. 11, 1922. Serial No. 600,436. 1 Claim. (Cl. 152—21.)



A device of the character described comprising a member having a pocket formed therein, a plunger slidable in said pocket, a spring confined between one end of the plunger and abutment means formed at one end of the pocket, an inclined stem carried by the plunger and projecting outwardly from the pocket through a slot formed in said member and a finger grip secured to the projecting terminal of the stem.

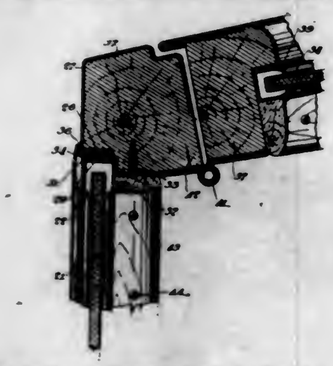
1,639,887. TIRE AND RIM TOOL. ROY H. HATFIELD, Lewiston, Idaho, assignor of one-half to Charles H. Murray, Lewiston, Idaho. Filed June 16, 1926. Serial No. 116,430. 2 Claims. (Cl. 157—6.)



1. A tire and rim tool of the class described comprising a lever having a reduced hooked end, and a bracing prop therefor, said prop comprising a screw pivotally connected to the reduced end of the lever, a part into which said screw is threaded, a retaining nut in said screw cooperable with said part, said part terminating in a downturned end adapted to fit into a bolt hole in a disk wheel, and there being stop pins associated with said downturned end for resting against the disk.

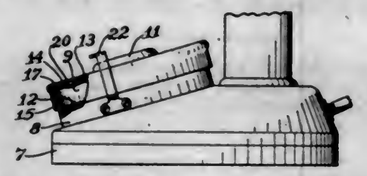
1,639,888. THERMOSTATIC SWITCH. WILFORD J. HAWKINS, Montclair, N. J. Filed Dec. 12, 1919. Serial No. 344,395. Renewed Jan. 27, 1927. 15 Claims. (Cl. 200—140.)

1. A thermostatic switch comprising a container provided with a spring tensioned wall arranged to buckle in opposite directions, a support for said container having upper and lower arms, switch mechanism mounted on the upper arm of said support and provided with an actuating member disposed in position to be engaged by the buckling wall and means carried by the lower arms of the support for effecting relative adjustment of the buckling wall and switch actuating member on the support.



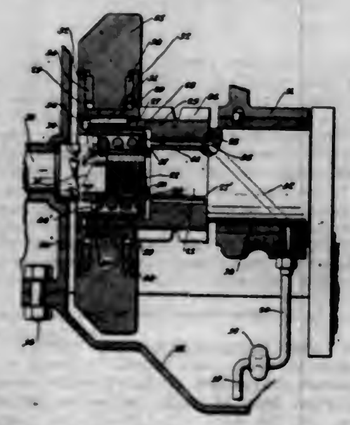
1,639,889. COMBINED TOOL AND ELECTRIC BULB. JOSEPH A. HUMM, Elyria, Ohio. Filed Dec. 29, 1922. Serial No. 609,696. 2 Claims. (Cl. 240—2.)

1. A device of the character described, comprising a handle having a reduced end portion, an axial recess in the reduced end, a longitudinally extending hole in said handle, a flexible conductor disposed in said hole, a sleeve secured to said reduced end and extending forwardly thereof, a socket attached to said sleeve and adapted to receive the end of said conductor, a lamp mounted in said socket in electrical connection with said sleeve, and an implement pivotally connected to said sleeve and adapted to bridge said lamp.



1,639,890. MOTOR VEHICLE. ARCHER L. KNAPP, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 5, 1924. Serial No. 704,308. 4 Claims. (Cl. 296—84.)

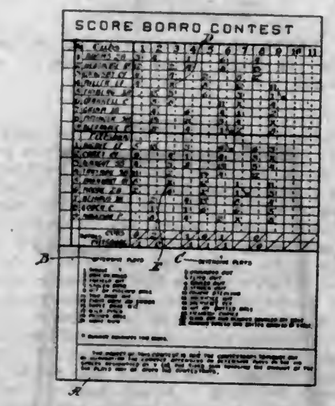
4. The combination with a motor vehicle body, of cross members and side members forming a frame at the forward end thereof, said frame having a forwardly disposed rabbet, a unitary windshield having a rim, molding having a portion adapted to embrace the rim and to fit in said rabbet and another portion adapted to cover the joint between the frame and the rim, the first named portion



having an inwardly projecting flange adapted to be removably secured to the frame, and beading secured to the frame adapted to conceal said flange.

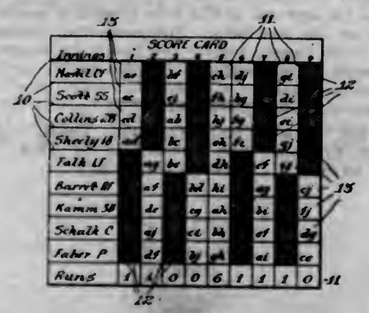
1,639,891. DIAL MECHANISM FOR AUTOMATIC TELEPHONES. ALFRED LUCKIE and TYLER L. MANOUM, Birmingham, Ala. Filed Mar. 28, 1927. Serial No. 179,156. 8 Claims. (Cl. 179—90.)

1. In a telephone dial mechanism, a rotatable dial plate carrying a series of finger holes closed below by a transparent element rotatable with the dial plate, a series of signal indicia visible through said holes, and stop means to limit rotation of the dial in signalling.



1,639,892. INTERNAL-COMBUSTION ENGINE. ALFRED MOOSHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 10, 1923. Serial No. 673,872. 20 Claims. (Cl. 74—6.)

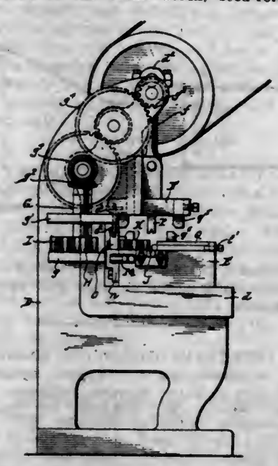
1. In an engine, the combination with the crankshaft thereof having a threaded end, of a sleeve threaded



thereon, a spring surrounding the sleeve, and a vibration damper having its parts held in frictional engagement by said spring.

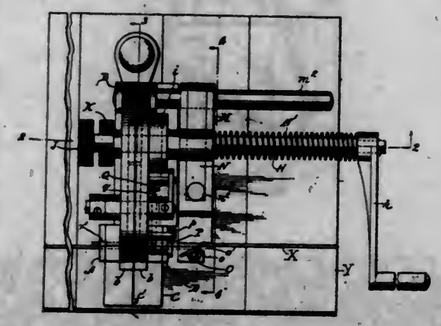
1,639,893. GAME OR PUZZLE. EMIL S. NEUZIL, Chicago, Ill. Filed Apr. 6, 1925. Serial No. 20,883. 10 Claims. (Cl. 273—88.)

1. In a game, the combination of a score card having certain numerals thereon representing plays and certain other characters representing unknown plays.



1,639,894. GAME OR PUZZLE. EMIL S. NEUZIL, Chicago, Ill. Filed June 18, 1926. Serial No. 116,795. 5 Claims. (Cl. 273—88.)

1. In a game or puzzle the combination of a score card having certain characters representing plays, a guide having certain combination of characters representing plays of a baseball game whereby only certain combination of characters in said guide representing certain plays may be inserted on said score card for completing said score card.

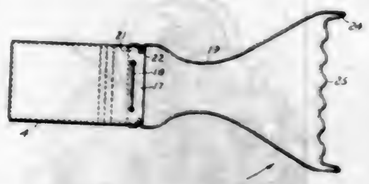


1,639,895. MACHINE FOR MAKING DIVERGENT FASTENERS. VINCENT RAGONA, Brooklyn, N. Y., assignor, by mesne assignments, to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed June 4, 1921. Serial No. 475,148. 7 Claims. (Cl. 10—28.)

3. In a machine for making divergent fasteners of the class described, a plurality of complemental die-rolls provided with matching-surfaces in relief and in intaglio for the formation of divergent corrugations in alternate relation to flat surfaces, combined with a channel within which the formed stock is directed in a determined path, tooth-forming dies acting upon edge only of the corrugated portions of the metal stock, feed-rolls positioned

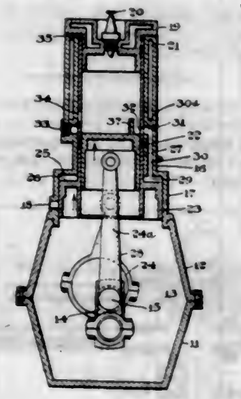
intermediate said die-rolls and said tooth forming dies, and means for intermittently actuating said feed-rolls and said tooth-forming dies.

1,639,896. PACKAGE-BINDING IMPLEMENT. VINCENT RAGONA, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 19, 1922. Serial No. 589,150. 7 Claims. (Cl. 140—93.)



1. In a wire tying device, the combination with a twister pinion, and a tensioning member, of a shaft provided with a gear, means actuated by the shaft to impart sliding movement to said tensioning member, a rotatable and slidable operating shaft, a gear fast with the operating shaft and movable by the sliding movement thereof into and out of mesh with said gear on first named shaft, and a second gear fast with said operating shaft and movable by the sliding movement thereof into and out of service relation to said twister pinion, whereby the operating shaft is adapted in one position for actuating the twister pinion and in another of its positions to impart movement to the tensioning member.

1,639,897. HOT-AIR DEVICE. WILLIAM L. RATHJEN and LILLIAN K. RATHJEN, Oakland, Calif. Filed Aug. 14, 1924, Serial No. 731,994. Renewed Jan. 15, 1927. 6 Claims. (Cl. 34—26.)



5. A hot-air device, comprising a shell having a plurality of spaced walls therein forming a plurality of heating chambers having a common inlet opening and

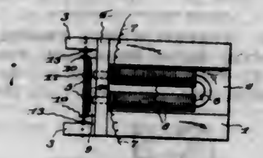
converging toward a common outlet opening, and said chambers having thereabove an additional chamber with a separate inlet opening for cold air and terminating in

the said common outlet opening, and a hair guard mounted above said outlet opening and extending outwardly therefrom.

1,639,898. INTERNAL-COMBUSTION ENGINE. PERCY H. REID, Montreal, Quebec, Canada, assignor of one-half to Arthur S. Piers, Montreal, Canada. Filed Apr. 29, 1926. Serial No. 105,570. 7 Claims. (Cl. 123—71.)

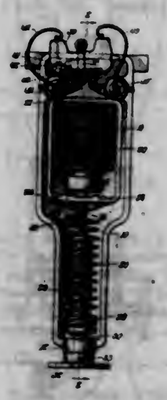
7. A two cycle engine having aligned fuel inlet and exhaust ports formed in opposite wall portions of the power cylinder and positioned so that the inner edges of said ports approximately coincide with the compression surface of the power piston when the latter is at the end of the power stroke, a reciprocal sleeve valve operating between the cylinder and the piston and provided with fuel inlet and exhaust ports arranged to register, at times, with the corresponding ports of the cylinder, said valve ports being relatively staggered to position the exhaust port a predetermined distance nearer to the head or outer end of the valve, means for reciprocating the valve oppositely to the piston including provision for causing the valve to have a limited movement in the same direction as the piston at the very beginning of the compression stroke, said means being timed to cause the exhaust ports to open and close during a slight travel of the piston at the end of the power stroke, to cause the inlet ports to begin to open just prior to closure of the exhaust ports and before the piston has reached the end of the power stroke and to cause said inlet ports to be closed by the valve and the piston when the latter has traveled only a slight distance outwardly at the beginning of the compression stroke and a fuel pump comprising a pump cylinder formed by enlarging the inner end of the power cylinder and having a fuel inlet and a fuel outlet, a conduit formed in the power cylinder and establishing communication between the fuel inlet thereof and the pump outlet and a pump piston operating in said pump cylinder and formed by an enlargement at the inner end of the valve, said pump piston functioning to draw a charge of fuel into the pump cylinder during the inward movement of the sleeve and to compress and deliver the charge of fuel to the power cylinder during the outward movement of the sleeve.

1,639,899. DUSTPAN. WILLIAM C. RICE, Holden, Mo. Filed Apr. 14, 1925. Serial No. 23,066. 1 Claim. (Cl. 65—20.)



A dust pan including a body portion formed of a length of sheet metal, side and rear upstanding flanges formed on the body portion, the ends of the side flanges overlapping the ends of the rear flange, a support embodying a plate having its upper edge disposed between the overlapping ends and having its lower edge arranged in spaced relation with the body portion of the pan to elevate the rear end of the body portion, a handle positioned on the rear flange, rivets extending through the ends of the flanges, support and handle for securing the flanges in upright positions.

1,639,900. STEAM HAIR CURLER. FRANK C. SALISBURY, Cleveland, Ohio. Filed Mar. 29, 1926. Serial No. 98,098. 7 Claims. (Cl. 132—33.)

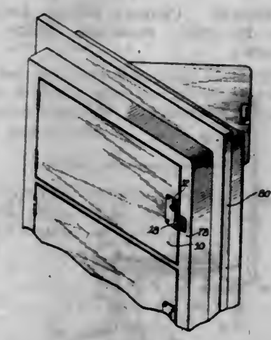


1. A hair curler comprising, a source of steam, a multiple number of steam pipes connected therewith, a corresponding number of perforated tubes closed at their outer ends, tubular sliding connections between said steam pipes and said perforated tubes and having outer cylinders enclosing said tubes.

1,639,901. ORGAN RELAY. MAURICE H. SAMPSON, Chicago, Ill. Filed July 23, 1923. Serial No. 653,357. 1 Claim. (Cl. 200—104.)

A relay comprising a horizontal insulating base block having a longitudinal channel in its under face and extending from end to end, said block having the upper portion of one end extended at each side to form a pair of arms of reduced thickness, an insulating strip secured across one end of said channel to said block beneath said arms, an elongated horse shoe magnet having the two ends of the core thereof passed through said strip for support of said magnet with the body of said magnet extending into and being housed within the channel of said block, an L-shaped armature plate having a depending long arm and a horizontal short arm, integral ears extending at right angles from opposite side edges of the long arm of said armature plate directly adjacent the bend thereof, a pivot rod passed through said block arms and plate ears for pivotal suspension of the armature with the long arm thereof depending adjacent the poles of said magnet and the short arm thereof extending oppositely from the ears, and in the direction of the magnet, a contact block detachably secured on the upper face of said base block, a plurality of circuit leads disposed in said contact block and extending over the short arm of said armature plate, and means carried by the short arm of said armature plate for simultaneous circuit closing engagement of all of said circuit leads upon energization of the magnet.

1,639,902. THERMOSTATIC APPLIANCE. HERBERT J. SAUVAGE, Chicago, Ill., assignor, by mesne assignments, to the trustees of Electro Thermostatic Control Company, Chicago, Ill., a Trust Estate. Filed July 5, 1924. Serial No. 724,278. 6 Claims. (Cl. 297—8.)

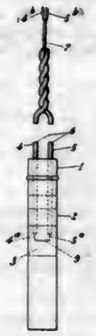


1. In a thermostatic appliance of the character described, the combination of an expansible and contractible thermostatic bellows, a supporting ledge to which one end wall of said bellows is fixedly secured, said ledge having a surface parallel to the plane of said bellows end wall, a yoke around said bellows bearing on the outer face of the opposite end wall of said bellows, a coil contractible spring secured to the yoke on the opposite side of said ledge from said bellows, and means to adjust the tension of said spring, said yoke under certain conditions being adapted to bear on said ledge surface and to maintain said movable bellows end wall parallel to said fixed bellows end wall.

1,639,903. PROCESS OF ACCELERATING THE VULCANIZATION OF RUBBER. WINFIELD SCOTT, Akron, Ohio, assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Aug. 14, 1924. Serial No. 731,969. 19 Claims. (Cl. 18—53.)

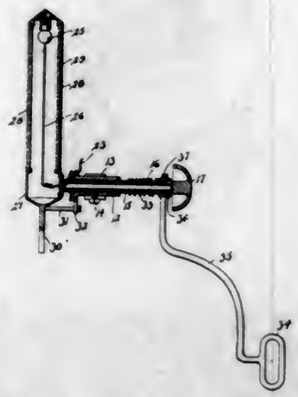
1. The process of manufacturing an accelerator for use in the vulcanization of rubber which comprises treating an aldehyde derivative of Schiff's base with an acid, neutralizing said acid, and reacting the product so formed with an aldehyde.

1,639,904. SERVICE CABINET. HARRISON A. SMITH, Neenah, Wis., assignor, by mesne assignments, to The Servidor Company, New York, N. Y., a Corporation of Delaware. Filed May 23, 1921. Serial No. 471,566. 12 Claims. (Cl. 232—1.)



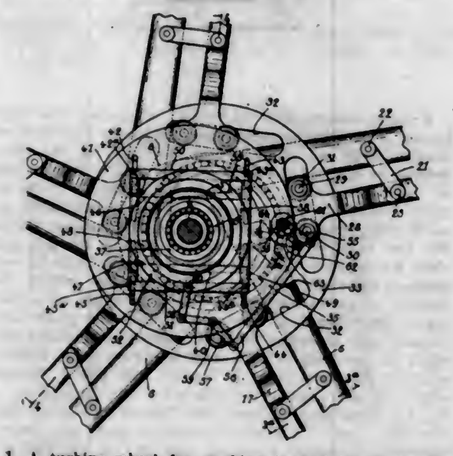
1. In combination, a normally closed compartment, a plurality of doors providing access to said compartment, locking means operated by swinging said doors to closed position to hold them closed, manual means for releasing said locking means, said locking means operating to throw the door open when released, and an inter-locking mechanism connecting said sets of locking mechanism to permit operation of said doors in predetermined sequence only.

1,639,905. MANUFACTURE OF SODIUM THIOSULPHATE. FREDERICK W. SPEER, Jr., and DAVID L. JACOBSON, Pittsburgh, Pa., assignors to The Koppers Company, a Corporation of Pennsylvania. Filed Apr. 4, 1921. Serial No. 458,265. 4 Claims. (Cl. 23—115.)



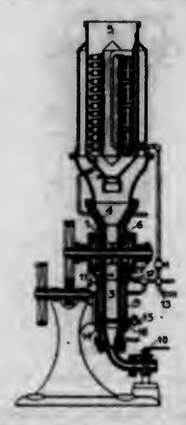
3. In a process for the production of alkali metal thiosulphate the combination of steps that consists in: passing a gas containing hydrogen sulphide through an alkaline solution to absorb the hydrogen sulphide from the gas; heating and treating the solution containing the absorbed hydrogen sulphide with an oxidizing agent so as to effect the formation of the alkali metal thiosulphate; and withdrawing from the circulating system solution for the recovery of the alkali metal thiosulphate, when the latter has accumulated to about its saturation point in the system.

1,639,906. SAFETY BLASTING CAP. NEWTON I. STEERS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 24, 1925. Serial No. 17,864. 2 Claims. (Cl. 102—9.)



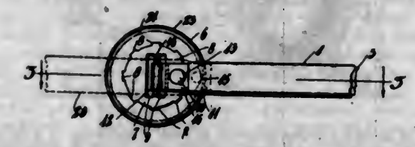
1. In a blasting cap, an explosive container, and electric leads from said container, said leads having uninsulated portions, with such portions twisted together through a substantial length thereof.

1,639,907. SIGNAL. CHARLES STILES, Altoona, Kans. Filed June 20, 1925. Serial No. 38,520. 1 Claim. (Cl. 177—329.)



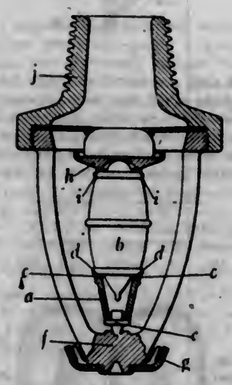
A signal of the character set forth including a fixed sleeve, a bearing sleeve arranged within and fixed to the inner side of the fixed sleeve, a rotary shaft arranged in the bearing sleeve, a hand operated wheel upon the inner end of the shaft, a collar fixed to the outer end of the rotary shaft and abutting the outer end of the bearing sleeve to limit the inward movement of the collar, a large annular flange on one end of the collar, a small similar flange upon the opposite end thereof, an illuminated lamp casing secured to the small annular flange on the collar, the large annular flange on the collar having a contact member arranged upon the inner side thereof, the outer end of the fixed sleeve having an annular flange thereon, a semi-circular spring contact member on the last mentioned annular flange and adapted to contact with the first mentioned contact member, a spring encircling the bearing sleeve with one end connected with the bearing sleeve and the other end connected to the hand operating wheel, means upon the lower end of the lamp casing and the annular flange on the fixed sleeve for restricting the lateral movement of the lamp casing, and a knee pedal having its upper end secured to the inner end of the hand operating wheel and its opposite end extending downwardly and in juxtaposition with the motor operator's knee.

1,639,908. TURBINE-WHEEL PROPELLER AND MOTOR. CARL BRUNO STRANDGREN, Paris, France. Filed Oct. 17, 1925, Serial No. 63,013, and in Great Britain Aug. 25, 1925. 12 Claims. (Cl. 170—24.)



1. A turbine wheel for working in a fluid in relative motion thereto, comprising in combination a rotary member, a number of oscillating members pivoted to said rotary member about axes parallel to the axis of rotation of said rotary member, an eccentric member adapted to rotate about an axis parallel to said axis of rotation, rigid members extending in a substantially radial direction and respectively pivoted to said oscillating members and means for connecting said eccentric member to said rigid members whereby the latter may take slight displacements of translation in a direction substantially parallel to the corresponding tangent to said eccentric member during the operation of the wheel.

1,639,909. CEREAL-SWELLING MACHINE. CHUJIRO SUZUKI, Tokyo, Japan. Filed Mar. 26, 1924. Serial No. 702,157. 2 Claims. (Cl. 99—2.)



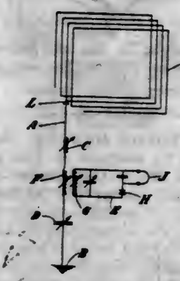
1. A machine of the character described comprising preheating means, feeding means arranged therebeneath including a cylinder casing, a hopper above the casing and connected with the preheating means for guiding the material to the casing, a rotary valve arranged transversely within the casing, a high pressure steam chamber connected to the bottom of the casing, means for conducting steam into the upper part of the steam chamber and exhausting it from the lower part thereof, a steam drawing device positioned at the bottom of the steam chamber including a plurality of superposed annular and relatively thin plates, and a drain valve in communication with the space between the plates and valve means connected with the means for exhausting the steam from the chamber for regulating the treated material from the chamber.

1,639,910. TRUSS. CHARLES J. TRAUB, Cincinnati, Ohio. Filed Aug. 21, 1926. Serial No. 130,625. 7 Claims. (Cl. 128—120.)

1. In a truss, in combination with a resilient back member thereof, a padded flat element, a plate having prongs clinched into said element and having apertures with a part between said apertures distended away from said element, forming a pivot part, and means embracing said pivot part and fixed to said member.

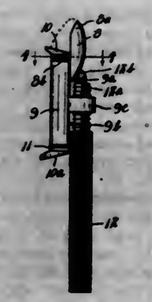
1,639,911. AUTOMATIC SPRINKLER OR FIRE EXTINGUISHER. JOHN TAYLOR, Manchester, England, assignor of one-half to Mather & Platt Limited, Manchester, England, a British Company. Filed Aug. 23, 1926, Serial No. 131,011, and in Great Britain Mar. 13, 1926. 4 Claims. (Cl. 169—38.)

1. As an article of manufacture, a bulb support for automatic sprinklers or fire extinguishers, comprising a body of relatively soft metal having a serrated surface which contacts with the material of the bulb and which when pressure is applied thereto is adapted to cold-flow to ensure of even bedding of the bulb on the support.



1,639,912. WICK HUMIDIFIER FOR CIGAR CASES. JAMES A. WARD, Mallard, Iowa. Filed May 1, 1926. Serial No. 106,011. 4 Claims. (Cl. 131—30.)

1. In a device of the class described, two bars parallelly arranged and designed to rest on the bottom of a cigar case, a trough secured to said bars and having end members that extend downward and also designed to rest on the bottom of the case, a wick supported by said bars and terminating in said trough, metal webbing embracing said

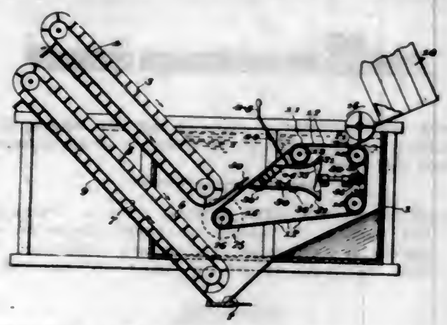


wick and rods between said wick and said webbing for holding the top portion of the webbing a certain distance from said wick.

1,639,913. ANTISTATIC AERIAL. ROY A. WEAGANT, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 6, 1920. Serial No. 415,081. 5 Claims. (Cl. 250—20.)

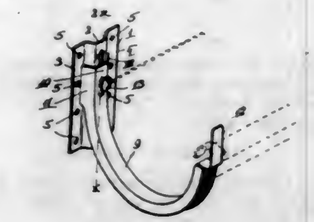
1. An aerial for radio signaling, comprising an open loop portion having a plurality of turns and a vertical antenna portion connected to substantially the mid point of the open loop portion.

1,639,914. DENTAL INSTRUMENT. AMOS S. WELLS, Minneapolis, Minn. Filed Aug. 27, 1925. Serial No. 52,789. 11 Claims. (Cl. 32—10.)



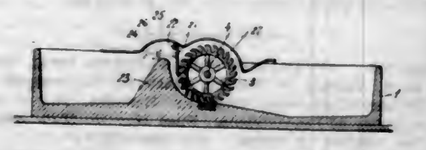
1. A dental tool for building tips on artificial teeth having in combination retaining means for holding a tooth, and a supporting surface extending transversely at one side of the tooth when the latter is held in said means, on which surface a tip may be built up.

1,639,915. APPARATUS FOR WASHING COAL AND ORE. GEORGE W. WILMOT, Hazleton, Pa., assignor to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed May 10, 1922. Serial No. 559,793. 7 Claims. (Cl. 209—423.)



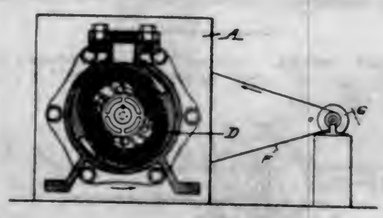
1. In a coal and ore washing apparatus, the combination of traveling means situated within a body of water for conveying coal or ore through the said body of water the said coal or ore being adapted to be deposited upon

said means, means also situated within the said body of water for creating a continuously flow stream of water and causing the same to flow through the said coal or



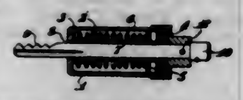
ore as it is carried along by the said means, and means for varying the angle at which the said stream strikes the said coal or ore.

1,639,916. EAVES-TROUGH HANGER. SIDNEY C. WILSON, Pittsford, N. Y., assignor to The Knab Corporation, Rochester, N. Y., a Corporation of New York. Filed Aug. 6, 1925. Serial No. 48,515. 4 Claims. (Cl. 108—29.)



3. In an eaves trough hanger, the combination of a hanger comprising a body portion having parallel flanges, said body portion having the outline of a semi-cylinder, said body portion having one end thereof extending straight or tangential thereto, said straight portion having the flanges flared outwardly, a support consisting of a plate of metal having a channel formed midway thereof and extending outwardly therefrom, said channel having sloping sides with which the flaring flanges of the hanger engage to nest the channel of the support therein, said channel having a narrow slot in the base thereof and a wide opening at the end of said slot, a bolt for fastening said hanger to said support, said bolt comprising a screw and a nut, the screw of said bolt passing through said hanger and through the slot in said support, a nut in the channel of the support with which said screw engages.

1,639,917. BEATER. GEORGE STANFORD WITHAM, Jr., Hudson Falls, N. Y. Filed June 30, 1922. Serial No. 572,092. 12 Claims. (Cl. 92—24.)

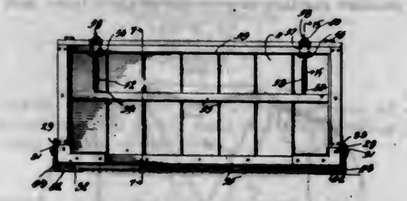


1. In combination, a beater roll and a motor having their axes in alinement, a connection between the motor and the roll for driving the same directly, said connection adapted to shear under a predetermined stress, and means for moving the motor and the roll vertically while retaining the alined axes horizontal.

1,639,918. DEVICE FOR ILLUSTRATING THE OPERATION OF ROTARY PUMPS. GEORGE B. WRIGHT, South Norwalk, Conn., assignor to Nash Engineering Company, South Norwalk, Conn., a Corporation of Connecticut. Filed Nov. 19, 1925. Serial No. 70,040. 3 Claims. (Cl. 35—16.)

1. A device for the purpose stated, consisting of a back representing a section of a rotary pump, said back having a cut away portion, a front rotor representing a section of the pump rotor, and a rotor on the rear of the back connected to turn with the front rotor, and having markings to indicate the action of the liquid in a pump.

1,639,919. LOCKSMITH'S INSTRUMENT TO OPEN ALL STANDARD MAKES OF CYLINDER LOCKS. GEORGE JOHN BARON, Willesden, England. Filed Jan. 5, 1926, Serial No. 79,367, and in Great Britain July 17, 1925. 7 Claims. (Cl. 70—9.)

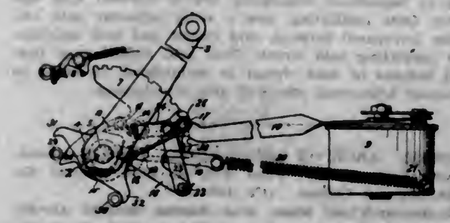


1. An instrument for unlocking different cylinder locks, comprising a stock, a plunger mounted resiliently in said stock, capable of rotation therewith, and extending therefrom at one end with a serrated edge and being exposed at the other end of the stock, the serrated end being adapted to be inserted in the lock while the stock bears against the lock's outer wall, thus enabling a series of trial turning efforts to be given to the plunger simultaneously with a series of resilient percussions on the exposed end.

1,639,920. HYDROCARBON BURNER. CLARENCE A. BERKINS, Minneapolis, Minn. Filed Oct. 28, 1922. Serial No. 597,453. 2 Claims. (Cl. 158—91.)

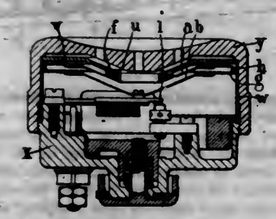
1. A fluid fuel burner comprising an air tube having a depending delivery end arranged for the downward delivery of air, a generating cone extended from a point below axially up into the delivery end of said tube but spaced therefrom, said air tube at a point slightly above said cone having an internal annular flange forming a contraction and causing the downwardly delivered air to be concentrated toward the top of said cone and to move with relatively high velocity, and means for delivering fluid fuel to the outer surface of said generating cone.

1,639,921. COLLAPSIBLE BASKET. ROBERT W. BIRCH, Livingston, Mont. Filed Feb. 15, 1926. Serial No. 88,473. 4 Claims. (Cl. 217—47.)



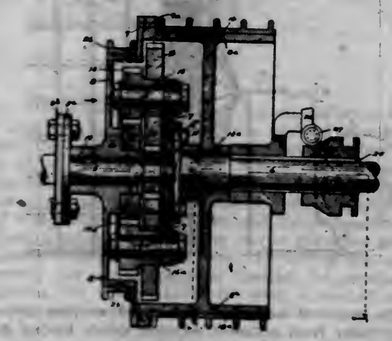
2. A knock-down basket including a bottom wall, end walls hinged to the upper surface of the bottom wall slightly inwardly of the outer ends thereof and adapted to fold inwardly and lie flat thereupon, brackets carried by the said bottom wall and extending beyond the ends thereof, front and rear walls adapted to rest at their lower edges upon the bottom wall, brackets carried by each end of the said front and rear walls and extending inwardly thereof, and connecting arms extending between and pivotally connected to the said brackets carried by the bottom wall and the brackets carried by the front and rear walls.

1,639,922. STORAGE BATTERY. STANLEY ALBERT BREULS, Sutton West, Ontario, Canada. Filed Aug. 14, 1923. Serial No. 657,364, and in Canada May 30, 1923. 1 Claim. (Cl. 136—81.)



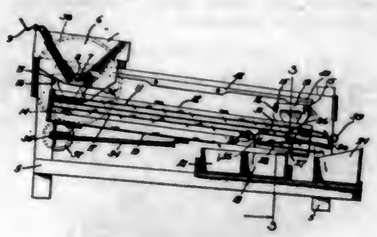
In combination a series of battery plates in spaced relation and having apertures near their edges with the apertures in alinement, a metal locking bar extending across the plates and provided with transverse slots in which are seated the plates, said bar having a longitudinal opening registering with the alined apertures of the plates and a locking pin extending through the longitudinal openings of the locking bar and said apertures in the plates.

1,639,923. CALCULATING MACHINE. CHARLES E. BROMAN, Grand Rapids, Mich., assignor, by mesne assignments, to Add-Index Corporation, a Corporation of Delaware. Filed Nov. 4, 1920. Serial No. 421,749. 10 Claims. (Cl. 235—6.)



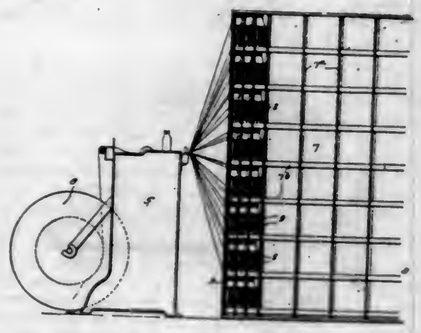
1. In a calculating machine, a shaft-driving flexible and yielding connection, comprising in combination, a shaft, a member fixed on said shaft, another member carried by said shaft and independently rotatable on the same and contacting with said first member, a power-transmitting member loosely mounted on said shaft, a spring, and intermediate connecting parts between said members and said spring, the arrangement of said intermediate connecting parts requiring greater power to expand the flexible connection and spring when at normal than after such expansion has commenced.

1,639,924. DEVICE FOR TRANSMITTING OR REPRODUCING SOUND. SIDNEY GEORGE BROWN, North Acton, London, England. Filed Feb. 4, 1925, Serial No. 6,870, and in Great Britain May 27, 1924. 6 Claims. (Cl. 181—31.)



5. In a device for transmitting or reproducing sound, the combination comprising a vibrating element having two similar diaphragms opposed to one another, means for connecting said diaphragms together at their peripheries to form an enclosed space of uniform thickness, means for directly causing one of said diaphragms to vibrate, a sound directing member, and means for rigidly connecting the centre of said other diaphragm to said sound directing member, as set forth.

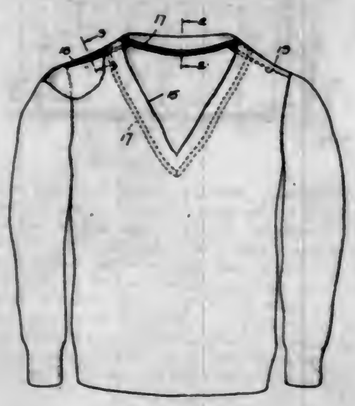
1,639,925. POWER-TRANSMITTING DEVICE. PHILIPPS LYONS CLARK, deceased, Los Angeles, Calif., by Roy A. Kirkpatrick, executor, Los Angeles, Calif., assignor to Annie Clark. Filed Apr. 28, 1924. Serial No. 709,392. 5 Claims. (Cl. 74—34.)



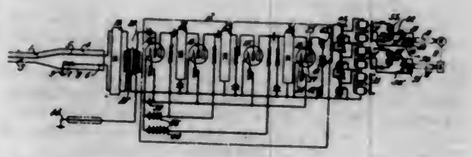
1. In a power transmission mechanism, in combination, two shafts in alinement with each other, a drum revolubly mounted on the adjacent ends of said shafts and having bearings on each shaft, a gear on one of said shafts to be driven thereby, a planetary gear train interposed between said gear and said drum, said drum having a gear in connection therewith and forming a part of said gear train, a friction brake band exteriorly of said drum and adapted to hold the same for reverse drive, means for operating the same, an external contracting band frictional power clutch encircling said drum and keyed to one of said shafts, and means for operating said power clutch as required.

1,639,926. FLAX-TESTING MACHINE. ANDREW V. CLELAND, Minneapolis, Minn. Original application filed July 18, 1923, Serial No. 652,422. Divided and this application filed Sept. 2, 1924. Serial No. 735,370. 10 Claims. (Cl. 209—345.)

1. A flax testing machine comprising a frame, an oscillating shoe mounted therein, a scalping sieve mounted in said shoe and having a group of perforations near its lower end which are larger than those in the upper portion of said sieve to allow the larger seeds passing over the upper portion of the sieve to pass through, a sieve mounted in said shoe beneath said scalping sieve to receive the seed and fine material falling through the upper portion of said scalping sieve, the tailings of said scalping sieve being discharged from the lower end thereof, the finer seeds falling upon said second named sieve, and a means beneath the group of larger perforations for separating the larger seeds received through the larger perforations of the scalping sieve, and delivering the same substantially at the point of delivery of the second named sieve.



1,639,927. METHOD AND MEANS FOR WARPING YARN. HARRY D. CLINTON, Johnson City, N. Y. Filed Jan. 31, 1927. Serial No. 164,934. 13 Claims. (Cl. 242—131.)



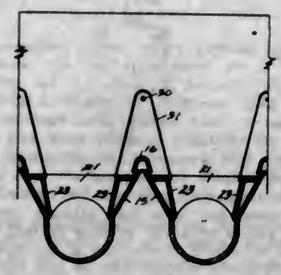
1. The improved method of high speed warping onto a beam cylinder from ordinary warping spools having flat heads, characterized by drawing the yarn directly off of the spools past fixed points spaced from the spools without rotating the latter.

1,639,928. ATTACHMENT FOR SWEATERS AND THE LIKE. SAMUEL H. COHEN, Los Angeles, Calif., assignor, by mesne assignments, to Jerry-J., Inc., Los Angeles, Calif., a Corporation of California. Filed May 6, 1925. Serial No. 28,416. 1 Claim. (Cl. 2—90.)

The combination with a sweater having a single opening at its neck portion, of a strip of elastic tape surrounding said opening and secured to the inner face of the sweater, and a plurality of elastic tapes secured to the inner face of the sweater and extending along the lines of both shoulders and terminating at their outer ends at the junction of the sleeves of the sweater with the shoulder portions thereof and at their inner ends adjacent to the neck portion of the sweater, all of said strips functioning to exert an elastic influence upon the fabric of the sweater, whereby the neck portion is made to closely adapt itself to the neck of the wearer and the shoulder portions to the shoulders of the wearer.

1,639,929. SIGNALING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1925. Serial No. 75,019. 12 Claims. (Cl. 178—63.)

1. In combination, a circuit of substantial length, balanced as regards the impedances of its two sides to earth and exposed to interference from extraneous electric fields, an electric space discharge amplifier of direct amplifying, non-duplex type at one end of said circuit, said amplifier having a cathode with an earth connection of impedance sufficiently low to prevent said amplifier from oscillating, and a relay adjacent said amplifier interposed between said circuit and said amplifier and insulating said circuit from said amplifier so that said balance of said circuit is maintained, in order to minimize deleterious effects of said interference.

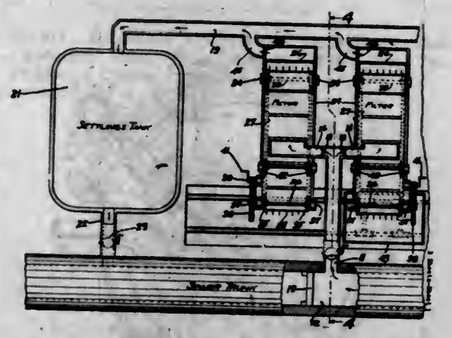


1,639,930. ARCH OR TRUSS SHOE. LOUIS DAVIDSON, New York, N. Y. Filed Feb. 9, 1924. Serial No. 691,586. 3 Claims. (Cl. 108—1.)

1. An arch or truss shoe having sockets therein into which the ends of segments may fit, means in the shoe which permit of the compression strains being transmitted from an end face of one segment to the end face of another without stressing the outer walls of the shoe, said sockets having connected walls for sustaining the vertical and horizontal strains which may be transmitted thereto by the ends of said segments, and means

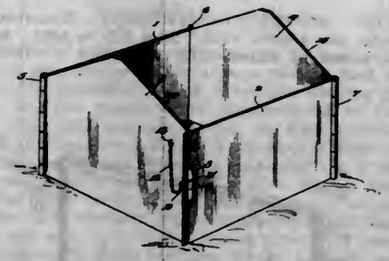
for taking up transverse play between the ends of said segments and said socket walls and resist bending and torsional strains on the arch.

1,639,931. COAL-FEEDING HOPPER. FRED DORNBROOK, Milwaukee, Wis., assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1924. Serial No. 690,277. 5 Claims. (Cl. 110—109.)



1. In a stoker, a ram casing having an opening in the top thereof, a coal feeding ram slidable in said casing, and a hopper fitting secured within said opening and having its depending front and rear walls substantially fitting the curved upper surface of the ram.

1,639,932. AGITATOR. WILSON R. ELLIS, Berkeley, Calif. Filed Sept. 10, 1926. Serial No. 134,744. 6 Claims. (Cl. 259—126.)

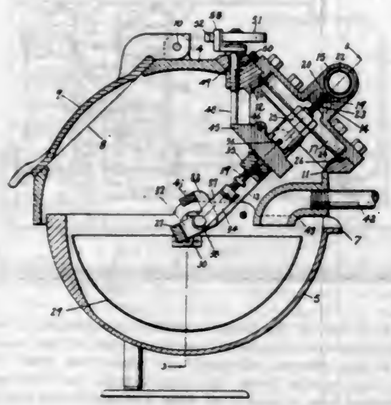


1. An agitator comprising a main shaft, gear mechanism connected to said shaft for rotating the same, a beater element offset with relation to said shaft, a base plate carried by said shaft, and a universal joint connection between said base plate and said beater element.

1,639,933. FILTERING APPARATUS. LEO EWALD, Minneapolis, Minn. Filed June 19, 1925. Serial No. 38,255. 10 Claims. (Cl. 210—2.)

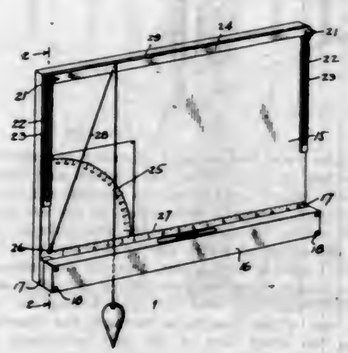
1. A device of the class described, comprising a tank, a feed hopper at the liquid discharge end of the tank, a belt having fingers arranged to rake fresh filter material downwardly from the hopper into the tank, said belt fingers also arranged to drag and distribute the material within the liquid, and to finally remove the same at a point remote from the liquid discharge end.

1,639,934. SAND MOLD. ANTON W. FERRING, Dubuque, Iowa. Filed Dec. 31, 1925. Serial No. 78,622. 3 Claims. (Cl. 46—37.)



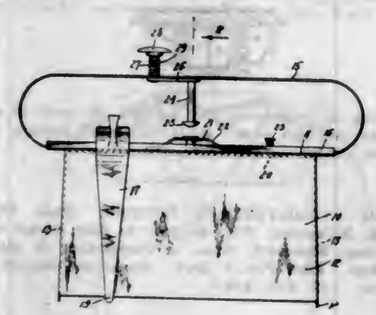
1. A sand mold comprising a plurality of walls hingedly connected to one another in a series and adjustable about their hinged connections to provide a mold chamber of hollow geometric form open at its top and bottom, and means for connecting the free ends of the end ones of the series of walls, one of said walls at its free end being provided with a slot, and the said means comprising a tongue upon the free end of the other wall engageable through the said slot and having an opening therein, and a pin insertable through the opening and engaging the outer side of the first mentioned one of the endmost walls.

1,639,935. VALVE-CONTROL MECHANISM. EDWARD A. FIELD and EDWARD A. FIELD, Jr., Chicago, Ill., assignors to Field Engineering Company, Chicago, Ill. Filed Nov. 23, 1925. Serial No. 70,960. 16 Claims. (Cl. 137—68.)



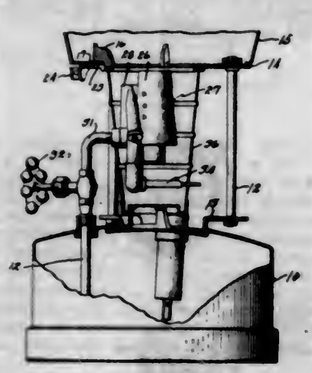
13. In a structure of the class described, the combination of a housing open at the bottom, a receptacle pivotally mounted within and constituting a bottom for said housing, a valve casing mounted on said housing, a feed valve, a pivotally mounted actuating lever, an overflow bucket suspended therefrom within said receptacle, an operating connection for said actuating lever to said valve, a pivotally mounted weight acting on said

lever when the parts are actuated, and a bucket dumping member on said receptacle engaging the bucket to tilt the same when the receptacle is tilted, said receptacle being



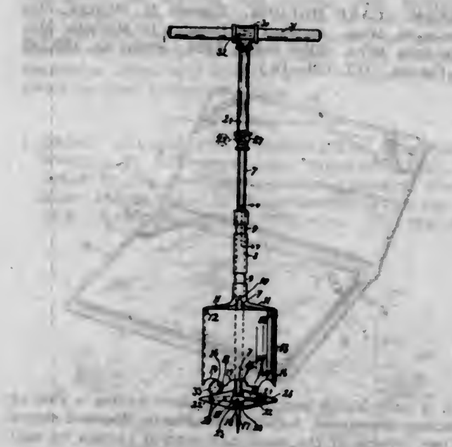
provided with a weight engaging part whereby the parts are returned to set position upon the tilting of the receptacle and the bucket discharged.

1,639,936. MEASURING INSTRUMENT. ELIZABETH H. GATES, Los Angeles, Calif. Filed July 6, 1925. Serial No. 41,846. 5 Claims. (Cl. 33—180.)



1. A geometrical instrument comprising a support having a linear scale thereon, a protractor carried by said support and having its index at one end of the scale, a bar mounted upon the support in parallelism with said scale, means whereby the bar is adjustably mounted upon the support for varying the position thereof with respect to said scale, a rule having a scale on said support for determining the position of the bar, a flexible line connected at the index of the protractor and passing over said bar in a direction determinable by reference to said protractor and thence passing downward and providing a depending stretch, a plumb bob on the depending end of said line, and means on the bar for maintaining an adjusted position of the line thereon.

1,639,937. BUTTER MOLD. JOSEPH GREENER, New York, N. Y. Filed Nov. 1, 1926. Serial No. 145,508. 1 Claim. (Cl. 31—11.)



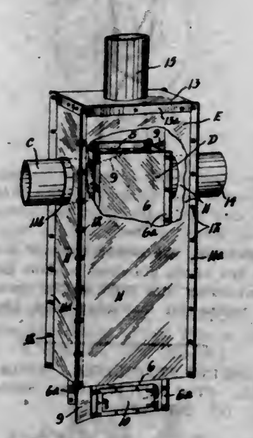
A device for molding butter blocks, comprising a mold composed of a top, side walls and end walls, a ball-shaped handle attached to said top, an ejector plate within said mold extending in parallel relation to said top, a plunger on said ejector plate extending through said top, a pin shiftably mounted upon said handle in alignment with said plunger and provided with a head at its lower end adapted to bear against said plunger, a spring co-operating with said pin for normally holding the latter disengaged from said plunger, two parallel longitudinal guides upon the exterior of said top, a U-shaped frame extending transversely of the mold mounted upon said guides, and a cutter wire on said frame extending across said mold, the lower edges of said end walls projecting below the free edges of said side walls and thus forming stops for said cutter wire.

1,639,938. FIRE-POT CONSTRUCTION. OTTO J. GROEHN and WILLIAM BLASKEWITZ, Detroit, Mich., assignors to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 12, 1925. Serial No. 1,998. 11 Claims. (Cl. 158—33.)

1. In a fire pot the combination with a fuel tank and combustion chamber of a combined induction chamber and sediment trap in proximity to but outside of the combustion chamber, and a fuel feed pipe extending upwardly from the tank and provided with a horizontally extending part communicating with the said induction chamber and sediment trap.

1,639,939. AUGER FOR POSTHOLES AND WELLS. HENRY GROTHE, Le Sueur Center, Minn. Filed Apr. 3, 1926. Serial No. 99,509. 3 Claims. (Cl. 255—68.)

1. An auger of the class described the same having a normally upright boring bar with means at the top end for rotating it, said bar being polygonal in cross section and having a sharp bottom end for starting it in the ground, a spider fixed on the bar near its lower end, two oppositely arranged semicircular spirally inclined cutting blades fixed on the spider, a vertically disposed open-ended hollow cylinder arranged centrally above the spiral wings, said cylinder having to its upper end secured a spider having a central sleeve extending upwardly and slidable on the polygonal bar, and having one or more portions fitting the contour of the bar so as to make the cylinder rotate with the bar, each spiral blade having its outer edge turned upward and out of concentric position so as to gather the loosened earth inward and leave the cylinder to turn easy in the bore in the earth.



1,639,940. VEHICLE TIRE. DANIEL LAR GUVIA, Mexico, Mexico. Filed Nov. 2, 1925, Serial No. 66,226, and in Mexico Nov. 17, 1924. 6 Claims. (Cl. 152—8.)

1. A tire comprising an elastic casing arranged in close form on a rim to form an inner hollow space, a frame of strong, strengthening and yielding net arranged on the inner face of the elastic casing, and a pressure compensating member for the peripheral surface of the casing,

which member is mounted at the central portion of the hollow space of the casing and is conveniently secured to its inner frame.

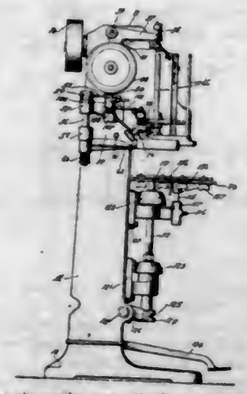
1,639,941. HEATING APPARATUS. HANS P. HANSON, Cambridge, Minn. Filed Jan. 21, 1926. Serial No. 82,684. 5 Claims. (Cl. 257—168.)

2. Auxiliary heating apparatus having in combination a closed inner casing formed from a pair of shell sections having registering flanges, a partition dividing said casing into two compartments communicating at their lower ends, said partition having its sides extending between said registering flanges of said shell sections and projecting therebeyond, means for connecting one of said compartments with the outlet flue of a heating plant, discharge means communicating with said other compartment, an outer relatively large casing enclosing said inner casing, and secured in spaced relation thereto by means of the outwardly projecting sides of said partition, said outer casing having air intake means adjacent the lower end thereof, and discharge means adjacent the upper end thereof.

1,639,942. SPRING COVER, SPRING SLEEVE, AND LUBRICATOR. EARL F. HARTZELL, Cuyahoga Falls, Ohio. Filed Oct. 18, 1926. Serial No. 142,346. 24 Claims. (Cl. 267—37.)

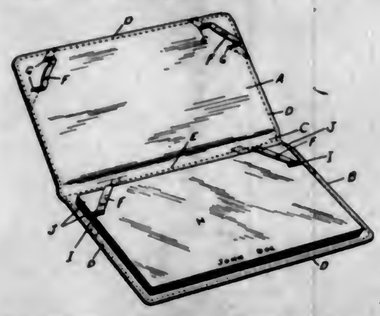
1. In an apparatus of the class described, the combination of a sectional casing, said sections provided with double flanges at their contiguous ends, said flanges each being of sufficient size to allow double end movement of a longitudinal nature with respect to a spring upon which the apparatus may be mounted, a filler device assembled with said sectional casing, said filler device comprising sections capable of longitudinal movement, and means for fastening said section casing and filler device together.

1,639,943. PINWHEEL. JOHN HEBERLING, Rochester, N. Y. Filed Dec. 19, 1924. Serial No. 756,906. 4 Claims. (Cl. 46—14.)



3. In a pinwheel, the combination of a central sleeve forming the hub of the pinwheel, a blade having a curved inner end extending into each of the open ends of said sleeve and means for fastening said blades into said sleeve.

1,639,944. SPRING STABILIZER. ALSAR J. HOLIFIELD, Mobile, Ala. Filed July 17, 1924. Serial No. 726,609. 2 Claims. (Cl. 267—45.)

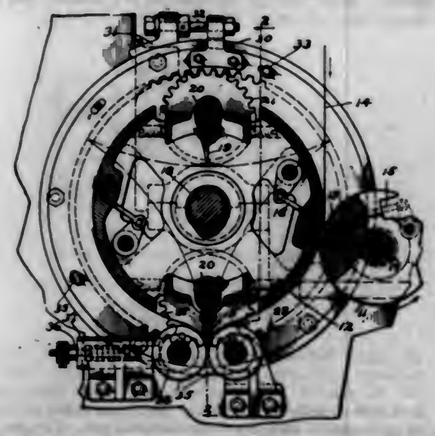


1. A stabilizer of the character described adapted to be introduced between a leaf spring and a body element, comprising a flat metallic strip having a center perforation to receive the spring tie bolt, and having end deformations adapted to form chocks on each side between the spring and body member and shaped to conform to the contour of the spring and body element between which they are clamped in position.

1,639,945. SEMIAUTOMATIC CAN-CLOSING MACHINE. FELIX HUNTAR, Hillside, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 21, 1924. Serial No. 714,979. 9 Claims. (Cl. 113—14.)

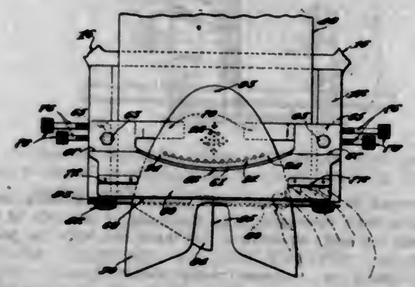
1. A semi-automatic can closing machine, comprising seaming mechanism, means for feeding covers from a stack on the machine to position beneath said mechanism and above a can body, said means including an adjustable advancing lever independent of the stack support adapted to accurately engage and position covers of different size, and means for presenting an assembled can and cover to said seaming mechanism.

1,639,946. CARD HOLDER. JOSEPH M. HURLEY, Minneapolis, Minn., assignor to Douglas C. McClain, Minneapolis, Minn. Filed Oct. 2, 1926. Serial No. 139,182. 4 Claims. (Cl. 129—18.)



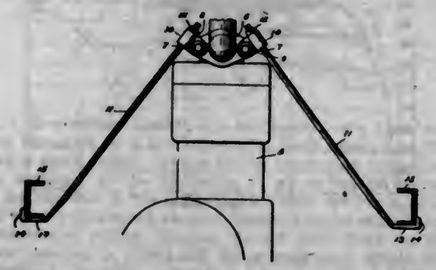
1. A card holder comprising a panel having a row of stitching thereabout, a pair of diagonally disposed straps at two corners of the panel and secured thereto by said stitching.

1,639,947. ART OF MAKING METALLO-ORGANIC COMPOUNDS. CHARLES A. KRAUS and CONRAD C. CALLIS, Worcester, Mass., assignors to Standard Development Company, a Corporation of Delaware. Filed Apr. 13, 1923. Serial No. 631,940. 13 Claims. (Cl. 260—11.)



1. The improvement in the art of making tin tetramethyl, which comprises alloying tin with sodium in the proportions of about 86% of tin and 14% of sodium, subdividing the alloy, and reacting upon the alloy with methyl chlorid under pressure at a temperature between about 30° and 100° C. in the presence of zinc as a catalyst.

1,639,948. FOLDING-BLADE-ADJUSTMENT MECHANISM. FREDERICK LAMATSCH, Grantwood, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 1, 1926. Serial No. 145,585. 3 Claims. (Cl. 270—77.)

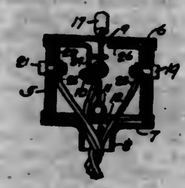


1. In folding mechanism for printing presses and the like, the combination with a suitable supporting frame and folding-off rollers journaled therein, one of said rollers being adjustable toward and away from the other; of a cylinder journaled in said frame adapted to convey paper to be folded to said folding-off rollers, a rotary tucking blade mounted in said last-named cylinder and adapted to tuck paper in between said folding-off rollers, and means for rotating said tucking blade, comprising an internal gear adjustably secured to said frame, a spur gear adapted to engage with said internal gear and operatively connected to said tucking blade, and means adapted to adjust said internal gear rotatorially with relation to said folding-off rollers.

1,639,949. GAUGE FOR PERFORATING MACHINES. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to The Peerless Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 17, 1924. Serial No. 686,817. 9 Claims. (Cl. 164—93.)

1. A gauge for perforating machines comprising a plate having a curved guiding edge and having its forward edge bent upwardly to facilitate the insertion of the work underneath and means for detachably securing said plate in an operative position.

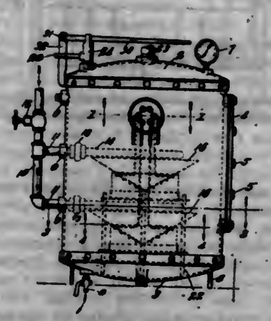
1,639,950. ENGINE BRACE. ALBERT S. LERPER, Kent, Wash. Filed July 7, 1925. Serial No. 41,959. 1 Claim. (Cl. 180—64.)



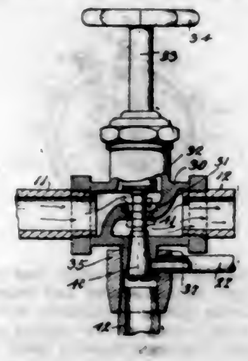
In combination with the chassis of a motor vehicle and an engine carried thereby, of a pair of brace rods having relatively broad angular lower end portions adapted to be caught on the undersides of the chassis frames, offset clips adjustably secured by nuts to the upper ends of said rods, and said clips adapted to be secured to the engine by the radiator pipe connection flange bolts.

1,639,951. RHEOSTAT. ALFRED F. C. LOTZ, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1925. Serial No. 18,523. 8 Claims. (Cl. 201—55.)

4. In a resistance adjusting device, the combination of a container having a cylindrical wall, resistance material supported on the inner side of said wall, a frame, an axial shaft supporting said frame at one end, a roller journaled at the other end of said frame, a circular contact member interposed between said roller and resistance material, spring means on said frame acting against said roller whereby said contact member is pressed against said resistance material, means on said roller for confining said contact member axially, and terminals connected with said contact member and resistance element, said roller having rolling engagement with said contact member and said contact member having rolling engagement with said resistance material when said frame is revolved.

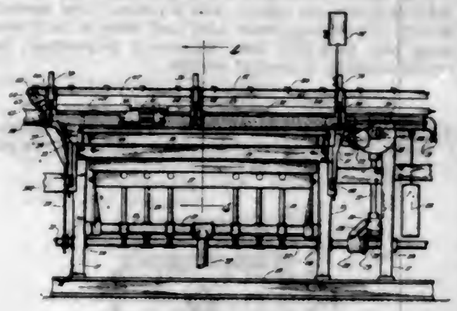


1,639,952. MULTIPLE PLURAL SWITCH. NATHAN R. MATOZA, Memphis, Tenn. Filed Feb. 4, 1926. Serial No. 85,847. 4 Claims. (Cl. 200—6.)



1. A switch, comprising a casing having a plurality of individual contacts therein, and a control lever movable selectively into engagement with said contacts, said lever being bent to helical form, whereby it is yieldingly retained normally in neutral position.

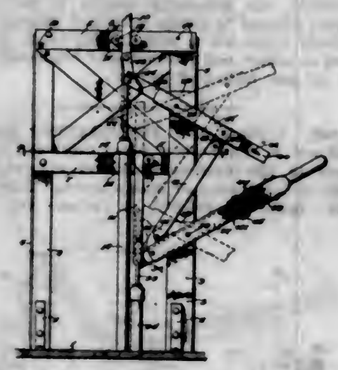
1,639,953. STEAM GENERATOR. PETER J. O. MILLER, Peoria, Ill. Filed Dec. 9, 1925. Serial No. 74,250. 1 Claim. (Cl. 219—38.)



In a generator of the character described, in combination, a casing, a plurality of drip pans arranged in superimposed relation within said casing, an electrical heating coil beneath each pan, means for electrically energizing said coils, nonconductive rests for the respective coils and pans, supporting means for said rests and pans, a water conducting pipe connected with the casing and a perforated pipe in the form of a ring above each pan and connected with said pipe.

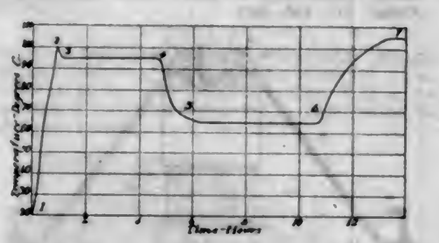
1,639,954. TWO-WAY DRAIN VALVE. ARTHUR L. MITCHELL, Dallas, Tex. Filed Mar. 30, 1926. Serial No. 98,466. 2 Claims. (Cl. 251—23.)

1. In a combined hot and cold water drain valve, a valve casing having supply and service pipe connections and an intermediate drain opening, a hot water drain pipe connected to the casing adjacent the drain opening, a main valve in the casing intermediate the supply and service connections, and a drain valve extended from the main valve and operating in the drain opening to close the same and the hot water drain pipe when the main valve is opened.



1,639,955. SOLDERING MACHINE. JOHN H. MURCH, East Orange, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed July 13, 1925. Serial No. 43,067. 8 Claims. (Cl. 113—61.)

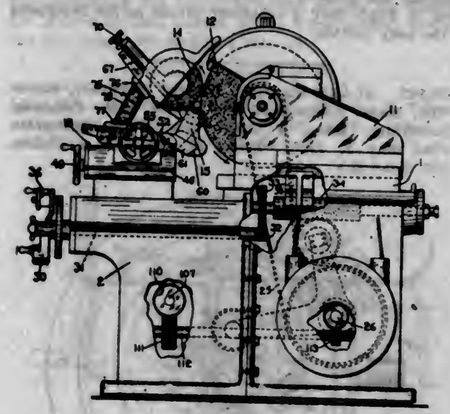
1. In a soldering machine, the combination of a solder bath receptacle, a solder applying roll adapted to carry solder from said bath and apply the same to the side seam of can bodies or the like, a conveyor for directing the bodies longitudinally of said roll, and a solder horse having supporting and guiding means for said can bodies adapted to have a cooling medium circulated therethrough to prevent undue heating of the can bodies and the mechanism during the soldering operation.



1,639,956. PUMP. JAMES O. NASH, Duke, Okla. Filed Mar. 30, 1926. Serial No. 98,541. 5 Claims. (Cl. 103—215.)

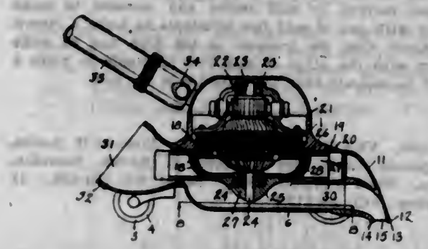
1. In a pumping mechanism, the combination of a plurality of posts, metallic facing strips secured along the said posts, cross bars connecting the posts at their upper ends and at points below their upper ends, filler blocks secured to the inner opposed faces of said cross bars and the posts and having their inner longitudinal edges spaced apart to define guiding slots, a pump rod

mounted to reciprocate through the said guiding slots, and a lever fulcrumed upon the posts at one side of the pump rod and connected at its inner end with the pump rod.



1,639,957. MANUFACTURE OF ALDEHYDE REACTION PRODUCTS OF THE ALDEHYDE DERIVATIVE OF A SCHIFF'S BASE. CLAYTON OLIN NORTH, Talmadge Township, Summit County, Ohio, assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Mar. 25, 1925. Serial No. 18,316. 7 Claims. (Cl. 260—130.)

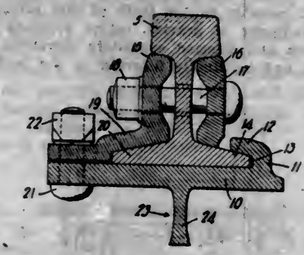
2. The process of preparing the aldehyde reaction product of an aldehyde derivative of a Schiff's base, which comprises combining the substantially dehydrated aliphatic aldehyde derivative of a Schiff's base with approximately 16.8% by weight of an aliphatic aldehyde.



1,639,958. CENTERLESS GRINDING MACHINE. CHARLES H. NORTON, Worcester, Mass., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed June 28, 1922. Serial No. 571,456. 17 Claims. (Cl. 51—103.)

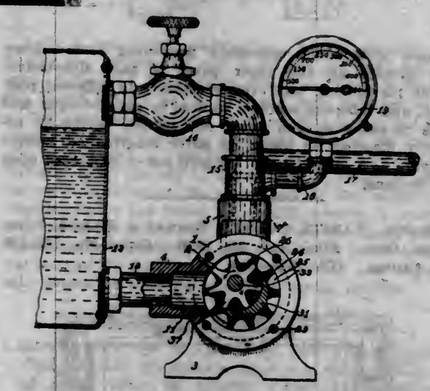
1. A centerless grinding machine comprising a rotatable grinding wheel, a work regulating wheel rotatably mounted opposite thereto, means to rotate the grinding wheel rapidly and the regulating wheel slowly in order to respectively grind and rotate work positioned therebetween, and a work positioning member arranged and positioned to maintain a piece of work in operative contact with said wheels during the grinding operation, said mem-

ber having an extensive concave cylindrical work positioning surface of substantially the same radius as that of the finished work.



1,639,959. ELECTRIC SUCTION SWEEPER. IRA J. OWEN, Grand Rapids, Mich., assignor, by mesne assignments, to Bissell Carpet Sweeper Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Oct. 8, 1922. Serial No. 592,036. 6 Claims. (Cl. 230—11.)

1. In a suction cleaner, the combination of a main casing supported on a pair of suitable front wheels comprising a broad intake portion in the lower part contracted in proximity to the fan intake to secure Venturi action, a fan chamber in the upper portion with circular opening at the top and broad annular intake, a motor casing with dish-shaped bottom suitably flanged and fitted to the said opening, a detachable motor supported within the casing, a fan with a dish-shaped body portion conformed to the bottom of said motor casing and having curved radially disposed blades at its periphery and suspended by a depending spindle of said motor within the intake passage, the intake of the fan being defined on the inner side by the dish-shaped body as a broad annular opening, substantially as described for the purpose specified.

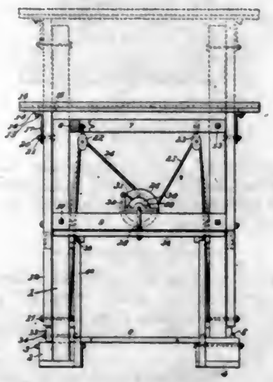


1,639,960. ANTICREEPING JOINT. CHARLES PASCAL, Montreal, Quebec, Canada. Filed Mar. 10, 1926. Serial No. 93,713. 2 Claims. (Cl. 238—195.)

1. In a rail joint for tying together the ends of successive rails independently of the ties in the road bed, a joint base having an upwardly and inwardly extending flange along one side forming a rail base recess and having a downwardly extending flange extending the length thereof and adapted for insertion between and having engagement with adjacent ties to prevent creeping movement of the rails or joint, and a joint plate having a flange adapted to extend over the bases of the rails and

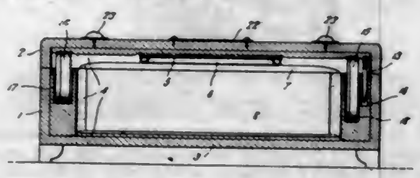
offset downwardly to form an abutment for the rail bases and perforated to form bolt openings registering with holes in said joint base, and adapted to be secured to the latter by bolts and nuts.

1,639,961. SELF-METERING ROTARY PUMP. PETER CHRIS PETERSEN, Cedar Falls, Iowa, assignor to Viking Pump Company, Cedar Falls, Iowa. Filed Aug. 21, 1926. Serial No. 130,665. 4 Claims. (Cl. 103—41.)



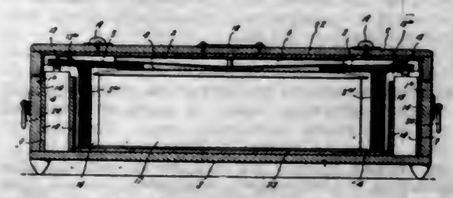
1. In a device of the character described, a reservoir, a rotary pump cylinder in communication with said reservoir and having a discharge passage of a predetermined areal cross section, and intermeshing rotary piston devices mounted within said cylinder, one having one or more discharge passages, each of the same cross sectional area as the first-mentioned discharge passage, said devices being shaped and operative to pump liquid from the cylinder into and through said first-mentioned discharge passage to deliver it metered therefrom at a quantity discharge depending upon the relative number of rotations of said piston devices, the degree of liquid pressure caused to exist within the pump cylinder, and the number and size of any such liquid discharge passages which may be in said devices, said last-mentioned passages being located to periodically communicate with the first-mentioned discharge passage.

1,639,962. ERECTING MACHINE FOR WALL BOARDS. FRANK J. PFIFFNER, Joliet, Ill., assignor of one-half to Jay W. Elliott, Minneapolis, Minn. Filed Dec. 31, 1925. Serial No. 76,634. 1 Claim. (Cl. 304—29.)



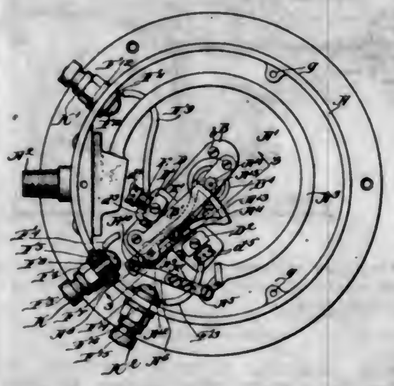
An erecting machine for wall boards, comprising in combination, a basal support, longitudinally spaced pairs of transversely spaced standards fixed upon said support, a slide-beam, slidably mounted between each pair of standards, a connecting device between the upper ends of the standards, pulleys supported on the end parts of said

connecting device, spaced bars connecting the middle parts of said standards, a winding drum rotatably mounted on and between said bars, a ratchet-wheel mounted on one end of said drum, a pawl rockably mounted upon one of said bars to movably engage teeth of said ratchet-wheel under the influence of gravity, cables attached to said winding drum and directed oppositely therefrom around said pulleys and terminally fastened to the lower parts



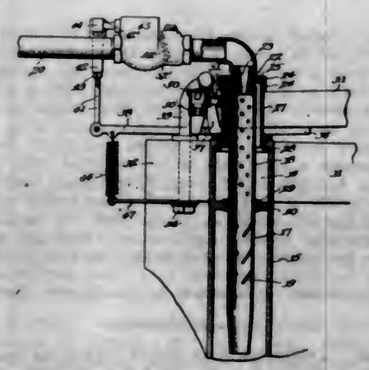
of said slide-beams, oppositely projecting arms adjustably pivoted on the upper parts of said slide-beams, means for holding said arms releasably in different positions, and table-top sections secured in parallel upon said arms to swing up and down, one section having an upwardly directed rib along its outer longitudinal margin to serve as a stop thereon for wall board supported upon the sections.

1,639,963. VANITY CHEST. THOMAS J. PILLIOD, Swanton, Ohio. Filed Apr. 28, 1926. Serial No. 105,239. 4 Claims. (Cl. 132—79.)



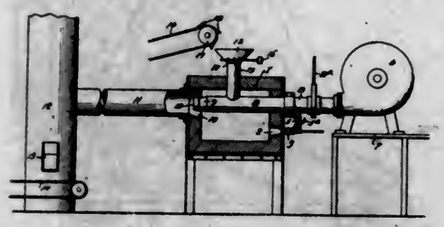
1. A vanity chest of the character described, comprising a body portion; a cover hinged to said body portion; a mirror positioned in said cover; a frame for said mirror adapted to rest against and firmly hold a container, placed in said body portion, when the cover is closed.

1,639,964. CABINET. THOMAS J. PILLIOD, Swanton, Ohio. Filed Nov. 19, 1926. Serial No. 149,429. 3 Claims. (Cl. 206—1.)



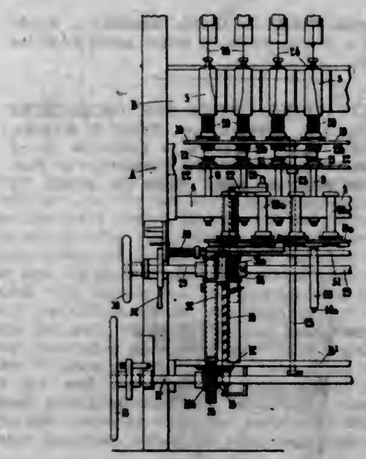
3. In a cabinet, the combination of a body portion comprising a receptacle; a cover comprising a receptacle; a resilient padding applied to the bottom of the body portion; a second resilient padding applied to the cover; and means for retaining articles in the cover, the parts being so proportioned and related that the two resilient paddings are adapted to co-act with the articles in the cover to firmly hold a container placed in the receptacle in the body portion.

1,639,965. ALARM GAUGE. WALTER F. PRIEST, Somerville, Mass., assignor to The Ashton Valve Company, Cambridge, Mass., a Corporation of Massachusetts. Filed May 2, 1925. Serial No. 27,418. 6 Claims. (Cl. 200—81.)



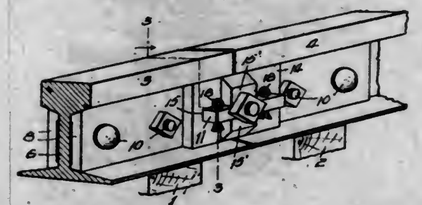
1. A gauge of the character described comprising pressure indicating means including a sector; two longitudinally movable electric terminals; and a third electric terminal carried by said sector and movable to make contact with one of said two terminals to make a circuit to indicate that the pressure is too high and to make contact with the other of said two terminals to make a circuit to indicate that the pressure is too low.

1,639,966. VENTILATING CLOSET. EDWARD H. RAPER, Mapleton, Iowa, and CHARLES E. RAPER, Sheridan, Wyo. Filed Aug. 28, 1924. Serial No. 734,605. 11 Claims. (Cl. 4—215.)



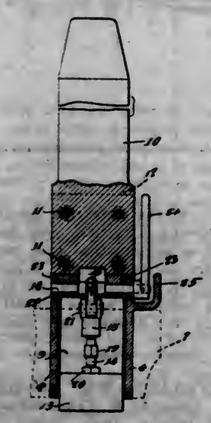
1. The combination with a water closet bowl and the waste pipe of the closet, of a ventilating chamber communicating with the bowl, a seat for said bowl, means for creating suction through said chamber to withdraw foul air from the bowl comprising a perforated tube mounted within the chamber, a supply pipe communicating with said tube, a valve for controlling the supply to said tube, means operatively connected to said seat and said valve for causing fluid to flow through said tube when the seat is lowered, and means communicating with the atmosphere and connected to the ventilating chamber for preventing back suction of the liquid passing through the tube when the supply is shut off.

1,639,967. DRYING APPARATUS. EDWARD C. READER, Cleveland, Ohio. Filed Sept. 10, 1925. Serial No. 55,439. 5 Claims. (Cl. 34—7.)



1. An apparatus of the character described comprising in combination a heating chamber, a conduit leading from said chamber, a conduit extending into said chamber and having its delivery end aligned with the adjacent end of the first mentioned conduit, means for delivering material to be dried into said second mentioned conduit, means forcing a drying fluid through said second mentioned conduit, and means for imparting a whirling motion to the fluid delivered from said second mentioned conduit into the first conduit and for throwing such fluid outwardly against the inner wall of said first mentioned conduit.

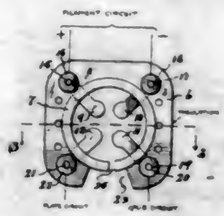
1,639,968. DOFFING MECHANISM FOR SPINNING, DOUBLING, TWISTING, AND LIKE MACHINES. ARTHUR RHODES and CLIFFORD RHODES, Keighley, England. Filed Dec. 28, 1926, Serial No. 157,455, and in Great Britain Nov. 28, 1925. 7 Claims. (Cl. 118—18.)



1. In doffing mechanism for spinning, doubling and like machines, a spindle, a rail upon which said spindle is fixed, a screw for raising and lowering said rail and spindle, means for actuating said screw, a driving pulley or wharle mounted to revolve on said spindle, means for transmitting motion to said wharle, a tube for supporting a bobbin mounted upon said spindle and arranged to engage with said wharle, said bobbin, a rail for supporting the tube and the bobbin above the wharle, devices for removing and retaining said rail and its tube, a lifter rail for supporting the wharle and the tube with which it engages, means for actuating said lifter rail, a cap mounted upon the upper end of the spindle, devices for engaging said cap and supporting same when the spindle is withdrawn, a second rail for supporting another tube, devices for carrying said second rail and placing same into alignment with the spindle above the wharle and means for engaging the thread in order to sever same and cause it to encircle the bobbin.

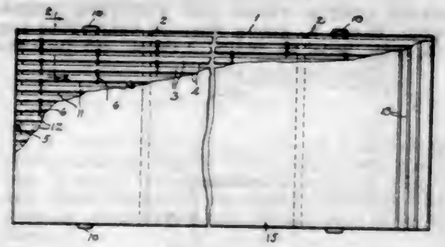
1,639,969. RAIL JOINT. DAVID REES RICHARDS, St. Louis, Mo. Filed Dec. 15, 1925. Serial No. 75,515. 3 Claims. (Cl. 238—182.)

1. In a rail joint construction, a pair of rails each having the confronting end of its web provided with an open ended slot in register with the other, a pair of fish plates secured to the rails and each provided with a slotted opening in register with the slots in the rail webs, a splice key receivable in said slots to hold the rails in true alignment, a washer having a slotted opening mounted upon one end of the splice key, a pair of spaced bosses directed from the outer face of the washer and disposed above and below the slotted opening, a head for one end of the splice key, a screw threaded shank extending from the opposite end of the splice key and a securing nut carried by said screw threaded shank and engaging said bosses for securing the splice key in position.



1,639,970. TRUCK STAKE AND MOUNTING THEREFOR. DANIEL W. RIDDLE, Maywood, Calif. Filed July 25, 1925. Serial No. 46,109. 1 Claim. (Cl. 296—43.)

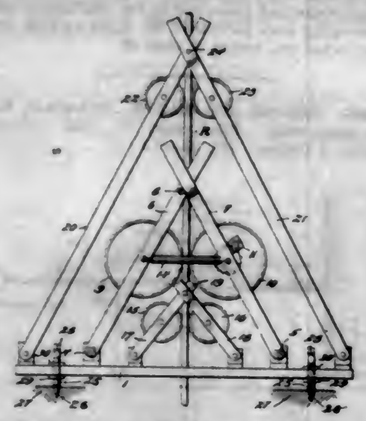
A truck stake and mounting therefor comprising a socket member having a bore smaller at the upper end than at the lower end and provided with an outwardly



extending flange adapted for securing to a truck body, a member having a split portion adapted to be inserted in the socket when said portion is contracted, a standard connected with the second mentioned member, a wedge block slidable in the split portion to expand the same, an operating member, a coupling inside of the split portion, means operable by movement of the operating member to shift the coupling lengthwise of the split portion, and means adjustably connecting the coupling and wedge block for adjustment of the wedge block along the split portion relative to the coupling.

1,639,971. SOCKET FOR RADIO VACUUM TUBES. CARL SAENGER, Irvington, N. J. Filed Oct. 17, 1924. Serial No. 744,140. 5 Claims. (Cl. 173—328.)

1. In a socket device for radio vacuum tubes provided with contact connections for an input or grid circuit and contact connections for an output or plate circuit a socket body of dielectric material discontinuous between said first mentioned contact connection and said last mentioned contact connection, whereby surrounding air becomes the only dielectric path directly between the former and latter contact connections.



1,639,972. MACHINE FOR MAKING ORNAMENTAL CRUSHED LININGS. HOWARD A. SLITER, Los Angeles, Calif. Filed Apr. 2, 1924. Serial No. 703,833. 12 Claims. (Cl. 223—52.)

7. In a device of the character described, a plurality of angle bars having a vertical web, spaced upstanding portions formed on said vertical web, means for slidably securing said bars one to the other, a plurality of weight members adapted to be positioned on said bars between said upstanding portions, and a plurality of pins positioned along said bars adjacent said vertical webs.

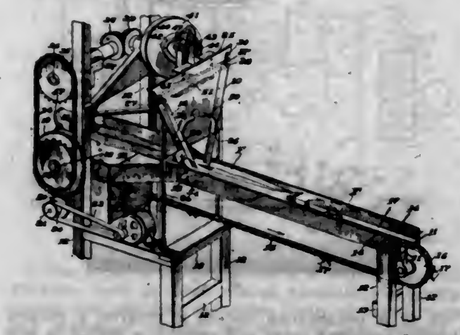
1,639,973. APPARATUS FOR MEASURING DEPTHS OF WELLS. CHARLES E. VAN ORSTRAND, Washington, D. C. Filed June 8, 1926. Serial No. 114,594. 7 Claims. (Cl. 33—134.)

1. In an apparatus for measuring depths of wells, a support, a pair of frames, hinges connecting said frames to said support, said frames being constrained to substantially vertical-plane movement, a flat-faced wheel on each frame at substantially the same distance from the hinges connecting the respective frames to the support,

said frames being adapted to swing toward each other and grip a cable between the flat faces of said wheels, and registering means upon one of said wheels.

1,639,974. ROLLER CLUTCH. CIPRIANO ANDRADE, Jr., New York, N. Y. Filed July 12, 1924. Serial No. 725,549. 3 Claims. (Cl. 192—45.)

3. In a roller clutch; a driving member; a driven member; and a locking roller of softer metal than the driven member.



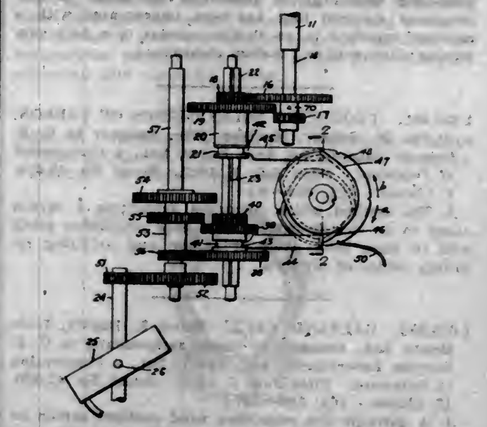
1,639,975. ATTACHING DEVICE FOR RECEPTACLE BAILS. JULIUS C. ANDRESEN and HENRY F. MARTEN, San Francisco, Calif., assignors to California Barrel Company, San Francisco, Calif., a Corporation of California. Filed Mar. 25, 1926. Serial No. 97,287. 2 Claims. (Cl. 217—126.)

1. In combination with a receptacle having on its exterior at opposite sides a keef, with a depth less than the thickness of the receptacle wall, an embracing hoop crossing said keefs, a bail member, and a suspension link seated in each of said keefs behind the hoop, said links

each provided on its upper end with an eye for resting on the upper edge of the hoop and each at its lower end engaging the lower edge of the hoop, and the eyes receiving the bail member, said grooves and said links being arcuate.

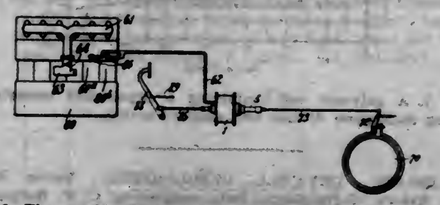
1,639,976. FISH-CUTTING MACHINE. JAMES BARRY, Medford, Mass. Filed Mar. 22, 1927. Serial No. 177,272. 21 Claims. (Cl. 17—4.)

1. A fish cutting machine, comprising in combination, means for advancing a fish toward the cutting position, knives mounted for reciprocatory movement toward and from their cutting position, means operable in timed relation with the fish advancing means for moving the knives into position to cut a slab of meat from each side of the fish, and additional means for advancing the knives towards each other during the cutting operation.



1,639,977. BAG FRAME. AUGUST BELLINGRATH, East Orange, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed Dec. 21, 1923. Serial No. 681,930. 6 Claims. (Cl. 150—29.)

1. A two-part bag-frame comprising an outer and an inner frame, said outer frame consisting of a pair of frame-sections, the ends of the leg-portions of said frame-sections being slotted, the adjacent end-portions of each leg-portion being provided with oppositely extending pintle-receiving eyes, connecting plates arranged in the slots of said leg-portions, each connecting plate being provided with perforations in alinement with the eyes of said leg-portions, pintles extending through said alined eyes and perforations, a connector stem extending from each connecting plate, said inner frame consisting of a pair of frame-sections, and the ends of the leg-portions of the said last-mentioned frame-sections being provided with perforated ears oscillatorily mounted upon the said connector stems for oscillatorily disposing the inner bag-frame within the outer bag-frame.



1,639,978. TACHOMETER. EUGEN BLUM, Valley Stream, N. Y., assignor, by mesne assignments, to American Schaeffer & Budenberg Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 3, 1926. Serial No. 366,004. 1 Claim. (Cl. 74—58.)

In a tachometer, a driving shaft, a driven shaft, a free running shaft disposed between said shafts, variable transmission members disposed on said free running shaft for longitudinal movement thereon relative to the component members for varying the rate of transmission between the driving and driven shafts, a pair of arms disposed in substantially parallel spaced relation and engaged each at one end with certain of said transmis-

sion members for imparting movement thereof on said intermediate shaft upon movement of said arms, a plurality of cams disposed between said arms and in engagement with the opposite ends of said arms, and means for selectively actuating said cams for selective movement of said transmission members through the medium of said arms.

1,639,979. MEANS FOR PROVIDING SUCTION FOR OPERATING POWER ACTUATORS. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 25, 1925. Serial No. 71,270. 9 Claims. (Cl. 123—198.)

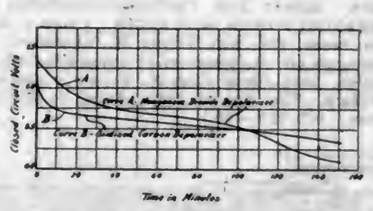
1. The combination with an internal combustion engine of the four cycle type, provided with a suction passage for supplying explosive charges to the engine, of a sucton actuated device comprising a cylinder, a piston therein, and controlling valve mechanism, and a suction pipe extending from the cylinder of the suction actuated device and connected to a cylinder of the engine adjacent to the position of the piston head therein, when said piston has moved far enough on its suction stroke to produce rarefication within the cylinder greater than that existing in the charge supplying suction passage.

1,639,980. ELECTROCHEMICAL PRODUCTION OF SOLID OXIDES OF CARBON. BRUCE K. BROWN, Terre Haute, Ind., assignor to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed July 7, 1925. Serial No. 42,091. 15 Claims. (Cl. 204—6.)

10. The method of producing oxide of carbon solid under normal conditions consisting essentially of submitting carbon anodes to an electric current in an electrolyte containing about 30% nitric acid by weight.

1,639,981. PRODUCING OXIDIZED CARBON. OLIVER W. STOREY and GORDON T. COLLINSON, Madison, Wis., assignors to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed July 7, 1925. Serial No. 42,111. 17 Claims. (Cl. 204—9.)

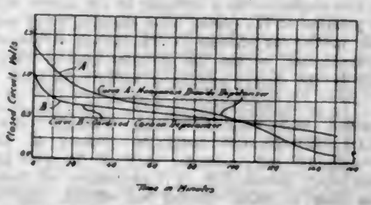
12. The method of producing pulverous, oxidized carbon consisting essentially of submitting an anode of carbonaceous material that has been impregnated with a moisture repellant to an electric current in a bath containing nitric acid and sodium dichromate.



1,639,982. PRODUCING SOLID OXIDES OF CARBON. OLIVER W. STOREY, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed July 7, 1925. Serial No. 42,028. 7 Claims. (Cl. 204—9.)

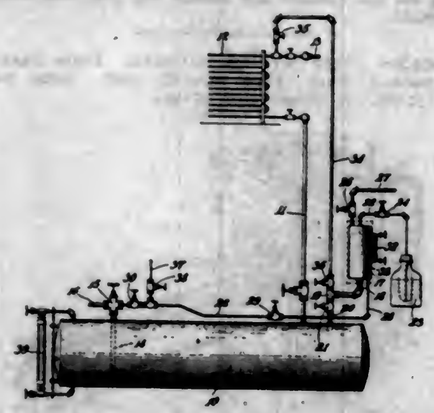
1. The method which comprises submitting a carbon anode to an electric current in a bath containing nitric acid to form solid oxide of carbon and oxidizing resulting oxides of nitrogen.

1,639,983. GALVANIC CELL. BRUCE K. BROWN, Terre Haute, Ind., assignor, by mesne assignments, to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed July 7, 1925. Serial No. 42,090. 17 Claims. (Cl. 136—137.)



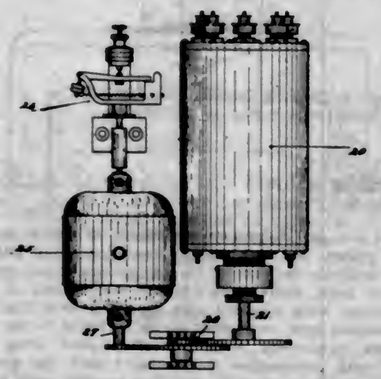
1. A galvanic cell containing solid oxidized carbon as a depolarizer.

1,639,984. DRY CELL. BRUCE K. BROWN, Terre Haute, Ind., assignor, by mesne assignments, to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed July 7, 1925. Serial No. 42,092. 12 Claims. (Cl. 136—137.)



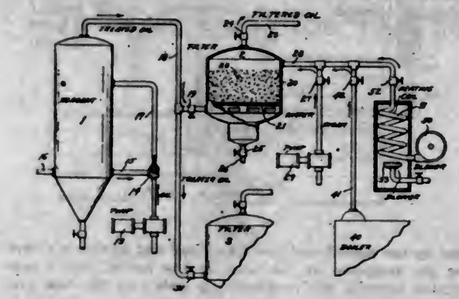
1. A galvanic cell containing a depolarizer comprising manganese dioxide and oxidized carbon.

1,639,985. DRY-CELL DEPOLARIZER. BRUCE K. BROWN, Terre Haute, Ind., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Original application filed July 7, 1925. Serial No. 42,092. Divided and this application filed July 7, 1926. Serial No. 120,891. 3 Claims. (Cl. 136—139.)



1. The method of making a pure depolarizer which comprises the steps of oxidizing carbonaceous material and then chemically precipitating manganese dioxide onto suspended particles of said oxidized material, substantially as described.

1,639,986. REFRIGERATING APPARATUS. WILLIAM W. CONNER, Sewaren, N. J. Filed July 14, 1926. Serial No. 122,291. 11 Claims. (Cl. 62—115.)

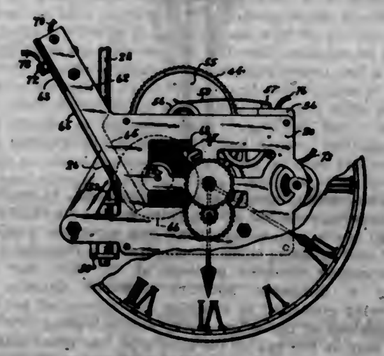


10. In a refrigerating system, a receiver, a purging chamber supported above said receiver, a cooling in said chamber, means for supplying refrigerant to said cooling coil, a conduit of materially less cross section than said chamber connecting the bottom of said chamber and the top of said receiver, means for conducting incondensible gases from the high pressure portion of said system to said chamber, and a vent from said chamber for uncondensed gases.

1,639,987. ELECTRICAL CONTROL SYSTEM. RICHARD C. COUPLAND, U. S. Army, Dayton, Ohio. Filed May 13, 1926. Serial No. 106,977. 8 Claims. (Cl. 177—353.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a system of electrical control, a receiving apparatus comprising relatively movable primary and secondary members, resilient means connecting the said members for simultaneous operation, impulse-responsive means and means controlled thereby for moving the primary member at a constant rate during the duration of the impulse, a travelling contact carried by the secondary member, a plurality of stationary contacts adapted to be traversed by the travelling contact, means for locking the secondary member upon arrival at each stationary contact, and means controlled by the primary member for releasing the secondary member at the termination of a predetermined amount of travel of the primary member after the travelling contact has become locked in contact with each stationary contact.

1,639,988. PROCESS OF PURIFYING PETROLEUM PRODUCTS. SAMUEL J. DICKEY and RAYMOND C. WHEELER, Los Angeles, Calif., assignors to General Petroleum Corporation of California, a Corporation of Delaware. Filed Apr. 19, 1924. Serial No. 707,619. 4 Claims. (Cl. 196—147.)

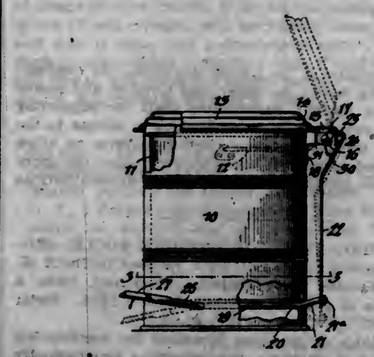


1. The steps in the production of a neutral petroleum distillate from an acid treated distillate, comprising: settling and removing the coarse sludge produced by the acid treatment, passing the acid distillate through a pack of dried sand retained in a substantially closed vessel for the removal of fine sludge particles, continuing such filtration until the sand pack ceases to function by becoming internally coated with sludge, discontinuing the filtration, draining the free oil from the vessel, washing out the sludge with steam, and drying the sand by the passage therethrough of a current of air, thereby bringing said sand into condition for re-use without removing the sand from its operating position in the vessel.

1,639,989. ALLOY STEEL AND METHOD OF MAKING IT. CHARLES TYNDALE EVANS, Titusville, Pa. Filed Apr. 18, 1922. Serial No. 555,280. 4 Claims. (Cl. 75—1.)

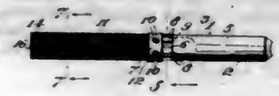
1. An alloy steel comprising the following ingredients in substantially the following percentages: chromium 3.50 to 7.75; nickel 10 to 20; carbon 0.40 to 1.00; manganese 0.40 to 2.50; silicon 0.50 to 2.50; the remainder being principally iron.

1,639,990. ELECTRIC CLOCK-WINDING MECHANISM. FREDERICK A. FELDKAMP, Newark, N. J. Filed Dec. 23, 1925. Serial No. 77,203. 6 Claims. (Cl. 58—40.)



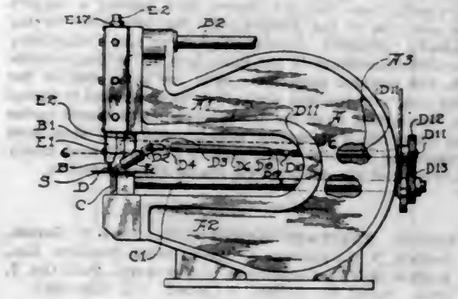
1. In a spring actuated clock, an electric spring winding means including a service circuit therefor, a plurality of switch means connected in series in said circuit; one of said switch means comprising a movable contact element, transmission means actuated by the clock spring for operating said movable contact element, a cooperative normally stationary contact element, means actuated by the spring winding means to move said latter contact element in the direction of movement of said movable contact element, means to temporarily separate said contact elements when the clock spring is in fully wound or rewound condition; the other switch means comprising normally separated contact members, actuating means to intermittently close and open said contact members, and transmission means also actuated by the clock spring for operating said actuating means.

1,639,991. DEMOUNTABLE RIM. FREDERICK WILLIAM FRENCH, Oakland, Calif. Filed Oct. 2, 1923. Serial No. 666,177. 1 Claim. (Cl. 301—11.)



A vehicle wheel having a fixed rim and a resilient, demountable, non-split rim encircling the fixed rim, the said fixed rim having an obliquely disposed flange extending outwardly from one side thereof and forming a support for one side of the demountable rim, said rims having medially disposed interlocking structures comprising rounded depressions in the inner face of the demountable rim and rounded projections upon the outer face of the fixed rim, said rounded projections being adapted to engage the depressions when the demountable rim is moved across the fixed rim and sprung radially, and said structures cooperating with the said flange to prevent lateral bodily movement of the demountable rim in either direction.

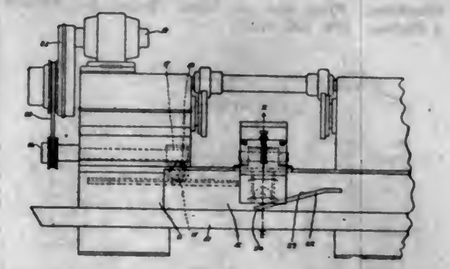
1,639,992. SANITARY WASTE CAN. JOHN F. GRIEBL, Buffalo, N. Y., assignor to Master Metal Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Oct. 7, 1925. Serial No. 60,949. 8 Claims. (Cl. 220—36.)



6. A device of the character described, comprising a can-body, a cover therefor, hinge members including a pivot pin applied to the can-body and its cover, foot-operated means for raising the cover, and a flat spring carried by the cover hinge member and extending downwardly around said pivot, the free lower end of said spring being normally clear of the adjacent part of the can-body and adapted to engage such part only in the open position of the cover to yieldingly resist its opening beyond a predetermined point.

1,639,993. PROTECTOR MEANS OR GUARD FOR CIGARETTE HOLDERS. DUMITRU GOLOGAN, Newark, N. J. Filed Apr. 1, 1924. Serial No. 703,351. 1 Claim. (Cl. 131—51.)

The combination with a cigarette holder, of a guard member comprising a tube formed of wire mesh, said tube having one end open and adapted to be removably connected to the cigarette holder, the tube being provided at its opposite end with a plurality of triangular tabs bent at right angles to the longitudinal axis of the tube and forming a closure for the tube at said end.

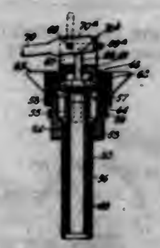


1,639,994. MACHINE FOR CUTTING SHEET-FORM MATERIAL. CHARLES B. GRAY, Philadelphia, Pa. Filed Mar. 15, 1923. Serial No. 625,327. 17 Claims. (Cl. 164—49.)

3. In a machine of the nature described, the combination of cutting means, an upper feed member, and means comprising an upright, reciprocable shaft for supporting said member rotatably on an axis which is oblique to the sheet plane, said shaft being yielding endwise to allow said upper feed member to bear yieldingly upon the upper face of a sheet resting in the sheet plane, substantially as described.

1,639,995. TOOL FEED FOR MACHINE TOOLS. WILLIAM F. GROENE, Cincinnati, Ohio, assignor to The R. K. Leblond Machine Tool Company, Cincinnati, Ohio, a Corporation of Delaware. Filed May 23, 1924. Serial No. 715,487. 3 Claims. (Cl. 82—2.)

1. In a device of the class described the combination with a lathe bed, having a way extending longitudinally thereof, of a carriage reciprocally mounted in the way, means for reciprocating the carriage in the way, a cam bar carried by the carriage, a second carriage mounted on the lathe bed, a shaft carried by the second carriage and having its axis extending longitudinally of the bed, the axis of said shaft being disposed below the center of work to be received by the lathe and adjacent the vertical plane extending through the center of such work, a tool holder having a pivotal mounting on the shaft and having a threaded bore, a screw extending adjustably through the threaded bore and adapted to be locked against movement relative to the tool holder, the screw having a semi-globular head at its lower end, a reciprocating slide carried by the second mentioned carriage and having a socket for the reception of the head on the screw, and a connection between the reciprocating slide and the cam bar.

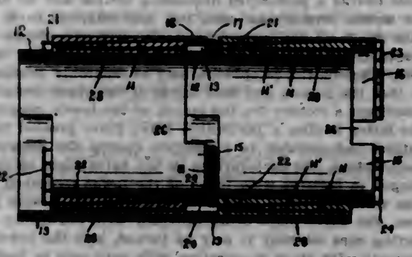


1,639,996. DIATHERMY KNIFE. SUTTON H. GROFF, Long Beach, Calif. Filed Oct. 27, 1926. Serial No. 144,542. 3 Claims. (Cl. 174—39.)

1. A diathermy knife comprising an electrode, and a blade thereon having a relatively sharp cutting edge, whereby current from the electrode will be concentrated along the cutting edge and the burning of tissue effected as the blade penetrates to permit the removal of the tissue without bleeding.

1,639,997. INLET-VALVE MECHANISM. PHILIP HAAS, Dayton, Ohio. Original application filed Mar. 16, 1926, Serial No. 95,007. Divided and this application filed Nov. 23, 1926. Serial No. 150,267. 3 Claims. (Cl. 137—104.)

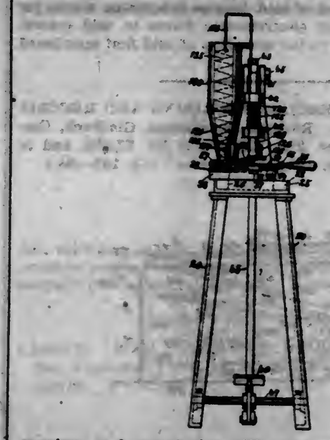
1. The combination with a flushing tank, of an inlet pipe therefor, provided with a valve seat at its extremity, an inlet valve casing comprising two separable members, one of said members being provided with a threaded aperture engaging threaded portions of the inlet pipe and having a discharge aperture adjacent thereto, an inlet valve consisting of a flexible disc interposed between the members of the valve casing and extending over the valve seat on the end of the inlet pipe, the other member of the valve casing being provided with means for depressing the valve upon said seat, means for connecting the said casing members permitting a relative rotation of one of said members with respect to the other, and a float actuated lever operatively connected with the valve casing, and adapted to engage the valve actuating device



therein, whereby, by rotating said first mentioned valve casing member with respect to the inlet pipe the location of the valve seat with respect to the valve may be adjusted.

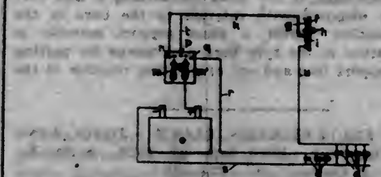
1,639,998. VALVE BASE FOR PNEUMATIC TIRES. ALBERT ENNIS HENDERSON, Toronto, Ontario, Canada. Filed Jan. 27, 1917. Serial No. 144,911. 1 Claim. (Cl. 152—13.)

A tube for pneumatic tires, said tube having rim side re-inforcing fabric embedded therein, and also having fabric patches embedded therein inwardly and outwardly from the rim side re-inforcing fabric in a radial direction to form a valve base, substantially as set forth.



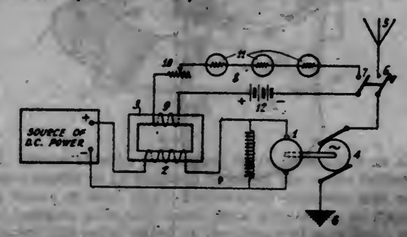
1,639,999. SEWER PIPE. OMAR R. HUMPHREYS, Omaha, Nebr. Filed Feb. 6, 1926. Serial No. 86,604. 2 Claims. (Cl. 72—53.)

1. A sewer pipe section comprising a substantially cylindrical body portion having a deep flange at one end and a shallow flange at its other end, said flanges extending axially from the body portion and each composed of a substantially semi-circular section of large radius and a semi-circular section of small radius, and the sections of large and small radius being disposed to opposite sides of the body portion at opposite ends, the shallow flange having gaps between the ends of its semi-circular sections, and bridge portions arranged at an angle between the ends of the semi-circular sections of the deep flange, whereby in interlocking a sewer pipe section with a section already in place the end with the shallow flange may be fitted over the deep flange section of small diameter and guided into position by said inclined bridge portions.



1,640,000. POWDER PRESS. WILLIAM G. KENDALL, Newark, N. J. Filed Apr. 14, 1924. Serial No. 706,379. 5 Claims. (Cl. 226—71.)

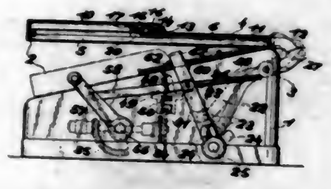
1. In a powder press the combination of a rotatable disc having openings, a charging barrel adjacent to said disc for a plurality of receptacles, a pusher arm with a pusher blade adapted to swing under said barrel and push the receptacles one after the other in position below the openings in the disc, flexible means below the disc to force the said receptacles one after the other into the lower portions of said openings, means to charge said



openings and receptacles with a powder to be operated upon and means to compress the powder into said receptacles to form tablets therefrom.

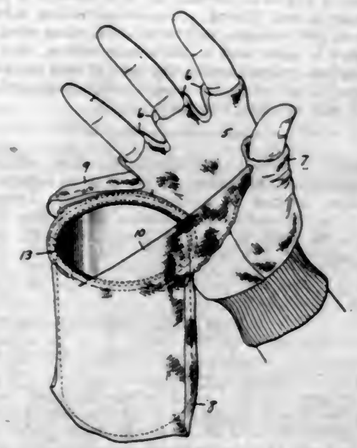
1,640,001. DEVICE FOR RENDERING ADVERTISEMENTS LUMINOUS BY THE OPENING OR CLOSING OF DOORS. VIKTOR MAX KOLBE, Berlin, Germany. Filed Nov. 1, 1926, Serial No. 145,647, and in Germany June 8, 1925. 2 Claims. (Cl. 40—130.)

1. In combination with a door, an illuminated advertising device comprising in combination, two electric circuits including a source of current for said circuits, a plurality of lamps in each circuit, a circuit-controlling mechanism in one of said circuits, said mechanism being closed when said door is open, and a double-pole switch, said switch when in one position connecting both of said circuits with said source, and when in a second position connecting only one of said circuits with said source.



1,640,002. SPEED REGULATOR FOR HIGH-FREQUENCY GENERATING SETS. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed May 17, 1923, Serial No. 639,707, and in France June 19, 1922. 4 Claims. (Cl. 171—119.)

1. In combination with a transmission circuit, a dynamo coupled to said transmission circuit, a motor for driving said dynamo, a control circuit for said motor, means

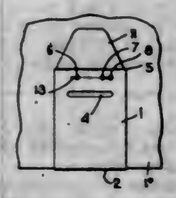


for varying the current introduced into said transmission circuit by said dynamo to send a signal, and means for controlling the speed of said dynamo comprising means for impressing transient electromotive forces in said control circuit in response to the operation of said first mentioned means.

1,640,003. COMMERCIAL INSCRIBING AND RECORDING MACHINE. RICHARD LEYSIEFFER, Gladbach, Germany. Filed Dec. 28, 1925, Serial No. 77,995, and in Germany Oct. 24, 1924. 15 Claims. (Cl. 101—94.)

1. In a record inscribing apparatus, in combination, a casing, a bank of parallel slidable type bars each bearing printing characters on one of its faces and each having a face exposed exteriorly of the casing and provided with surfaces equal in number to the printing characters for the engagement therewith of a scriber or like manually manipulable implement, whereby said type bars may be adjusted to bring any printing characters thereof into printing position, and a registry with characters of other similarly adjusted bars of the bank for setting a line text transversely disposed with relation to the bars in the adjusted position thereof, a sheet support movable in parallel relation to the type bars, and means for moving the sheet support into and out of printing relation to the type bars.

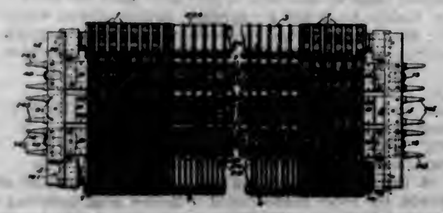
1,640,004. FRUIT-PICKER'S GLOVE. JULIUS LUNDBLAD, Jelly, Calif. Filed Sept. 27, 1926. Serial No. 138,007. 1 Claims. (Cl. 224—28.)



In a hand appliance for use by fruit pickers, a glove including a wrist band, a body portion connected with said band, and individual finger stalls connected to the body portion, the stall for the little finger being complete and enclosed at its outer end, the stalls for the remaining fingers and thumb being open to allow the latter to pass through and beyond the open end, an open top collection and receiving pouch having a portion of the top edge connected with the little finger stall and palm portion of said body, and a connecting and supporting web connected with the upper end of the pouch and with the palm and thumb stall.

1,640,005. CONDIMENT SHAKER. FRANK E. MILLER, Boston, Mass. Filed Feb. 12, 1927. Serial No. 167,718. 1 Claim. (Cl. 65—45.)

A condiment shaker composed of an upper receptacle having a perforated dispensing top and elsewhere closed, said receptacle including a closed bottom and a base flange projecting downwardly therefrom and formed to support the receptacle in an upright position, and a lower receptacle having a perforated dispensing bottom and an annular mouth forming an open top, and adapted to fit the base flange of the upper receptacle, said base flange and mouth being provided with complemental coupling members, whereby the receptacles may be separably connected, so that the bottom and base flange of the upper receptacle constitute a closure for the mouth of the lower receptacle, the latter having a perforated valve plate pivoted to its bottom and movable to a position closing the dispensing perforations, the perforations in the valve plate being arranged to register with those of the lower receptacle bottom when the valve plate is moved from the closing position, the valve plate being provided with outwardly projecting ears whereby it may be turned, and the lower receptacle with stops cooperating with said ears in limiting the turning movements of the valve plate, said ears projecting downwardly from the plate and constituting feet adapted to support the lower receptacle above a table on which said ears bear.



1,640,006. MARKING TICKET. JOHN G. MORAN, Brooklyn, N. Y., assignor to A. Kimball Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1924. Serial No. 743,023. 2 Claims. (Cl. 40—25.)

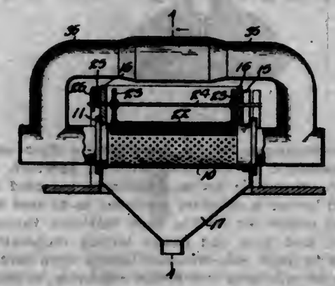
1. A marking ticket for attachment to goods by means of an ordinary headed pin comprising two connected foldable main flaps adapted to receive between them the

article to be marked; the first main flap having a transverse slot and, between its free end and said slot, three aligned apertures; the second main flap having two apertures juxtaposed to the central and one end aperture of the first main flap when the flaps are in folded position; and a covering flap connected with the free end of the first main flap, foldable thereupon over the three apertures and shaped to enable it to be passed through said slot and extend between the main flaps, whereby, when the ticket is folded upon the interposed goods and a pin is passed through the juxtaposed apertures, the head of the pin will lie in the third aperture in the first main flap and will be covered at one side by the second main flap and at the other side by the covering flap.

1,640,007. PAPER-MAKING MACHINE. JOHN MORAVEC, Vancouver, British Columbia, Canada. Filed Nov. 19, 1925. Serial No. 70,036. 32 Claims. (Cl. 92—51.)

1. In a paper-making machine, a suction-box table and a drive-roll, in combination with a carrier for supporting a wire-screen apron, mounted on the drive-roll and arranged to be driven over said table, said carrier comprising a series of unconnected chains.

1,640,008. COMBINED SIGNAL-LAMP CASING. ROBERT W. NORRIS, Birmingham, Ala. Filed July 31, 1925. Serial No. 47,347. 2 Claims. (Cl. 177—329.)



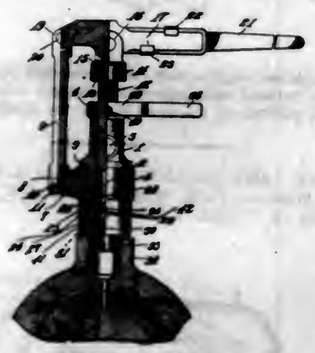
1. A combined signal lamp casing comprising a plate having a depending web for supporting a number plate, a plurality of lamp housings mounted in said plate, one of said housings having a slot in its lower side for illuminating the number plate, and a detachable hood for said slotted housing, said hood having a slot in its side adapted to register with the slot in said housing.

1,640,009. BOTTLE CLOSURE AND THE LIKE. FABRAIC K. PLYMPTON, Wellesley, Mass., assignor, by mesne assignments, to Naomi D. Plympton, Brewster, N. Y. Filed Sept. 15, 1922. Serial No. 588,379. 2 Claims. (Cl. 215—51.)

1. A closure comprising a thin disk and an extractor attachment of hair-pin form, said attachment having an inwardly-extending bail-like handle with side limbs slightly embedded at the top surface of the disk and relatively depressed opposite shoulders embedded in portions of the full thickness of the disk, and said disk having a depression between said embedded shoulders below an intermediate portion of the cross-bar of the handle.

1,640,010. RICE SEPARATOR. ANTON A. SCHOENEGG, San Francisco, Calif. Filed Feb. 20, 1926. Serial No. 89,719. 6 Claims. (Cl. 209—285.)

2. In a separating device for grain or the like, a rotary suction drum having perforations for the passage of minor impurities, means for feeding the material to be cleaned to the upper side of the drum, and mechanical agitating means close to the outer periphery of the drum, substantially as set forth.

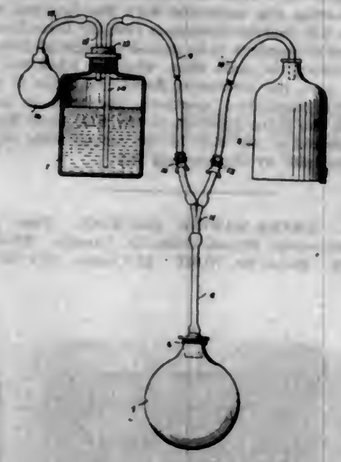


1,640,011. METALLIC CONSTRUCTION FOR SERVING TRAYS, FRAMES, AND THE LIKE. HERMAN SOMMERFLECK, New York, N. Y. Filed Mar. 26, 1926. Serial No. 97,519. 2 Claims. (Cl. 65—53.)

1. Corner sheaths for serving trays comprising an angle plate adapted to be disposed adjacent the upper surface of the frame of said trays, downwardly disposed side members integral with said angle plate adapted to be disposed adjacent the outer edges of the frame of said tray, overlapping bottom plates integral with the side members, and a projecting member on one of said bottom plates extending at right angles to said bottom plate, adapted to recline

on the lower surface of the other bottom plate having an opening therein in registration with an opening in said last mentioned bottom plate for receiving a pin at a point spaced from the corner joint of the frame of said tray.

1,640,012. LUBRICATING DEVICE. CARL SUTTER and GEORGE A. PETTIT, New Orleans, La. Filed June 26, 1926. Serial No. 118,719. 5 Claims. (Cl. 221—47.4.)

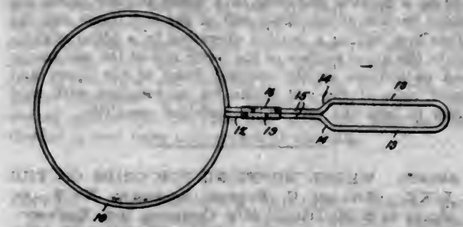


1. Lubricating apparatus comprising a filler neck having a machined end provided with an aperture, a hard-lubricant expressing device detachably mounted on said neck and having a shoulder machined to fit said end, and including means for forcing hard lubricant through said aperture, said neck and device having cooperating cam elements to draw said shoulder tightly onto said end by rotation of said neck and device relatively to each other a support in said neck, a valve for closing said aperture and resting normally on said support closely adjacent to said aperture with the aperture open, and movable from said support to aperture closing position by expansion of hard lubricant filling said neck after removal of said device from the filled neck.

1,640,013. EXPANSION CORE. JOHN R. TAYLOR and ERVIN WOOD, Sawtelle, Calif. Filed Sept. 14, 1923. Serial No. 662,736. 1 Claim. (Cl. 242—72.)

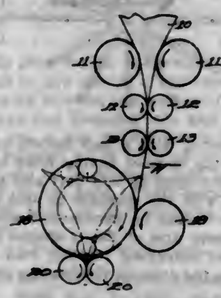
An expansion core comprising a central shaft of rectangular cross-section having longitudinal guides on its sides, an outer shell composed of a plurality of individual strips, a flanged end cap, inwardly directed pins on the flange of the end cap connecting said end cap to said strips for connecting the strips for unitary movement, a nut threaded upon said shaft and connected to said end cap for moving the strips longitudinally upon adjustment of the nut, blocks carried by said shaft between said longitudinal guides and arranged in pairs having their facing ends inclined, and blocks carried by said strips and disposed between said longitudinal guides and having inclined ends slidably engaging the inclined ends of said first named blocks whereby said strips will be moved inwardly towards or outwardly from the shaft upon longitudinal movement of the strips.

1,640,014. VAGINAL BALLOON. CESARE TOMASULO, New York, N. Y. Filed Sept. 29, 1926. Serial No. 138,526. 1 Claim. (Cl. 128—255.)



A therapeutic device for the treatment of uterine ailments, the same consisting of a hollow plug including a tapering body, an outer flange and a stem, a tube coupled to the stem of the plug and an expansible balloon attached to the body of the plug and adapted to be folded and stowed within the said body.

1,640,015. POWER ATTACHMENT FOR PRESSING MACHINES. CHARLES E. WARHAM, Norwood, Ohio. Filed Jan. 2, 1920. Serial No. 348,874. 11 Claims. (Cl. 68—9.)



1. A garment press, comprising upper and lower pressing members, means for moving the upper pressing member into engagement with the lower pressing member, means for holding said pressing members in engagement, power operated means effective upon said upper pressing member and movable through a part cycle to produce final pressure between said pressing members when said pressing members are in engagement, and release means for said holding means and ineffective upon said power operated means, whereby said holding means may be released prior to the completion of the cycle of movement of said power operated means.

1,640,016. WIRE HANDLE. WALTER BRUCE WILLS, Baltimore, Md. Filed Feb. 10, 1926. Serial No. 87,275. 2 Claims. (Cl. 140—71.)

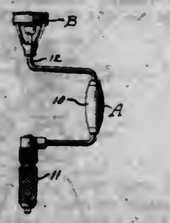
1. The method of assembling a two piece wire utensil consisting in forming a supporting section with parallel terminal portions having their end surfaces lying in the same transverse plane, forming a handle section with parallel terminal portions having their end surfaces lying in the same transverse plane, juxtaposing said plane surfaces in abutting relation and alining the terminal portions of the supporting section with the terminal portions of the handle section, wrapping a clip sheet around said abutting terminal portions and indenting the clip into frictional contact with all of the said terminal portions.

1,640,017. FOLDER. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 25, 1926, Serial No. 118,451, and in Canada May 26, 1924. 8 Claims. (Cl. 270—65.)

1. In a folding machine, the combination with a former and leading-in rolls, of means for nipping the web and pulling it through the rolls from a plurality of points along the web for the purpose of dividing the strain, said means at each of said points comprising two rolls rotatably mounted one roll being yieldingly held in contact with the other.

6. In a folding machine, the combination with a former and leading-in rolls, of means for nipping the web and pulling it through the rolls from a plurality of points along the web for the purpose of dividing the strain and means for running the nipping means at a surface speed greater than web speed for the purpose of dividing the strain.

1,640,018. PROCESS OF PREPARING VAT-DYESTUFF DERIVATIVES FROM VAT DYESTUFFS AND ALKYL ESTERS OF MONOCHLORACETIC ACID. BIRKETT WYLAM, Lancaster, JOHN EDMUND GUY HARRIS, Carlisle, England, and JOHN THOMAS, Grangemouth, Scotland, assignors to Scottish Dyes, Limited, Grangemouth, Scotland. Filed Aug. 19, 1926, Serial No. 130,358, and in Great Britain Aug. 5, 1925. 10 Claims. (Cl. 260—31.)



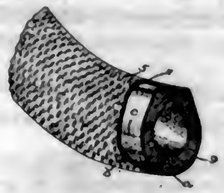
10. A vat dyestuff derivative such as may be made by acting upon indanthrone with an alkyl ester of monochlor-acetic-acid in the presence of pyridine and zinc and subsequently treating the product with alkali.

1,640,019. CONDENSATION REMOVER FOR STEAM-HEATED DRIERS. JAMES YOUNG, Kenora, Ontario, Canada. Filed Apr. 8, 1926. Serial No. 100,688. 3 Claims. (Cl. 34—4.)

1. The combination with a steam heated drying roll, of means for automatically removing the water of condensation from said roll including a longitudinally extending water collecting trough secured to the inner face of the roll, means for draining the water collected from one end of the trough, a stationary cup for receiving the water from said end of the trough, and an outlet water pipe communicating with the cup.

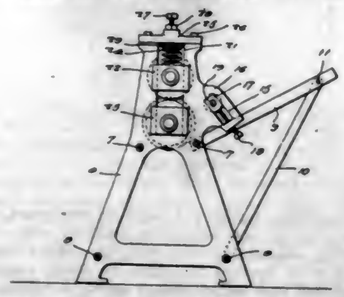
1,640,020. BIT-BRACE HEAD. GUNWALD ABRAHAMSON, Point Edward, Ontario, Canada. Filed Jan. 3, 1927. Serial No. 158,683. 12 Claims. (Cl. 145—66.)

1. In combination with a head for bit-braces, a spirit bulb carried by the head and provided with a plumb designation disposed co-axial with the chuck of the brace.



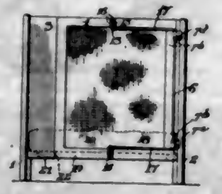
12. A brace head of the class described, comprising a cap provided with an opening, a spirit bulb fitting in the opening and projecting inwardly from the inner side of the cap, said bulb being provided with a leveling line spaced inwardly from the inner side of the cap and plumb lines intersecting at the inner and outer ends of the bulb, means for retaining the bulb in position within said cap, and a coupling section for rotatable mounting of the cap embodying a socket provided with a bore having its axis arranged in axial alignment with the point of intersection of the plumb lines.

1,640,021. METHOD OF PACKAGING TORIC ARTICLES. EDWARD H. ANGIER, Framingham, Mass. Filed Mar. 28, 1921. Serial No. 456,407. 2 Claims. (Cl. 206—46.)



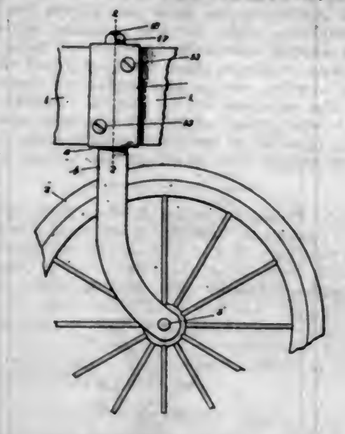
2. A package comprising a ring shaped article and a covering comprising a pair of strips extending along the inner and outer circumferences thereof respectively having resilient gatherings locally expanded longitudinally thereof whereby they are conformed to the shape of the article and joined along the sides of the article.

1,640,022. PACKAGING TORIC ARTICLES. EDWARD H. ANGIER, Framingham, Mass. Original application filed Mar. 28, 1921, Serial No. 456,407. Divided and this application filed Sept. 18, 1926. Serial No. 136,338. 9 Claims. (Cl. 93—2.)



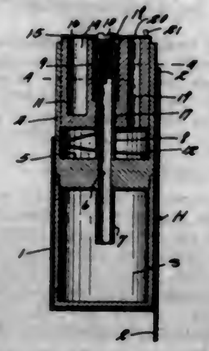
1. The method of packaging toric articles which comprises applying a strip of wrapping material capable of substantially unrestrained local longitudinal expansion throughout its width along a circumference of the article, differentially expanding the strip to fit it to and around the article to cover at least a large portion of its cross-sectional perimeter and securing it in position thereabout.

1,640,023. VENEER-SPLITTING MACHINE. RANDOLPH M. BARRON, Beaumont, Miss., assignor of one-half to Claude W. Wallace, Columbia, Miss. Filed Nov. 29, 1926. Serial No. 151,470. 6 Claims. (Cl. 144—174.)



1. A veneer splitting machine including, in combination, a pair of roll members, means urging the roll members towards each other, one of said roll members including a shaft, a pair of roll head sections formed with hub cylinders having outwardly directed annular flanges at adjacent edges merging into cylindrical rims disposed concentrically about the hub cylinders in spaced relation thereto, means fixing one section to the shaft, an annular cutting tool clamped between the sections, and bolts holding the sections and tool together, said other roll member including a shaft, a pair of roll head sections formed with hub cylinders having outwardly directed annular flanges at remote edges merging into cylindrical rims, concentric about and in spaced relation to the hub cylinders and terminating in spaced relation to form kerfs for receiving the cutting tool.

1,640,024. FOLDING CRIB. WILLIAM C. BAXTER, Rochester, N. Y., assignor to Edward M. Trimble, Rochester, N. Y. Filed Oct. 28, 1924. Serial No. 746,438. 1 Claim. (Cl. 5—99.)



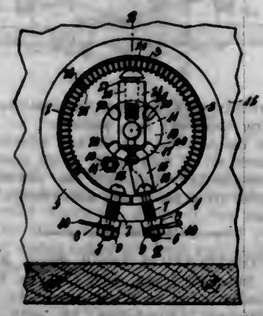
A crib embodying two side walls, a rectangular end frame pivotally connected to one of the side walls having upper and lower rails, a U-shaped member pivotally connected to the other side wall and having its two arms pivotally connected to the rectangular end frame, one arm having a portion operating in a plane slightly below the under surface of the upper rail of the end frame and the other arm having a portion operating in a plane slightly above the upper surface of the lower rail of the end frame, and projections on the opposed faces of the upper and lower rails of the end frame for cooperating with said arms to lock the crib in an unfolded condition.

1,640,025. WHEEL MOUNTING FOR CRIBS OR THE LIKE. WILLIAM C. BAXTER, Rochester, N. Y., assignor to E. M. Trimble Mfg. Company, Inc., Rochester, N. Y., a Corporation of New York. Filed May 22, 1926. Serial No. 110,881. 3 Claims. (Cl. 16—38.)

1. The combination with a part having an opening, of a U shaped bearing member having arms lying in abutment with opposite sides of said part and provided with openings aligned with the openings in said part, a wheel supporting frame having its movement limited in one direction by the lower arm of the U shaped bearing member, and a pintle extending through said opening and having bearing in the arms of the bearing member.

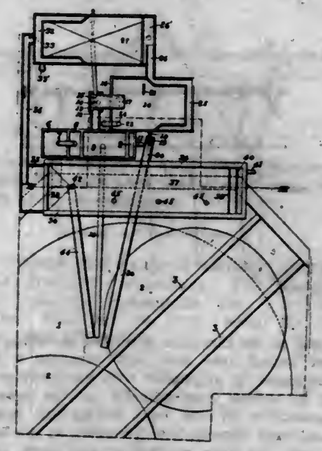
1,640,026. FUMIGATOR. JOHN O. BURT, Memphis, Tenn. Filed Oct. 12, 1926. Serial No. 141,140. 2 Claims. (Cl. 299—24.)

2. A fumigator comprising a lower container, a hollow cylinder closing the upper end of the lower container, an upper container slidably mounted in the cylinder, spring means interposed between the bottom of the cylinder and the upper container for normally holding



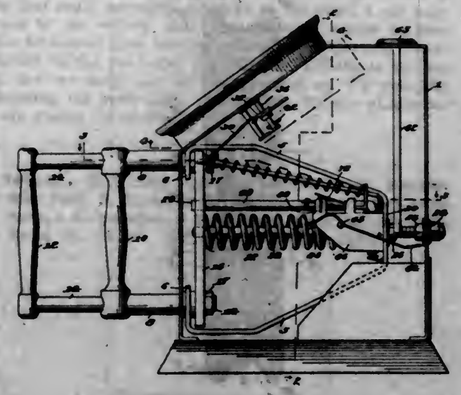
the same in an elevated position in the cylinder, said upper container having a passage-way leading from the top end thereof into the space between the upper container and the bottom of the cylinder, said cylinder having a central tube, said tube extending in opposite directions and entering both containers, the upper portion of the tube being slotted, a movable member carried by the tube and adapted to overlap the slots, the upper container having a socket which receives the slotted portion of the tube and with the wall surface thereof spaced from the surface of the tube.

1,640,027. SHAVING-STICK HOLDER. ELMORE RAY BUTLER and WILLIAM T. SINGER, Toronto, Ontario, Canada. Filed May 8, 1924, Serial No. 711,906, and in Canada Mar. 22, 1924. 1 Claim. (Cl. 206—56.)



In a shaving stick holder, the combination with a container threaded at one end, of a cap having a cylindrical wall presenting an internal and external thread, a shaving stick having one end threaded into and permanently secured in said cap, a cap presenting an internal and external thread adapted to be threaded on and enclose the aforesaid cap and to be threaded into said container, a slot depression in the head of said enclosed cap and an opening in the head of the enclosing cap uncovering said depression.

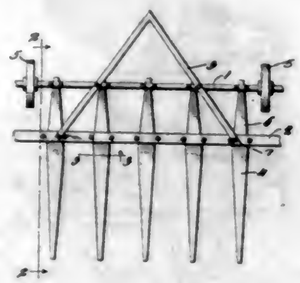
1,640,028. RHEOSTAT. POWEL CROSLEY, Jr., Cincinnati, Ohio. Filed Nov. 3, 1923. Serial No. 672,492. 5 Claims. (Cl. 201—55.)



4. In a rheostat, a plurality of resistance elements stationarily connected in series, one of said elements being of specific resistance different from that of another one of said elements, and movable means for including various proportions of said one of said elements in a circuit, or all of said element and various proportions of said other element in the circuit.

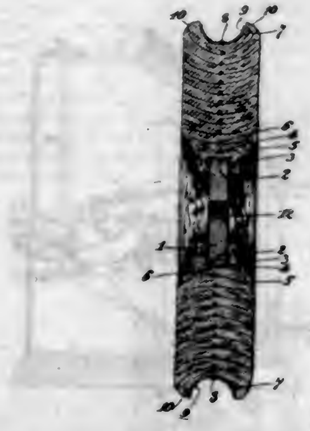
1,640,029. METHOD FOR GRADING AND DELIVERING SAND TO GLASS-GRINDING MACHINES. JAMES W. CRUIKSHANK, Pittsburgh, Pa., assignor to J. W. Cruikshank Engineering Company, Pittsburgh, Pa. Original application filed May 5, 1922, Serial No. 558,743. Divided and this application filed Oct. 19, 1926. Serial No. 142,628. 4 Claims. (Cl. 51—263.)

1. In the method of grinding plate glass, the steps consisting in feeding coarse and medium coarse sand to the glass and grinding the glass therewith, and then feeding to the glass successive portions of a single continuous sand deposit containing a perfect sequence in a common horizontal plane of sand grains graded in accordance with the linear dimensions thereof, substantially as described.



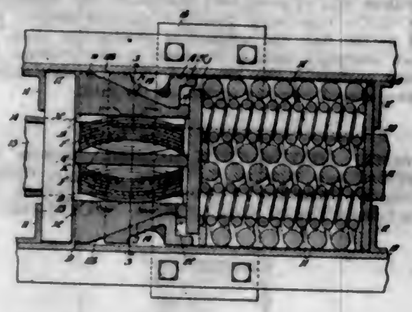
1,640,030. GRIP TESTER. WILLIAM K. EDWARDS, Big Spring, Tex. Filed Nov. 26, 1926. Serial No. 150,928. 4 Claims. (Cl. 194—34.)

1. In a muscular testing device of the character described, the combination of grip resisting means, handles for operating the same, a locking bar to normally prevent movement of one of said handles, a spring acting to



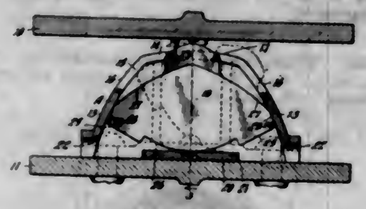
remove said locking means, a bell crank and latch for holding said locking means in position to prevent operation of the device, and coin controlled means for operating said latch.

1,640,031. SWEEP HAYRAKE. GREEN R. ELMORE, Saline, Mo. Filed Nov. 1, 1921. Serial No. 512,149. 1 Claim. (Cl. 56—400.)



In a rake of the character described including a pair of connected spaced rake bars each carrying a depending U bolt arranged in alignment with one another, a tooth designed to extend longitudinally of the rake beneath and transversely of the bars having its intermediate portion enlarged immediately forwardly of the bolt of the forward bar, the rear portion of the tooth converging toward the rear end thereof and having slidable engagement with and through the bolt in the rear bar, said enlarged intermediate portion being of greater width than the adjacent supporting bolt to prevent the tooth from passing rearwardly therethrough and the forward portion of the tooth converging forwardly, substantially for the purpose described.

1,640,032. BUFFING WHEEL. JOHN J. FISCHTER, Willow Grove, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 29, 1926. Serial No. 105,370. 2 Claims. (Cl. 51—195.)

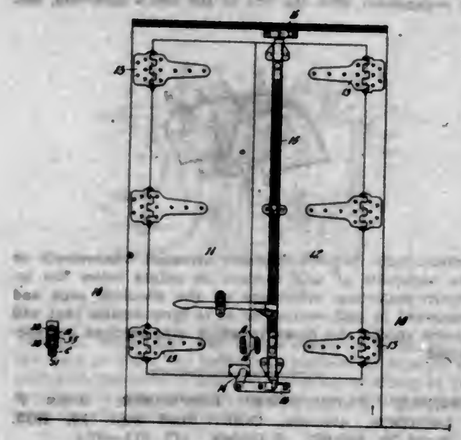


1. A buffing wheel, including a hub, rings of material surrounding said hub and disposed one over the other, and means intermediate each ring of material binding said rings on said hub.

1,640,033. FRICTION SHOCK-ABSORBING MECHANISM. WILLIAM A. GRIGGS, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed May 21, 1923, Serial No. 640,334. Renewed Feb. 2, 1927. 17 Claims. (Cl. 213—30.)

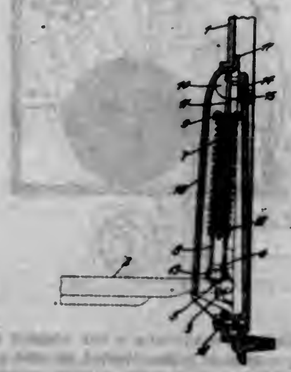
I. In a friction shock absorbing mechanism, the combination with a friction shell; of a main spring resistance; wedge means co-acting with said shell and including a plurality of wedging members, certain of which have keen angled wedge faces co-acting with said shell, and others of which have blunt wedging surfaces co-acting with blunt wedge faces on some of said keen faced members, said blunt faced wedge members being arranged to permit movement thereof outwardly relative to said first mentioned wedging members when the compressing force upon the wedge means is discontinued; and expansible means bearing upon said last mentioned wedge members and operating to yieldingly maintain the same in spaced relation.

1,640,034. COUNTERBALANCED SIDE BEARING. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 21, 1923. Serial No. 652,903. 6 Claims. (Cl. 308—224.)



1. In an anti-friction bearing, the combination with a housing having side and end walls; of an anti-friction rocker within the housing shaped and adapted to always closely approach all of said walls in all positions of the rocker to substantially prevent the entrance of any foreign material from above the anti-friction rocker to a point below it.

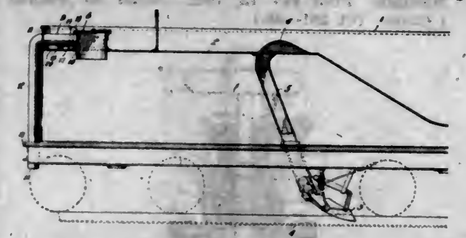
1,640,035. COMBINATION DOOR STOP AND CATCH DEVICE. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Oct. 13, 1923. Serial No. 668,283. 2 Claims. (Cl. 292—189.)



1. In a latch for a swinging door, the combination with a pair of supports fixed respectively to the door and the fixed member on which the door is mounted; of a slotted, gravity influenced plate slidably confined on one of said supports; and an extension formed integral with the other support, adapted to be projected through said slot, said extension having a shoulder

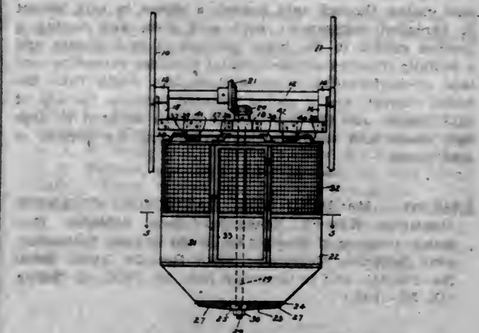
thereon adapted to engage behind said plate to retain the door in open position, said extension having a second shoulder thereon extending above said first-named

shoulder and adapted to engage the front of said plate at an angle to its sliding movement to limit the opening movement of the door.



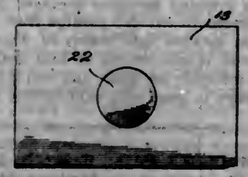
1,640,036. OVEN-DOOR MECHANISM. JOHN T. HUECKEL, Belleville, Ill. Filed Aug. 30, 1926. Serial No. 132,355. 9 Claims. (Cl. 126—191.)

1. The combination with an oven door frame and a door hinged in said frame, of a crank rigid with the door and extending laterally above the plane of the hinge axis, a hook rigid with the frame, a spring, and compression devices for said spring connected with said crank and said hook respectively.



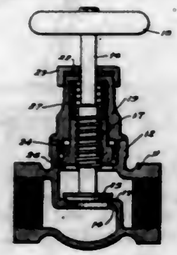
1,640,037. SURPLUS-WATER DISCHARGE SYSTEM FOR LOCOMOTIVE TENDERS. GEORGE A. JOHNSON, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed May 8, 1922. Serial No. 559,169. 6 Claims. (Cl. 103—82.)

1. A surplus water discharge system for locomotive tenders, comprising in combination: a water tank, a scoop, a supply conduit communicating at one end with said scoop and at its other end with said tank, said tank being provided with an auxiliary opening in its top formed by walls extending above the top surface of the tank; and a discharge conduit disposed exteriorly of the tank and communicating through one of said walls extending above the surface of said tank, said conduit being



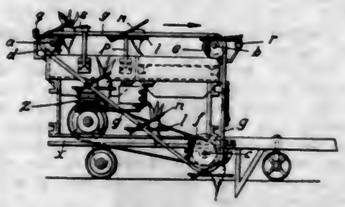
adapted to receive and convey to a point of discharge, the surplus water from said tank, said conduit being directed downwardly at its discharge end.

1,640,038. PASSENGER CAR FOR AMUSEMENT RIDES. HALLIGAN JOHNSON, Jacksonville, Fla., assignor to Nudevice Company, Jacksonville, Fla., a Corporation of Florida. Filed Apr. 26, 1926. Serial No. 104,664. 4 Claims. (Cl. 272—36.)



1. In combination with an amusement ride having a horizontal car-supporting shaft; a passenger car having a yoke rotatably mounted on the horizontal shaft, a vertical shaft rotatably mounted in the yoke, a car body fixed to the vertical shaft, transmission means between the horizontal and vertical shafts for imparting rotary motion to the car body, a guide plate secured to the top of the car body, and rollers mounted on the yoke for engaging the guide plate and guiding the top of the car body during its rotation.

1,640,039. BATTERY CELL. FREDERICK A. KELLER, New York, N. Y., assignor to Bright Star Battery Company, a Corporation of New York. Filed Mar. 17, 1925. Serial No. 16,102. 7 Claims. (Cl. 136—111.)



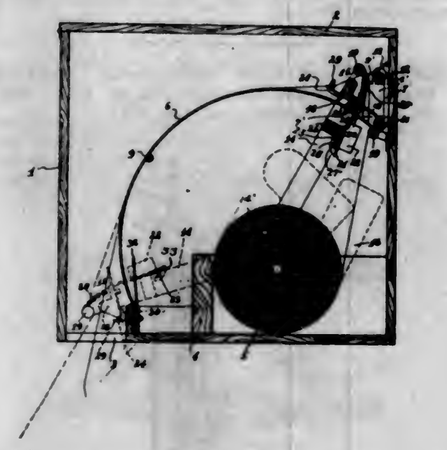
1. A composite electrode for dry battery cells comprising a thin, flat sheet of insulating material having an aperture in the same in combination with a section of active material of substantially the same thickness as the supporting sheet set into said aperture.

1,640,040. SELF-GRINDING VALVE. JOHN F. KELLY, Chicago, Ill., assignor, by mesne assignments, to Kelly Valve Company, Muskegon, Mich., a Corporation of Michigan. Filed Feb. 13, 1922. Serial No. 536,040. 1 Claim. (Cl. 251—58.)

In a self-grinding valve, a casing provided with a valve seat, an internally threaded nipple and an internal shoulder below the threads of the nipple, a valve bonnet adapted to be engaged with the threads in said nipple and arranged to provide with said shoulder an internal circumferential recess, a stem and valve extending into said casing through said bonnet, a sleeve in said bonnet in threaded engagement with said stem and having a portion guided in the lower portion of said bonnet and a radially directed circumferential shoulder extending into said circumferential recess and of less width than the width thereof, and a spring situated between the top of said bonnet and the top of said sleeve adapted to urge said sleeve and shoulder thereon toward the bottom of said recess.

1,640,041. MACHINE FOR GATHERING TURNIPS. HELMUTH KRAUSE, Schkeitbar, near Schkolen, Germany, assignor of one-half to Edwin Krause, Schkeitbar, near Schkolen, Germany. Filed Dec. 24, 1926, Serial No. 156,945, and in Germany Nov. 18, 1926. 3 Claims. (Cl. 55—108.)

1. The combination, in a machine for gathering turnips, with a truck, a motor mounted on the latter, three horizontal shafts revolubly arranged on said truck and forming the corners of a triangle, a chain gearing for driving said shafts from said motor and comprising two parallel endless chains, and tonglike grippers having short rear arms and long gripping members arranged between said chains and adapted to lift the turnips from the ground, of spacing axles between said chains on which said grippers are mounted, ratchet-wheels on said chains in which said axles are revolubly mounted, and spring-pawls on the ends of said axles in gear with said ratchet-wheels.

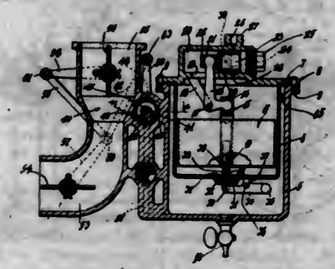


1,640,042. SHOULDER PAD. HARRY B. LATINA, East St. Louis, Ill., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed May 4, 1925. Serial No. 27,771. 3 Claims. (Cl. 2—2.)

3. A shoulder pad for football players, comprising substantially rigid or inflexible sections that fit over the user's shoulders, shoulder caps provided with inwardly-projecting, flexible extensions that are pivotally connected to the underside of said sections at points adjacent the inner ends of said sections, means for holding said caps in engagement with the tips of the user's shoulders, and

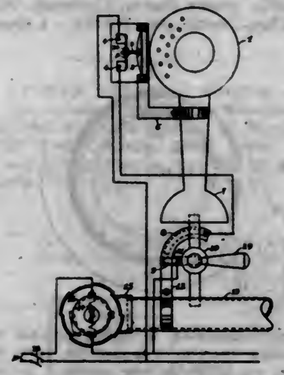
substantially inelastic elements arranged transversely on the underside of said sections at points below the inwardly-projecting extensions on the shoulder caps and connected to said sections so as to form devices that will absorb shocks and blows to which said sections are subjected.

1,640,043. PAPER-TOWEL DISPENSER. JOHN F. LEIDECKER, Alameda, Calif. Filed Sept. 19, 1923. Serial No. 663,607. 5 Claims. (Cl. 211—33.)



1. A paper dispenser comprising a box adapted to retain the paper, a pair of arms pivoted in said box, a roller journaled between said arms, a plate adapted to bear against said roller and grip the paper, a rod upon which said plate is mounted, said rod being bent at an angle to said plate at its outer ends, a trigger mounted on said arms adapted to engage said rod to hold the plate against the roller, and means to release said trigger when the arms are in the lowered position.

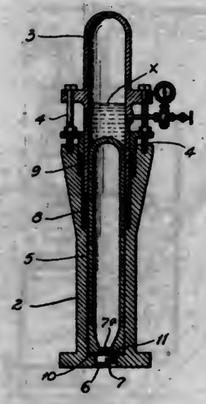
1,640,044. SELF-FEEDING CARBURETOR. HOWARD E. MARSH, Lompoc, Calif. Filed Aug. 10, 1925. Serial No. 49,351. 1 Claim. (Cl. 158—36.1.)



A self feeding carburetor comprising a mixing chamber, a fuel supply chamber communicating with the mixing chamber, and opening to the atmosphere, a float chamber having a port opening into the fuel supply chamber, said float chamber provided with a constantly open fuel inlet, a check valve to prevent flow of fuel from the fuel supply chamber through the port, a float in the float chamber, a

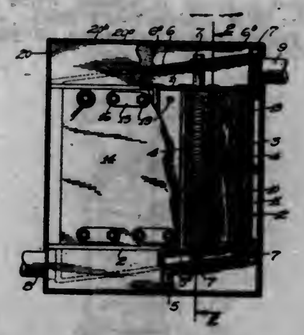
valve chamber having a suction port and having an air admission port communicating with the atmosphere, the float chamber provided with ports alined with the suction and air admission ports respectively, a cylindrical valve

having a single port, and means operated by falling of the float to move the valve into position to register its port with the suction port and operated by rising of the float to move the valve into position to register its port with the air admission port.



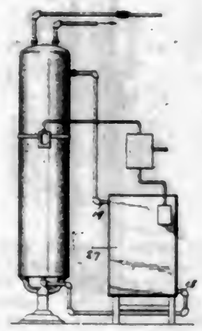
1,640,045. AUTOMATIC SAFETY APPLIANCE FOR GAS BURNERS. MARCUS B. MATSON, New York, N. Y. Filed Oct. 30, 1925. Serial No. 65,867. 11 Claims. (Cl. 67—116.)

1. The combination with a fuel burning fixture having a control cock, a fuel supply conduit to the fixture, and a safety shut-off valve in said conduit, of means, including an electric actuating circuit, for adjusting said valve, and means for opening and closing said circuit to control the adjustment of said valve, said means including a thermally operated snap action switch controlled by flame conditions at the fixture, and another switch controlled by movement of the fixture cock.



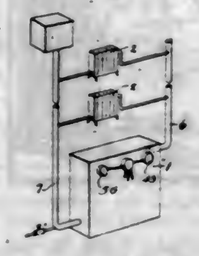
1,640,046. ALLEVIATOR FOR HYDRAULIC APPARATUS. FRANK MCFARLAND, Mexico, Mo. Filed Oct. 18, 1926. Serial No. 142,459. 4 Claims. (Cl. 137—71.)

1. In an alleviator of the kind that comprises a cylinder provided with a plunger that is acted upon by a medium confined between the upper end of the cylinder and the upper end of the plunger, an opening in the lower end of the cylinder, a reduced extension at the lower end of the plunger constructed so as to constitute a dash pot element that enters said opening when the plunger is at the end of its downward stroke, and means



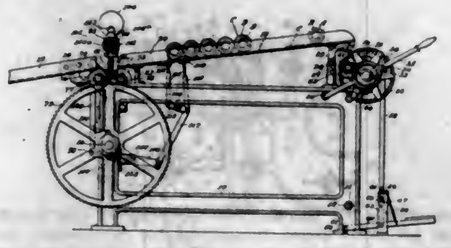
for producing a tight joint between the lower end of the cylinder and the lower end of the plunger that surrounds the dash pot element on the plunger.

1,640,047. ELECTRIC WATER HEATER. SAMUEL D. NESMITH, San Diego, Calif., assignor of part interest to A. S. Bridges, J. B. Osborn, Mrs. Kathryn Osborn, J. H. Bulmer, and Mrs. Mary E. Nesmith, San Diego, Calif.; Roger Welles and R. R. Richardson, U. S. Navy; E. J. Callahan, Guadalajara, Mexico; George H. Schmidt, Walter C. Stitt, F. F. Grant, H. M. Sammis, Paul J. Hartley, and R. C. Easom. Filed Aug. 26, 1924. Serial No. 734,254. 2 Claims. (Cl. 219—39.)



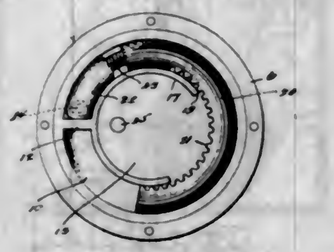
1. In an electric water heater, the combination of two headers, one at the top and one at the bottom of the heater, a plurality of vertically extending, spaced apart, flattened water tubes extending from one header to the other and communicating with the interiors thereof to connect said tubes in multiple through said headers, electrically-insulating heat-conducting material providing electrical heating elements interposed between each pair of adjacent water tubes, end plates at the ends of said heaters adjacent the end tubes, said end plates being bolted to the headers, heat-insulating material interposed between said end plates and the adjacent tubes, electrically-insulating side plates provided at each side of said heater, a casing for said heater and heat-insulating means interposed between said casing and said heater.

1,640,048. ELECTRICALLY-OPERATED WATER HEATER. SAMUEL D. NESMITH, San Diego, Calif., assignor of part interest to George H. Schmidt, Walter C. Stitt, F. F. Grant, H. M. Sammis, Paul J. Hartley, and R. C. Easom. Filed May 19, 1926. Serial No. 110,073. 4 Claims. (Cl. 219—39.)



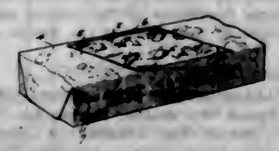
1. An electrically operated water heater comprising in combination a plurality of series connected separate flattened water tubes, flanges on the ends of each tube, a header at each end of said tube bolted to said flanges to attach said tubes to said headers for independent removal and to connect said tubes in series, and independently removable electrical heating elements interposed between and adjacent said tubes and electrically insulated therefrom.

1,640,049. ELECTRICALLY-OPERATED WATER HEATER OR BOILER FOR HEATING PURPOSES. SAMUEL D. NESMITH, San Diego, Calif., assignor of part interest to George H. Schmidt, Walter C. Stitt, F. F. Grant, H. M. Sammis, Paul J. Hartley, and R. C. Easom. Filed May 22, 1926. Serial No. 110,864. 5 Claims. (Cl. 219—39.)



1. In an electrically operated water heater or boiler, the combination of a pair of unitary spaced headers, a plurality of spaced water tubes interposed between and removably attached to said headers, heating elements independently removable and interposed between adjacent water tubes, each of said water tubes being flanged at each end, said flanges projecting beyond the sides or edges of the tubes and said heating elements, and a sheet or slab of electric and heat insulating material at each side of the boiler and fitting between the upper and lower flanges on the tubes and lying against the edges of the tubes and heating elements.

1,640,050. RUBBER-TUBE TRIMMING, WRAPPING, AND ROLLING MACHINE. WILLIAM NICHOLAS, Bridgeport, Conn., assignor to The Black Rock Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 18, 1923. Serial No. 652,267. 16 Claims. (Cl. 18—2.)



1. In a rubber tube wrapping machine, the combination with a frame, an inclined work table upon which rubber tubes are wrapped, a pair of operating rolls positioned adjacent the lower end of the table to receive wrapped tubes as they roll therefrom, a third roll positioned above said pair of rolls, means for raising and lowering said third roll into and out of engagement with the wrapped tubes, and means for adjustably raising and lowering said third roll independent of the above mentioned raising and lowering means to position said third roll to accommodate tubes of different diameters.

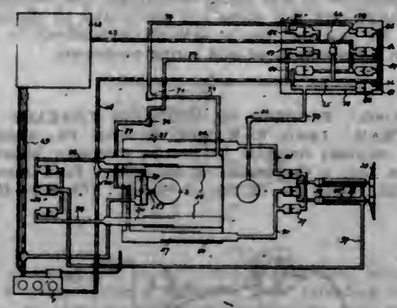
1,640,051. ALTITUDE GAUGE FOR USE ON AIRCRAFT, ETC. ANTON NOSAN, Cleveland, Ohio. Filed Aug. 18, 1926. Serial No. 129,983. 4 Claims. (Cl. 73—110.)

1. A gauge comprising a casing having a circular vacuum chamber therein, a segmental rack slidable in said chamber, an inflatable bag confined in said chamber and open to air pressure at the inside and pressing against one end of the rack, and means to indicate the movement of the rack.

1,640,052. CANDY PACKAGE. ANDREW OLSEN, Jr., San Francisco, Calif. Filed Dec. 21, 1925. Serial No. 76,704. 3 Claims. (Cl. 206—44.)

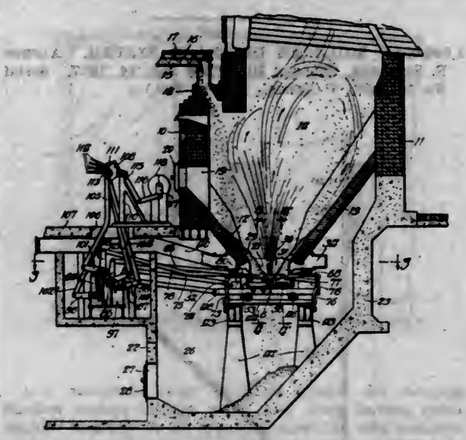
3. A candy package for a bar of candy in which the face of the bar is covered with a wrapping perfectly transparent over a portion of its face surface only and translucent over the remaining portion and being sealed thereover.

1,640,053. MOWER PITMAN CONNECTION. JOHN H. SCHONHOFF, Advance, Mo. Filed Aug. 6, 1926. Serial No. 127,538. 2 Claims. (Cl. 287—89.)



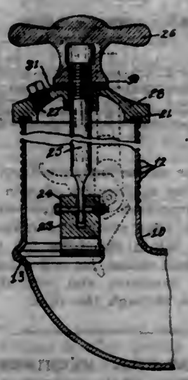
1. A pitman comprising a pair of flexible spaced arms having holes therethrough, a bolt provided with oppositely running threads on its opposite ends and extending through said holes, and a pair of nuts screwed on each set of threads and engaging respective arms.

1,640,054. ELECTRIC-LOCOMOTIVE-CAB UNDERFRAME. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 24, 1924. Serial No. 751,891. 20 Claims. (Cl. 105—172.)



1. An electric locomotive cab underframe comprising a box girder with brake cylinder supports, a rheostat base, a phase converter base, a transformer base, means for connecting said underframe to the locomotive truck, means for connecting said underframe to the cab, and a motor journal support all formed integrally.

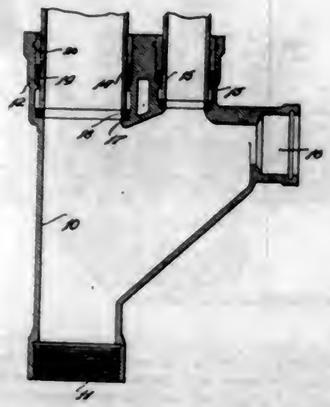
1,640,055. POWER SHOVEL. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 29, 1925, Serial No. 66,549. Divided and this application filed Oct. 27, 1926. Serial No. 144,504. 12 Claims. (Cl. 303—6.)



5. In a power shovel, the combination with a hydraulic actuating device, of a balanced poppet valve arranged to open against a fluid pressure for applying the same to said actuating device, a spring yieldably urging said valve into closed position, a second partially balanced poppet valve for by-passing said fluid pressure from said first mentioned valve and arranged to close against said pressure, a pivoted hand lever for opening said first mentioned valve, a pivoted rocker member for closing said second valve, and a roller mounted radially on said lever for actuating said rocker member to close said second valve upon continued valve opening movement of said lever after said first mentioned valve has been opened.

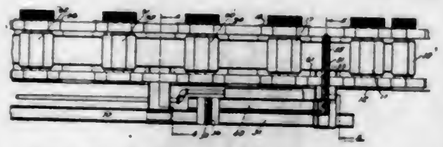
1,640,056. FURNACE. JOHN F. O. STRATTON, Chicago, Ill. Original application filed Aug. 28, 1925, Serial No. 52,998. Divided and this application filed Aug. 28, 1925. Serial No. 53,000. 5 Claims. (Cl. 110—72.)

1. In a furnace, in combination with a combustion chamber having a throat in the bottom thereof, an air pressure chamber below said throat, and intercepting means consisting of a pair of sections interposed between said pressure chamber and the lower end of said throat, said sections being spaced apart to define a nozzle for directing a blast of air from said pressure chamber through said throat into said combustion chamber, means for reciprocating said sections back and forth across said throat to shift said blast, and means for adjusting said last mentioned means to selectively adjust the movement of each of said sections, said adjusting means being manually operable to reciprocate said sections manually.



1,640,057. TESTING-COVER SUPPORT AND PIPE THEREFOR. ALFRED E. STRINGER, Chicago, Ill. Filed Apr. 21, 1924. Serial No. 707,800. 3 Claims. (Cl. 137—77.)

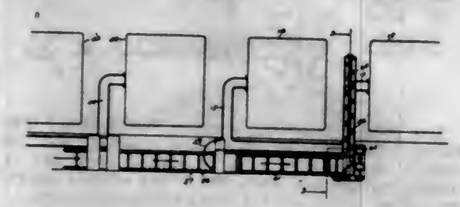
1. The combination of an elbow having a groove extending partially around the inner end of its open arm adjacent the bend of the elbow, a cap adapted to seat on the open arm of the elbow, a cross-piece adapted to be inserted into such open arm of the elbow with one end of the cross-piece extending into the other arm of the elbow and the other end thereof within the central portion of the groove, said cross piece being adapted to



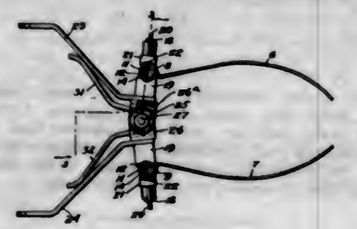
be brought into operative engagement with said groove by a rotary movement, stop shoulders in said groove for limiting the rotary movement of said cross-piece therein, and clamping means acting on said cross-piece for forcing said cap against the end of the elbow.

1,640,058. SOIL-PIPE DRAINAGE SYSTEM. ALFRED E. STRINGER, Chicago, Ill. Filed Jan. 14, 1927. Serial No. 161,055. 7 Claims. (Cl. 4—212.)

1. An expansion joint, for pipes comprising a bell-mouthed socket, means insertable in the bottom of said socket for temporarily supporting a length of pipe, and permanent sealing means in said socket around said pipe adapted to permit longitudinal movement of said pipe relative to said socket.



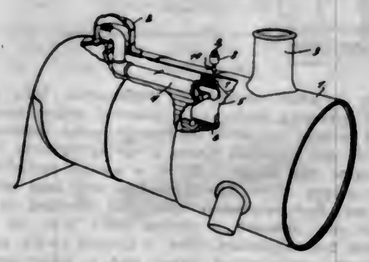
1,640,059. SUGAR-MILL MACHINERY. JOHN E. STUNTZ, Central Estrella, Cuba, assignor to The Hooven, Owens, Rentschler Company, Hamilton, Ohio, a Corporation of Ohio. Filed Oct. 2, 1925. Serial No. 60,137. 22 Claims. (Cl. 127—2.)



1. Apparatus for extracting juice from sugar cane and the like, comprising a plurality of sets of rolls, a plurality of juice strainers associated with said several sets of rolls, each juice strainer arranged independently of the others to strain the juice fed thereto from its associated rolls, and means for collecting the screenings from the several strainers and returning such screenings to pass again through the rolls.

1,640,060. SUGAR-MILL MACHINERY. GEORGE I. THEILE, Hamilton, Ohio, assignor to The Hooven, Owens, Rentschler Company, Hamilton, Ohio, a Corporation of Ohio. Filed Oct. 2, 1925. Serial No. 60,136. 5 Claims. (Cl. 127—2.)

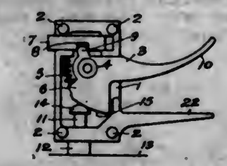
1. Apparatus for extracting juice from sugar cane and the like, comprising a plurality of sets of rolls, a plurality of juice strainers arranged alongside the ends of said sets of rolls, means for feeding to each of said strainers juice from certain of said sets of rolls, each strainer acting independently to strain the juice fed thereto, means associated with each strainer for removing the screenings therefrom, and a common conveyor means for receiving the screenings removed from the several strainers to return said screenings to the bagasse passing through the rolls.



1,640,061. CLAMPING ELECTRODE. REINHOLD H. WAPPLER, Yonkers, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed July 2, 1924. Serial No. 723,656. 11 Claims. (Cl. 174—89.)

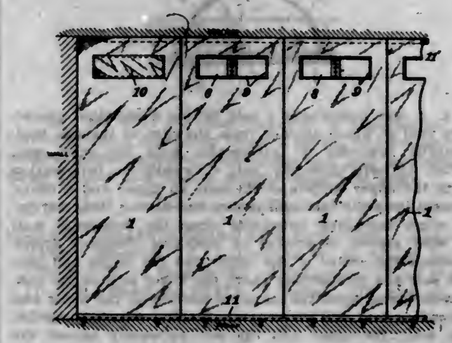
1. A clamping electrode comprising a pair of plates made of conducting material and having proper form to serve as clamping plates and also as electrodes, spring mechanism connected with said plates for automatically forcing them toward each other, means controllable by the operator for moving said plates apart in opposition to said spring mechanism, and mechanism connected with said plates and controllable by the operator for adjusting one of said plates relatively to the other, independently of said spring mechanism.

1,640,062. PROCESS OF STOPPING LEAKAGE OF STEAM. LEWIS S. WATRES, Scranton, Pa., assignor to National Graphite Lubrication Company, Wilmington, Del., a Corporation of Delaware. Filed June 5, 1925. Serial No. 35,159. 5 Claims. (Cl. 122—459.)



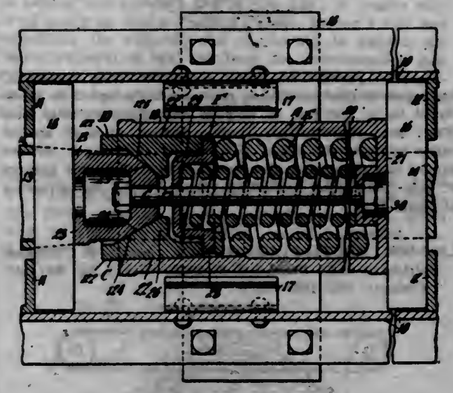
1. The process of operating a steam boiler provided with a superheater, which comprises introducing oil into steam immediately before it enters the superheater.

1,640,063. AUTOMOBILE STEEL DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 22, 1922. Serial No. 583,647. 2 Claims. (Cl. 301—22.)



1. In a disk wheel, the combination of a disk having its tread portion bent laterally at a distance from its outer margin to extend obliquely towards the rear across the plane of the wheel and provided at its margin with a rim-seating flange, a clamping member having its inner margin bearing upon the oblique surface and extending radially outward and terminating at the outer margin in a rim-seating flange, a tire-rim resting on the two flanges, the oblique tread portion being provided at circumferentially spaced intervals with bolt anchoring portions substantially perpendicular to the wheel plane, and bolts connecting the said bolt-anchoring portions of the tread and the clamping member for forcing the latter along the incline to exert oppositely directed stress upon the rim and disk.

1,640,064. COMBINED SASH HOLDER AND WINDOW RELEASE. JOHN L. ARMSTRONG, Chicago, Ill., assignor to The National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed June 7, 1926. Serial No. 114,240. 1 Claim. (Cl. 292—40.)

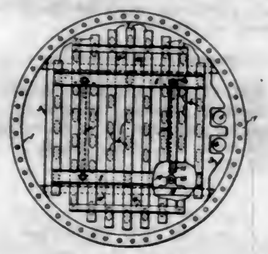


A combined sash holder and window release, comprising a casing having a stationary lever extending therefrom, an operating member pivoted within said casing and having a lever extending therefrom in juxtaposition with respect to the stationary lever, a separate latching member movable in the casing, connections between said latching and operating members whereby the downward and upward swinging of the operating member lever will effect the unlatching and latching movements of the latching member, a spring which acts to effect the latching movement and to restore the parts to normal positions, a vertically disposed independent plunger pin slidably guided within the bottom of the casing and adapted to be forced downwardly by the bottom portion of the operating member with a camming action when the latter is forced downwardly to effect the withdrawal of the latch member.

1,640,065. INTERIOR WALL. JACOB B. BLAW, Atlantic City, N. J.; Sadie H. Blaw executrix of said Jacob B. Blaw, deceased. Filed Sept. 24, 1926. Serial No. 137,460. 5 Claims. (Cl. 72—39.)

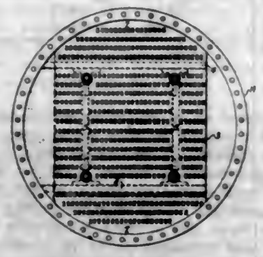
1. A relatively large sheet of plaster for forming finished surface interior walls, said sheet having metal angular members in its opposite edges, the said members being perforated and the said perforations adapted to permit a filler to pass therein, said sheet having a non-metallic binding means therein and also a plurality of metal members within the sheet to strengthen the relatively thin sheet of plaster.

1,640,066. FRICTION SHOCK-ABSORBING MECHANISM. ARILD M. BRENNE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 17, 1925. Serial No. 56,933. 2 Claims. (Cl. 213—32.)



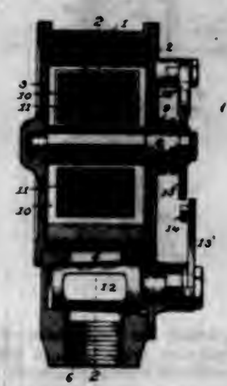
1. In a friction shock absorbing mechanism, the combination with a column member having longitudinal friction surfaces thereon; of friction elements longitudinally slidable on said member; spring resistance means co-operating with said elements; and a wedge element, said friction elements and wedge element having co-operating sets of wedge faces, one of the faces of each set being so proportioned and arranged as to be overlapped by the other faces of said set and said element carrying the overlapped faces being of softer material than the co-operating element, said faces of the element of softer material having relatively blunt edges.

1,640,067. SHOE. DAVID E. COOL, St. Louis, Mo. Filed Oct. 11, 1926. Serial No. 140,819. 2 Claims. (Cl. 36—16.)



1. A shoe comprising a sole having a marginal groove, one wall of which extends from the edge of the sole horizontally inwardly to intersection with the other wall which extends upwardly and outwardly to intersection with the upper surface of the sole, an upper and a lining creased inwardly into said groove and having their marginal edges extending outwardly upon the horizontal wall of said groove, a number of fastening elements driven through the crease of the upper and the lining and into the sole and terminating above the lower side of the sole, a welt seated upon the marginal portion of the upper and extending into said crease, and stitching securing together the welt, the upper and the sole outwardly beyond the marginal edge of the lining.

1,640,068. RECTIFYING COLUMN. JAMES F. CYPHERS, Baltimore, Md. Filed Oct. 2, 1923. Serial No. 666,211. 13 Claims. (Cl. 195—13.)



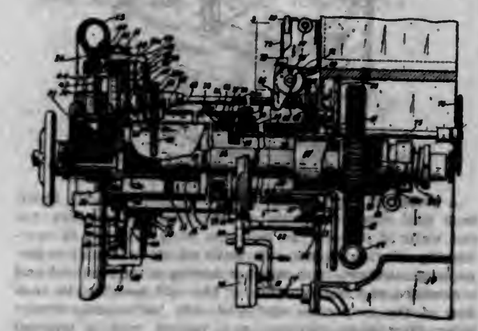
13. In a rectifying column, a substantially horizontal and unobstructed rectifying plate means adapted to cause liquid to be rectified to flow in one direction over said plate, said plate having therein spaced rows of spaced vapor nozzles, the upper portions of said vapor nozzles having one dimension greater than the other, the greater of said dimensions extending transverse to the direction of liquid flow.

1,640,069. RECTIFYING COLUMN. JAMES F. CYPHERS, Baltimore, Md. Filed Oct. 6, 1923. Serial No. 667,040. 7 Claims. (Cl. 195—13.)

5. In self-cleaning beer plate adapted to hold material to be rectified, projecting covered members in said plate having two vapor outlet orifices between and adjoining said plate and the walls and tops of each of said members, said projecting members being adapted to cause the vapors coming through said orifices to agitate the material on said plate.

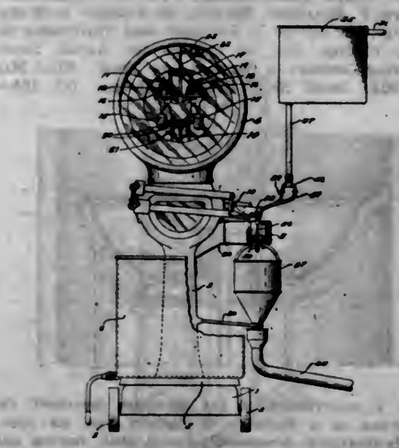
1,640,070. PIPE-LINE STRAINER. EARL J. DREXLER, Chicago, Ill. Filed Aug. 3, 1925. Serial No. 47,687. 1 Claim. (Cl. 210—165.)

In a strainer for water pipes, a casing having a circular chamber, inlet and outlet passages at its respective sides, and a controllable drain passage at bottom, a revoluble valve member controlling said drain passage, a revoluble strainer head arranged in the aforesaid circular chamber, the same comprising a series of screen frames mounted radially on a central hub and carrying the screening webs of the structure, means for positioning said strainer head in its turning adjustments, the same comprising a ratchet wheel on the carrying hub of the strainer head, and a holding pawl pivoted on the side of the casing in operative relation to said ratchet wheel, and an operating lever engaging the valve member aforesaid and having a projecting stud adapted for operative engagement with the ratchet wheel.



1,640,071. LOOSE-LEAF BINDER. CHARLES H. FRANZ, Jr., Milwaukee, Wis. Filed Feb. 1, 1924. Serial No. 689,924. 1 Claim. (Cl. 129—24.)

A loose leaf binder comprising a pair of covers, posts carried by one of said covers and each having a transverse aperture adjacent its free end, the other of said covers having a pair of abutting plates, each plate having a tubular portion in its marginal edge, the tubular portions of the plates being in alignment, said tubular portions being cut away approximately along a diameter thereof to form channels in their adjacent ends, rods fitting said tubular portions and having laterally bent ends projecting laterally from said channels and held closely adjacent the corresponding cover by the channels



of the tubular portions, said tubular portions being cut away intermediate their ends for the reception of said posts, and said rods being adapted to enter the apertures through said posts.

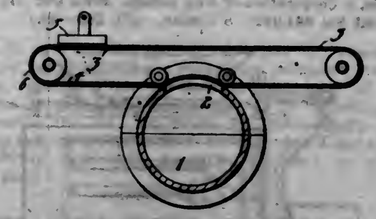
1,640,072. TIRE-BUILDING APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1922. Serial No. 606,382. 21 Claims. (Cl. 154—10.)

1. Bead placing apparatus comprising means for presenting a bead to a partially constructed tire while holding the bead in circular form by engagement with its inner periphery, a bead-pressing roller, means for relatively running said roller longitudinally of the bead to press said bead against said tire while the bead remains upon the presenting means, and means operatively connecting the bead-presenting means and the bead-pressing roller to actuate them in timed relation.

1,640,073. WEIGHING SCALE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 13, 1924. Serial No. 737,568. 15 Claims. (Cl. 265—70.)

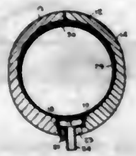
1. In a device of the class described, in combination, automatic load-counterbalancing mechanism, indicating mechanism connected thereto, a fluent load counterbalance, and means for applying said fluent counterbalance in substitution for said automatic load-counterbalancing mechanism.

1,640,074. PLATTER-RETAINING DEVICE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 28, 1925. Serial No. 58,969. 6 Claims. (Cl. 265—27.)



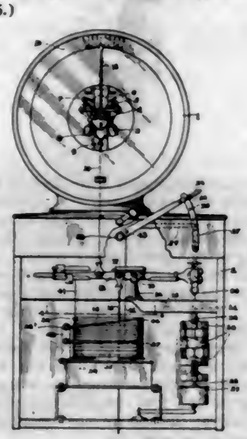
1. In a device of the class described, in combination, a platter having a depending flange, a spider, and resiliently pressed means engaging said spider and said depending flange to hold said platter in place upon said spider.

1,640,075. DRAFT-RIGGING-KEY RETAINER. JOSEPH HARRIS, Wheaton, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 17, 1925. Serial No. 62,971. 7 Claims. (Cl. 213—61.)



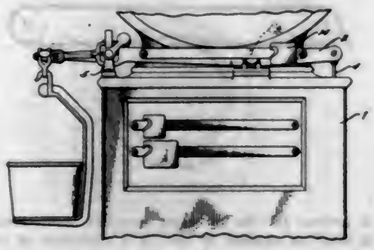
1. In a retaining means for a connecting key of a draft rigging, wherein the key extends transversely of the sills and has one end thereof projecting outwardly beyond the plane of one sill through a slot therein; the combination with a casting of the draft rigging secured to one face of said sill, said casting having a flanged section fitting within said slot of the sill and having a portion of said flanged section projecting outwardly of the plane of the sill beyond the adjacent end of the key; of means supported solely by said projecting portion having a free end overlapping the adjacent end of the key to prevent accidental removal of said key from the corresponding side of the draft sills, said free end always overlapping a portion of said end of the key in any longitudinal position of the latter while in said slot.

1,640,076. FORMATION OF LABELS, SYMBOLS, AND THE LIKE ON GLASS CONTAINERS. WILLIAM CLIFTON HART, Adelaide, South Australia, Australia. Filed Mar. 24, 1926, Serial No. 97,061, and in Australia Apr. 6, 1925. 3 Claims. (Cl. 49—82.)



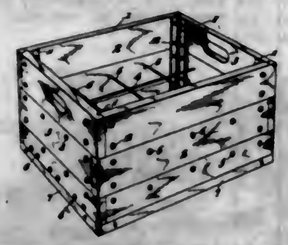
1. A process for the purposes specified characterized in that a label or symbol of one of a plurality of colours is applied to a glass container during the operation of blowing the container in the mould and while the glass is in a viscous condition.

1,640,077. APPARATUS FOR FINISHING TIRE TUBES. HORACE HILLYARD HASTINGS, Quebec, Quebec, Canada. Filed June 1, 1926. Serial No. 112,903. 1 Claim. (Cl. 18—38.)



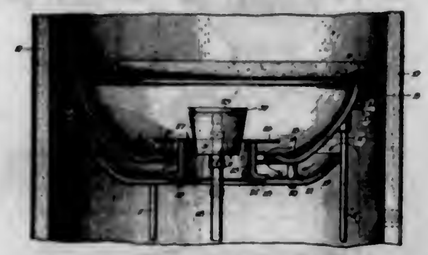
In an apparatus for finishing tire tubes, an annular tube chamber recessed to contain an annular steam chamber having a steam inlet said tube chamber being adapted to enclose and restrict undue expansion of a tire tube and bring the reinforced wall thereof into register with said annular steam chamber.

1,640,078. RECORDING WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Jan. 26, 1920. Serial No. 354,143. 9 Claims. (Cl. 265—5.)



1. In a scale, in combination, automatic weighing mechanism, manipulative weighing mechanism, and means operatively connected with said weighing mechanisms for making a graph record of the operations of said weighing mechanisms.

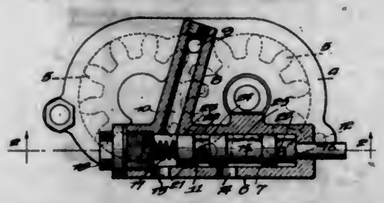
1,640,079. BEAM-LOCKING DEVICE. HALVOR W. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 17, 1923. Serial No. 681,040. 8 Claims. (Cl. 265—49.)



1. In a device of the class described, in combination, a beam provided with an opening, and a pivotally movable locking device passing through said opening, said locking device having members adapted in movement to one position of the device to engage the upper and lower sides of said beam opening and move said beam to central position.

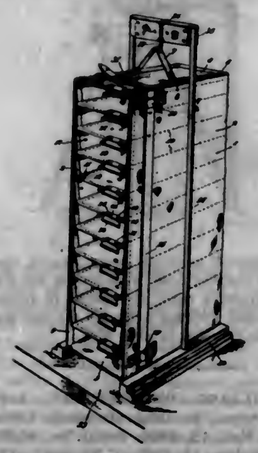
1,640,080. SHIPPING BOX OR CRATE. JOHN H. HIER and ELLSWORTH J. HIER, Merrill, Wis. Filed Mar. 13, 1926. Serial No. 94,410. 1 Claim. (Cl. 217—19.)

A shipping box or crate formed of end and side walls, each wall comprising tiers of superimposed members, the end walls of each of the members being disposed in overlapping relation to the side walls of the adjacent superimposed members, each member having a tenoned end and a mortised end and the ends of the said members in each tier of the respective end and side walls respectively, being alternately disposed and jointed with a tenoned end of one member to a mortised end of another member, a brace plate surrounding the lower edge of said walls and recessed therein, longitudinally and transversely extending rods arranged within and connecting the end and side walls and forming spaced receiving openings, supporting rods arranged beneath and in spaced relation to the first named rods and secured in opposite walls above said brace plate, interiorly disposed angular braces for each corner extending from top to bottom of the tiers, and exteriorly disposed angular braces for each corner terminating at the top of the brace plate and recessed in the connected side and end walls of each of the tiers, said exteriorly disposed angular braces having inturned side edges adapted to engage in the side and end walls of each of the tiers.



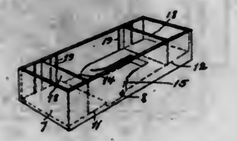
1,640,081. AIR PREHEATER FOR OIL BURNERS. ADOLPH T. JOHANSON, Chicago, Ill., assignor to Milton E. Page, jr., Adolph T. Johanson, and Christopher M. Page, Chicago, Ill., as trustees for Aaball Manufacturing Company, a Common Law Trust. Filed May 21, 1924. Serial No. 714,786. 5 Claims. (Cl. 158—28.)

1. In a construction of the character described, the combination of a plurality of upright legs, an upper centrally-apertured downwardly-dished shell resting and supported on said legs, a second lower, centrally-apertured downwardly-dished shell spaced below and supported from said upper shell, a ring inside of the apertures of said shells supported on said lower shell, spaced inwardly away from the margin of the aperture of said upper shell, and having an outwardly-extended flange above said upper shell, and a fuel-burner having a discharge opening



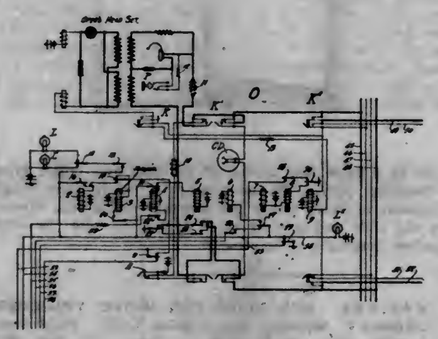
above said ring, whereby air flowing inwardly between said shells is caused to flow upwardly and outwardly above said upper shell where it mixes with the gases issuing and at some distance from said burner, such air being preheated by said shells during its passage through the conduit specified.

1,640,082. TURBINE REVERSING MECHANISM. AUGUST H. KATTERJOHN, Denver, Colo., assignor to The Denver Rock Drill Mfg. Company. Filed Oct. 3, 1922. Serial No. 592,049. 1 Claim. (Cl. 121—70.)



A reversible rotary motor, comprising a cylinder member having a piston chamber and a valve casing on one side thereof, having an elongated valve chamber, rotary intermeshed pistons in the piston chamber, said cylinder member having a pair of combined intake and exhaust ports that communicate with the piston chamber on opposite sides of the intermeshed portions of the pistons, said chamber also having a supply port opening thereinto and having exhaust permitting means, a reciprocatory plunger valve in the chamber having an internal passage with an inlet port that is in constant communication with the portion of the chamber into which said supply port opens, said passage also having an outlet port that is movable with the valve into communication with either of a pair of combined intake and exhaust ports, and said last-named ports being also alternately in communication with the exhaust permitting means on the said movements of the valve.

1,640,083. DEVICE FOR USE IN SORTING AND DELIVERING MAIL. GEORGE FRANK LADD, Forbes, N. Dak. Filed May 11, 1926. Serial No. 108,399. 6 Claims. (Cl. 150—14.)

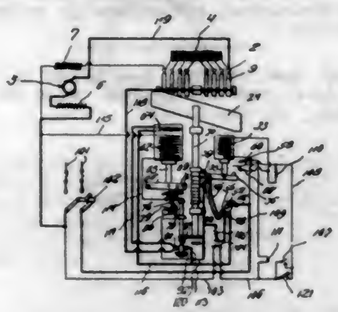


1. In a device for use in sorting and delivering mail, a case having flexible side and rear walls adapting it to be collapsed, the case being open at its front, and a series of pockets within the case comprising bottom, side and rear walls, the side and rear walls of the pockets being flexible and thereby adapted to be collapsed and being attached at their upper portions to the respective walls of the case, the pockets of the series being semi-nested with relation to one another whereby the bottom of one pocket may constitute a displaceable top for the pocket next beneath it.

1,640,084. BAG HOLDER. JOHN LEICHT, Jr., Burlington, Iowa. Filed Feb. 27, 1926. Serial No. 91,059. 1 Claim. (Cl. 211—2.)

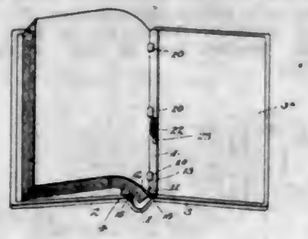
A bag holder comprising a container having ends and sides, a front bottom plate secured between its sides, and a rear bottom plate also secured between its sides, said rear plate having parallel side members terminating short of the front plate whereby a T-shaped slot is defined through the bottom of the container, the depth of the container over the rear plate being less than its depth over the front plate.

1,640,085. SERVICE-OBSERVING APPARATUS FOR AUTOMATIC TELEPHONE SYSTEMS. FRED T. MADSEN, Forest Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 15, 1922. Serial No. 575,383. Renewed June 26, 1926. 33 Claims. (Cl. 179—27.)



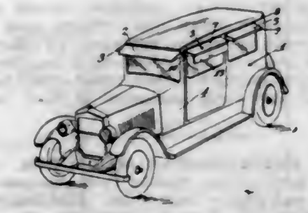
30. In a telephone syatem, a series of automatic switches for establishing a connection between a calling and a called line, trunk lines between each of said switches, service observation equipment for recording the progress of the call, and means for automatically controlling said equipment to make a record should any of the switches in said series encounter an open or faulty trunk line.

1,640,086. MOTOR-CONTROL MECHANISM. CHARLES HAROLD MCCULLOUGH, Visalia, Calif., assignor of one-half to Frank Elliott, Orosi, Calif. Filed Dec. 12, 1925. Serial No. 75,140. 7 Claims. (Cl. 172—288.)



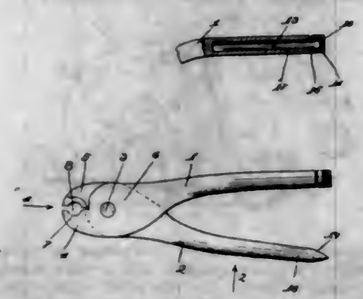
1. A motor control mechanism, comprising a rheostat, for starting and controlling the operation of an electric motor, a reciprocating member for operating said rheo-

stat gravity operated in one direction and having a rack member thereon, an oscillating mechanism for engagement with said rack member to produce a step by step operation of said reciprocating member in an opposite direction, electromagnetic means for operating said oscil-



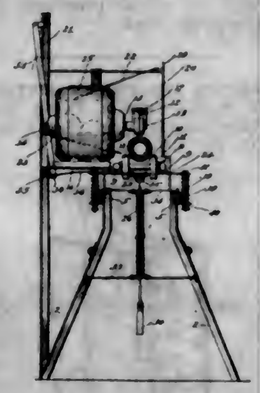
lating mechanism, means for controlling the operation of said oscillating mechanism, and primary electromagnetic control means for controlling said electromagnetic means, said motor and the gravity operation of said reciprocating member, said primary electromagnetic control means forming a no voltage cut-out.

1,640,087. LOOSE-LEAF BINDER. JOHN L. MCMILLAN, Syracuse, N. Y. Filed Dec. 9, 1925. Serial No. 74,352. 10 Claims. (Cl. 129—24.)



1. In a loose leaf binder of the link and pintle type, a housing carried by the binder; a pintle slide longitudinally movable within the housing; and a lock carried by the slide and serving when locked, to hold the slide against longitudinal movement.

1,640,088. SUN VISOR FOR MOTOR VEHICLES. CHARLES C. MEGOWN, Los Angeles, Calif. Filed Sept. 7, 1926. Serial No. 133,908. 1 Claim. (Cl. 296—95.)

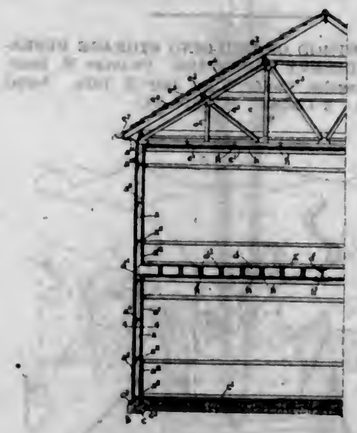


A sun visor comprising in combination a fixed structure having a roof portion and end walls, means to secure same to a vehicle, a pivot bolt extending through the end walls and having shoulders inside said walls, extension stems through the walls, a bushing on each stem fitting in each end wall, a loose washer between each bushing and each shoulder, a spring washer on each stem on the outside of each end wall, a nut on each stem bearing against each spring washer, and a drop leaf connected to the pivot bolt.

1,640,089. MINER'S HAND TOOL. CORNELIUS G. MURPHY, Long Beach, Calif. Filed Apr. 6, 1926. Serial No. 100,052. 1 Claim. (Cl. 7—4.)

A combination pliers having a pair of handles with jaws pivotally connected together, one of the handles being formed hollow forming a receptacle therein, the end of the said handle being sharpened forming a circular die suitable for cutting washers or the like, and a cap threaded on the open end of the said hollow handle forming a closure.

1,640,090. NEWSPAPER-CORE-STRIPPING MACHINE. FRANK MURRAY, Los Angeles, Calif. Filed May 10, 1926. Serial No. 107,993. 17 Claims. (Cl. 164—60.)

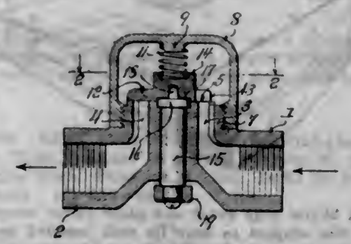


1. A core stripping machine comprising in combination, a single rotary cutting disc, a conveyor having a series of rollers to support a core, and means to rotate the cutting disc, said disc forming a means for moving the core longitudinally in relation to said disc.

1,640,091. BUILDING CONSTRUCTION. JOHN GEORGE STEWART MURRAY, the Duke of Atholl, Dunkeld, Scotland. Filed Mar. 18, 1926, Serial No. 95,722, and in Great Britain Aug. 14, 1925. 7 Claims. (Cl. 189—1.)

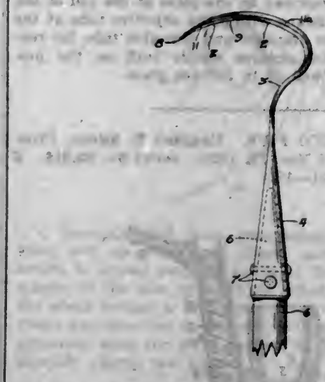
1. A structure comprising vertically disposed wall frame members of T-shaped cross-section, the web part of which cross-section is inwardly disposed, wall plates dis-

posed between the web parts of the cross-section of adjacent frame members and against the inwardly disposed faces of the T-head part of the cross-section of the frame



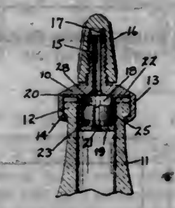
members, and means for the connection of the said wall plates to the said T-head part of the cross-section of the frame members, substantially as described.

1,640,092. COMPOSITION FOR PREVENTING THE ACCUMULATION OF RAINDROPS ON WINDOWS. JOSEPH F. MURRAY and JOHN SMITH, Mayfield, Pa. Filed Aug. 17, 1926. Serial No. 129,864. 1 Claim. (Cl. 134—27.)



In a composition of the class described comprising substantially three quarts of pure water, one-half pint of nicotine, four ounces of alcohol, four ounces of bluing, one teaspoonful of liquid soap, and eight ounces of onion juice.

1,640,093. TWO-WAY VALVE. KARL O. NELSON and HENRY J. NUNNEMACHER, Milwaukee, Wis. Filed Aug. 7, 1925. Serial No. 48,790. 1 Claim. (Cl. 251—90.)



A valve comprising a body portion having an entrance aperture and an outlet aperture and having upwardly extending entrance and outlet ducts opening through the upper face of the body portion, a valve adapted to rotate upon said upper face and having a flat enlarged portion on one side and a pair of bearing arms on the other side of lesser width than the entrance or outlet ducts, a valve spindle having an elongated bearing portion extending through the body of the valve and having a disc-like upper portion seated within a corresponding cavity formed in the body portion of the valve and projecting slightly above the upper face of the body portion, said valve having a similar recess for receiving the projecting portion of the disc-like part of the valve spindle, said valve spindle and valve having interengaging portions, whereby rotary motion may be imparted to said valve by said spindle, said body portion being externally threaded, a closure cap internally threaded and screwed upon the threaded part of the body portion, and a spring interposed between said cap and said valve, the entrance and outlet openings of said body portion being in alignment.

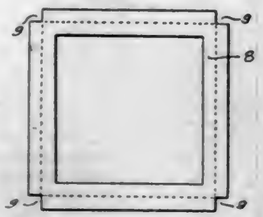
1,640,094. TOOL FOR WEEDING, CULTIVATING, AND LIKE PURPOSES. JOSEPH FREDRICK RAYMOND, Surrey Hills, Melbourne, Victoria, Australia. Filed Mar. 29, 1926, Serial No. 98,252, and in Australia June 27, 1925. 2 Claims. (Cl. 97—58.)

1. An improved hand operated tool for weeding, cultivating and like purposes, comprising a socket portion which is adapted for attachment to a tool handle; an intermediate portion extending sidewardly from said socket portion; and a blade portion having a leading side and a trailing side and which is arched lengthwise into a hook-like form and decreases in width towards its outer end which is pointed, said hook-like blade portion being offset sidewardly in the direction of its width, the leading side of the blade having a relatively sharp beveled edge extending substantially throughout its length and the blade being offset in the direction of its trailing side.

1,640,095. NONREFILLABLE BOTTLE CAP. WILLIAM M. ROGERS, New York, N. Y. Filed Nov. 7, 1925. Serial No. 67,524. 2 Claims. (Cl. 215—21.)

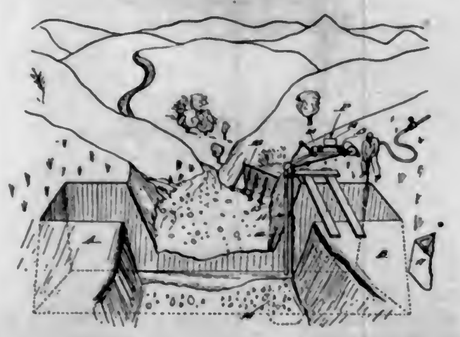
1. A bottle cap comprising a shaker nozzle having an extension to be permanently secured over standard beading of a mouth of a bottle, a washer to be placed at the edge of the bottle mouth, a cylindrical cup-shaped member having a flange to be secured between said washer and extension, and having an aperture in the bottom thereof, a float valve resting on the bottom of said cup-shaped member, and a case hardened disk disposed between said float valve and nozzle, axially reciprocable in said cup-shaped member to impinge against said float valve and nozzle, and being substantially coextensive with the internal diameter of said cup-shaped member, and having liquid passages along the edges thereof.

1,640,096. OBSERVATION INSTRUMENT. PAUL ROSENSTEIN, Berlin, Germany. Filed Feb. 16, 1927, Serial No. 168,616, and in Germany Nov. 24, 1925. 2 Claims. (Cl. 128—7.)



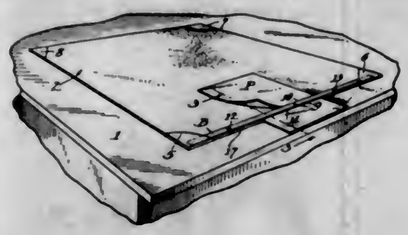
1. An observation instrument consisting of an objective tube terminating in two branches, a projection surface at the end of one branch and an eye glass at the end of the other branch, and means within the objective tube at the junction of the two branches and objective tube for rendering the observed pictures visible both on the projection surface as well as in the eye glass.

1,640,097. TOBACCO PIPE. HERBERT E. SHOOP, Pittsburgh, Pa. Filed Nov. 14, 1925. Serial No. 69,018. 3 Claims. (Cl. 131—12.)



1. In a smoking pipe, the combination of a bowl, a stem containing a well which is open at both ends, a passage connecting the lower portion of said bowl with the lower portion of the well, a mouth-piece connected with the upper portion of the stem and having its passage connected to the upper portion of the well, a removable tapering plug removably inserted in said well, a helical groove on the plug forming a passage for the upward travel of the smoke and the ends of the well being closed by the end portions of the plug when the plug is in place, and a deposit chamber being provided in the well by the termination of said groove below the mouth of the first mentioned passage.

1,640,098. LAP ROBE. JAMES SKOLER, Brooklyn, N. Y. Filed Apr. 16, 1926. Serial No. 102,441. 2 Claims. (Cl. 2—274.)

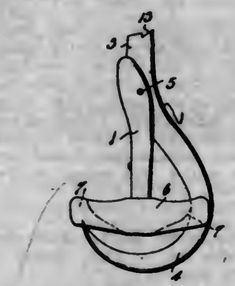


1. A lap robe or the like comprising a central body and a binding of material cut in a single continuous piece to extend completely around the body, the corners of the binding being notched and said binding being folded to lap both sides of the edge of the body, the corners of the binding being seamless on one side and being stitched together adjacent the notches on the other side.

1,640,099. METHOD OF BUILDING STORAGE RESERVOIRS IN DESERT COUNTRIES. CHARLES H. SPENCER, Los Angeles, Calif. Filed July 5, 1924. Serial No. 724,435. 3 Claims. (Cl. 61—30.)

1. The method of constructing an earth fill dam which consists of forming a trench across the stream bed, sinking the trench to an impervious layer, erecting perforate forms in the trench, thoroughly mixing earth containing solubles with water, pouring the mixture into the forms, and allowing the water to drain through the forms carrying with it the solubles from the earth.

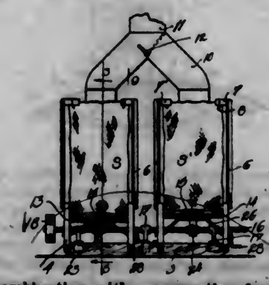
1,640,100. BLOTTER-EDGE GUARD AND PAPER CUTTER. LAWRENCE G. SWININGTON, Los Angeles, Calif. Filed Sept. 7, 1926. Serial No. 133,848. 4 Claims. (Cl. 120—2.)



1. A blotter edge guard and paper cutter comprising a metal bar adapted to have its ends inserted under the corner retainers of a desk blotter and having spaced projections extending from its near edge to engage the edge of the desk blotter and hold the bar in place above the edge of the blotter to protect the blotter, said projections spacing the bar from the blotter and allowing paper to be cut to pass between the bar and the blotter.

1,640,101. APPARATUS FOR MAKING CONCRETE PILES. MAXWELL MAYHEW UPSON, Englewood, N. J. Filed Oct. 11, 1924. Serial No. 743,166. 11 Claims. (Cl. 61—78.)

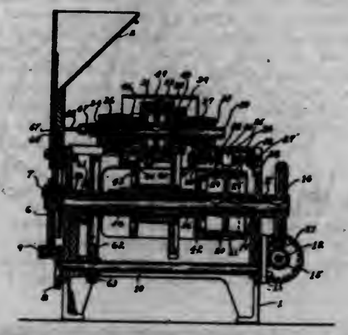
1. Means for forming piles or the like including in combination a shell member and a rod like tool member adapted to be embraced by the shell member, said members having their main bodies spaced from each other, one of said members being provided with a spiral groove and the other member having a single screw thread engaging said groove and forming the only contact between the two members, and means for simultaneously forcing the members into soil or the like without rotating either member.



1,640,102. FREIGHT HOOK. JOHN L. VALLIERE, Skowhegan, Me. Filed Sept. 10, 1926. Serial No. 134,667. 4 Claims. (Cl. 294—26.)

1. A freight hook having a shank and a hook portion pivotally mounted thereon, and a handle portion on the shank having recesses to receive the hook portion when folded.

1,640,103. SACK JIGGER. HENRY G. WILLIAMS, Spokane, Wash., assignor of one-half to John M. Packer, Douglas, Wash. Filed Apr. 9, 1926. Serial No. 100,690. 3 Claims. (Cl. 226—55.)

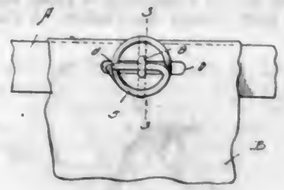


1. The combination with a supporting frame and a stationary sack holder thereon of a reciprocable platform and a pivoted guide link connecting said frame and platform, means for reciprocating the platform, and means for elevating said platform to inoperative position.

1,640,104. ORNAMENTATION FOR SHOES. FREDERICK A. BALLOU, Nayatt, and ROGERS T. STAFFORD, East Providence, R. I., assignors to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed May 31, 1927. Serial No. 195,270. 3 Claims. (Cl. 41—10.)

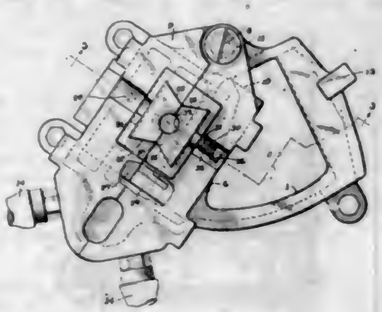
1. Ornamentation for a shoe comprising a strap provided with an ornamental theme, said strap being of a length to extend over the instep of the wearer from one margin of the shoe upper to the other, each extremity of the strap having a clip conforming to said ornamental theme and provided on one side with attaching means cooperating with the main portion of the clip unit to removably engage the shoe.

1,640,105. TAPPING MACHINE. HARRY S. BERGEN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed July 28, 1921. Serial No. 488,107. 4 Claims. (Cl. 10—139.)



1. In a device of the class described, in combination, a magazine adapted to contain a row of articles to be tapped, there being a passage adjacent said magazine, a threading tool, means for moving said threading tool through said passage and into engagement with an article in said magazine, means for turning said threading tool, means for retracting said threading tool and thereby moving said article from said magazine into said passage, means for reversing the direction of rotation of said threading tool, and means for removing the burr due to the threading operation for said article.

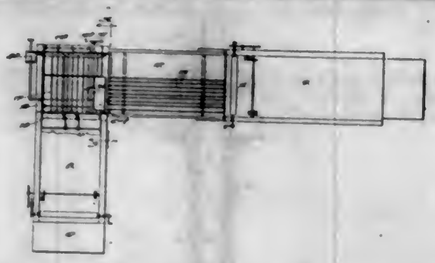
1,640,106. LICENSE-PLATE FASTENER. OBLEY E. BOGAN, Centralia, Ill. Filed Nov. 18, 1926. Serial No. 149,175. 2 Claims. (Cl. 40—125.)



1. In a fastener whereby a license plate may be secured to a supporting bracket, and wherein said plate and bracket are formed with registering slots, an ex-

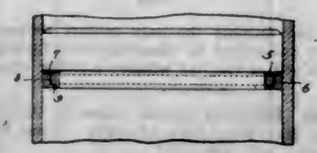
pansible coil spring, a cotter pin arranged longitudinally through the spring and having the ends of the legs bent outwardly at right angles for overlying the innermost convolute of the spring when the spring is expanded, said bent ends of the cotter pin legs adapted for engagement through the registering slots in the license plate and supporting bracket when the spring is

compressed after which said spring is turned to an extent that the bent ends of the cotter pin will overlie the edges of the slot in the bracket and means between the outer end of the cotter pin and said spring for interconnecting the same, said means consisting of a cross arm at the center of the spring formed integrally with the end most convolute of the spring, said arm engaging through the eyed end of said cotter pin.



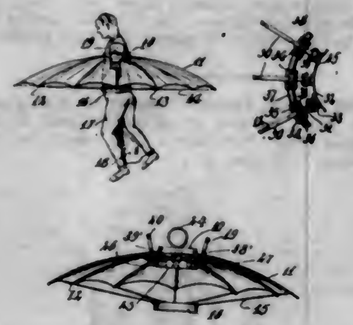
1,640,107. CASTING MOLD. EDWARD BOYLE, Lyndhurst, N. J., assignor to MacCammond-Alexander Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 8, 1925. Serial No. 48,917. 9 Claims. (Cl. 22—153.)

1. A mold for casting metal objects, comprising, in combination, a base plate having a surface adapted to form one side of said objects, a plurality of side molds pivotally mounted on said base plate, said side molds being provided with interchangeable dies for forming objects of different contours.



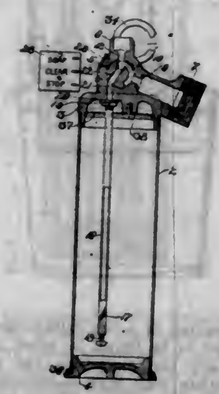
1,640,108. MEANS FOR CHANGING THE DIRECTION OF MOVEMENT OF SHEETS. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Mfg. Co., Harrisburg, Pa., a Corporation of Pennsylvania. Filed June 13, 1924. Serial No. 719,893. 18 Claims. (Cl. 271—69.)

1. The combination with two sheet working apparatuses located in angular relation, of means for receiving the sheets from one apparatus and delivering them in an angular direction to the other, said means comprising a rotatable head having air intake openings, means for rotating the head, means for delivering the sheets successively in overlapping relation to the head, and means for causing the head to be inactive during



the delivery of the sheet and for causing suction in the head through the intake openings to operate on the sheet when a sheet is in overlapped relation thereto.

1,640,109. PISTON RING. ED BROWN, Washington, D. C. Filed Aug. 30, 1926. Serial No. 132,496. 2 Claims. (74—109.)

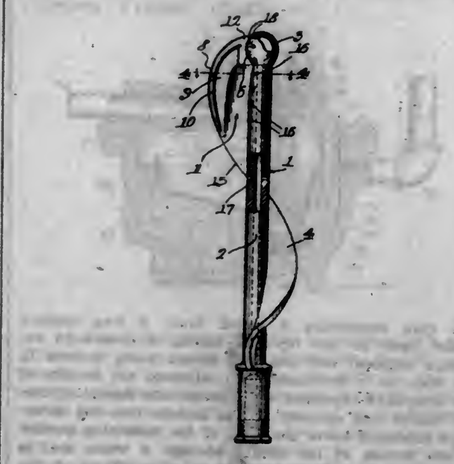


1. A piston ring including an inner section and an outer section, said inner section having upper and lower outer conical surfaces and having a substantially cylindrical surface connecting the conical surfaces, said outer section having upper and lower inner conical surfaces connected by a substantially cylindrical surface, the conical surfaces cooperating to spread the ring vertically, and said cylindrical surfaces being spaced apart to allow movement of one section with respect to the other section.

1,640,110. PARACHUTE SUIT. PAUL BUNEVAC, St. Louis, Mo. Filed Mar. 5, 1927. Serial No. 172,966. 4 Claims. (Cl. 244—21.)

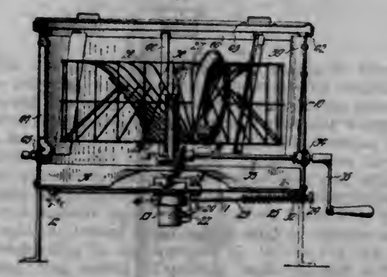
1. In a parachute of the class described, central supporting members adapted to be secured about the body of an individual, a collapsible, air resisting element secured in position concentric to the said supporting members and itself supported by rib members thereto attached, and means to limit the spread of the said collapsible element and to hold it, when open, in a downwardly concave position with respect to the said supporting members, and a web element secured adjacent to the said supporting members and adapted to be attached at its edges to the legs of the aforesaid individual and to be there retained in position between the same.

1,640,111. SPRAYING APPARATUS. WILLIAM CLAUSON, Dorchester, Mass., assignor to U. S. Specialty Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1921. Serial No. 447,492. 3 Claims. (Cl. 299—84.)



1. An apparatus of the character described comprising a container provided with a head having a valve chamber therein, with supply and discharge ports leading into and out of said chamber, respectively, and having inlet and outlet ports leading from said chamber into said container, a valve mounted in said chamber and controlling the flow of fluid through said head, a by-pass controlled by said valve to direct a portion of said flow through said container, and means independent of said valve for regulating the flow through said by-pass.

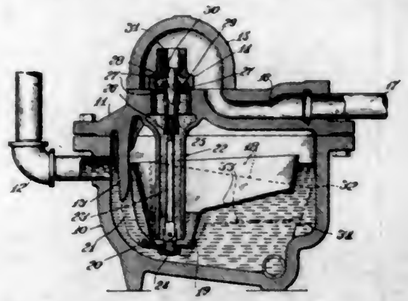
1,640,112. ADVERTISING SCALE. SAMUEL G. CRANE, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,684. 1 Claim. (Cl. 40—52.)



In a device of the class described, in combination, a dial having a window therein, indicating mechanism movable with respect to said dial, a reel located adjacent said window, means actuated by movement of said indicating mechanism for partially rotating said reel, and means actuated by movement of said indicating mechanism for illuminating said reel.

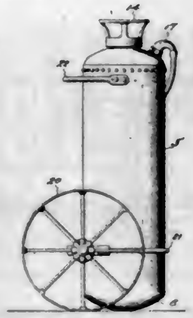
1,640,113. CURETTE. PINNEY ALFRED CURREY, Baker, Oreg. Filed Dec. 1, 1926. Serial No. 152,005. 2 Claims. (Cl. 128—304.)

1. A curette comprising a stem, including a tubular body and an enlarged approximately spherical head on the end of the body; and a blade disposed helically about the body and joined at its inner edge to the body, the blade being joined at one end to the head in a plane parallel to the axis of the body, the blade being tapered transversely from its outer edge inwardly toward its inner edge, throughout a portion of the length of the blade, to form a transverse flange on the outer edge of the blade, and to form a groove extended lengthwise of the blade and located between the body and the flange, the flange being joined at one end to the head, and being tapered in width toward its opposite end; the stem having an outlet.



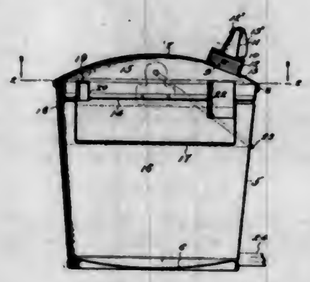
1,640,114. MACHINE FOR WASHING TABLE UTENSILS. ARCHIE DIMATOS and GREGORY DIMITRI MICHAL, Sydney, New South Wales, Australia. Filed Jan. 2, 1926, Serial No. 78,943, and in Australia Feb. 11, 1925. 1 Claim. (Cl. 141—9.)

In a machine for washing tableware, a stationary cylindrical vessel 10, a fixed vertical post 27 centrally mounted in said vessel, with a cone shaped bearing 60 on the top end of said post, a flanged tubular sleeve 30 removably mounted on said post, a rotatable wire



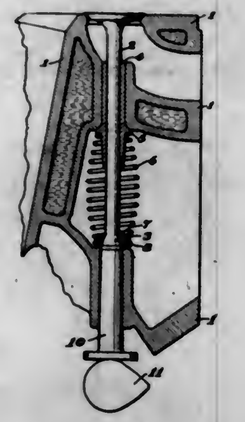
cradle 28 supported by said flanged tubular sleeve, and means for rapidly swirling and splashing water in said vessel, said cradle being slowly revolved by the swirling water.

1,640,115. BUCKET TRAP. FALTEN EIGE, Toronto, Canada, assignor to C. A. Dunham Company, Marshalltown, Iowa, a Corporation of Iowa. Filed Nov. 12, 1923. Serial No. 674,329. 1 Claim. (Cl. 137—103.)



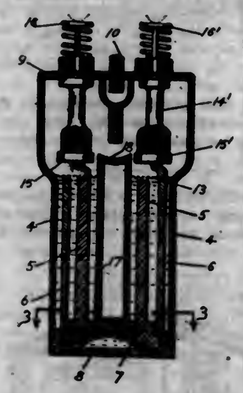
A trap comprising a closed tank, a long shallow bucket open at the top and having a downward extension adjacent one end, the bucket being pivoted in the tank on a horizontal axis adjacent the bottom of the downward extension, a discharge tube depending into the bucket and opening at the bottom into the downward extension below the level of the remaining portion of the bottom of the bucket whereby a water seal is provided for the discharge tube in all positions of the bucket, a valve for opening and closing said discharge tube, connections between the bucket and valve for opening the valve by the downward movement of the bucket and closing the valve when the bucket moves upwards, and means for limiting the downward movement of the bucket at a point where the bottom of the major portion of the bucket is substantially horizontal so that the major portion of the bucket may be entirely drained of its liquid contents through the discharge tube, the upper open top of the bucket being inclined to a point considerably below the maximum liquid level in the tank when the bucket is in its lowered position whereby a substantial portion of the tank contents is drained along with the contents of the bucket.

1,640,116. FIRE-EXTINGUISHING APPARATUS. ORLANDO R. ERWIN, Forest Hills, N. Y., assignor to Foamite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1920. Serial No. 423,511. 5 Claims. (Cl. 169—32.)



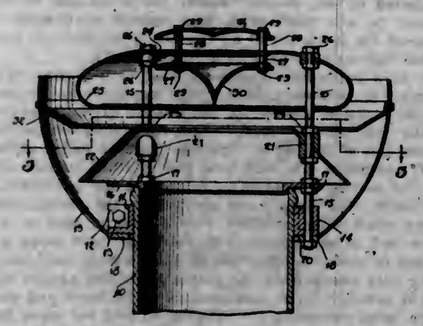
1. A fire extinguisher having means predetermining the axis on which it is adapted to be tipped and the direction of tipping, comprising two solution containers, and a mixing chamber, outlets from both containers to said mixing chamber, and a pressure equaliser opening from the mixing chamber to one of said solution containers arranged on the side of the extinguisher which is highest when tipped.

1,640,117. PAIL EXTINGUISHER. ORLANDO R. ERWIN, Forest Hills, N. Y., assignor to Foamite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 16, 1920, Serial No. 424,400. Renewed Sept. 11, 1924. 14 Claims. (Cl. 169—34.)



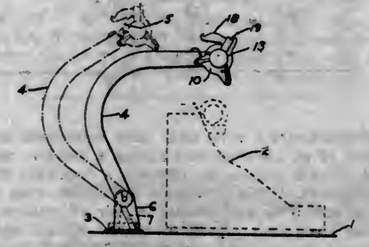
1. The combination in a fire extinguisher of the kind described adapted to be tipped in either direction on a pre-determined axis and comprising two receptacles for solutions, of outlets from both receptacles arranged on the side of the device which is lowest when tipped, and means for transmitting the pressure resulting from the commingling solutions to the said receptacles on the upper side of the device, the openings being so arranged that the device has the same action when tipped in either direction.

1,640,118. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HENRY FORD, Dearborn, Mich. Filed Apr. 22, 1926. Serial No. 103,956. 3 Claims. (Cl. 251—144.)



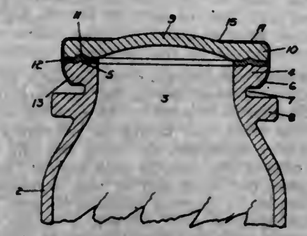
1. In a valve mechanism for internal combustion engines, the combination of an engine block with a valve-stem provided with a valve on one end thereof and having its opposite end flared, a split bushing in which the valve-stem is adapted to be reciprocated, a member adapted to fit the flared end of the valve stem and having a segment slightly wider than the least diameter of the valve-stem cut away, and a resilient member supported by said first named member.

1,640,119. ELECTRIC ACCUMULATOR FOR HAND-LAMPS. CHARLES RUPERT FOWLER and EDRIC MILBURN ROBERTS, Bulli, New South Wales, Australia. Filed Sept. 25, 1925, Serial No. 58,554, and in Australia Apr. 22, 1925. 1 Claim. (Cl. 136—163.)



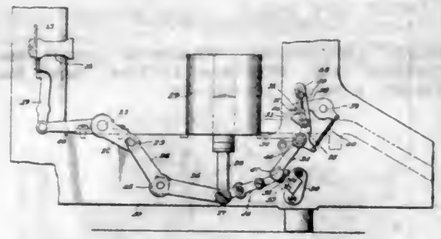
An electric accumulator which comprises a casing or container holding a body of electrolyte and annular positive and negative plates submerged in said electrolyte and connected respectively to external contacts, venting means comprising a cup shaped chamber making fluid tight contact at its upper edge with the inside of the top of the casing, an outer tube passing through the casing top into said chamber, and an inner tube extending downwardly from the bottom of said chamber, the lower end of said inner tube terminating above the normal level of the electrolyte, a cross piece in the bottom of the casing and on which said plates are arranged and a sealed tubular filler arranged on the center of the cross piece and within the inner annular plate, said filler having a dished top arranged under and spaced from the lower end of the inner tube of said cup so that said filler forms a baffle.

1,640,120. SPARK CONSUMER. CARL F. GERLINGER, Dallas, Oreg. Filed Oct. 4, 1926. Serial No. 139,527. 2 Claims. (Cl. 183—103.)



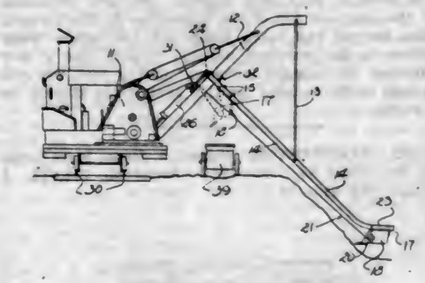
1. In a spark consumer, a main bowl member adapted to surround a stack, means to support said member on a stack, an annular hood having an inwardly turned outer edge extending beneath the body thereof, said hood being positioned within the upper part of the bowl in inwardly spaced concentric relation thereto, a core deflector having a central depending point and spaced below the opening in the annular hood to close direct passage of fluid therethrough, a deflector disk spaced above said opening, a frusto-conical inside deflector spaced below the outer portion of the hood, and an inverted frusto-conical deflector ring fixed within the bowl below the space between the bowl and hood.

1,640,121. COPYHOLDER. WILLIAM H. GLEESON, San Francisco, Calif. Filed Sept. 10, 1924. Serial No. 736,882. 5 Claims. (Cl. 120—30.)



1. A copy-holder comprising the combination of a base adapted to be mounted on a typewriter support rearwardly of the typewriter thereon, an upwardly and forwardly extending relatively heavy arm pivotally mounted on the base, a copy-holding roll mounted on the forwardly extending portion of the arm, means for rotating the roll to move a copy held thereby, the arm extending about the rear and top of the typewriter in the forward position thereof and being positioned rearwardly away therefrom in the rearward position thereof, and a stop for limiting the forward movement of the arm, the arm being held in the forward position against the stop by its own weight.

1,640,122. JAR CLOSURE. SMITH A. HOGE, Rices Landing, Pa. Filed Sept. 16, 1924. Serial No. 738,017. 1 Claim. (Cl. 215—95.)



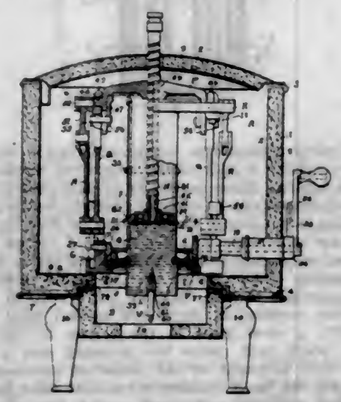
The combination with a fruit jar having an upper flat top provided with an upwardly extending annular rib between its inner and outer edges, said top extending laterally from the jar, providing a clamping flange having an upper right angle corner portion forming a full bearing seat and an inwardly rounded lower clamping edge, a lower laterally extending holding ring extending beyond the periphery of the top with an intervening contracted annular neck channel, a cover adapted to be laid on said top having a flat bottom with an annular groove corresponding to the annular rib of the top, an intervening ring gasket of packing material, and a hollow center clamping ring therefor of thin sheet metal adapted to embrace the upper outer portion of the cover and having a continuously fluted depending resilient skirt portion adapted to be tightly clamped around the lower clamping edge of the top, substantially as set forth.

1,640,123. BACK SPACER FOR TYPEWRITERS. OTTO A. HOKANSON and JAMES F. KOCA, Woodstock, Ill., assignors to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Nov. 6, 1925. Serial No. 67,197. 5 Claims. (Cl. 197—91.)

1. The combination with back space mechanism for a typewriter, of an electromagnet having a plunger, means operated by said plunger for effecting a backward letter space movement of said back space mechanism when said plunger is moved by said magnet, a pair of contacts for controlling the circuit of said magnet, a spring tending to close said contacts, a detent for holding said contacts open, and a back space lever for releasing said detent.

1,640,124. JIB-CRANE EXCAVATOR. SAMUEL KING, Carlingford, New South Wales, Australia. Filed July 3, 1924, Serial No. 724,098, and in Australia July 31, 1923. 7 Claims. (Cl. 214—102.)

1. An excavator comprising a crane having a jib, a ram on the crane, a member having its end pivotally connected to the movable member of the ram for movement thereby on the crane and having an outwardly turned lower end, a stay connecting the crane and said member at a point midway the ends of said member, means to raise and lower the crane and to also correspondingly move said member, a carriage mounted on said member for movement longitudinally thereof, a bucket on the underside of said member pivotally connected at its outer, closed end to said carriage and having its inner, open end presented toward the crane, a cord attached to the carriage and slidably connected to the open end of the bucket, and means to operate said cord to first hold the bucket substantially parallel with the carriage, to then draw the bucket and carriage upwardly on the underside of said member and to finally release said bucket to enable it to swing downwardly and outwardly and discharge its contents from its open end when the bucket has reached a desired elevation.

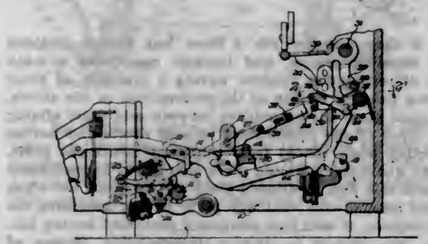


1,640,125. INSTRUCTION DEVICE FOR MUSICAL INSTRUMENTS. HEBER C. KLINK, Toledo, Ohio. Filed Oct. 23, 1924. Serial No. 745,391. 2 Claims. (Cl. 84—315.)

1. A skeleton note location instruction device for attaching to the tapering neck of a stringed musical instrument comprising a pair of integral main strips positioned in converging planes, supplemental strips upstanding from

the main strips and extending transversely therebetween, to provide clearway regions and keys carried by the supplemental strips unobstructing the clearway regions.

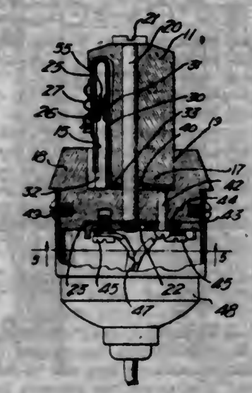
1,640,126. PORTIONING MACHINE. LUTHER L. KNOX, Bellevue Borough, and WILLIAM H. LEWIS, Pittsburgh, Pa. Filed June 16, 1923. Serial No. 645,722. 11 Claims. (Cl. 31—13.)



1. In a portioning machine having a rotary dispensing tube adapted to contain a bar of the substance to be portioned, a piston in said tube, means whereby the rotation of said tube causes said piston to travel along the same whereby the end of said bar will be progressively extruded from the tube, and means for intermittently slicing off the protruded end of said bar to form the portions, the combination of toggle mechanism operatively connected to said piston whereby the latter may be advanced in said tube when said tube is stationary to compact the substance to fill the full cross sectional area of the tube at substantially uniform density.

8. In a portioning machine having a dispensing tube adapted to contain a bar of the substance to be portioned, a piston working in the tube to extrude the end of the said bar therefrom, means for slicing off the extruded end of the bar to form the portions and a piston shaft extending into said tube and attached to said piston for moving the same in said tube, the combination therewith of a drop valve carried by the piston, said piston shaft being provided with a passage open at its outer end to atmosphere and the drop valve being arranged to close the inner end of said passage, said valve being held closed when the piston is pressed against the end of said bar of the substance to be portioned and said valve being opened by its adhesion to said bar when the piston is moved away from said bar for the purpose described.

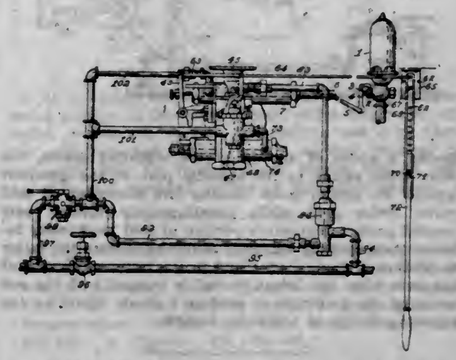
9. In a portioning machine having an outer enclosing casing, means within said casing for containing a refrigerant, a dispensing tube within said casing adapted to be subjected to the influence of the refrigerant and adapted to receive the substance to be portioned, said tube having its discharge end extending through an opening in said casing, and means for extruding the substance from the discharge end of said tube, the combination therewith of a shielding means constituting part of said casing and surrounding the discharge end of said tube, said shielding means being spaced away from the tube to form therewith an air passage surrounding said tube for the downward passage of refrigerated air from the interior of said casing.



11. In a portioning machine, having a rotary dispensing tube adapted to contain a bar of the substance to be portioned, a piston working in said tube and rotating therewith, means whereby the rotation of said tube causes said piston to be advanced along the latter to extrude the bar from the discharge end of said tube, and means for slicing the extruded end of the bar to form portions, the combinations of quick-action means for moving said piston along said tube when the latter is stationary to compact the substance of the bar to fill the full cross sectional area of the tube, the discharge end of said tube being provided with an internal resistance-member which resists the extrusion of said bar, thereby assisting in compacting.

1,640,127. CASE-SHIFT MECHANISM. JAMES F. KOCA, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Jan. 10, 1925. Serial No. 1,530. 5 Claims. (Cl. 197—73.)

1. Typewriter mechanism comprising a pivoted shift frame, a stop mounted on said shift frame, a spring actuated detent having a shoulder for engaging said stop, a release dog movably connected on said detent adjacent said shoulder for engaging said stop to disconnect said detent from said stop, a shift lever, and means for connecting said shift lever with said dog.

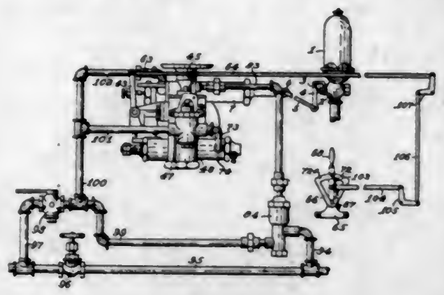


1,640,128. EXPANDING PLUG. LOUIS P. KOVANDA, Los Angeles, Calif. Filed Sept. 30, 1922. Serial No. 591,548. 4 Claims. (Cl. 173—360.)

1. In an expanding plug for electric light sockets having screw threads in the walls thereof and a contact member at the bottom thereof, the combination of: a body

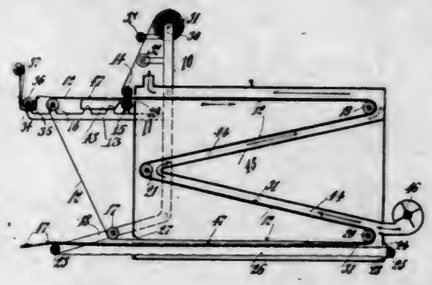
adapted to be inserted in a socket; said body having longitudinal channels in the periphery thereof, the bottom walls of said channels sloping inwardly in a forward direction toward the entering end of the body; U-shaped spring members respectively disposed in said channels with their inner legs connected and their return bends toward the entering end of the body; threaded engagement segments mounted on the outer legs of said U-shaped spring members to be maintained in engagement with the threads in said socket; and a contact on the forward end of said body for engaging said contact member at the bottom of said socket.

1,640,129. SIGNALING APPARATUS. WILLIAM G. LAMB, Waterloo, Iowa, assignor to National Safety Devices Company, Waterloo, Iowa. Filed Apr. 8, 1926. Serial No. 100,656. 2 Claims. (Cl. 116—24.)



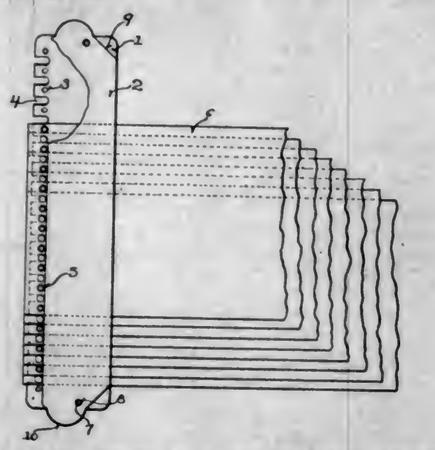
2. In an apparatus of the character described, a signaling device, mechanism for actuating said signaling device with a predetermined series of actuations, said mechanism including limitedly movable coupled parts entrained between but unconnected with associated elements of the mechanism, an operating valve device also included in the mechanism, a lever composed of adjustably connected parts suspended swingingly near its upper end, stops fixed at opposite sides of the lever to limit its oppositely swinging movements, and connections between the upper end of the lever and a movable part of the valve device and between the lever and one of said movably coupled parts, permitting the lever to be swung to one side to move the last-mentioned coupled part idly while simultaneously shifting said valve device part to actuate the valve and with it said mechanism for producing a series of signals by the signaling device, the lever when swung to the opposite side from its normally pendent position causing idle movement of said valve device part while simultaneously moving both said coupled parts in a direction to actuate the portion of said mechanism between them and the signaling device to operate the latter to produce a single signal.

1,640,130. SIGNALING APPARATUS. WILLIAM G. LAMB, Waterloo, Iowa, assignor to National Safety Devices Company, Waterloo, Iowa. Filed Apr. 27, 1926. Serial No. 104,944. 2 Claims. (Cl. 116—24.)



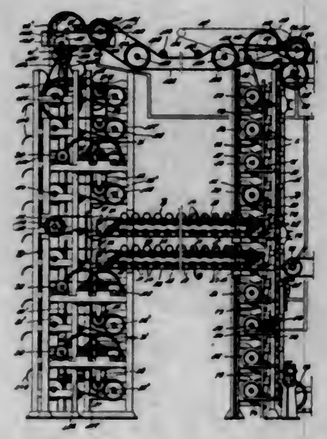
2. In an apparatus of the character described, a signaling device, mechanism for actuating said signaling device with a predetermined series of actuations, said mechanism including limitedly movable coupled parts entrained between but unconnected with associated elements of the mechanism, an operating valve device also included in said mechanism, a quadrant having a medial notch and a notch near one end only, a lever pivoted abutting said quadrant having a resiliently controlled detent mounted movably thereon adapted to ride upon the quadrant to engage either notch, resilient means connected to said lever

adapted to be placed under tension when the lever is moved in either direction away from said medial notch, and connections between said lever and a movable part of the valve device and between the lever and one of said movably coupled parts, permitting the lever to be swung in one direction along the quadrant to the end thereof having no notch to move the last-mentioned coupled part idly while simultaneously shifting said valve device part to actuate the valve and with it said mechanism for pro-



ducing a series of signals by the signaling device, the lever when swung to the opposite part of the quadrant beyond the medial notch causing idle movement of said valve device part while simultaneously moving said coupled parts to actuate a portion of said mechanism between them and the signaling device to operate the latter to produce a single signal, and in the latter movement of the lever when the detent thereof is engaged with the end notch of the quadrant, to produce a single signal by the signaling device of indefinite duration.

1,640,131. MACHINE FOR SQUEEGEEING, MOUNTING, AND DRYING PHOTOGRAPHIC PRINTS. JAMES A. MACBRIDE, Kearny, and ALFRED E. PETZER, Perth Amboy, N. J. Filed July 3, 1924, Serial No. 724,167. Renewed Jan. 21, 1927. 7 Claims. (Cl. 216—20.)

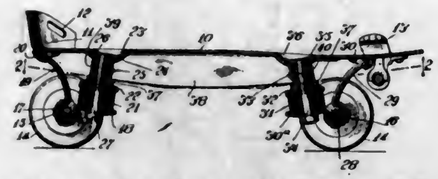


1. In a machine for squeegeeing, mounting and drying photographic prints, the combination of a drying chamber, a system of guide rolls operatively arranged with relation to said drying chamber, an endless belt conveyor to receive the wet print, said conveyor engaging aforesaid guide rolls, and being of hard tough material capable of receiving the special finish desired to be impressed upon the face of the print, a pair of squeezing rolls in cooperative relation with each other by means of the endless belt conveyor, means to impart motion to the squeezing rolls thereby starting the endless belt conveyor, a space for applying the wet print to the endless belt conveyor, means to pass a strip of moist adhesive backing material unto the conveyor, and means for passing air through the drying chamber.

1,640,132. SHEET INSERTER. HENRY C. MILLER, Milwaukee, Wis.; First Wisconsin Trust Company, Milwaukee, Wis., executor of said Henry C. Miller, deceased. Filed Aug. 25, 1926. Serial No. 131,392. 3 Claims. (Cl. 129—1.)

1. A sheet inserter for a loose leaf binder provided with impaling prongs, said inserter comprising a main plate of rectangular contour having a plurality of posts adapted to enter certain of the perforations in the sheets, said main plate having notches between said posts alining with other of the perforations of said sheets and having projecting posts spaced from said first mentioned posts, and an auxiliary retaining plate adapted to be positioned opposite said first mentioned plate and adjacent the edges of said sheets, said auxiliary plate having apertures for the reception of said last mentioned posts and having cut-away rear corners to expose corresponding corners of said first mentioned plate.

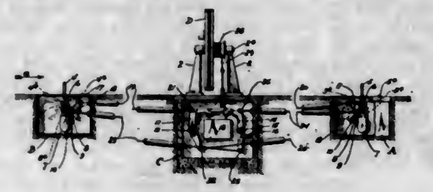
1,640,133. APPARATUS FOR HANDLING PULP TUBES OR THE LIKE. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Portland, Me., a Corporation of Maine. Original application filed Mar. 3, 1923, Serial No. 622,610. Divided and this application filed Nov. 28, 1924. Serial No. 752,577. 26 Claims. (Cl. 198—27.)



1. In an apparatus of the character described, a carrier having a pair of endless chains, pairs of alined members each carried by one link of a chain and having extensions

overlying a number of links of the chain, and rollers journalled in said members.

3. In combination, a drier, a carrier within the drier and having transversely extending supporting rollers, means to deliver articles singly to between the rollers of the carrier, a drive mechanism driven in timed relation to said delivery means to advance said carrier intermittently upon delivery of such articles to the carrier, and a control mechanism to vary the distance said carrier is advanced at each such delivery.

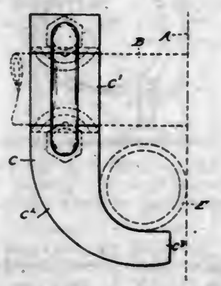


8. In an apparatus of the character described, a carrier, a pair of shifting arms at the forward end of said carrier, means for moving the carrier forward a portion of a step and simultaneously moving the arms backwardly, and then completing the step movement of the carrier and moving the arms forwardly.

1,640,134. ROLLER SKATE. GUSTAVE R. SALBERG, Chicago, Ill., assignor to Richardson Ball Bearing Skate Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1926. Serial No. 117,439. 17 Claims. (Cl. 208—179.)

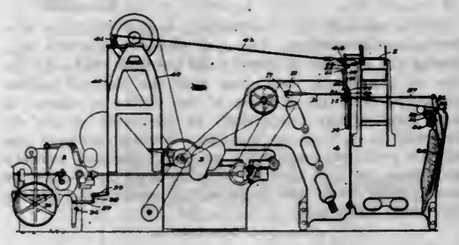
1. In a roller skate, the combination of a truck, a plate having a rounded recess in its upper surface and a hanger for securing the truck to the plate provided with a head having a rounded under surface for bearing movably against the rounded surface of said recess.

1,640,135. GATE. ROBERT A. SALLEE, Point Richmond, Calif. Filed Dec. 21, 1925. Serial No. 76,565. 4 Claims. (Cl. 39—60.)



1. A device of the character described, comprising a gate adapted to normally assume a horizontal position crosswise of a roadway, a horizontal pivotal support for one end of the gate, a main counter-weight attached to the end of the gate and adjacent the pivot, an auxiliary counter-weight, mounted for vertical movement, means whereby vertical movement of the auxiliary weight in one direction is transmitted to open the gate and vertical movement in the other direction permits closing of the gate, and means actuated by the wheels of a vehicle for imparting vertical movement to the auxiliary weight.

1,640,136. ADHESIVE PASTE. RALPH B. SMITH, Endicott, N. Y. Filed Apr. 26, 1926. Serial No. 104,840. 1 Claim. (Cl. 87—17.)

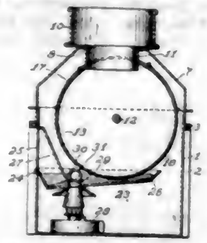


A boiled adhesive paste comprising one gallon of sour cow's milk, an aqueous extract made from boiling one-fourth pound of flax seed meal in one pint of water and filtering and pressing out the extract, two ounces spring wheat flour, two ounces of laundry starch, and water sufficient in quantity to form a paste, to which, after the boiling, two ounces of leather dust has been added.

1,640,137. BOILER CLEANER. WILLIS P. THOMAS, Detroit, Mich., assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 28, 1919. Serial No. 293,155. 5 Claims. (Cl. 122—392.)

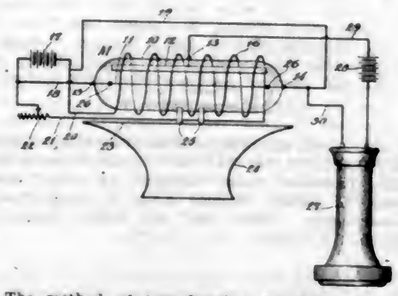
1. In a boiler cleaner, the combination with an extended portion of the boiler surface and a boiler tube extended transversely thereto, of a blower tube lying adjacent said extended surface, and a member clamped to said boiler tube for retaining said blower tube in contact with said extended portion of the boiler surface.

1,640,138. CONTROLLING APPARATUS FOR COTTON-DISTRIBUTING MECHANISMS. JOHN WILLIAM WOODWARD, Lawrence, Mass., assignor, by mesne assignments, to Kitson Machine Shop, a Corporation of Massachusetts. Filed Nov. 16, 1923. Serial No. 675,141. 8 Claims. (Cl. 19—69.)



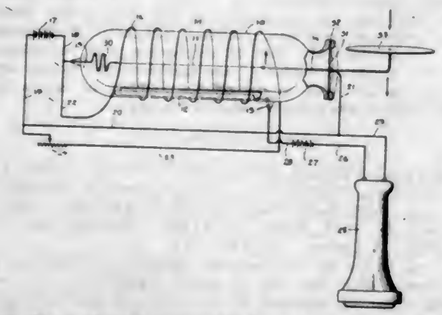
1. In a cotton handling apparatus, the combination of a cotton working machine, automatic means for supplying cotton thereto comprising a conveyor and a gate movable into and out of position to discharge cotton from said conveyor into said machine, automatic mechanism for controlling said gate in accordance with variations in the supply of cotton in the machine, and means for operating said gate to cut off the delivery of cotton to the machine when the machine is stopped.

1,640,139. FEEDER FOR LIQUID FOODS. CRENO P. BENTENGA, Marshalltown, Iowa, assignor to Marshalltown Sheet Metal Works, Marshalltown, Iowa. Filed July 18, 1925, Serial No. 44,608. Renewed Apr. 7, 1927. 3 Claims. (Cl. 119—73.)



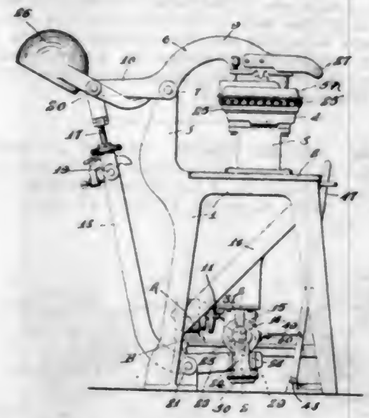
1. A device of the character described, comprising a container with open top to receive liquid food, a closed tank supported rotatably above and to dip into said container and having a peripheral wall opening to be immersed therein in one position of the tank, a closure for said opening slidably mounted on the tank to be shifted

to and fro circumferentially, and a flexible encompassing connection passed completely about the tank connected



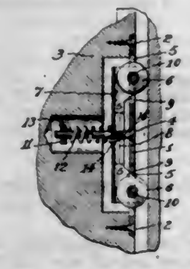
at its ends to opposite ends of the closure for manually shifting the closure from any part of the connection around said tank to open or closed positions.

1,640,140. METHOD OF AND APPARATUS FOR ELECTRICALLY PRODUCING SOUND. THEODORE BODDE, Niagara Falls, N. Y. Filed Jan. 17, 1923, Serial No. 613,273. Renewed Jan. 7, 1927. 18 Claims. (Cl. 179—121.)



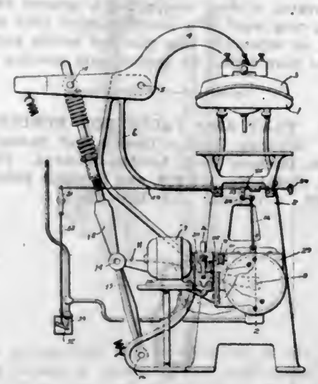
1. The method of transforming sound impulses into corresponding electrical impulses which consists in subjecting the electron stream of an electron discharge device to a magnetic field such that the electron stream emanating from the cathode of the device is caused to move substantially tangentially to the anode of the device and in setting up relative vibration between the cathode and anode responsive to sound impulses whereby variations in the electron stream impinging upon or touching the anode are produced in correspondence with the sound impulses.

1,640,141. METHOD OF AND APPARATUS FOR ELECTRICALLY PRODUCING SOUND. THEODORE BODDE, Niagara Falls, N. Y. Filed July 5, 1924, Serial No. 724,379. Renewed Jan. 7, 1927. 10 Claims. (Cl. 179—121.)



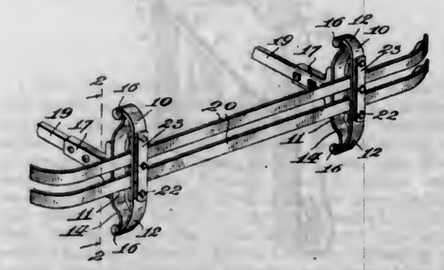
4. The method of transforming sound impulses into corresponding electrical impulses which consists in vibrating the cathode of an electron discharge device relatively to the anode in response to sound impulses to vary the condition of the electron stream emanating from the cathode and moving to the anode.

1,640,142. GARMENT-PRESSING MACHINE. AQUILA R. BRAUN, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed July 11, 1923. Serial No. 650,806. 13 Claims. (Cl. 68—9.)



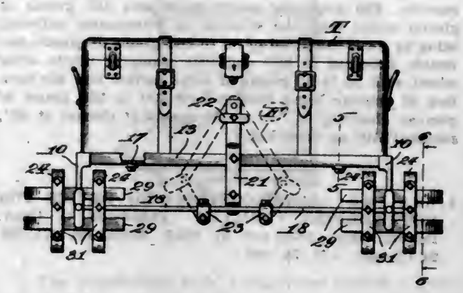
1. In a pressing machine, the combination of coacting pressing elements having relative movement one toward and from the other, a lever pivoted between its ends, one arm thereof carrying the movable pressing element, power means, motion transmitting connections between the power means and the other arm of said lever including a part shiftable into and out of connection with the power means, spring means normally ineffective on said lever and arranged to come into action to be effective on said lever after said part has been shifted into effective connection with the power means and the movable element is actuated by the power means, said spring means tending to separate the pressing elements and to open the press, said part being movable into effective connection with the power means by a preliminary closing of the movable element and manual means operable to control the shifting of said part out of effective position when the press is closed and thereby permit the spring means to react to open the press.

1,640,143. WINDOW FIXTURE. LOUIS A. CORCORAN, Indianapolis, Ind., assignor to Stanley Barnes, Indianapolis, Ind. Filed Apr. 25, 1925. Serial No. 25,909. 3 Claims. (Cl. 292—15.)



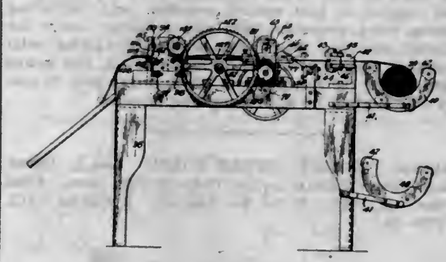
1. An inaccessible spring tensioning means comprising an abutment element, a bolt having its shank extending therethrough and forwardly and rearwardly thereof, a spring mounted on said shank rearwardly of said element, the forward terminal portion of said spring engaging in said element to hold the spring from rotation, a polygonal shaped nut mounted on said shank rearwardly of said spring, and a projection carried by the rear end of the spring and engaging one side of the nut to prevent rotation of the latter relative to the spring; the said forward terminal portion of said spring associating with said shank forwardly of said element for preventing accidental, while permitting forced, rotation of the bolt relative to the spring and nut.

1,640,144. MECHANISM FOR PRESSING MACHINES HAVING A START AND STOP MOTOR. JOSEPH P. DALY, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,819. 5 Claims. (Cl. 68—9.)



1. In a pressing machine, the combination of cooperating pressing elements one of which is movable toward and from the other, means for actuating the movable element including a start and stop motor, an intermittently rotatable shaft normally disconnected from the motor, motion transmitting means between the shaft and the movable element, a switch for closing the circuit through the motor, manually operable means for closing the switch, and an automatically operable controller movable with the shaft to maintain the circuit closed through the motor and break the circuit at the end of each intermittent operation and means controlled by said manually operable means for connecting the shaft to the motor after the switch has been closed and the motor started.

1,640,145. AUTOMOBILE BUMPER AND SUPPORT. WILLIAM W. DONEGAN, Los Angeles, Calif. Filed Sept. 16, 1926. Serial No. 135,768. 9 Claims. (Cl. 293—55.)

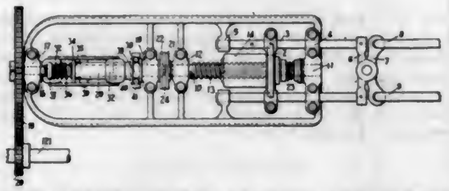


1. In an automobile bumper, a pair of vertically disposed substantially oval loops formed of resilient material, a horizontally disposed flanged bumper bar positioned against the inner faces of the front portions of said vertically disposed resilient loops and clips secured to the inner faces of the front members of said vertically disposed resilient loops and engaging the flanges of said bumper bar.

1,640,146. COMBINATION AUTOMOBILE BUMPER AND TRUNK RACK. WILLIAM W. DONEGAN, Los Angeles, Calif. Filed Oct. 11, 1926. Serial No. 140,792. 11 Claims. (Cl. 293—55.)

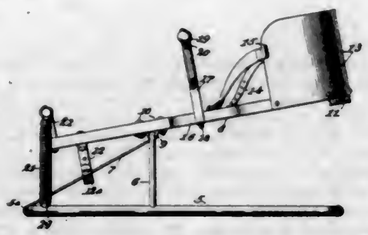
1. A combination automobile bumper and trunk rack comprising a pair of side frames adapted to be secured directly to the side members of an automobile frame, a bar connecting the lower portions of said side frames, pairs of vertically disposed loops secured to the ends of said bar and horizontally disposed bumper bars secured to said vertically disposed loops.

1,640,147. MACHINE FOR PREPARING METAL STRIPS. JOHN M. FEDDERS, Buffalo, and FRANK H. STOLP, Geneva, N. Y., assignors to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed May 5, 1925. Serial No. 28,088. 7 Claims. (Cl. 153—2.)



1. A machine for preparing strips of metal comprising two die members, each member having a plurality of V-shaped die teeth adapted to engage between adjacent teeth of the other die member, the opposite ends of the summits of the teeth of each member having flat faces and the valley between adjacent teeth also having flat faces and adapted to co-operate with the corresponding flat faces of the other member and the summits of each tooth on one member being provided between the corresponding flat faces with grooves and the valleys between adjacent teeth thereof being provided with a rib between the flat faces therein and adapted to co-operate with corresponding grooves and ribs on the other die member and the sides of a tooth of each die member being provided with a deflecting punch and with a deflecting recess adapted to co-operate with a deflecting recess and punch of the other die member.

1,640,148. PROCESS FOR PROTECTING THE GELATIN COATING OF PHOTOGRAPHIC PLATES AND FILMS. CRESZENZIA GLASER, née Pietti, Paris, France. Filed Oct. 7, 1926, Serial No. 140,204, and in France June 14, 1926. 1 Claim. (Cl. 91—68.)



Process for protecting and rendering impervious the layer of gelatin made sensitive with silver salts, of photographic plates made of glass sheets or on films constituted by sheets of celluloid or other similar plastic material, this process consisting in putting on the plates a coating comprising, for 1000 grams, 300 grams of a solution of transparent celluloid, 150 grams of a solution of gum-lac, 450 grams of acetic ether and 150 grams of glacial acetic acid, the solution of transparent celluloid being by itself composed of 85 to 100 grams of plastic materials dissolved in 800 and 850 grams of acetic ether mixed with 35 to 50 grams of amyl acetate and the solution of gum-lac being composed of 200 to 250 grams of gum-lac dissolved in 700 to 750 grams of alcohol at 96°, substantially as described.

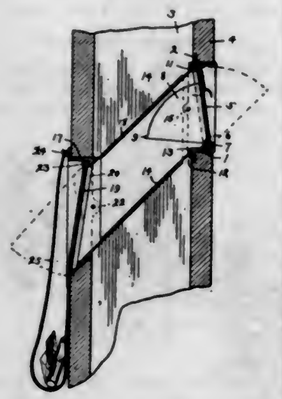
1,640,149. SPEED-CONTROLLING DEVICE FOR MOTOR-DRIVEN VEHICLES. FREDERICK O. GRAY, Dayton, Ohio. Filed Oct. 27, 1923. Serial No. 671,094. 24 Claims. (Cl. 74—96.)

1. In a speed controlling mechanism, a motor driven part, an actuating device, means for connecting said actuating device with a part to be operated, a shaft normally connected with said motor driven part, a connecting member mounted on said shaft for rotation therewith, said shaft and said member having cooperating parts to cause said member to move lengthwise of said shaft when said member is held against rotation, said connecting member being connected with said actuating device for rotation relatively thereto but being held against axial movement relatively to said actuating device, and means controlled by the speed of said motor driven part to control the rotation of said connecting member.

1,640,150. CHILD'S TEETER BOARD. LEO L. HENRY and EDWIN HETHERINGTON, Cedar Rapids, Iowa. Filed Nov. 18, 1926. Serial No. 149,071. 3 Claims. (Cl. 272—55.)

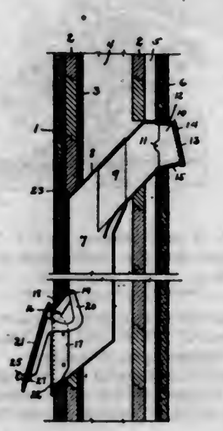
1. A child's teeter-board, comprising a skeleton base of tubular steel, an arch rising therefrom, a brace connecting the arch and base, a seat-board mounted rockably on the arch, and having an upstanding cleat, studs projecting therefrom, lugs carried pivotally by said studs, and springs connecting said lugs and base.

1,640,151. PACKING RING FOR PISTONS. ALBERT C. HOUCKER, Collinsville, Ill. Filed Jan. 15, 1923. Serial No. 612,822. 3 Claims. (Cl. 74—109.)



1. A packing element comprising a grooved base ring, a wearing ring made of a material softer than said base ring, and an expanding ring mounted within said groove adapted to bear outwardly against said wearing ring.

1,640,152. TEAT AND VALVE FOR FEEDING BOTTLES. WILLIAM CONRAD INGRAM and ERNEST JAMES EVERETT, Hackney Wick, London, England. Filed Jan. 4, 1927, Serial No. 158,939, and in Great Britain Nov. 25, 1926. 3 Claims. (Cl. 128—252.)

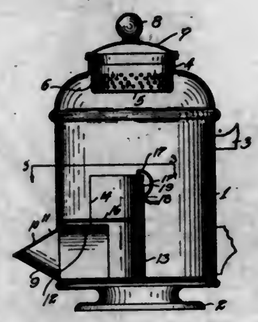


1. A perforated closure device for a feeding bottle having a body, an inner broad band of india rubber, and a strengthening strip of india rubber of less width than the said broad band and located between the broad band and the body of the closure device substantially as set forth.

1,640,153. MAIL BOX. OLE O. KOLSTAD, Duluth, Minn. Filed Apr. 14, 1924. Serial No. 706,232. 3 Claims. (Cl. 232—19.)

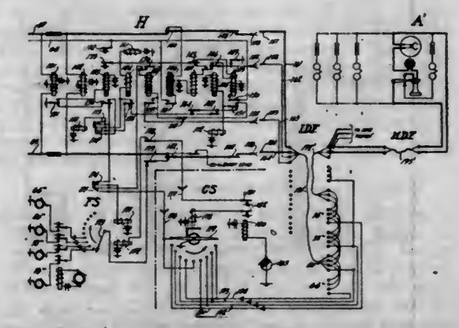
3. The combination with a wall, of an inclined mail chute having a receiving door and a discharge door, a frame for each door having means cooperating with its respective end of the chute whereby the frame and chute are jointly attached to the wall.

1,640,154. MAIL BOX. OLE O. KOLSTAD, Duluth, Minn. Filed Jan. 6, 1926. Serial No. 79,684. 2 Claims. (Cl. 232—19.)



1. The combination with a mail box of the character described having a receiving door and frame therefor, the upper horizontal wall of said frame having a flange forming a shoulder or stop for the door inboard of which the upper edge of the door is engaged when closed, an inwardly projecting flange formed integral with the door upon the two sides and bottom thereof for overlapping engagement with the cooperative sides and bottom of the door frame.

1,640,155. PISTON-RING SPRING PACKING. ARTHUR B. LOW, Denver, Colo. Filed Mar. 30, 1925. Serial No. 19,417. 9 Claims. (Cl. 74—109.)

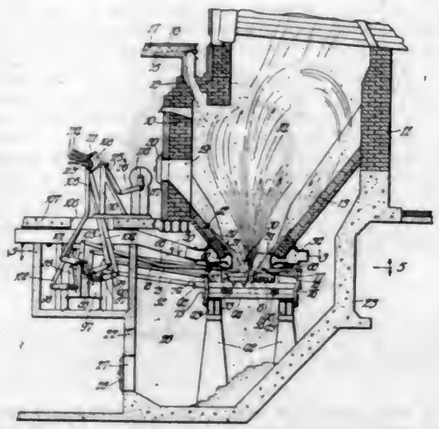


1. The combination with a piston having a piston ring groove and a piston ring therefor, of an auxiliary ring-like band spring packing, having its respective border edge extremities of uniformly continuous but of relatively greater and lesser diameter than the intermediate body portion thereof, mounted within said groove and longitudinally partitioning the space behind said piston ring into two annular chambers, respectively encompassing the intermediate outer and inner peripheral faces thereof, with its border extremity of greater diameter expansibly engaging said piston ring, in annular leak-proof relation, and with its border extremity of lesser diameter snugly engaging the wall surface of said groove in annular leak-proof relation.

1,640,156. SUGAR BOWL. HENRY PETERMAN, Wallace, Idaho, assignor of one-third to Charles Statler and one-third to Olgard Johnson, Wallace, Idaho. Filed Dec. 28, 1926. Serial No. 157,437. 3 Claims. (Cl. 221—98.)

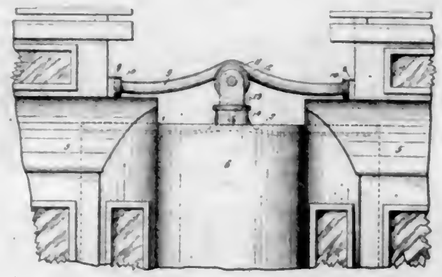
1. The combination with a sugar-bowl having a pouring spout at its bottom and an interior, open end trap chamber communicating with the spout, of an upright partition spaced from the rear or inner open end of the chamber, and an adjustable, horizontal gate co-acting with said partition, above the chamber.

1,640,157. PARTY-LINE AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, and JOHN I. BELLAMY, Brookfield, Ill., assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 1, 1923, Serial No. 616,429. Renewed Jan. 5, 1927. 26 Claims. (Cl. 179—17.)



14. In a telephone system, a party line, a connector having access to said line over a plurality of branches, a frequency selector individual to said connector, and means individual to each branch for controlling said frequency selector.

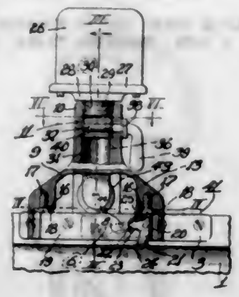
1,640,158. FURNACE. JOHN F. O. STRATTON, Chicago, Ill. Filed Aug. 26, 1925. Serial No. 52,998. 21 Claims. (Cl. 110—72.)



1. A furnace having, in combination, a combustion chamber, a throat formed in the bottom of said combustion chamber, an air pressure chamber below said throat, movable intercepting means directly beneath said throat, said intercepting means consisting of a plurality

of independently movable sections spaced apart to define a space for directing a blast of air from said pressure chamber into said combustion chamber, means for moving

said sections in unison to shift said space back and forth across said throat, and means movable oppositely to said sections and overlying the same to dislodge matter collecting thereon.

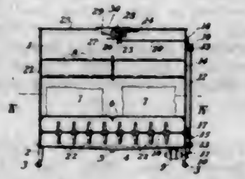


1,640,159. ARTICULATED CAR. JOSEPH M. SUAREZ, Baltimore, Md., assignor of one-fifth to Sterling P. Buck, Washington, D. C. Filed July 6, 1927. Serial No. 203,692. 12 Claims. (Cl. 105—4.)

1. The combination of two articulated car body sections each having an end provided with an electric cable coupling, an electric cable section extending continuously from one to the other of said couplings and being normally connected thereto but disconnectible therefrom, a vestibule between said articulated car body sections, and means mounted on the vestibule to support the middle part of said cable section.

1,640,160. DETACHABLE COUNTER BRACKET FOR SUPPORTING FABRIC MEASURING AND COMPUTING MACHINES. FERDINAND J. TILLMAN, St. Louis, Mo., assignor to Yard-O-Meter Corporation, St. Louis, Mo., a Corporation of Missouri. Filed May 19, 1922. Serial No. 562,158. 3 Claims. (Cl. 211—12.)

1. The combination of a counter and a detachable bracket therefor, a base member borne by said counter having a horizontally inclined cam surface, said bracket having a projection for horizontal co-operation with said cam surface of said member, horizontally disposed

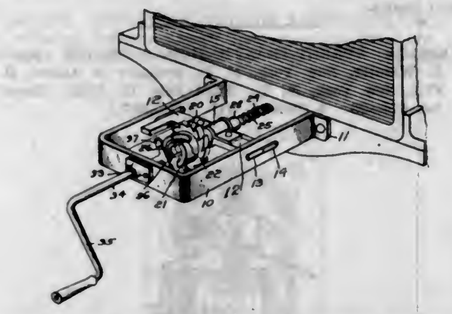


teeth provided on said member, and a locking element borne by said bracket for co-operation with said teeth of said member.

1,640,161. ALUMINO SOLDER. MURAJI TORII, Kamakuragori, Japan. Filed Aug. 7, 1924. Serial No. 730,678. 2 Claims. (Cl. 75—1.)

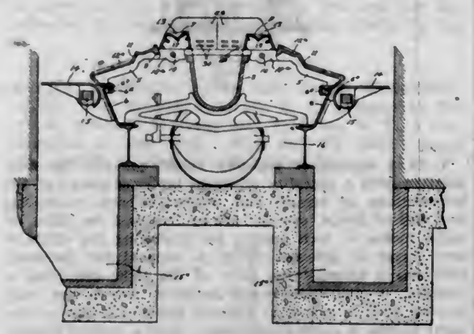
1. Alumino-solder containing 20–70% of zinc, 20–70% of tin, 5–35% of lead, 3–50% of cadmium, 1–5% of tin phosphide and 1–5% of magnesium, substantially as described.

1,640,162. COOLING DEVICE. GUSTAVE TRECK, Detroit, Mich. Filed May 3, 1926. Serial No. 106,352. 1 Claim. (Cl. 62—133.)



In a device of the character described, the combination of a box-like structure, a vertical shaft supported by said structure, means for driving said vertical shaft, perforated plates in said structure, ice on said perforated plates, a horizontal shaft extending across said structure under said plates, and driven by said vertical shaft, a plurality of fans on said horizontal shaft adapted to agitate air under said ice so that said air is cooled by contact with the drippings from the ice and by contact with the latter, the top of said structure having an opening therethrough, a discharge fan in said opening, a second horizontal shaft driven by said vertical shaft, means for rotating said discharge fan by the rotation of said second horizontal shaft, racks adapted to support food above said perforated plates, the bottom of said structure having an opening therethrough for the escape of drippings and for the admission of air into said structure, and means for driving said vertical shaft.

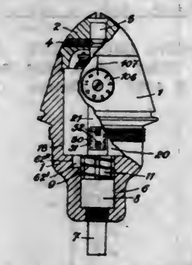
1,640,163. CRANK. CHARLES C. TRESTER, Lawrenceburg, Ind. Filed Feb. 26, 1927. Serial No. 171,190. 4 Claims. (Cl. 123—185.)



3. An engine cranking device comprising, a support, a rotatable shaft carried thereby, a tubular clutch element connected with the shaft to turn it and having longitudinal slots, a second tubular clutch element of

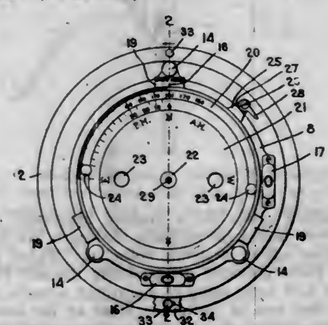
larger diameter rotatably mounted upon the shaft and receiving therein the first named tubular clutch element and having inclined slots, a transverse clutch element for insertion within the slots of the first and second named

tubular clutch elements and carrying rollers to engage the walls of the inclined slots, and a crank shaft carried by the support and connected with the transverse clutch element.



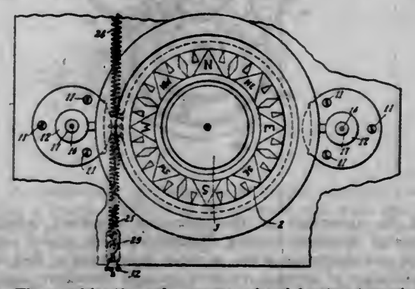
1,640,164. UNDERFEED STOKER. WALTER F. TROTTER, Cincinnati, Ohio, assignor to Detroit Stoker Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 19, 1921. Serial No. 523,251. 11 Claims. (Cl. 110—47.)

1. In a furnace bed, an inclined plate transversely shouldered intermediately of its upper and lower ends to effect a drop of fuel, feeding down the incline, for the purpose of breaking up said fuel, said plate having its top surface formed with pockets above and below said shoulder to retain heat insulating material.



1,640,165. CLOCKWORK-OPERATED MECHANICAL FUSE FOR SHELLS AND THE LIKE PROJECTILES. ANDRÉ VARAUD, La Capite sur Vesenaz, near Geneva, Switzerland, assignor to Tavannes Watch Co. S. A., Tavannes, Canton of Bern, Switzerland, a Corporation of Switzerland. Filed May 18, 1924, Serial No. 712,960, and in Switzerland Aug. 2, 1923. 10 Claims. (Cl. 102—36.)

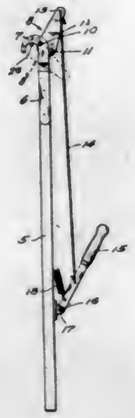
1. In a clockwork operated fuse for artillery projectiles, a striker member, a revoluble member adjustable in one direction to an angular position prior to firing for controlling the striker member, a clockwork, a regulating device therefor, a power spring, and a barrel shaft mounted in the axis of the fuse and adapted to turn several revolutions in one direction prior to firing for simultaneously winding the power spring and moving the said revoluble member to position to regulate the time interval determining the ignition of the charge of the projectile and also adapted to be turned by the spring in the opposite direc-



tion during the flight of the projectile for then moving the revoluble member and also transmitting power to the said regulating device of the clockwork.

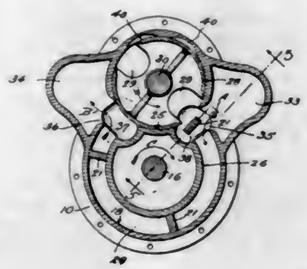
1,640,166. PELORUS. WILFRID O. WHITE, Newton, Mass. Filed Aug. 23, 1924. Serial No. 733,683. 3 Claims. (Cl. 33—61.)

1. A pelorus comprising a flat base, a plate slightly spaced from and generally parallel with the base, two levels mounted on the plate at right angles to each other, means for adjusting the plate with respect to the base to level the plate, an azimuth graduated dial and a compass graduated dial carried by the plate in parallelism therewith and concentrically and rotarily adjustable with respect to the plate and each other, and means for clamping the dial in adjusted position.



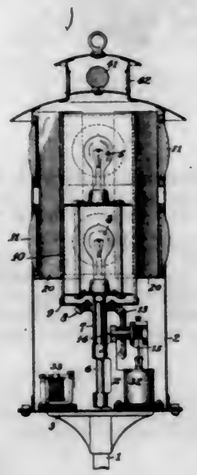
1,640,167. SPRING-MOUNTED COMPASS. WILFRID O. WHITE and HARVEY G. HATCH, Newton, Mass., assignors to Kelvin & Wilfrid O. White Company, Boston, Mass., a Corporation of Massachusetts. Filed June 20, 1926. Serial No. 82,428. 7 Claims. (Cl. 33—222.)

1. The combination of a compass bowl having trunnions, hollow posts mounted at opposite sides of said bowl and having longitudinal slots in their sides next to the bowl



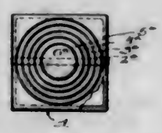
into which said trunnions project, and supporting springs suspended from the upper parts of said posts and connected to said trunnions to support the bowl.

1,640,168. PRUNING IMPLEMENT. LOUIS WILLIAMS, Seattle, Wash. Filed June 9, 1926, Serial No. 114,674. Renewed July 5, 1927. 4 Claims. (Cl. 30—11.)



4. A cutting device for a pruning implement consisting of a blade having intermediate its length two laterally spaced apart pivot receiving holes, the blades at one side of a plane projected diametrically through the axes of both of said holes being of a serrated arcuate contour providing two sets of teeth, the blade at the other side of said plane being adapted for engagement with means for operating the blade as a lever with respect to a pivot engaging in either of said holes.

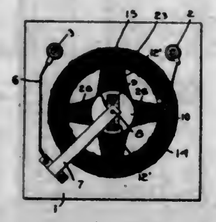
1,640,169. ROTARY PUMP. HARVEY A. WITTEMAN, Seattle, Wash. Filed Nov. 13, 1926. Serial No. 148,127. 5 Claims. (Cl. 103—125.)



1. In apparatus of the character described, annular pumping chambers having circumferentially spaced apart inlet and discharge ports, a rotor comprising a disk and a plurality of pistons revoluble in said chambers, hollow rotary members extending into said chambers to close the same at opposite sides of the rotor-disk between said ports, said members being provided at diametrically opposite sides with openings to successively receive the rotor pistons, said openings having communication with each other through the medium of the chambers within the respective hollow members, shafts for the rotor and said members, and operative driving connections between said shafts.

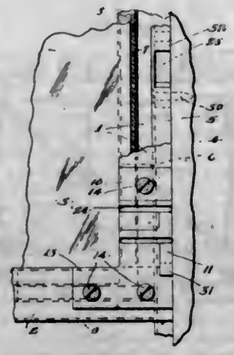
1,640,170. STREET-TRAFFIC-SIGNAL DEVICE. JOHN E. WRIGHT, New York, N. Y., assignor to Austen H. Fox, New York, N. Y. Filed July 12, 1922. Serial No. 574,493. 6 Claims. (Cl. 177—337.)

1. In a system of highway traffic control, the combination with a plurality of signal lanterns placed at the intersections of streets and roadways each containing two sets of lamps, one for use by day and the other by night, means in each lantern for displaying the lights of such lamps in different colors, a solenoid for operating said means whereby the color of the light displayed is changed, a polarized electro-magnetic switch for connecting with a source of current either the day or the night lamps, a controlling circuit from a central station including all the solenoids and all the polarized magnets of said switches and means in said circuit for sending over it currents in either direction for operating the light controlling means.



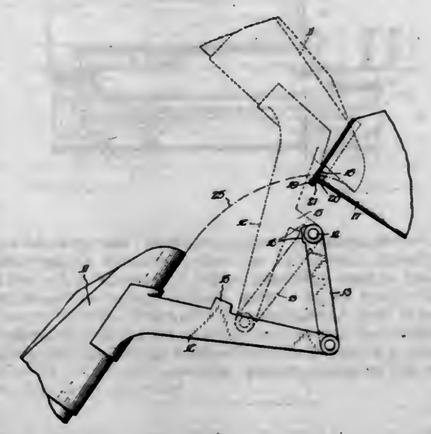
1,640,171. TOY NOVELTY. WILLIAM O. YANCEY, Chicago, Ill. Filed June 26, 1926. Serial No. 118,634. 5 Claims. (Cl. 46—37.)

2. A toy comprising a plurality of hollow telescoping members of increased length from the outer to the inner member, and joined together for limited endwise sliding



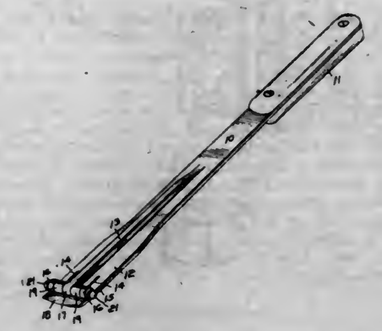
movement relative to each other, whereby the end portions of said members are alternately arranged in pyramid formation in the shifting of the same in opposite directions.

1,640,172. INDUCTION COIL FOR RADIO APPARATUS. WILLIAM HUSSEY ADAMS, Kenyon, R. I. Filed Oct. 1, 1923. Serial No. 666,014. 4 Claims. (Cl. 175—359.)



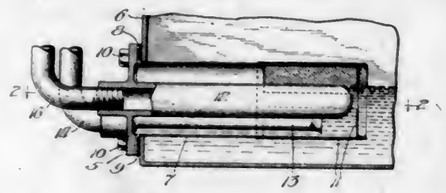
1. A coil for a radio apparatus comprising an insulating hub and a series of similar windings each extending through substantially one half the circumference of the coil, thence across the diameter, thence in the reverse direction through the other half of the circumference and back across the diameter, the circumferential portions of different terms being crossed transversely of the plane of the coil and the diametrical portions engaging the hub and crossing each other between the hub and the circumference whereby the coil is supported wholly by the hub.

1,640,173. WINDOW SASH AND LOCK CONSTRUCTION. ROY T. AXE, Syracuse, N. Y., assignor to The O. M. Edwards Company Inc., Syracuse, N. Y., a Corporation of New York. Filed July 14, 1925. Serial No. 43,588. 8 Claims. (Cl. 292—128.)



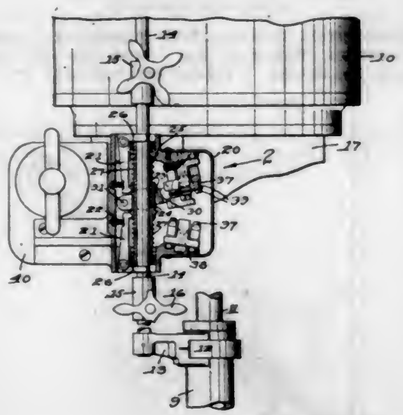
1. A window sash construction, comprising a frame having a projecting guide, a sash having a hollow member in the form of a channel movable along the guide, the guide projecting into the channel, one wall of the sash member being formed with an opening arranged to expose a side of the guide therethrough, and a sash holder comprising a base mounted on the sash member and located wholly within the width of the sash member, and a movable latch carried by the base plate and having a nose movable through said opening to coact with said side of the guides.

1,640,174. FLEXIBLE SEAL FOR MIXERS. FREDERIC E. BAGER, South Milwaukee, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 1, 1926. Serial No. 85,185. 3 Claims. (Cl. 214—130.)



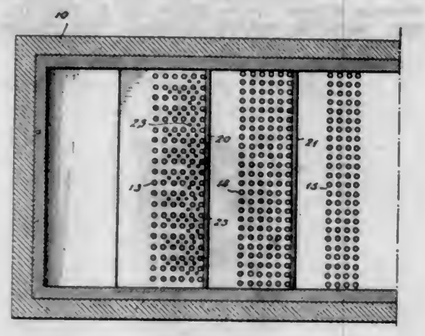
2. In a concrete mixer, a material handling skip, a material receiving chute, the skip being adapted to be moved toward and from the chute and resilient sealing means carried by one of the members and adapted to yield to permit passage of the other member to engage the other member to make a tight joint therebetween.

1,640,175. TOOL FOR SCRAPING BEARINGS. ROLLAND O. BARNES, Walkerton, Ind. Filed May 11, 1926. Serial No. 108,288. 3 Claims. (Cl. 145—47.)



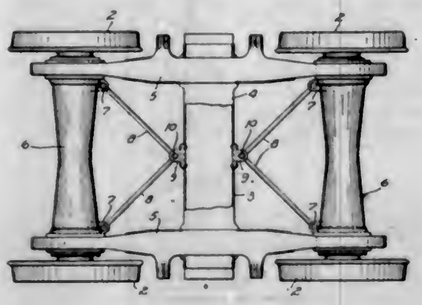
1. An implement for scraping or truing bearings, comprising a shank provided at its forward end with spaced knuckles and longitudinal slots which extend rearwardly from the knuckles, a scraping blade provided at its rear end with spaced knuckles to interfit with the first named knuckles, and a clamping bolt passing through the knuckles and adapted to lock the two sets of knuckles together so that the scraping blade may be positively held at a selected angle with respect to the shank.

1,640,176. LUBRICATING-OIL HEATER. RALPH W. BERGSTROM, Rockford, Ill. Filed Apr. 17, 1926. Serial No. 102,810. 2 Claims. (Cl. 184—104.)



1. A combined oil heating reservoir and strainer for the crank case of an internal combustion engine comprising, a head plate adapted for attachment to the crank case, an oil intake and an exhaust heater coil mounted on said plate, an imperforate cylindrical reservoir carried by said plate and surrounding said oil intake and exhaust heater coil, and a strainer carried by and enclosing the free end of said cylindrical reservoir.

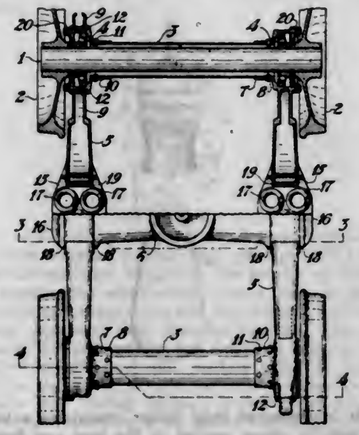
1,640,177. ELECTRIC REVERSING DEVICE FOR TAPPING MACHINES. BENJAMIN S. T. BISHOP, Shrewsbury, and PERCIVAL E. DOW, Leicester, Mass., assignors to Leland-Gifford Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 13, 1926. Serial No. 80,980. 4 Claims. (Cl. 200—47.)



1. In an electric current reversing device, the combination with a movable spindle, and a rod connected with the spindle to move with it and located parallel with it, of a pair of stops adjustable along the rod, a double flanged slide slidable along the rod, means in position to be engaged by the stops as the rod moves for holding said flanged slide and adapted when engaged by either stop to release the flanged slide, yielding means on opposite sides of the slide for changing its position when it is thus released, and an electric switch connected with said slide to be operated by its movement for breaking the circuit and connecting it in another way.

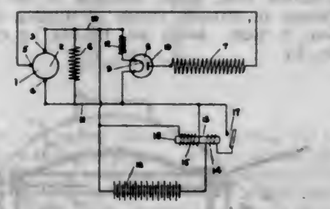
1,640,178. BOILER CONSTRUCTION. BENJAMIN N. BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 1, 1925. Serial No. 19,807. 3 Claims. (Cl. 122—302.)

1. In a water tube boiler, a furnace, said boiler having a plurality of banks of water tubes located at different distances from said furnace, the first bank of tubes nearest to the furnace having a smaller number of rows of tubes transversely of the boiler spaced apart at greater distances than the remaining banks, and a plurality of superheater units extending downwardly into the boiler between the tubes of the first bank, the effective area of the gas passage formed in said first bank between the superheater units and the water tubes of said bank being no less than the effective area of the gas passage of each of the remaining passes.



1,640,179. RAILWAY-CAR TRUCK. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 4, 1926. Serial No. 92,124. 9 Claims. (Cl. 105—182.)

1. A car truck construction comprising axles, axle housings and tie-rods secured to said axle housings and extending diagonally therefrom.



1,640,180. RAILWAY-CAR TRUCK. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed June 3, 1926. Serial No. 113,405. 7 Claims. (Cl. 105—182.)

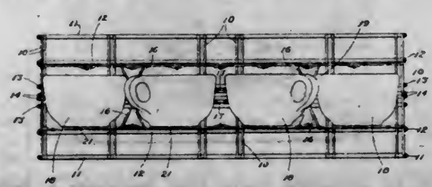
1. A railway car truck comprising a pair of axle members and a pair of side frames having their ends mounted on the ends of said axle members, each of said side frames being rigidly secured to one of said axle members, said rigid connections being at diagonally opposite corners of

the truck, and said axle members being movably received in the end portions of the side frames at the other diagonal corners.

1,640,181. DYNAMO-ELECTRIC SYSTEM. WILLIAM B. CHURCHER, Cleveland Heights, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 16, 1924. Serial No. 726,283. 1 Claim. (Cl. 171—312.)

1. In a charging system for storage batteries, the combination with a storage battery of a direct current generator adapted to charge the same, said generator comprising a pair of field windings, an armature, a pair of current collecting brushes contacting therewith, one of said windings being connected across said brushes, said brushes being relatively fixed to each other, and a third brush in contact with the generator armature intermediate the points of contact of the other brushes, and a thermionic electron discharge device having a filament and an anode, means to communicate current from the pair of brushes to the filament, said filament and anode being connected in serial circuit together with the other one of said generator windings between said last named brush and one of the other brushes, said windings being so disposed in their respective circuits that current through one of the windings will magnetically oppose the effect of current in the other winding.

1,640,182. PROCESS FOR MAKING FOOD PRODUCTS. NATHAN MINTON CRELOOK, Los Angeles, Calif., assignor to Ward Baking Company, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1924. Serial No. 733,158. 7 Claims. (Cl. 99—11.)

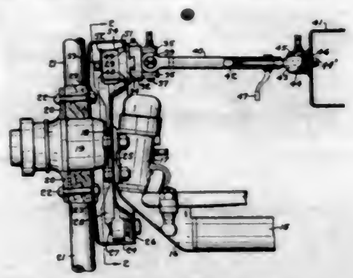


1. The method of producing a food product from cereal germs which comprises cooking the raw material until the starch present is gelatinized, treating the material to effect saccharification of the gelatinized starch and subsequently boiling and subjecting said material to a second saccharification treatment.

1,640,183. TOW ROPE. ALBERT P. DENIS, Springfield, Mass. Filed Oct. 12, 1926. Serial No. 141,113. 5 Claims. (Cl. 280—33.14.)

1. A tow-rope comprising a rope member, means for clamping the opposite ends of the rope which consists of a pair of members, each having matching grooves for receiving the rope, a portion of the ends of the rope extending beyond the clamps and brought back to form a loop, means for securing the ends of the rope in the clamps, a hook device attached to the clamps for receiving the loop, whereby two strands are provided for attaching the rope to a part, as described.

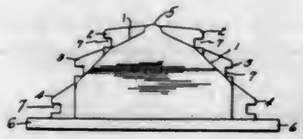
1,640,184. DEVICE FOR HANDLING CUPS AND THE LIKE. MALCOLM H. EATON, Brookline, Mass., assignor of one-third to Ezra S. Eaton, Newton, Mass., and one-third to Charles F. Eaton, Brookline, Mass. Filed July 19, 1924. Serial No. 727,037. 3 Claims. (Cl. 220—22.)



2. The herein described device for handling fragile articles of irregular form comprising a frame or container having upright walls, an open top of symmetrical form, and a bottom disposed above the lower edges of said walls to leave an unobstructed space beneath the same and adapted to support said articles with portions thereof projecting above said top, the upper and lower edges of said walls being relatively formed to adapt said container to rest upon the walls of a similar container, and said open top having substantially its entire area divided into a plurality of compartments each substantially pear-shaped in outline and corresponding generally to the outline of said articles, said compartments being disposed in intermeshing relationship with respect to each other and in symmetrical relationship with respect to said container as a whole.

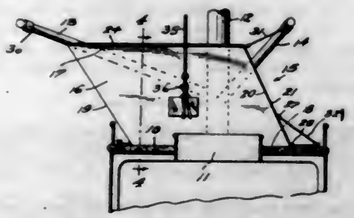
1,640,185. COATING PROCESS. ALFRED EGGIMAN and ALBINO PEREA, Paris, France. Filed Dec. 1, 1924, Serial No. 753,342, and in France Dec. 15, 1923. 4 Claims. (Cl. 91—68.)

1. A process for giving any object, of wood, metal, card or other material, the appearance of enamel, including the following operations, the application to the object of at least one preliminary coating of linseed oil, turpentine and crushed white lead, the drying of the object, and the dipping of the said object into at least one bath composed substantially in the proportions of 2½ litres of water,



500 grammes of gelatine and 500 grammes of zinc white, followed by the drying of the object and the dipping thereof into a bath composed of about 2½ litres of water and 500 grammes of pure gelatine, substantially as described.

1,640,186. BRAKE. GLA R. FULLER, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed May 8, 1926. Serial No. 107,683. 5 Claims. (Cl. 188—194.)

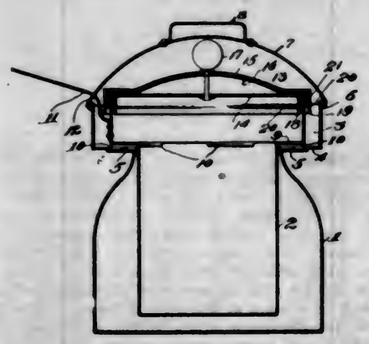


1. In combination, a support provided with an opening, a hollow bracket projecting through said opening provided with a slot through the walls thereof in line with the walls of said opening, a rotatable shaft in said bracket provided with a groove in line with said slot, and a key received by both said slot and said groove and held against displacement by the walls of said opening.

1,640,187. AUTOMOBILE HEATER COVER. EMMET P. GRAY, Detroit, Mich. Filed May 27, 1925. Serial No. 33,184. 6 Claims. (Cl. 98—103.)

3. An automobile heater cover comprising a casing formed to provide a series of bosses each having a vertical face, each boss being provided with a slot opening through the vertical face thereof.

1,640,188. WEATHER GUARD FOR HATCHWAYS. JOHN F. GRUNDOCK, Seattle, Wash., assignor to Seattle Tent & Awning Co., Seattle, Wash., a Corporation of Washington. Filed Oct. 11, 1926. Serial No. 140,825. 3 Claims. (Cl. 135—5.)



1. A weather-guard comprising a tent-like structure having a rectangular base, the upper edges of the side walls of the tent-like structure being spaced apart for the operation therebetween of a hoisting line and flexible guard strips adjacent inner upper edges of the side walls.

1,640,189. LAMP SOCKET. DORMAN E. HAMIEL, Columbus, Ohio. Filed Feb. 20, 1925. Serial No. 10,702. 2 Claims. (Cl. 173—358.)

1. An incandescent lamp holder comprising a base, an outer metallic sleeve carried by the base and forming a socket for the removable reception of a lamp base, said sleeve being provided with an angular spring seat, a split lamp base receiver carried by the base and arranged within said socket, and an annular spring confined between the sleeve and the receiver and positioned in said seat for coaction with said receiver to resiliently resist expansion on the part of the receiver.

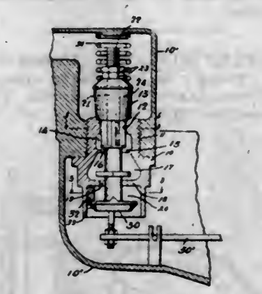
1,640,190. WATERLESS COOKER. ERNEST T. HEINSON, Mountain Iron, Minn., assignor of ten per cent to Thomas H. Strisich, village of Hibbing, Minn. Filed Sept. 7, 1926. Serial No. 133,864. 2 Claims. (Cl. 53—1.)

1. In a cooker, the combination of an outer receptacle, provided with an offset portion having a floor, said floor provided with elongated sockets open at their inner ends and closed by said floor at their outer ends, said outer ends of the sockets being near to the vertical portion of said offset portion, an inner receptacle provided with a shouldered portion registering with said offset portion of the outer receptacle, said shouldered portion provided on its bottom with elongated depending ribs adapted to be seated in said sockets and form a tight joint when said shouldered portion rests snug on the floor of said offset portion, said ribs extending the whole width of the bottom of said shouldered portion, and said offset portion and said shouldered portion forming a trough between said receptacles.

1,640,191. WATERLESS COOKER. ERNEST T. HEINSON, Mountain Iron, Minn., assignor of ten per cent to Thomas H. Strizich, village of Hibbing, Minn. Filed Sept. 7, 1926. Serial No. 133,865. 1 Claim. (Cl. 53—1.)

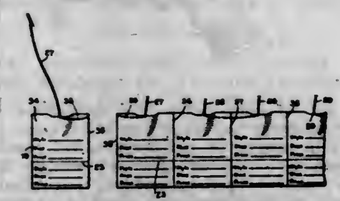
In a cooker, the combination of an outer receptacle provided with an offset portion, said offset portion having a flat horizontal floor, elongated ribs formed on said floor and extending the entire width of said floor, an inner receptacle in said outer receptacle and provided with an outstanding shoulder, said shoulder provided with a flat horizontal bottom, said bottom provided with horizontal elongated sockets, and said sockets being of the same length as the width of said shoulder and receiving said elongated ribs thereby forming a tight joint the entire width of said shoulder when said shoulder rests snug on the floor of said offset portion.

1,640,192. BOTTLE CLOSURE AND METHOD OF MAKING SAME. WILLIAM PATRICK HENRY, New York, N. Y. Filed Sept. 1, 1926. Serial No. 132,956. 8 Claims. (Cl. 215—318.)



1. A bottle closure unit comprising a holding cap and a lip cover hermetically sealed on the top surface thereof close to its edge, said cover portion being formed of paper having its outer edge the exact diameter of the intended bead surface contact with the initial tension in the paper and remainder of the cover portion bent and folded inwardly to conform to the desired cover shape with radially inward extending margin pressed to a form for union with the cap top surface.

1,640,193. PROCESS FOR MAKING FOOD PRODUCTS. CHARLES HOFFMAN, Tuckahoe, N. Y., assignor to Ward Baking Company, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1924. Serial No. 733,110. 11 Claims. (Cl. 99—11.)



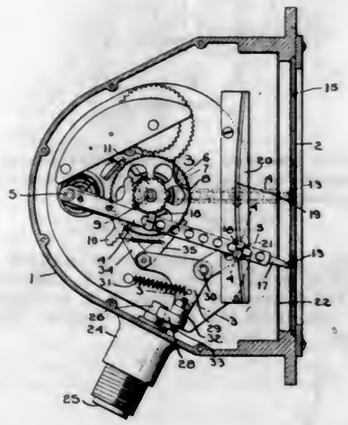
1. The method of producing from cereal germs a food product rich in water soluble B vitamine which comprises extracting the oil from the said germs, cooking the raw material to gelatinize the starch contained therein, acidifying the said cooked material and malting said material to effect saccharification thereof.

1,640,194. VALVE FOR ANIMAL DRINKING FOUNTAINS. AUGUST F. KLINZING, Milwaukee, Wis. Filed July 21, 1924. Serial No. 727,230. 6 Claims. (Cl. 251—134.)

4. In a valve of the class described, a casing having a seat, a bore, a relatively small chamber communicating with said bore, a larger chamber communicating with said first chamber, and a still larger discharge chamber communicating with said second chamber, said chambers being separated by inwardly projecting annular flanges; and a valve plug having a stem mounted in said bore and provided with outwardly projecting flanges moving within said chambers and providing a tortuous path for the fluid passing through said casing.

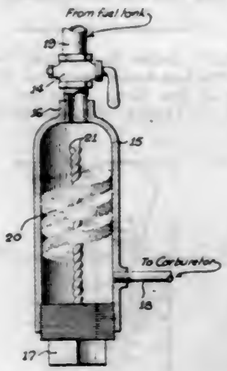
1,640,195. TAG AND METHOD OF MAKING SAME. HENRY E. KONDOLF, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 27, 1926. Serial No. 125,257. 7 Claims. (Cl. 40—21.)

1. In a tag of the character described, superposed layers, means therebetween for attaching them together, a binding tie having a free threading end and having its other end extending between the layers and engaged by said means, and said layers being so constructed and arranged as to permit said free end to be subsequently interposed therebetween.



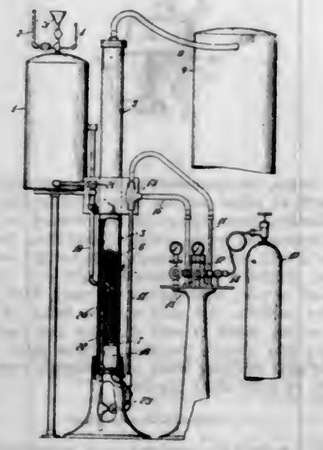
1,640,196. TAG. HENRY E. KONDOLF, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 3, 1926. Serial No. 145,938. 7 Claims. (Cl. 40—21.)

1. In a tag of the character described, the combination with a tie element having a locking tip which is normally transverse to the tie but which is adjustable into alignment with the tie, of a pocket wall having complementary deflectable portions which normally define an opening too small for passage of the tie but which are deflectable into positions which momentarily enlarge said opening just



sufficiently to permit passage of the tip when the latter is aligned with the tie, whereby momentary adjustment of both the tip and wall portions first out of and then back to normalcy will lock the tie in irremovable association with said pocket.

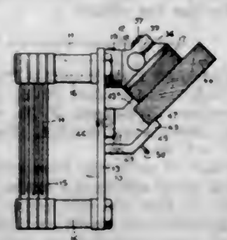
1,640,197. SPEED INDICATOR. GEORGE H. LANG, Boston, Mass., assignor to Stover-Lang Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1925. Serial No. 9,315. 6 Claims. (Cl. 264—2.)



1. In an indicating device, the combination with a swinging extensible indicating arm of an index member carried by the arm at the end thereof a dial member having a graduated portion extending in a straight line, and means to extend and contract said arm as it swings thereby to cause the index member to travel in a straight line parallel to the line of graduations of the dial member.

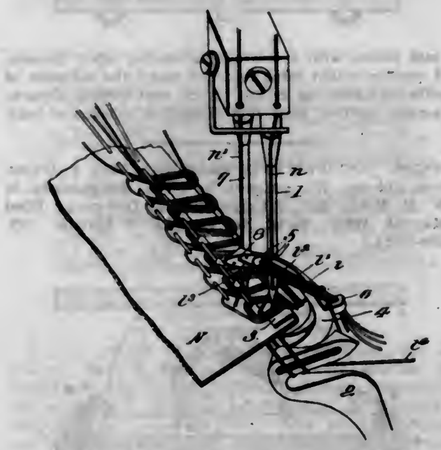
1,640,198. FILTER. JEAN M. LOBIT, Brooklyn, N. Y. Filed Nov. 14, 1923. Serial No. 674,670. 3 Claims. (Cl. 210—165.)

1. A filter comprising in combination, a casing having a substantially vertical bore and a pipe plug closing the lower end thereof, a filter brush secured to said plug and extending into said bore an inlet conduit communicating with said bore above said brush, and an outlet conduit communicating with said bore below said brush but above said plug.



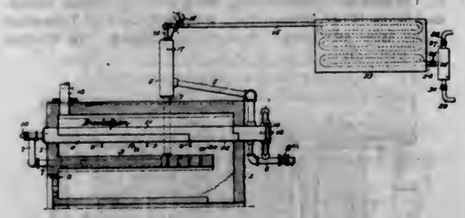
1,640,199. FLOUR-MATURING METHOD AND APPARATUS. JOHN I. LOGAN, Chicago, Ill., assignor to Industrial Appliance Company, Chicago, Ill., a Corporation of West Virginia. Filed Aug. 3, 1925. Serial No. 47,793. 8 Claims. (Cl. 83—42.)

1. Apparatus for practicing the process herein described comprising in combination a reaction tower having an outlet for gas, a solution tank, a valved pipe leading from the solution tank to the reaction tower near the bottom of the latter, and means for forcing a mixture of air and gas into the bottom of the reaction tower.



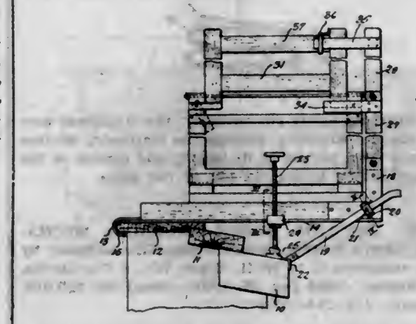
3. Method of maturing flour which consists in continuously passing chlorine gas in contact with aqua ammonia, with the chlorine in excess of the amount which will combine with the ammonia, and bringing the resultant gaseous agent, diluted with an inert gas, into contact with the flour in a dispersed state.

1,640,200. MOUNTING MEANS FOR RADIO RECEIVING SETS. FRANCIS L. LORD, Newark, N. J., assignor, by direct and mesne assignments, to The Lord Laboratories, Inc., New York, N. Y., a Corporation of South Dakota. Filed Aug. 28, 1925. Serial No. 53,003. 7 Claims. (Cl. 250—40.)



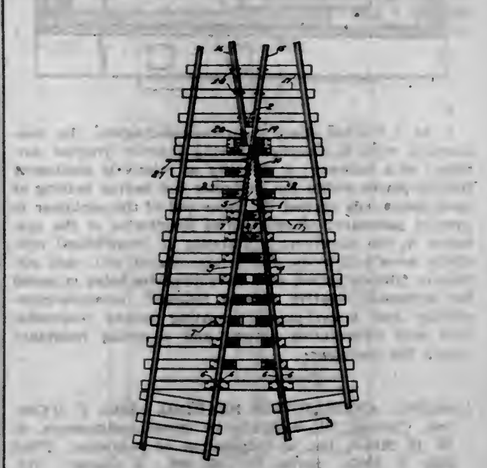
1. In a multi-stage transformer coupled, radio frequency system, a variable condenser for varying the capacity of the reactance in each transformer secondary circuit, means for varying the self-inductance of each primary and the mutual inductance of each transformer, said self-inductance varying means comprising a relatively fixed primary coil, a relatively fixed secondary coil and a relatively movable primary coil and means for mounting said relatively movable primary coil in relative movable relation to said relatively fixed primary coil and said relatively fixed secondary coil, said mounting means comprising a relatively fixed bracket and an element supported by said bracket in movable relation to said bracket and supporting said relatively movable primary coil.

1,640,201. STITCH-FORMING MECHANISM FOR SEWING MACHINES. KARL MAIER, Stuttgart, Germany, assignor to Union Special Maschinenfabrik G. m. b. H., Stuttgart, Germany. Original application filed June 13, 1925, Serial No. 36,887, and in Germany June 19, 1924. Divided and this application filed Oct. 26, 1926. Serial No. 144,811. 4 Claims. (Cl. 112—162.)



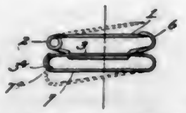
3. An over edge thread carrying looper comprising a body portion having a point and a heel, said body portion having a plurality of spaced eyes one above the other for carrying independent looper threads disposed adjacent the point, and means adjacent the heel of the looper for guiding the looper threads.

1,640,202. APPARATUS FOR THE DISTILLATION OF OIL. FREDERICK T. MANLEY, Houston, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Original application filed Oct. 10, 1917, Serial No. 195,777. Divided and this application filed Oct. 26, 1918. Serial No. 259,839. 9 Claims. (Cl. 196—119.)



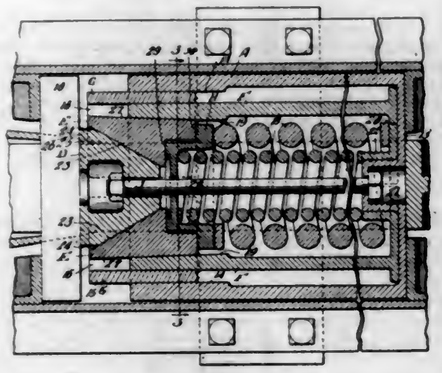
5. In an apparatus for converting hydrocarbon oils, a still adapted to contain a body of liquid oil to be converted and having a vapor space above the level of the oil therein, and heating means constructed and arranged to supply external heat around substantially the entire periphery of both the liquid and vapor portions of the still and including a heat-insulating medium disposed upon the vapor portion thereof to maintain the oil and the vapors therein at a substantially uniform cracking temperature whereby conversion takes place in the still without overheating the vapors.

1,640,203. SUPPORTING BRACKET. ALBERT MARLAWSKI, Chicago, Ill. Filed May 8, 1926. Serial No. 107,632. 1 Claim. (Cl. 304—24.)



In a device of the class described, a platform, means for temporarily securing said platform in place on a window sill, skeleton railings on three sides of said platform adapted to fold down thereon, one on top of another, said railings each comprising a pair of spaced standards, a secondary panel pivoted between the upper portions of each pair of standards and adapted to extend above or to be folded between the respective pair of standards.

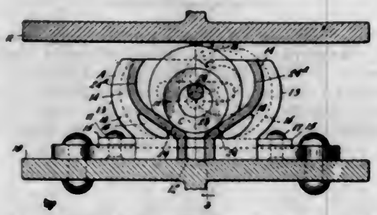
1,640,204. RAILROAD SWITCHING DEVICE. BIAGIO MARTINI, Pittsburgh, Pa. Filed Oct. 11, 1926. Serial No. 140,788. 8 Claims. (Cl. 246—389.)



2. In a shift-frog, the combination of a stationary half comprising two stationary converging rails and a filler-block positioned at the point of convergence of said rails; means for securing said rails rigidly to said filler-block; a movable half comprising two converging rail-elements and a movable filler-block positioned at the point of convergence of said rail-elements; unitary means for securing one of said rail-elements rigidly to said movable filler-block and for securing the other rail-element for longitudinal sliding movement along said movable filler-block; connecting means for hingedly securing the divergent ends of said rail-elements to the rails of a railway-track, and means for rotating said movable half in a horizontal plane about said connecting means.

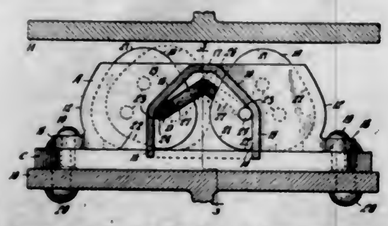
1,640,205. COMBINATION PIN AND CLASP. LEONARD ORVILLE NICHOLS, Kansas City, Mo., assignor to Rene E. Denman, Kansas City, Mo. Filed Apr. 4, 1927. Serial No. 180,870. 2 Claims. (Cl. 24—85.)

1. A clasp and safety pin assembly, the stationary portion of the pin extending through the stationary portion of the clasp for a portion of its length, said portion of the pin being bent to secure the pin in the clasp.



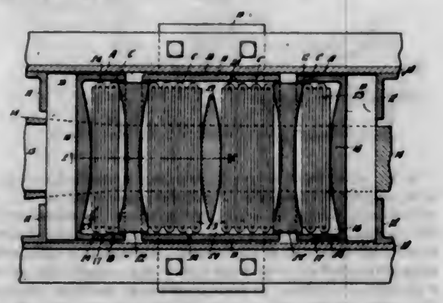
1,640,206. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 525,016. 6 Claims. (Cl. 213—33.)

1. In a friction shock absorbing mechanism, the combination with a container having interior friction surfaces; of a follower; a plurality of relatively stationary friction plates within the container and having bearing at their inner ends against the inner end of the container to prevent movement of said plates lengthwise of the container in one direction; a plurality of longitudinal relatively movable friction plates intercalated with said stationary friction plates, said movable plates being mounted for movement relative to said follower; pressure-transmitting and lateral-pressure-creating means cooperable with said intercalated plates; and a spring resistance within the container.



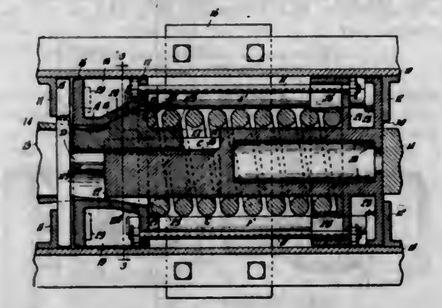
1,640,207. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 9, 1923. Serial No. 650,205. 3 Claims. (Cl. 308—226.)

3. In an anti-friction bearing, the combination with a housing adapted to be secured to a bolster or the like, said housing being provided with oppositely inclined surfaces symmetrically arranged with respect to the transverse center line of the housing and having also a bearing surface associated therewith; of an anti-friction element disposed within said housing for rolling movement on said bearing surface; a counterweight engageable and co-operable with said inclined surfaces, said counter-weight having a relatively large centrally disposed recess; and means carried by and extending axially of said element and within said recess, said means being engageable with the surface of said counter-weight defined by said recess, said means being of appreciably smaller sectional area than the area of said recess whereby, upon actuation of the anti-friction element to either side of normal position, said counter-weight is bodily elevated by one of said bearing surfaces and simultaneously shifted with respect



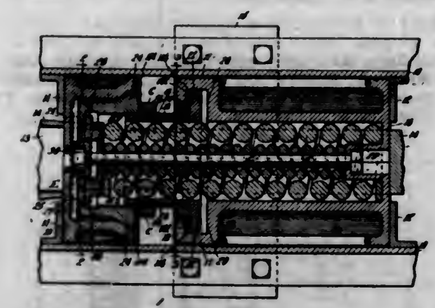
to said means with a leverage increasing effect thereon, said counter-weight being returned under the influence of gravity and effecting return of the anti-friction element to normal position when said element is relieved of load.

1,640,208. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed May 14, 1924. Serial No. 713,125. 6 Claims. (Cl. 308—224.)



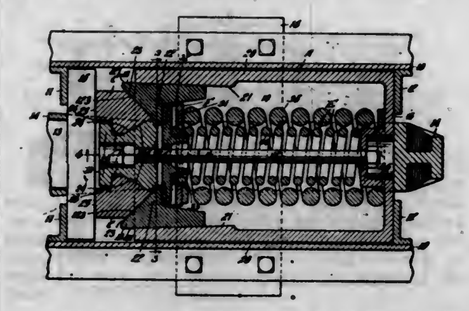
4. In an anti-friction bearing, the combination with a housing adapted to be secured to a bolster or the like; of a pair of load-transmitting rockers arranged therein, only one of said rockers taking the load and moving relatively of the other when the bearing is actuated, each of said rockers having a plurality of sets of wear faces, and said rockers being adjustable to present new wear surfaces to take the load when the others become worn; and centering means detachably associated with said rockers and arranged for engagement with said rockers in their various adjusted positions.

1,640,209. SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed May 28, 1924. Serial No. 716,304. 10 Claims. (Cl. 213—30.)



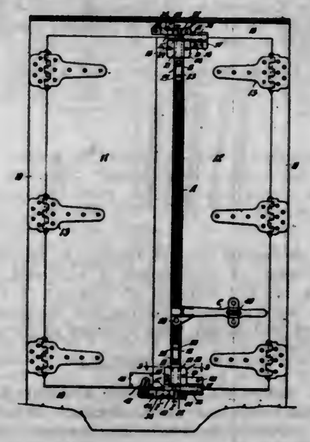
1. In a spring shock-absorbing mechanism, a spring resistance comprising a plurality of separate plate springs adapted to be arranged transversely across said mechanism, each of said springs being folded in the middle and arranged with the folded portions on alternately opposite sides of the longitudinal center of said mechanism, the portions of said plates opposite the folded portions being arranged to abut the adjacent folded portions to restrain movement therepast; and means for transmitting shock to said springs to flex the same.

1,640,210. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 21, 1924. Serial No. 727,110. 9 Claims. (Cl. 213—36.)



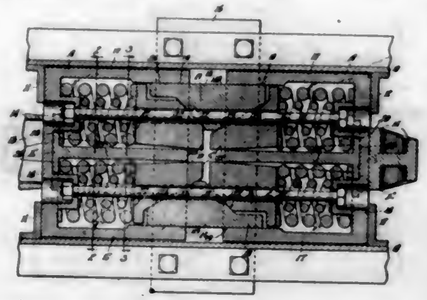
1. In a friction shock absorbing mechanism, the combination with a longitudinally disposed friction post having exterior friction surfaces, diverging inwardly of the mechanism; of a spring resistance; a plurality of friction shoes cooperating with said friction surfaces; and pressure transmitting wedge means, the latter being free from effective wedge engagement with said shoes under full release but adapted to have cooperative wedge action with said shoes as the compression stroke of the mechanism takes place.

1,640,211. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 8, 1925. Serial No. 1,139. 7 Claims. (Cl. 213—23.)



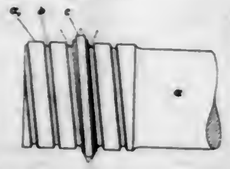
1. In a friction shock absorbing mechanism, the combination with relatively movable follower-acting means; of a central friction post having a lost motion connection with one of said followers permitting limited movement of the post with reference to said follower means to provide for preliminary spring action; a plurality of friction shoes cooperating with said friction post, said shoes and the other follower-acting means having cooperating wedge faces; and a main spring resistance interposed between said shoes and follower means to which the friction post is anchored.

1,640,212. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,416. 5 Claims. (Cl. 213—34.)



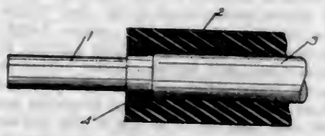
1. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces; of a main spring resistance including an inner and a relatively heavy outer coil; and a friction generating wedge system co-operating with a shell, said system including friction elements slidable on the shell friction surfaces and wedge means co-operating with said elements, said friction elements having their movement resisted by the inner coil of the spring resistance and movement of said wedge means being resisted independently of said friction elements by the heavier outer coil of the spring resistance.

1,640,213. REFRIGERATING-CAR-DOOR-OPERATING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 23, 1925. Serial No. 70,752. 6 Claims. (Cl. 268—72.)



1. In a door operating mechanism, the combination with a member having a door opening and a pivoted door; of keeper means fixed to the door frame adjacent the door opening, said keeper means being provided with recesses extending substantially parallel to the face of the door frame and having angular entrances thereto; of elongated transmitting elements pivotally and slidably mounted on said door, and having actuating means upon their free ends adapted to engage in the recesses in said keepers; and means on said door for imparting longitudinal and lateral swinging movements to said transmitting members to effect opening and closing movement of said door.

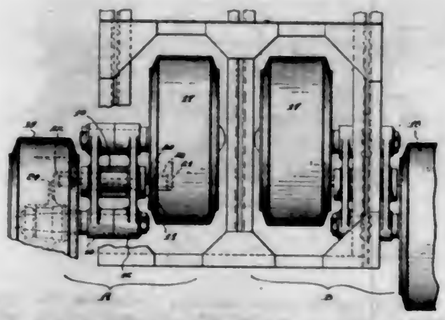
1,640,214. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 27, 1925. Serial No. 71,794. 5 Claims. (Cl. 213—32.)



1. In a friction shock absorbing mechanism, the combination with front and rear follower shells having interior friction surfaces, said shells being relatively movable toward and away from each other; of a tapered friction post movable with each shell; front and rear sets of friction elements cooperating respectively with said posts; spring resistance means interposed between said elements and said shells; and a plurality of friction shoes, each shoe having wedging engagement with one of the friction elements of said front set and one of the friction elements of said rear set, each of said shoes also having frictional engagement with the front and rear follower shells.

1,640,215. MEASURING TOOL FOR SCREW THREADS. OTTO PEGLOW, Berlin, Germany, assignor to Ludw. Loewe & Co. Actiengesellschaft, Berlin, Germany, a Corporation of Germany. Filed Nov. 20, 1925, Serial No. 70,225, and in Germany Nov. 29, 1924. 5 Claims. (Cl. 33—199.)

1. In a measuring tool for testing the limiting measures of threads, in combination, a tool body, a gauge for testing the full diameter of a thread, a gauge for testing a diameter less than the full diameter of the thread, both said gauges being arranged at the same end of the tool body.

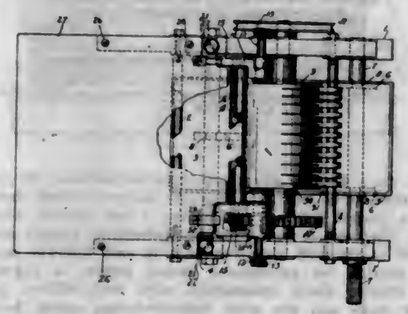


1,640,216. WRINGER ROLL AND METHOD OF MAKING THE SAME. JOHN J. RATHERS, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 1, 1926. Serial No. 112,891. 3 Claims. (Cl. 68—33.)

1. In a wringer roll, the combination of a rod; a soft rubber roll bonded to the roll; and a comparatively hard-composition abutment at the end of the roll secured to the rod and to the rubber roll, said abutment being formed initially of non-flowing stock formed of a ground vulcanized rubber and vulcanizing stock.

3. The method of forming wringer rolls which consists in forming a vulcanizing rubber composition in bonding relation to a supporting rod to form a roll, applying to the ends of this roll an abutment of non-flowing vulcanizable stock, and vulcanizing the whole in one vulcanizing heat.

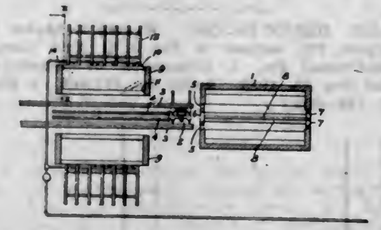
1,640,217. RUNNING-GEAR STRUCTURE FOR VEHICLES. FREDERICK MALCOLM REID, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 3, 1926. Serial No. 152,373. 10 Claims. (Cl. 280—81.)



1 In a vehicle, a frame, a plurality of wheels arranged in pairs for supporting one end of the frame, each pair of wheels being secured to the frame on a fore and aft directed pivot and on a separate transversely directed pivot the latter eccentric to the said wheels.

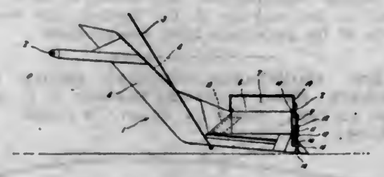
1,640,218. CONCENTRATION OF ORES. RALPH E. SAYRE, New Rochelle, N. Y., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed July 23, 1925. Serial No. 45,704. 13 Claims. (Cl. 209—166.)

1. The improvement in the concentration of minerals by flotation which comprises subjecting the mineral in the form of a pulp to a flotation operation in the presence of a thiourethane.



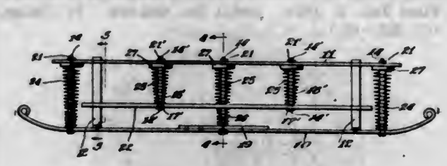
1,640,219. MACHINE FOR COATING LABELS, ETC., WITH ADHESIVE OR A SIMILAR SUBSTANCE. FRANK R. SCHMITT, New York, N. Y. Filed Sept. 27, 1924. Serial No. 740,219. 5 Claims. (Cl. 91—51.)

3. In a machine for coating labels with adhesive, the combination of an adhesive applying roll, label feed rollers, an adhesive regulating means, an upper and lower arm pivotally mounted, said arms having corresponding recesses, acting respectively as the upper and lower halves of a bearing for the label feed rollers, the arms having a projection for confining the rollers within the bearing and including a support in said arms for an adhesive regulating means, and means for adjusting said arms, the label feed rollers, and the adhesive regulating means in relation to the adhesive applying roll.



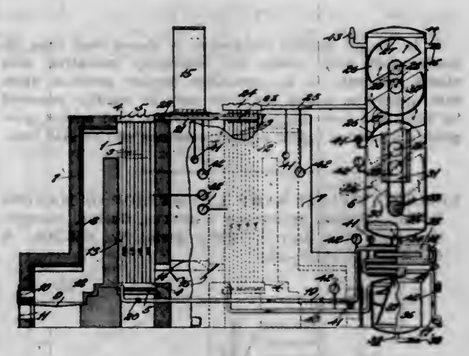
5. In a machine for coating labels with adhesive, the combination of said frames, an adhesive container, an adhesive applying roll, an adhesive regulating means, label feed rollers split bearings consisting of upper and lower members having recesses for the label feed rollers, both the upper and lower members pivoted about the same point and adapted to permit the removal of the label feed rollers without disturbing the setting of the adhesive regulating means.

1,640,220. PIPE-WELDING PLANT. JOHN H. SENNETT, Woodlawn, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 23, 1923. Serial No. 647,313. 3 Claims. (Cl. 78—87.)



3. In the production of welded pipe the method herein described which consists in heating bent skelp to a temperature approximately the limit of mechanical conveyance, mechanically conveying the so-heated skelp to the welding furnace, and completing in the welding furnace the heating of the skelp to welding temperature.

1,640,221. LOADING SKIP FOR CONCRETE MIXERS. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 13, 1926. Serial No. 108,957. 6 Claims. (Cl. 214—130.)

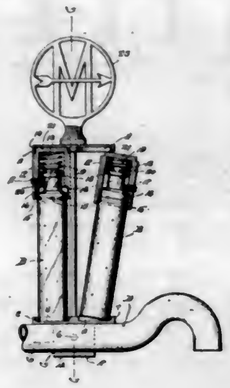


1. The combination with a charging skip for a concrete mixer formed with an unobstructed section into which the entire mass of coarse aggregate of the charge may be delivered at one operation, and a spout section through which such aggregate is discharged to the concrete mixer, of a separate receptacle for the cement that enters into the charge located at one side of the skip and communicating therewith through an opening in the side wall of the skip.

1,640,222. VEHICLE BUMPER. ALBERT SLOWIK, Chicago, Ill. Filed Apr. 23, 1927. Serial No. 185,945. 11 Claims. (Cl. 293—55.)

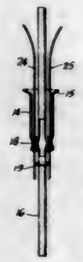
1. In a vehicle bumper having front and rear bumper bars, a central bar disposed between the first two named bars, and a plurality of cushioning and impact absorbing means disposed between the three bars, each of said means being operable independently and severally in respect of each other depending upon the extent of the impact at the front bumper bar.

1,640,223. PROCESS OF TREATING HEAVY HYDROCARBONS. ARTHUR D. SMITH and JOHN PERL, Arkansas City, Kans. Filed Jan. 28, 1922. Serial No. 532,455. 9 Claims. (Cl. 196—59.)



1. The process of converting heavy hydrocarbon oils into low molecular weight hydrocarbons which consists in cracking the heavy hydrocarbons partly into light gaseous hydrocarbons and partly into semi-liquid polymerized hydrocarbons soluble in the partially converted stock, eliminating said gaseous products and then precipitating and eliminating a portion of such polymerized hydrocarbons, said operations being effected while the stock is continuously circulated through a zone of heat and pressure sufficient for said cracking operation and thence through a zone of sufficiently low temperature to precipitate such portion of said polymerized hydrocarbons, and thence back to a second zone of heat, fresh stock being added to the treated portion from which said polymerized hydrocarbons have been precipitated after such portion reaches said second zone of heat.

1,640,224. MANUFACTURE OF MATCH-STRIKING COMPOSITIONS. HERBERT WILLIAM ROBINSON, West Bromwich, England. Filed Feb. 18, 1926, Serial No. 89,223, and in Great Britain Feb. 4, 1926. 4 Claims. (Cl. 52—27.)

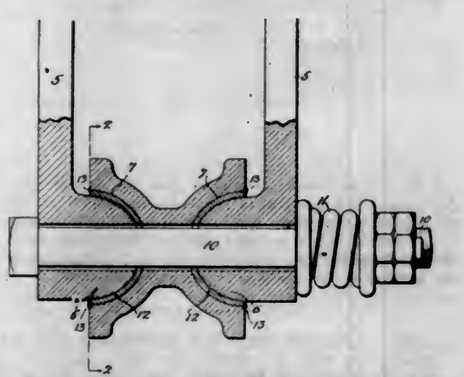


1. A process for the production of a non-inflammable composition upon which matches may be ignited by friction which consists in mixing together materials for the production of a synthetic resin together with ingredients usually employed in compositions upon which matches may be struck and subsequently subjecting the mixture to a condensation process to form a solid mass.

1,640,225. OIL-DISPLAY APPARATUS. CHARLES SPAETH, Cleveland, Ohio, assignor to The Marvel Equipment Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 2, 1924. Serial No. 684,034. 14 Claims. (Cl. 221—95.)

1. In an oil display apparatus, a closed test tube, in combination with means for removably mounting said closed test tube in an accessible display position upon said apparatus where the tube may be readily removed by hand and inverted for test purposes, said means comprising a locking holder sleeved over one end of said tube.

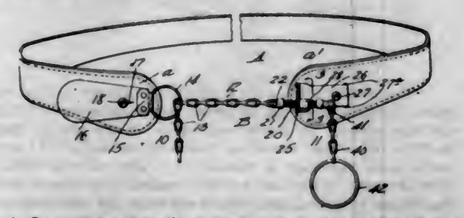
1,640,226. TIPLESS LAMP AND METHOD OF MAKING SAME. JEROME SCHOFIELD WHEELER, Guelph, Ontario, Canada. Filed July 2, 1923. Serial No. 648,909. 6 Claims. (Cl. 176—36.)



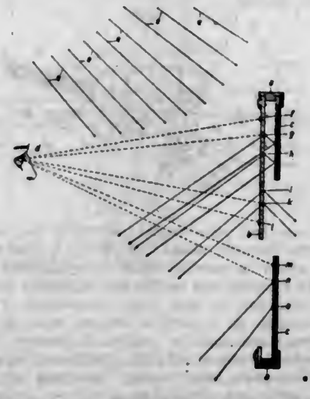
2. As a new article of manufacture a product of the herein described process being an incandescent electric lamp having an inwardly extending tubular stem, and a glass filament support extending throughout nearly the entire length of the lamp interior and having a tubular portion united by a pinched seal to the inner end of said stem and also extending through said stem, together with lead wires extending through said seal and through the annular space between said tubular portion and said stem.

1,640,227. TELEPHONE ATTACHMENT. WILLIAM M. YOUNG, Harrisburg, Pa. Filed May 23, 1927. Serial No. 193,549. 7 Claims. (Cl. 179—178.)

1. The combination in a telephone receiver and transmitter set having a switch-contact, a hook-switch, and a receiver, of a receiver cord, a spring engaging the same, and a connection between the spring and the switch-contact whereby when the receiver cord is pulled out to extend the spring the connection is relaxed to permit the switch-contact to engage the hook-switch.

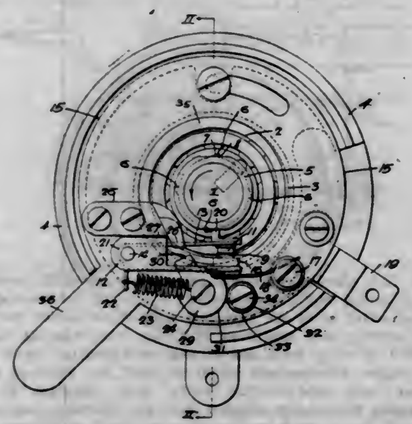


1,640,228. BRAKE HANGER. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 25, 1926. Serial No. 111,545. 2 Claims. (Cl. 188—209.)



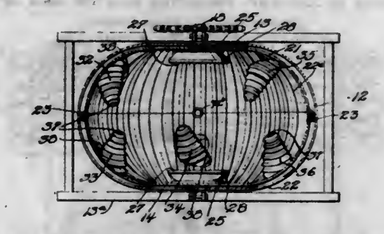
1. The combination in a brake hanger, of two brackets spaced apart, each bracket having a socket at each side; hard metal bushings located in the sockets and attached to the brackets by spot-welding; and two arms, each arm having semi-spherical projections at each end adapted to the bushings in the brackets, the bearing surfaces of the projections being case-hardened.

1,640,229. ADJUSTABLE SECURING DEVICE FOR TRUSSES. HENRY P. BALTZER, Hamburg, N. Y. Filed June 11, 1925. Serial No. 36,397. 8 Claims. (Cl. 128—96.)



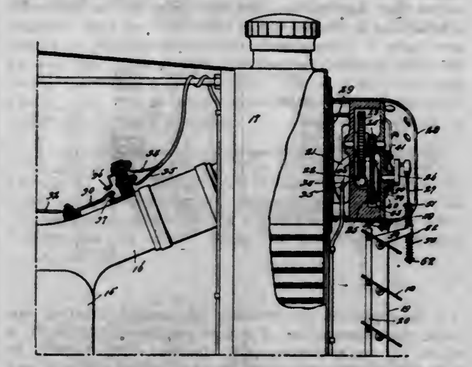
1. In a truss having a flexible body embracing member, the combination of an adjusting device for adjusting the truss to fit the user and placing said body member under tension, quick operable means for slackening said truss and relieving the tension on said body member, and quick detachable means independent of said slackening means for disconnecting said adjusting device and permitting the removal of the truss.

1,640,230. PAINTING AND PROCESS FOR THE PRODUCTION OF THE SAME. FRITZ BLAU, Berlin, Germany. Filed July 11, 1923, Serial No. 650,820, and in Germany July 12, 1922. 10 Claims. (Cl. 41—22.)



4. A painting for directed illumination, which when so illumined has between the brightest and darkest parts, as compared with the difference between the lightest and darkest pigments, a difference in illumination contrast several times greater than can be produced by said pigments, and whose dark portions are represented by portions practically incapable of diffused reflection.

1,640,231. IGNITION TIMER. WILLIAM H. BROWN, Philadelphia, Pa. Filed Oct. 29, 1923. Serial No. 671,431. 15 Claims. (Cl. 200—30.)

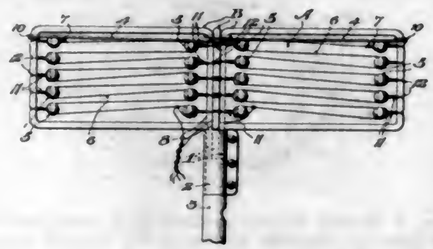


1. In combination, a pair of switch arms having a common pivotal mounting and provided with co-acting contact members, means for causing one of said contact members to engage periodically the other, and a resilient abutment for said last-mentioned member, said common pivotal mounting permitting one of said switch arms to have a pivotal as well as a bodily movement in response to said means independently of the other.

1,640,232. WASHING MACHINE. REED J. CLARK, Jr., Youngstown, Ohio. Filed Sept. 7, 1926. Serial No. 133,857. 2 Claims. (Cl. 68—18.)

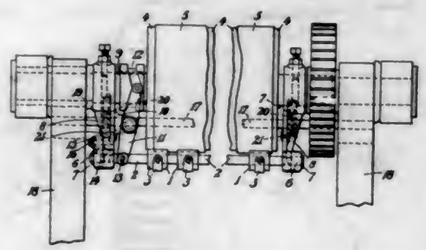
1. A washing machine comprising an outer casing; an inner flat spherical washing casing mounted to rotate in said outer casing; a plurality of projecting arms affixed on the inner spherical surface of said washing casing, said projecting arms serving as catching, rubbing and releasing elements, said arms being circular in shape running smaller gradually out from the base to the free end said free end having a large opening therein, the outer surfaces of said arms having circular corrugations therein, substantially as described.

1,640,233. SHUTTER-OPERATING MEANS. WILLIAM A. COLLINS, Brooklyn, N. Y. Filed Sept. 17, 1925. Serial No. 56,928. 8 Claims. (Cl. 236—35.)



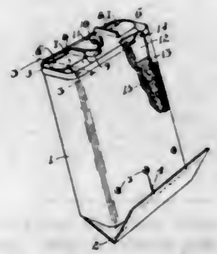
1. For use with a shutter regulating the flow of cooling air to an explosion engine, an automatic shutter regulating device comprising an electric motor operatively connected with the shutter to open and close the same, a thermostat responsive to the engine temperature, a motor feed circuit branched to afford lines arranged in parallel adjustable, means associated with the thermostat for closing alternatively one or the other of said parallel lines at opposite extremes of a predetermined range of engine temperature, together with a switch device operatively associated with a motor driven member, said switch device serving, after predetermined motor operation, automatically to open the thermostatically closed branch line, and automatically to close the switch contacts in the other branch line, so that the latter may be thermostatically closed and the motor re-energized when the engine reaches the opposite extreme of its predetermined temperature range.

1,640,234. ANTENNA FOR USE WITH RADIO SETS. MARK M. CONYERS, Custer, S. Dak. Filed June 14, 1926. Serial No. 115,931. 3 Claims. (Cl. 250—33.)



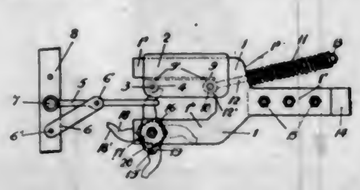
1. An antenna for radio-telegraphic use, including a support, a plurality of radiating substantially rectangular frames disposed vertically upon the support, spaced insu-

lators carried by each of the ends of the frames, a conducting element passed alternately through the insulators from one end to the other of each of the frames whereby to afford an increased conducting area for each of the



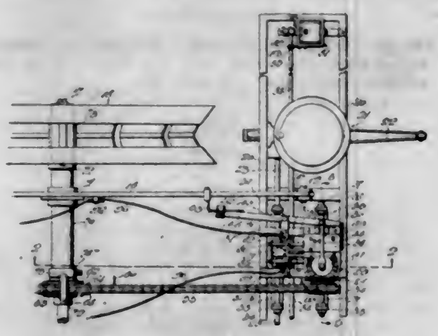
frames, means to insulate the upper ends of the conducting elements from each other, and means to secure the lower ends of the conducting elements together to form a single conductor.

1,640,235. MEANS FOR WASHING LITHOGRAPHIC PRINTING SURFACES. BENJAMIN JOSEPH JOHN GOULDING, London, England, assignor to Linotype and Machinery Limited, London, England, a Company of Great Britain. Original application filed June 3, 1924, Serial No. 717,488, Patent No. 1,627,774, dated May 10, 1927, and in Great Britain June 14, 1923. Divided and this application filed Jan. 13, 1927. Serial No. 160,818. 7 Claims. (Cl. 101—425.)



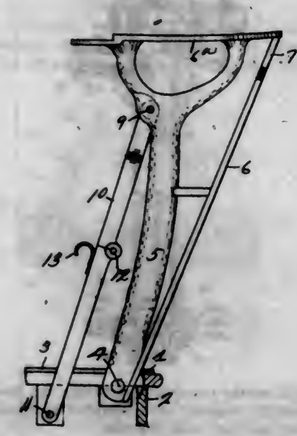
1. In apparatus for washing lithographic printing surfaces, the combination of a power-operated pad shaft, a series of non-rotatable pads thereon each having an operative surface of an absorbent resilient material, and means adapted to bring said operative surfaces into and out of contact with the surface to be washed.

1,640,236. TOBACCO-BAG HOLDER. PETER H. HART, San Jose, Calif. Filed Sept. 20, 1926. Serial No. 136,585. 2 Claims. (Cl. 206—41.)



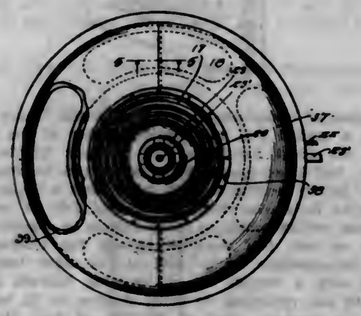
1. A device of the character described, comprising a spreading device insertible in the open end of a tobacco bag and provided with fingers extending to the bottom of the bag and having its upper edge formed to engage the upper edge of the bag, a case adapted to receive the spreader with a bag mounted thereon, means for holding the bag and spreader in the case, the said case having an opening formed therein adjacent the open end of the bag, and a closure for said opening.

1,640,237. AUTOMATIC TRACTOR AND PLOW HITCH. PATRICK MICHAEL HEFFERNAN, Moonlight, Palmerston South, New Zealand. Filed Apr. 12, 1926. Serial No. 101,425, and in New Zealand Sept. 24, 1925. 4 Claims. (Cl. 280—33.16.)



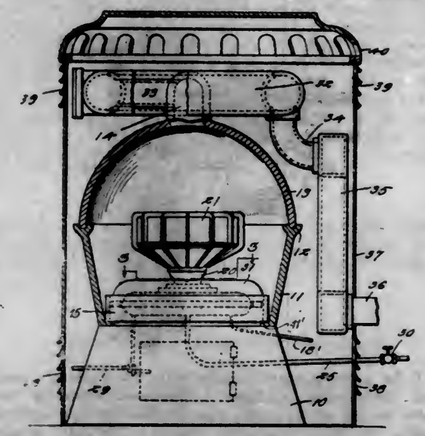
1. A tractor and plow hitch, comprising two bifurcated members disposed one above the other in alignment and spaced to permit a plow drawbar to be inserted between and secured thereto, and means for releasably connecting a tractor drawbar to said hitch comprising a member slidably mounted on a pair of aligned arms of said bifurcated members and a multi-arm clutch rotatably mounted between the other pair of aligned arms of said bifurcated members and having its arms successively engageable with said slidable member.

1,640,238. CORN PLANTER. CHARLEY JAMES, Corydon, Iowa. Filed Dec. 14, 1925. Serial No. 75,372. 2 Claims. (Cl. 111—26.)



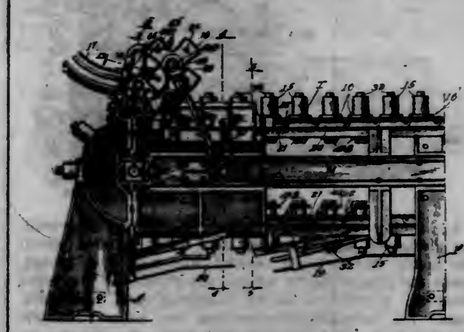
1. In a wheeled check-row corn planter, laterally spaced hill-planting units, a rock shaft extending between said hill-planting units and having an arm, wheel-driven means for rocking said shaft, an auxiliary seed-dropping unit spaced laterally from one of said seed-planting units to an extent substantially equal to half the distance between said seed-planting units, said auxiliary seed-dropping unit being adapted only for dropping seed on top of the ground, a second rock shaft substantially parallel with the first named shaft and connected with said auxiliary seed-dropping unit to operate the latter, a second arm on said second shaft disposed adjacent the first named arm, a projection on said first named arm which normally clears the second arm, and manually controlled means for moving said second arm in position to be struck and moved by the projection on said first named arm.

1,640,239. DISAPPEARING SHOE-SHINING FOOT REST. WILLIAM JOHNSON, Council Bluffs, Iowa, assignor to James W. Martin, Omaha, Nebr. Filed Aug. 12, 1926. Serial No. 128,801. 2 Claims. (Cl. 15—265.)



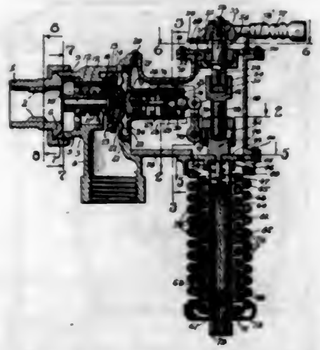
1. The combination with a shoe shining stand having a platform, of a bracket pivotally connected to said stand beneath the platform and extending upwardly through an elongated opening in said platform, a brace for said bracket hinged thereto and to said platform, said brace being formed from hingedly connected sections, and an elongated plate carried by the forward side of the bracket and forming means whereby when said bracket is folded through the elongated opening, said plate will register with and form a closure for the elongated opening.

1,640,240. LIQUID-FUEL BURNER. OTTO J. KIRCHEN, Lansing, Mich. Filed July 27, 1926. Serial No. 125,297. 2 Claims. (Cl. 158—63.)



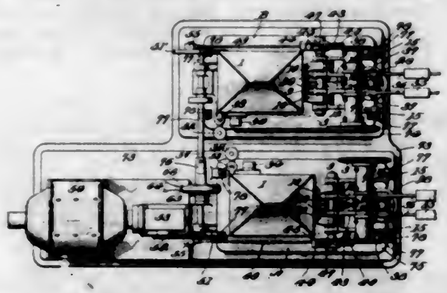
1. A liquid fuel burning device including a starting member having a recess and grooves in its upper face, a tube disposed vertically through the member and having openings leading into the recess, a sleeve surrounding the tube and resting within the recess, said sleeve having openings registering with the tube openings, a gasifying chamber supported on the sleeve whereby its bottom face is spaced above the wall of the recess to provide a gas escape crevice, said tube extending into the chamber, and a fuel conduit leading into the chamber.

1,640,241. OIL HEATER. OTTO J. KIRCHEN, Lansing, Mich. Filed July 27, 1926. Serial No. 125,298. 1 Claim. (Cl. 126—116.)



The combination with a heat generating chamber having an outlet in its upper end, of a horizontal radiator having a continuous passage therearound, a pipe connected to the inner face of one side portion of the radiator and to the said outlet, a vertical radiator having a continuous passage therearound, a pipe connecting the upper end of the vertical radiator with the horizontal radiator at a point remote from the first-named pipe, and a smoke pipe leading from the lower end of the vertical radiator.

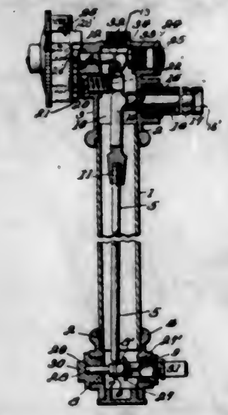
1,640,242. CAN-TESTING MACHINE. ALFRED L. KRONQUEST, Chicago, Ill., assignor to Continental Can Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 15, 1923. Serial No. 625,301. 16 Claims. (Cl. 73—51.)



1. A can testing machine comprising continuously traveling supports for the cans to be tested, elastic means carried thereby for closing the open end of the can, means for placing the can under vacuum while held against the support, means for cutting off the vacuum creating means from the can and for closing the can to the atmosphere, means whereby the can is removed from the support if the vacuum is decreased by a leak so as to release the can from its suction hold on the support and means associated with each traveling support for normally cutting off the connection of the vacuum creating means with said support until a can is placed on the support.

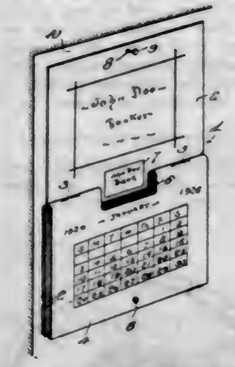
1,640,243. THERMOSTATIC SUPPLY VALVE FOR STEAM RADIATORS. JAMES J. LAWLER, Mount Vernon, N. Y. Filed June 14, 1926. Serial No. 115,949. 8 Claims. (Cl. 236—42.)

1. In a thermostatic supply valve for radiators, valve and thermostatic casings, a tensioned normally open valve in the valve casing and thermostatically operated devices in the thermostatic casing in constant engagement with the valve, said devices including a tensioned plunger, a thermostatically expansible tube having lever connections with the plunger, and a thermostatic coil in communication with the tube, said plunger comprising a rod and plunger head, a coil spring inclosing the rod and engaging the plunger head, a member movably mounted on the other end of the rod and engaged by the spring and a block connection between the member and lever.



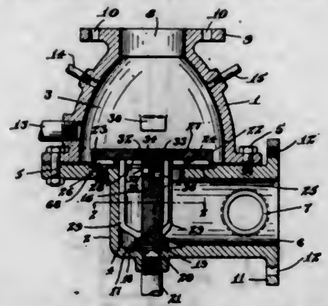
1,640,244. ELECTRIC WELDING APPARATUS. FRED P. MCBERTY, Warren, Ohio. Filed July 20, 1921. Serial No. 486,113. 26 Claims. (Cl. 219—4.)

1. An electric welding machine, comprising two welding electrodes, one of which is a roller between which the metal pieces to be welded are held and moved, means for intermittently moving the pieces and the roller electrode, a welding circuit including said electrodes, means for intermittently moving the roller electrode and the pieces to be welded, and means for turning on and off the welding current while the electrode and pieces are substantially stationary.



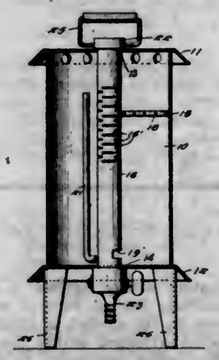
1,640,245. THERMOSTATIC OVEN-HEAT REGULATOR. BENJAMIN EDWARD MEACHAM, Lorain, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 16, 1926. Serial No. 148,651. 7 Claims. (Cl. 236—15.)

1. A thermostatic oven heat regulator comprising a movable lever, a fuel valve operatively connected with one end of the lever, a thermostatic element engaging the said lever near its opposite end, a fulcrum located beyond the said thermostatic member, the end of said lever adapted to engage the said fulcrum, and means located between the fulcrum and the said thermostatic



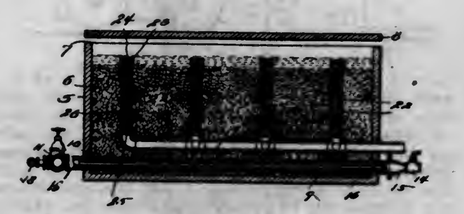
member, said means constantly pressing the lever against the thermostatic member and adapted to press the end of the lever against said fulcrum.

1,640,246. BOOKLET. JOHN J. MURRAY, Yonkers, N. Y. Filed Apr. 15, 1926. Serial No. 102,247. 1 Claim. (Cl. 281—38.)



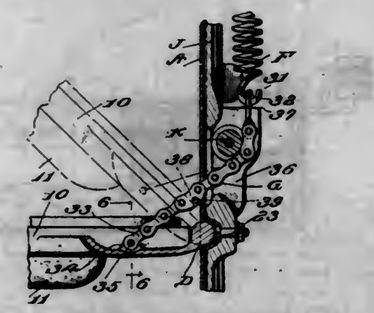
A booklet comprising a stack of double leaves folded along a central line and bound together at the line of fold, the front and rear leaf portions of the outer double leaf being uncut at the hinge and forming cover leaves jointly bearing on their inner faces a display panel centrally registering with the line of fold of said leaf portions and extending to equal degrees in opposite directions on said leaf portions beyond the binding line, each intermediate double leaf of the stack being provided with a central cut out opening through its line of fold and extending to equal degrees in its leaf portions on opposite sides of the line of fold, the front leaf portion of the outer double leaf adapted to be turned on the fold line to an open position in which it lies in the plane of the rear leaf portion of said double onter leaf and in which its inner face is exposed simultaneously with the front face of the adjacent leaf portion of the outermost intermediate double leaf of the stack, whereby when the front cover leaf is opened into the plane of the back cover leaf, the display panel will be exposed fully on both sides of the binding line through the cut outs of the leaf portions of all the inner double leaves in both the normally closed and open or turned positions of the latter, the front cover leaf portion and each intermediate leaf portion being provided at its free edge opposite the binding line with a perforation, said perforations registering in the open position of the leaves, whereby the opened leaves may be engaged with a hanger to suspend the booklet from a fixed support.

1,640,247. VALVE. BROR L. OLOFSSON and RUDOLPH E. PETERSON, Dorchester, Mass. Filed Mar. 5, 1926. Serial No. 92,413. 2 Claims. (Cl. 169—22.)



1. Water supply controlling mechanism for use in automatic sprinkler systems, comprising a casing defining a chamber having a water inlet and a water outlet, a valve normally seated in said chamber and closing said inlet, and adapted to be opened upon decreased pressure in said chamber, the chamber surface of the valve having a substantially greater area than the surface exposed to the inlet, a stem depending from said valve, a recess in said valve stem, means functioning upon operation of said valve to permit the sounding of an alarm, means to limit movement of said valve, an auxiliary valve seated approximately centrally in said main valve and in alinement with said valve stem and exposed to said recess, said recess extending from the water inlet to said chamber, the chamber surfaces of said two valves being substantially flush, the chamber surface of the auxiliary valve having a substantially greater area than the surface exposed to the recess in said valve stem, means to limit movement of said auxiliary valve, said last named means comprising a stem depending from said auxiliary valve into the recess in the main valve stem, a pin on said auxiliary valve stem, and a slot in the main valve stem in which said pin may slide, the height of said slot determining the limit of movement of said auxiliary valve.

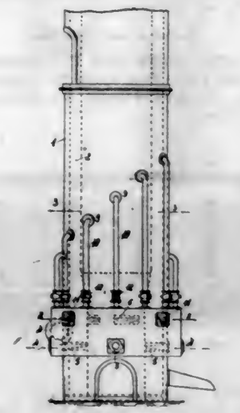
1,640,248. GAS HEATER. EMERY PEPIN, Santa Barbara, Calif. Filed Jan. 6, 1927. Serial No. 159,444. 1 Claim. (Cl. 126—85.)



A gas heater comprising a casing having openings in its upper and lower ends, and an ignition opening in one ride, a burner tube disposed within the casing and projecting through the openings in the ends of the casing, said tube having a lateral opening adjacent its lower end and transverse slots adjacent its upper end, a cap engaged on the upper end of the tube, a valved connection engaged on the lower end of the tube, a gas discharging nozzle extending from the said connection upwardly into the tube, and above said lateral opening, a laterally extending perforated pilot tube connected with the upper portion of the burner tube and extending to a point adjacent said ignition opening, and a hot air conduit connected with the lower portion of the tube opposite the said lateral opening and extending upwardly to a point adjacent the uppermost of said slots and externally of the tube.

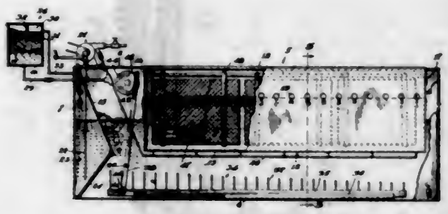
1,640,249. APPARATUS FOR FILTERING AND PURIFYING LIQUIDS. CHARLES H. PERRY, Miami, Fla. Filed May 10, 1923. Serial No. 638,015. 4 Claims. (Cl. 210—130.)

1. A filtering apparatus comprising an enclosure having a filtering bed closely engaging the side walls thereof and a reservoir space above the upper surface of the filtering bed, liquid supply pipes extending into the enclosure at the base of the filtering bed, air pipes extending into the supply pipes and longitudinally with relation to the latter, the supply pipes and air pipes having upper perforations for forcing the liquid under air pressure upwardly through the filtering bed into the reservoir space above the latter, and a discharge pipe at the lower portion of the bed having cross branches with vertically extending tubular receivers terminating above the upper surfaces of the filtering bed and provided with upper open ends and imperforate side walls, each of the receivers also having filtering material therein.



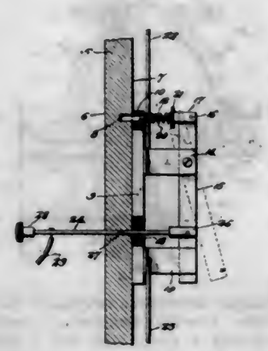
1,640,250. DOOR HANGER. MINARD A. POSSONS, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 29, 1925. Serial No. 46,781. 11 Claims. (Cl. 126—190.)

1. A hanger construction for stove doors or the like, comprising a door having circular-shaped members at its lower edge, a door frame having depressions forming



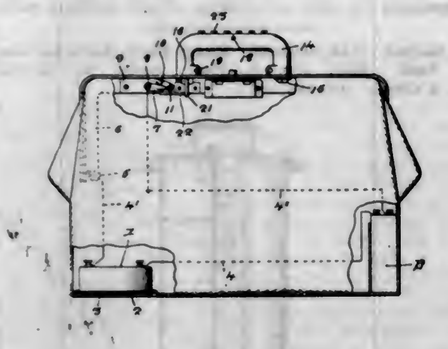
bearings for said circular shaped members, and resilient means behind said door frame and having connection with the door for holding the door members in their bearings.

1,640,251. CUPOLA FURNACE. ADOLPHE POUMAY, Jambes-lez-Namur, Belgium. Filed Apr. 16, 1925, Serial No. 23,637, and in Belgium Apr. 18, 1924. 2 Claims. (Cl. 266—30.)



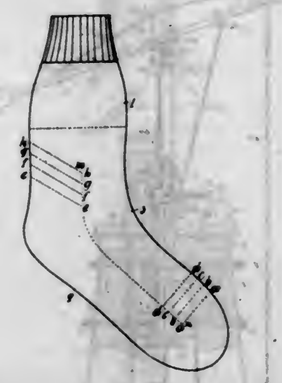
1. In a cupola furnace, in combination with an air chamber surrounding the furnace at the level of the melting zone, a lower set of tuyères arranged towards the centre of the furnace, a second set of tuyères arranged at a higher level, the said tuyères comprising two branches, one of which is directed towards the center of the furnace and the other tangentially thereto and a third set of tuyères spirally arranged around the cupola whereby air is fed by the tuyères of the third set at relatively different levels throughout a furnace area from the air chamber to that part of the furnace containing the charge.

1,640,252. REFRIGERATOR. DARL A. RIZER, Los Angeles, Calif., assignor of one-half to Edward F. Stella, Los Angeles, Calif. Filed Aug. 28, 1922. Serial No. 584,723. 3 Claims. (Cl. 62—101.)



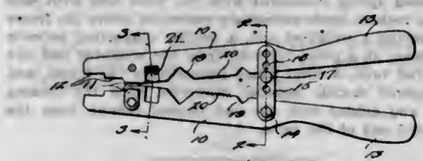
1. In a refrigerating apparatus, a tank containing a refrigerant of ice and brine, a refrigerating reservoir submerged in the refrigerant in said tank, a pump, an intake pipe leading from the tank to the pump, and a discharge conduit leading from said pump through the refrigerant in the tank and communicating with the reservoir, said reservoir being formed with overflow apertures opening to said tank.

1,640,253. AUTOMATIC LIGHTING SWITCH FOR RADIOS. GEORGE E. ROESCH, Pittsburgh, Pa. Filed Aug. 18, 1924. Serial No. 732,691. 2 Claims. (Cl. 200—153.)



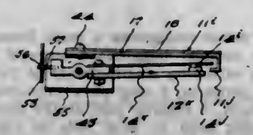
1. A switch for radio apparatus including a switch embodying a switch bar, and a rod in electrical communication with the radio apparatus and in contact with the switch bar to operate the latter, said rod loosely engaging the bar and being unconnected thereto to permit separation of the rod and bar when the latter is in a closed position.

1,640,254. AUTOMATIC ALARM FOR SATCHELS. EDGAR FORREST SCALES, Danville, Va. Filed Nov. 6, 1925. Serial No. 67,416. 5 Claims. (Cl. 177—316.)



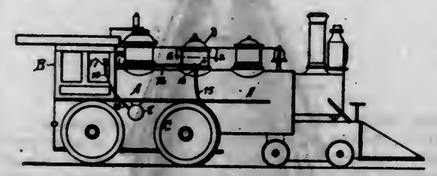
1. In combination with a satchel, a handle thereon, means for permitting limited vertical movement of the handle, an alarm in the satchel, a circuit for the same including a switch arranged within the satchel, means operable by the vertical movement of the handle with reference to the satchel for closing the circuit and means for preventing vertical movement of the handle when desired.

1,640,255. STOCKING AND SOCK. ANNA MARGRETTE SOFFEN SCHNIEBER, Copenhagen, Denmark. Filed June 18, 1926, Serial No. 116,972, and in Denmark Mar. 27, 1926. 1 Claim. (Cl. 2—239.)



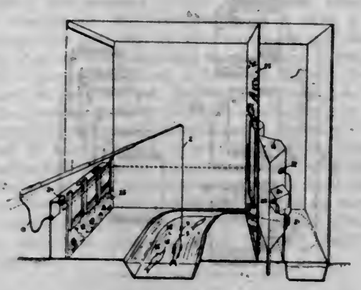
In an improvement for hosiery, a secondary foot section provided with side finishing edges and with a plurality of transversely extending finishing edges at the toe and heel portions thereof, and said finishing edges being uniformly spaced and parallel to each other, substantially as and for the purposes set forth.

1,640,256. TOOL. SHIRLEY E. SMALL, Brockton, Mass. Filed Sept. 11, 1925. Serial No. 55,871. 2 Claims. (Cl. 81—84.)



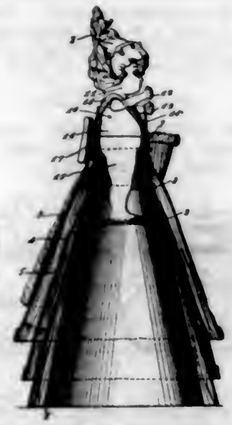
1. A wrench comprising a pair of complemental members, links upon opposite sides of and hingedly connecting the members adjacent one end, gripping portions spaced along the opposed edges of said members, handles for said members, links having one of their ends pivotally connected to the opposite sides of one of the members, and means to adjustably engage said links with the other member to limit pivotal movement of the members.

1,640,257. THERMOSTATIC SWITCH. EMIL STRANSZKY, Warren, Pa., assignor to Frank B. Rae, jr., and E. G. K. Meister, Cleveland, Ohio. Original application filed Dec. 8, 1921, Serial No. 520,970. Divided and this application filed Oct. 21, 1925. Serial No. 596,087. 1 Claim. (Cl. 200—139.)



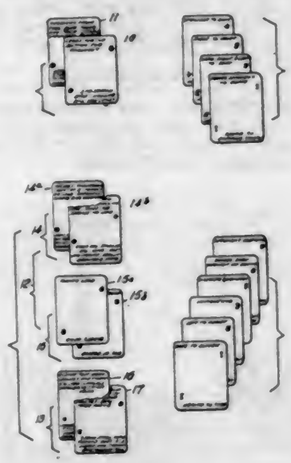
A switch of the class described including a stationary support, a thermostatic bar formed of two metals, one of which is less amenable to the action of heat than the other, a hook depending from the outer end of said bar, a lever member pivotally mounted on the support beneath the thermostatic bar, a second bar detachably secured to the under side of the lever at one end thereof, a resilient strip detachably secured to the opposite side of th bar and insulated therefrom, and both said bar and strip having engaging contacts at the outer end, the outer end of said strip being positioned in the path of said hook, and a heel pin connected with the other end of the said lever connecting the lever member with a hand-pointer.

1,640,258. AIR SANDING DEVICE. ROY M. TAYLOR, Richmond, Ind. Filed Nov. 1, 1926. Serial No. 145,469. 3 Claims. (Cl. 291—11.)



1. In combination with a locomotive having a sand-dome thereon, drive-wheels, and a cab connected therewith; an air sanding device connected with the sand-dome and comprising a body member located inside the sand-dome and consisting of a disc contacting with the inner side of the wall of the sand-dome, arms extending inward from said disc, a plate connecting the inner ends of said arms with a swell portion in the center of said plate; a nozzle threaded into said swell portion and directed toward an aperture formed through said disc, a nipple extending through the wall of the dome and threaded into said aperture in the disc, a nut threaded on said nipple and adapted to be clamped upon the outer side of the dome, a T-fitting secured on the outer forward end of said nipple, a pipe leading down to a drive wheel from said fitting, a plug secured in the forward end of said fitting, an air conducting pipe leading from said nipple to the cab, a valve on the rear end of said air pipe, and an air pipe leading from said valve to a source of compressed air.

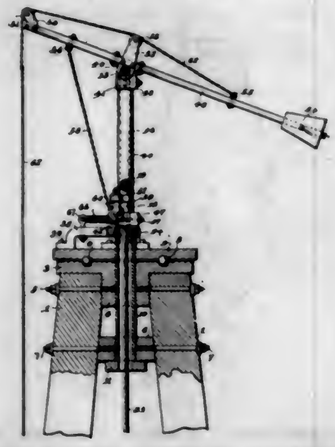
1,640,259. BOOTH GAME. ANDRÉ VALLAT, Paris, France, assignor to M. Sol Lesser, Los Angeles, Calif. Filed Dec. 16, 1926, Serial No. 155,251, and in France Aug. 9, 1926. 6 Claims. (Cl. 273—140.)



1. A booth game comprising a fishing-rod, a line secured to the fishing rod, a hook at the outer end of the line, an electric circuit, a number of objects adapted to move in front of the hook, a ring borne by each object and adapted to engage said hook, a switch in said circuit borne by the rod and adapted to close when one of the said objects is hung on the hook, a spring urging the switch into its circuit breaking position, a photographic apparatus disposed in front of the rod and the shutter of said apparatus adapted to be opened when the circuit is operative.

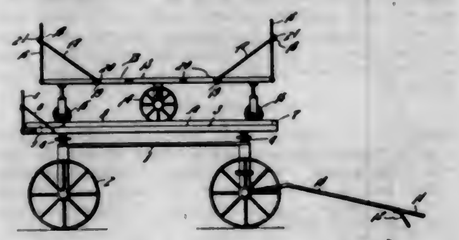
1,640,260. DOLL. CLARENCE F. VOGEL, Rock Island, Ill. Filed Sept. 14, 1926. Serial No. 135,323. 7 Claims. (Cl. 46—40.)

1. A doll comprising a hollow pedestal open at its top, a doll body mounted in and supported from the top of the latter and further extended upwardly therefrom, a waist mounted on the doll body above and connected to said pedestal, and a skirt secured to and surrounding the pedestal.



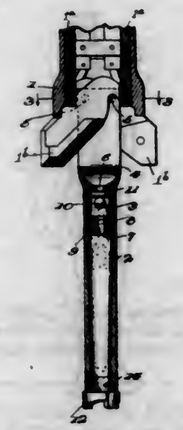
1,640,261. CARD GAME. MARSHAL H. WHALEY and CLEO W. ECKENWILER, Morrison, Okla. Filed Aug. 26, 1926. Serial No. 131,734. 15 Claims. (Cl. 273—152.)

1. A card deck comprising offensive and defensive groups, the offensive group including a card the playing of which inflicts a penalty upon the defensive player, the defensive group including cards cancelling the lead of any card in the offensive group, with the exception of said penalty card.



9. A card deck comprising offensive and defensive groups each including count and "no count" cards, the "no count" cards of the defensive group including cards cancelling the lead of any count card of the offensive group.

1,640,262. WINDMILL. IRA WOLF, Elm Creek, Nebr. Filed Aug. 15, 1925. Serial No. 50,475. 2 Claims. (Cl. 170—46.)



1. In a windmill of the character described, a supporting tower, a turn table carried at the top of the tower, an arm fixed to the turn table and having a threaded bearing, a tubular coupling element engaged centrally in the tower and in the threaded bearing, a substantially rectangular shaped frame integrally formed with the bearing and rising vertically from the turn table, a wind vane pivotally connected to the vertical frame, a coiled tensioned spring connected with the vane and with said arm, a rocking beam swingingly supported above the frame and having a weighted end, a flexible connection between said beam at a point removed from the weighted end and the wind vane, a wind wheel journaled in the frame, and a weighted flexible member connected with the rocking beam and guided over the end thereof remote from the weighted end of the same.

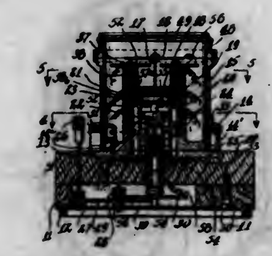
1,640,263. TRUCK. PAUL F. BURGETT, Mexico, Mo. Filed Feb. 18, 1924. Serial No. 693,678. 1 Claim. (Cl. 214—38.)

A loading device comprising a main frame, a platform mounted for vertical adjustment on said main frame, parallel rails extending longitudinally of the central portion of said platform, a stop piece extending at one end of said platform, a foldable plat at the other end of the platform, flared ends on said rails at one end of the platform, a second truck having spaced supporting wheels at the central portion thereof and caster wheels at each end of the second truck for engagement upon the rails on the platform of the main truck and foldable end frames at each end of the second truck as and for the purpose specified.

1,640,264. CORE BARREL. OSCAR M. CARTER, Houston, Tex. Filed Aug. 27, 1925. Serial No. 52,904. 2 Claims. (Cl. 255—72.)

1. In a sampling device, a core barrel having its exterior of cylindrical form and having its interior tapered downwardly from its upper to its lower end, a cutter at the lower end of the barrel, an attaching plate having a nipple threaded into the upper end of the core barrel, the juncture of the nipple and the attaching plate being provided with a vent, a valve seat provided within the nipple and having an opening affording communication between the vent and the interior of the barrel, and a downwardly seating ball valve co-operable with the valve seat.

1,640,265. PIPE WRENCH. MARVEN WILLIAM CROW, Fort Dodge, Iowa. Filed June 19, 1926. Serial No. 117,156. 1 Claim. (Cl. 81—96.)

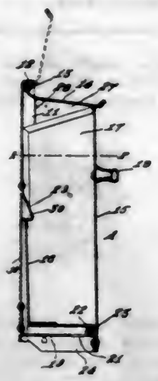


A wrench of the class described comprising a handle having an enlarged inner end which is provided with a recess, a yoke-shaped frame fastened to the enlarged portion and having a part forming a guide, a movable jaw having a shank slidably mounted in the guide, the inner edge of the shank being toothed, a toothed wheel rotatably mounted in the recess with its teeth engaging the teeth of the shank and some of its teeth projecting beyond the end of the enlarged part so that they will engage and be placed between the jaws and thus the wheel will be rotated, and a spring-pressed plate carried by the handle and engaging the shank.

1,640,266. SIGNAL. JOHN ARTHUR DES ROSIERS, Toronto, Ontario, Canada. Filed June 22, 1925, Serial No. 38,756, and in Canada Feb. 10, 1925. 4 Claims. (Cl. 116—36.)

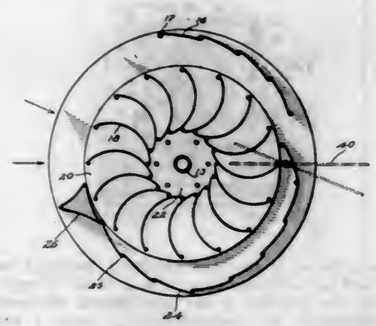
1. A resetting means for a reciprocable vehicle signal, comprising a pivotally mounted lever member, a cam carried at one end of said member arranged for contact with a movable part of a steering mechanism for swinging the lever, an oscillatory shaft actuated by said lever upon the swinging of the same, and means connecting said shaft with said signal for moving the same from signaling position.

1,640,267. TELEPHONE RELAY. ARCADY DEVIATKOFF, San Francisco, Calif. Filed Jan. 13, 1926. Serial No. 80,857. 2 Claims. (Cl. 179—171.)



1. In a device of the class described, having a microphone, and an operating knob with a train of gears for adjusting the pressure or the microphonic substance of said microphone, the combination of a base, a supplementary base attached to the bottom of said base, said train of gears being mounted in said bases, a washer fastened to the upper side of said base, a support threadedly engaged in said washer, said support having a chamber at its upper end to house said microphone, a member engaging against said microphone, a threaded rod connected to said member, a rotatable member threadedly engaging said rod, said rotatable member being connected to the last gear of said train of gears, a body supported in said base, said body forming a bearing for said rotatable member, and an expansion spring acting between said body and said member which engages against said microphone.

1,640,268. MAIL BOX. DANIEL S. DILLENBACH, Hastings, Nebr. Filed June 11, 1926. Serial No. 115,326. 1 Claim. (Cl. 232—28.)

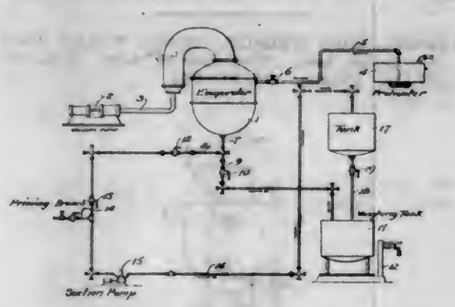


In combination, a frame-like support, an extension projecting forwardly from the lower end thereof, a mail box mounted for pivotal movement on said extension and capable of being swung from a vertical closed position to a horizontal open position, a sectional extensible brace with its sections pivotally connected together and adapted to lie in superimposed relation beneath the box when the latter is closed, one of said sections being pivotally con-

nected to the bottom of the box, and the other section pivoted to the support, whereby said sections assume a diagonal position with relation to the box to support the

latter horizontally in open position, said box being open at its top, and a downwardly inclined pivoted cover normally closing the box.

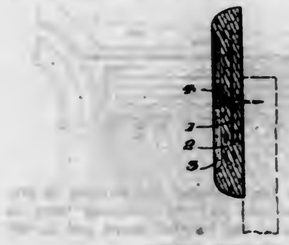
1,640,269. WIND ROTOR. HUBBARD ELLISON, London, Ontario, Canada. Filed June 10, 1926. Serial No. 115,080. 4 Claims. (Cl. 170—12.)



1. In a wind motor a wind driven rotor having an annular series of sails, a mast about the axis of which the rotor turns, a hub on said rotor turnable with said mast, a fixed floor secured to the mast, rollers on the floor at intervals, a structure outside of the rotor, including a platform resting on said rollers, as well as a housing secured to said platform, a power shaft, means to drive said shaft by the turning of the rotor, a governor, a wind vane, said structure being turnable bodily by wind pressure on said vane, and means to swing said vane by the movements of the governor, said governor and said last mentioned means being mounted above said platform and the turning of said structure bodily by the vane serving to reduce or increase the effective sail area of the rotor presented to the wind.

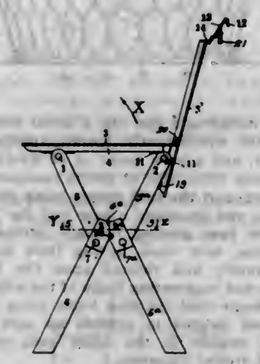
1,640,270. AVIATOR'S SUIT. WILLIAM RUSSELL FURMAN, Troy Mills, Iowa. Filed Mar. 6, 1926. Serial No. 92,826. 1 Claim. (Cl. 244—21.)

In a device of the class described, a garment, individual air-tight containers affixed to said garment, and in communication with each other, and a separate container connected to the shoulder portions of the garment, means for separately inflating the container last named, to permit it to rise above the head of the wearer, said separate container acting as a shoulder and back support when partly inflated for floating in water, and being proportioned to serve as a parachute when released to assume a position above the head.



1,640,271. APPARATUS FOR CONDENSING MILK. RICHARD M. GARRETT, Yonkers, N. Y., assignor to Nestle's Food Company, New York, N. Y., a Corporation of New York. Filed Oct. 14, 1922. Serial No. 594,663. 1 Claim. (Cl. 159—48.)

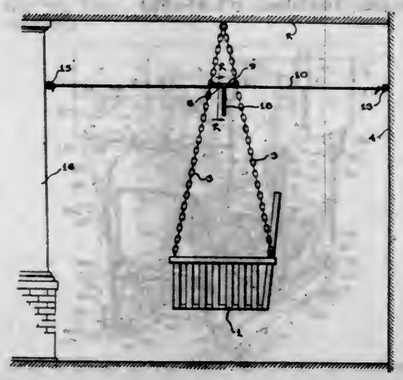
An aparatus for condensing milk, comprising a vacuum pan, a preheating tank, a pipe for conveying milk from the preheating tank to the vacuum pan and provided with a regulating valve, a vacuum pump having a suction branch connected to the vacuum pan for drawing the milk through said tank, pipe and regulating valve into the pan and for maintaining a vacuum in the latter, a relatively long slender discharge pipe connected at one end to the vacuum pan and having a portion extending downwardly from the latter to maintain a liquid seal for the pan, a suction pump connected to the other end of said discharge pipe and capable of withdrawing milk from the vacuum pump is in operation, and a discharge branch for the suction pump.



1,640,272. EVAPORABLE DEVICE. WALTER E. GOTHAM, Elizabeth, N. J. Filed June 1, 1926. Serial No. 113,025. 1 Claim. (Cl. 299—24.)

A disinfectant pad comprising a center strip of non-evaporative material entirely coated and enclosed on its sides and edges with a composition capable of slowly volatilising to give off an antiseptic and disinfectant

effluvia, said pad having a hole entirely through a portion of the non-evaporative material and volatile composition for receiving supporting means.



1,640,273. SEAT WITH FOLDING BACK. JEAN ALFRED HALAIS, Paris, France. Filed Jan. 29, 1926. Serial No. 84,701, and in France Jan. 30, 1925. 5 Claims. (Cl. 155—147.)

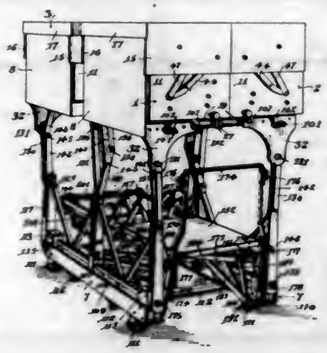
1. A folding seat comprising: legs in two parts,—a joint connecting the two parts of each leg,—a joint connecting the lower parts of the legs,—cross-bars connecting the upper parts of the pairs of legs,—cross-bars connecting the lower parts of the said legs,—a seat-forming panel jointed at the front to one of the upper cross-bars,—a back-forming panel jointed at its lower parts to the other upper cross-bar,—and means for holding the legs at a fixed distance apart and ensuring the rigidity of the seat in the open position.

1,640,274. PORCH SWING. GEORGE L. HALL, St. Petersburg, Fla. Filed Jan. 27, 1926. Serial No. 84,179. 2 Claims. (Cl. 230—7.)

1. A fan attachment for a swing having pairs of flexible suspension members by means of which the ends of the swing seat are suspended from an overhead support, said attachment comprising a shaft, a pair of shaft supporting and operating cables, each of said cables having an end portion thereof secured to a fixed support at the rear of the swing and then passed underneath and around an end portion of the shaft, the opposite end portion of said cable being secured to a fixed support in front of said swing, a pair of other shaft supporting and operating cables each having an end portion secured to one of said swing suspension members, and then being passed

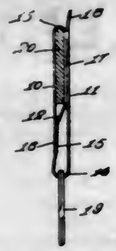
over the associated end portion of the shaft and around the shaft and then secured to the adjacent swing suspension member, and a blade carried by said shaft.

1,640,275. AUTOMOBILE SIGNAL. GEORGE E. HITCHCOCK, Flint, Mich., assignor of one-third to Ambrose Alford, Flint, Mich. Filed May 17, 1922. Serial No. 561,752. 1 Claim. (Cl. 177—329.)



A signal for automobiles including a casing, a vertical partition therein, a plurality of horizontal partitions connected with the vertical partition and the rear of the casing for providing a plurality of closed compartments, glass covering one side of said closed compartments, the upper end of the vertical partition having an opening therein, an elongated compartment above the closed compartments, having glass ends and including the upper part of the partitions intermediate its ends, lamps secured to the vertical partition for illuminating the glass sides of the closed compartments and a lamp mounted adjacent the opening in the partition.

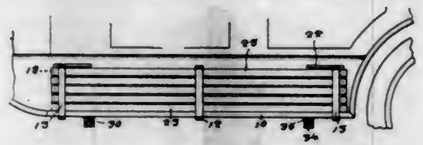
1,640,276. HOSE PROTECTOR. EARNEST HOENISCH, Wausau, Wis. Filed Nov. 5, 1926. Serial No. 146,491. 3 Claims. (Cl. 104—275.)



1. An arched rigid bridge protector for a fire hose comprising a pair of bridges connected by folding links and of a width when in service to permit the tires of a vehicle to pass over without damage to the hose.

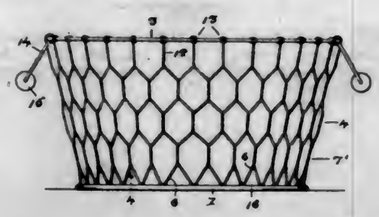
1,640,277. COMBINATION DESK AND FILE. JOHN A. HUGHES, Waco, Tex. Filed June 11, 1926. Serial No. 115,392. 16 Claims. (Cl. 45—52.)

1. A combined desk and file comprising a pair of oppositely movable, synchronously shiftable, normally closed filing units, a normally lowered vertically movable support for a typewriter or computing machine, a slidable support for each of said units, a carrier for each slidable support, and link and lever mechanisms connected with said units, supports and carriers and adapted when operated in one direction, to provide for the simultaneously shifting of said units to open position and said vertically movable support to its uppermost position and when operating in the opposite direction to lower said vertically movable support and to shift said units to closed position and in sidewise abutting relation and further superposed with respect to the lowered support.



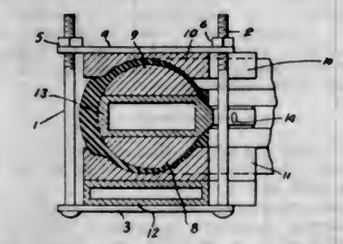
1,640,278. KEY-RING HOLDER. ALEX JOHNSON and JOHN A. SIDLE, Helena, Mont. Filed Jan. 14, 1927. Serial No. 161,134. 1 Claim. (Cl. 24—3.)

A key ring holder formed of a single strip of resilient material and comprising inner and outer parallel bars, an intermediate bar having its opposite ends connected to the inner and outer bars and providing a belt receiving loop at one end of the holder and a key receiving loop at the opposite end thereof, the intermediate bar being offset and having one of its faces flatly engaging the inner bar for an appreciable distance and its other face flatly engaging the outer bar for a relatively greater distance and the free end of the outer bar extending beyond the adjacent end of the belt receiving loop and having an outwardly curved extremity.



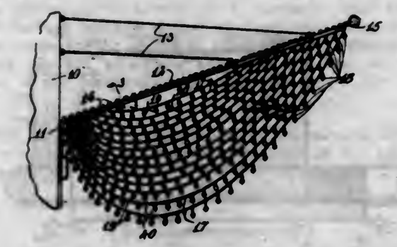
1,640,279. UTILITY RACK. HENRY L. LECKLITER, Bakersfield, Calif., assignor of one-half to Charles H. Tilden, Bakersfield, Calif. Filed July 14, 1926. Serial No. 122,467. 3 Claims. (Cl. 224—29.)

1. In a device of the class described, a plurality of hinges each including pivotally connected sections, one of the sections being adapted to be secured beneath a running board, and slats carried by two of the other sections, the slats of one section being positioned to lie between the slats of the other section when the hinge sections by which they are carried are folded, and devices



passing thru the slats for retaining the sections in predetermined relative position and for retaining them in substantially the plane of the running board and in different positions with reference thereto.

1,640,280. CLOTHES BASKET. INGERINUS E. LOBECK, Appam, N. Dak. Filed Nov. 12, 1926. Serial No. 148,043. 1 Claim. (Cl. 220—19.)

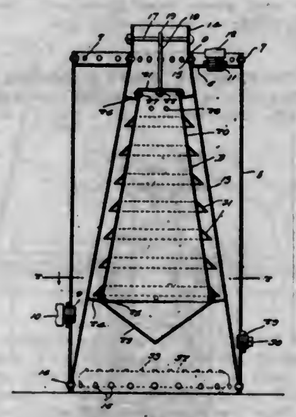


A basket including a rim top, a metal bottom which is provided with equidistantly spaced apertures adjacent its perimeter, and a body made up of wire strands, each of said strands being bent at points equidistant from the center thereof, and the said center being disposed at opposite angles and providing a base and the limbs extending from the base passing through alternate apertures in the bottom, said limbs having their lower portions inclined inwardly and twisted upon the limbs of the intermediate and cooperating limbs of the adjacent strands and from thence such twisted limbs being further bent angularly and twisted to provide an open weave, and the twisted strands at the upper ends of the basket being wound around the rim.

1,640,281. VULCANIZER. CHARLES C. MARBLE, Bradenton, Fla. Filed Oct. 2, 1926. Serial No. 139,132. 2 Claims. (Cl. 18—18.)

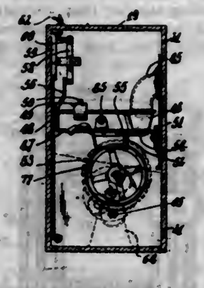
1. A vulcanizing mold for automobile shoes comprising segmental arc-shaped metal blocks on the sides of a metallic steam drum completely filling a section of the shoe, metal blocks inclosing the outer surface of the shoe, and means for applying heavy pressure during the vulcanization treatment.

1,640,282. ELECTRICAL FLAG. ARNOLD MIGLIACCIO, Brooklyn, N. Y. Filed Mar. 24, 1927. Serial No. 177,951. 11 Claims. (Cl. 40—126.)



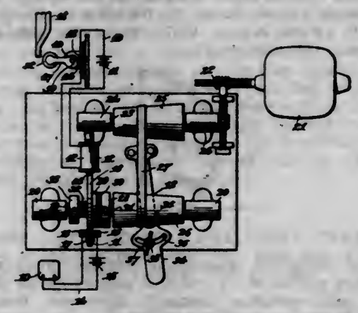
2. In a device of the class described, a post, a plurality of wires arranged in progressively sagging rows on the bottom side thereof, and lamps connected to the wires.

1,640,283. METHOD OF FORMING STITCHED BUTTONHOLES. HENRY C. MILLER, Waterford, N. Y. Filed Aug. 25, 1922. Serial No. 584,323. 12 Claims. (Cl. 112—264.)



1. The herein described method of forming stitched button-holes, consisting in cutting the fabric to leave a foldable margin within the proposed button-hole outline, and folding said margin onto the fabric in the stitching of the button-hole.

1,640,284. WATER HEATER OR BOILER. LEWIS JOHN MITCHELL, Warren, Ohio. Filed Apr. 12, 1926. Serial No. 101,408. 2 Claims. (Cl. 126—85.)

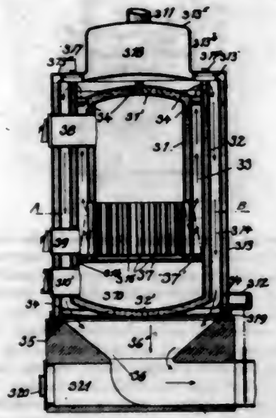


1. A device of the class described including, in combination, a casing, a flue tube of frusto-conical formation in the casing and forming therewith a fluid circulating chamber, a bolt extending transversely across the upper end of the tube, an eye bolt receiving the first bolt and depending therefrom, a hollow frusto-conical shaped baffle having a closed top through which passes the second bolt for suspending the baffle in the tube, and a heating element beneath the baffle.

1,640,285. SANITARY-TOILET-SEAT-PAPER-VENDING MACHINE. JOHN MORTKA, Poughkeepsie, N. Y. Filed July 26, 1926. Serial No. 124,897. 2 Claims. (Cl. 194—10.)

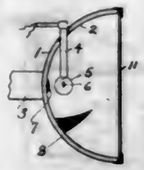
1. In a device of the class described, the combination with a ratchet wheel moved a certain predetermined part of a revolution by the action of certain dispensing means, of a casing, a carriage pivotally attached thereto, a coin box attached to the carriage, the said coin box being formed with a bottom slot, a bracket hinged to the carriage, a roller on the said bracket, said roller being engageable with the said ratchet wheel, means for normally keeping the roller engaged with the ratchet wheel, the said bracket being formed with a slot coincidable with the slot of the coin box, in a certain position only of the roller to the ratchet wheel, an extension member from the said carriage, a motor connected to operate the said dispensing means, and a switch for closing the circuit of the motor, and operated by the extension member when moved by a coin falling into or from the coin box and pivoting the carriage.

1,640,286. SIGNALING MECHANISM. ROBERT A. NEUSCHOTZ, New York, N. Y. Filed May 9, 1925. Serial No. 29,167. 7 Claims. (Cl. 177—336.)



1. In an elevator signaling device, an elevator operable between the plurality of floors, a signal at one or more of the floors, and means operated by the arrival of the elevator at a floor for actuating the signal for that floor at a predetermined time thereafter.

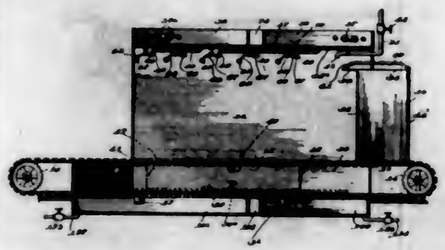
1,640,287. HEATER. PETER NEUSSER, Aachen, Germany. Filed Jan. 5, 1925, Serial No. 667, and in Germany Jan. 7, 1924. 1 Claim. (Cl. 122—160.)



In a heater comprising at least three concentrically arranged spaced cylinders the intermediate and innermost one of which are double-walled and adapted to contain water, heating channels between the cylinders, each cylinder having a double walled closed end adapted to

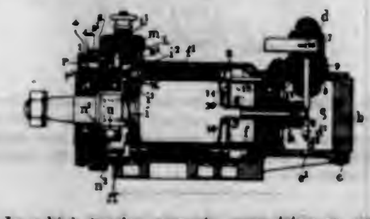
contain water, the closed end of the innermost cylinder being at the upper end of such cylinder, the closed end of the intermediate cylinder being at the lower end of such cylinder, and the closed end of the outermost cylinder being at the upper end of such cylinder, the innermost cylinder being shorter than the other cylinders, a furnace arranged underneath the innermost cylinder in the intermediate cylinder, said furnace including hollow

grate bars adapted to contain water and communicating with one another and with the water space of the intermediate cylinder, and a series of spaced upwardly directed connecting tubes between the grate and the lower end of the innermost cylinder, these tubes and the grate bars forming together a basket serving as fire box, and a flue arranged centrally below the cylinders and being in communication with the annular heating channel between the intermediate and the outermost cylinder.



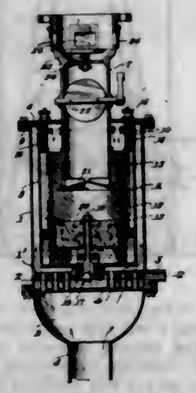
1,640,288. NONGLARE HEADLIGHT. JOSHUA BANKS NICHOLSON and CLARA S. NICHOLSON, Washington, D. C. Filed Jan. 4, 1927. Serial No. 158,941. 1 Claim. (Cl. 240—48.2.)

In an automobile headlight, a reflector having a non-reflecting surface at its centre, a support for an electric light bulb extending vertically downward from the upper portion of the reflector and an electric light bulb carried by said support having the axis of its filament vertical in front of said non-reflecting surface, the reflector being provided below the electric light bulb with a non-reflecting surface in line with the axis of the filament in position to receive the end rays therefrom.



1,640,289. PASTEURIZING APPARATUS. SENZO OYAMA, Hilo, Territory of Hawaii. Filed Nov. 4, 1926. Serial No. 146,227. 9 Claims. (Cl. 126—272.)

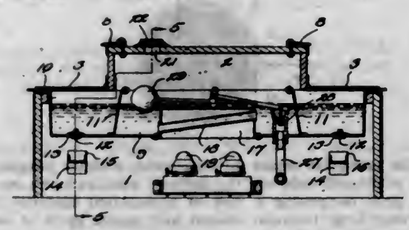
1. A pasteurizing device comprising a cabinet, a travelling carrier movable through the cabinet, a plurality of reservoirs located below the travelling carrier, a pair of reservoirs at the top of the cabinet and means for releasing the water from the reservoirs at the top of the cabinet for spraying, a container for carrying bottled liquid adapted to be drawn through the chamber by the travelling carrier and sprayed by liquids of different temperatures which are contained within the reservoirs



at the top of the cabinet, nozzles connected with the reservoirs at the top of the chamber, means co-acting with the ends of the nozzles for maintaining the nozzles closed, and means mounted on the top of closing means of the nozzles to open position.

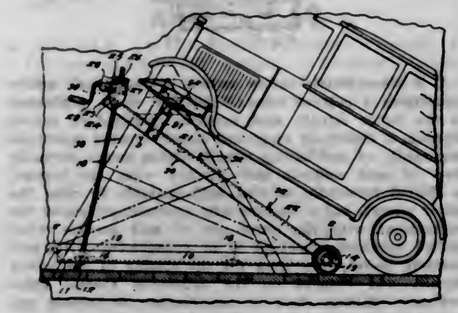
1,640,290. MAGNETO. JEAN EMILE PÉRISSET, surnamed Emmanuel Périsset, Chatillon-sous-Bagneux, France. Filed July 11, 1925. Serial No. 43,023, and in France May 19, 1925. 5 Claims. (Cl. 123—149.)

1. In a high tension magneto, comprising an outer adjusting system provided with a cam, a particular arrangement of this adjusting system consisting of a hollow crown, a ring within this crown, push pieces on this ring, these push pieces being permanently secured in position and acting on the adjusting cam.



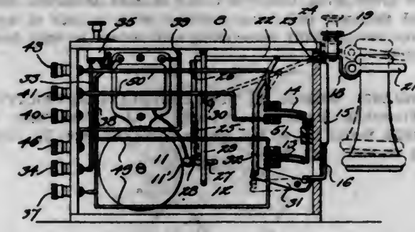
1,640,291. CARBURETOR. RALPH D. PERKINS, Kenosha, Wis. Filed Oct. 4, 1926. Serial No. 139,452. 1 Claim. (Cl. 261—105.)

A carburetor for an internal combustion engine comprising inner and outer casings spaced apart, a fuel chamber in the outer casing and in communication with



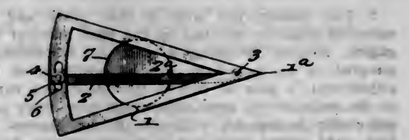
the inner casing, a float controlled valve for controlling such communication, a cylindrical wick in the inner casing and depending into the fuel therein, an outlet pipe extending into the space defined by the wick, means for permitting the suction of the engine to draw heated air through passages formed in the chamber and around the inner casing and into the same and through the wick and an adjustable shield surrounding the wick and having an opening exposing portions of the wick.

1,640,292. HOG WATERER. FRANK F. PETRICK, Wilsonville, Nebr. Filed July 26, 1926. Serial No. 125,088. 2 Claims. (Cl. 119—73.)



1. A watering device comprising a casing, a pan therein having its side walls spaced from the side walls of the casing with a passage for connecting the lower space of the casing with the space above the pan, a dome at the center of the pan, an inclinedly arranged tube passing through the dome with its ends in communication with the pan, heating means in the lower part of the casing under the dome, the products of combustion and heated air coming in contact with the bottom and sides of the pan and with the dome and the tube therein and passing upwardly through the dome passage to the space above the pan and means for permitting stock to drink from a portion of the pan.

1,640,293. AUTOMOBILE JACK. GUY L. PITT, Rocky Mount, N. C. Filed Mar. 11, 1926. Serial No. 93,962. 1 Claim. (Cl. 214—1.)



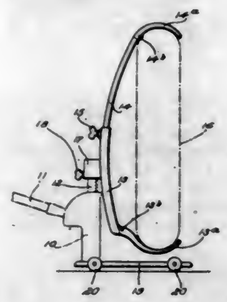
In an automobile jack, a wheel supported main frame, said frame being U-shaped, a second U-shaped frame having the arms thereof pivoted to the arms of the first named frame, a connection between the bights of the frames for shifting the second frame about the pivot thereof, a member bridging the arms of the second frame adjacent the bight portion thereof and having a channel in its upper face adapted to receive the axle of an automobile, a pivotal connection between the arms of the frames comprising an axle directed through the arms of both thereof and upon which certain of the supporting wheels of the first named frame are mounted and a pair of angle iron brackets secured to the arms of said second frame adjacent to but spaced from the bridge member.

1,640,294. ALARM SYSTEM. WORTLEY H. PRICE and HAMILTON G. BLUMBERG, San Antonio, Tex. Filed July 9, 1926. Serial No. 121,427. 10 Claims. (Cl. 179—5.)

1. An alarm system for use with a telephone system comprising spring actuated means for raising the receiver supporting lever of a telephone, trigger means for holding the spring means in inoperative position, an alarm including a bell and its hammer, means actuated by the hammer for relasing the trigger means to throw the spring actuated means into operation, a circuit for the alarm and a circuit closer in the circuit.

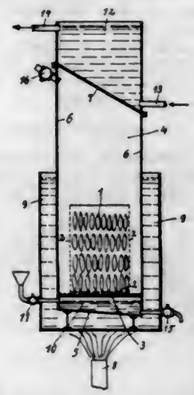
1,640,295. CENTER FINDER FOR SHAFTS. AUGUST RABER, Evansville, Ind. Filed Sept. 14, 1926. Serial No. 135,373. 1 Claim. (Cl. 33—191.)

The herein described center finder for shafts, comprising elongated converging members which are angular in cross-sectional shape and unobstructed on their lower faces, a base member connecting said converging members, a rule having an unbroken straight edge, said rule being pivoted to the converging members with its straight edge substantially bisecting the angle defined by the converging members, and a laterally adjustable connection between the end of said rule and the base member, said converging members being of such length that their connecting base member will be located beyond the shaft end whose center is being found, to thereby prevent the base member from overlying the shaft end and interfering with the striking of intersecting lines by the use of said unbroken straight edge of the rule.



1,640,296. AUTOMOBILE HEADLIGHT WRENCH. JOHN R. RHOADS, Boyertown, Pa. Filed Nov. 1, 1924. Serial No. 747,285. 1 Claim. (Cl. 81—64.)

A device of the class described comprising a pair of semi-circular band members, each one of said members having one of its ends folded upon itself to form a hinge

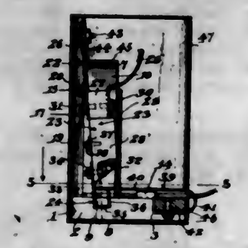


barrel, a separately formed hinge barrel operatively fastened to each one of the semi-circular members adjacent the free ends thereof, one of said hinge barrels having a U-shaped slot, a pair of operating levers, one end of one lever being flattened to fit in said U-shaped slots, said flattened end being provided with a pair of apertures for pivotally connecting said levers to said hinge barrels.

1,640,297. WHEEL OR TIRE HANDLING APPARATUS. FLORENCE ROGERS, Lakewood, N. J. Filed Mar. 8, 1926, Serial No. 93,313, and in Germany Sept. 28, 1925. 2 Claims. (Cl. 214—1.)

1. The combination with a base plate and a jack mounted adjacent one end of the base plate of tire engaging devices including a pair of telescoping arms adapted to be locked in various positions of relative adjustment, a pair of curved tire embracing extensions at the ends of the arms and means carried by one arm detachably engageable with the lifting element of the jack, said means including a sleeve adapted to receive the lifting element and a clamping screw carried by the sleeve.

1,640,298. TOBACCO DENICOTINING PROCESS AND APPARATUS. JOHANNES SARTIG, Berlin-Zehlendorf, Germany. Filed Apr. 30, 1926, Serial No. 105,862, and in Germany Mar. 3, 1926. 3 Claims. (Cl. 131—6.)

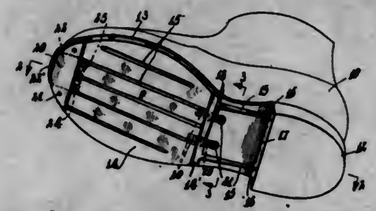


3. A denicotining apparatus comprising a closed receptacle adapted to receive in its bottom end a denicotining liquid, a support arranged above the bottom wall and adapted to receive the material to be denicotined so as to avoid its contact with the denicotining liquid, means permitting to heat the said liquid and the material to be denicotined to a temperature below 100° C. an inclined top wall on the said receptacle adapted to act as a vapor condensing and condensate deflecting surface and constituting means for returning such condensate to the denicotining liquid at the exclusion of any contact of the condensate with the material to be denicotined, and means for cooling the said top wall.

1,640,299. ANTIGLARE DEVICE. CLAUDE R. SNYDER, Elmira, N. Y. Filed June 28, 1924. Serial No. 723,035. 1 Claim. (Cl. 296—97.)

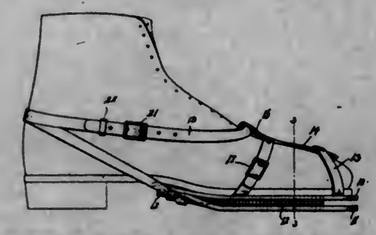
An anti-glare device for automotive vehicles adapted to be positioned between the driver's eyes and the source of glare comprising a disk of transparent material containing large irregular shaped and spaced spots of varying density of color.

1,640,300. THERMOSTATIC SAFETY SWITCH OR CUT-OUT. PETER STRUCHOLD, St. Louis, Mo. Filed Sept. 14, 1926. Serial No. 135,343. 10 Claims. (Cl. 200—138.)



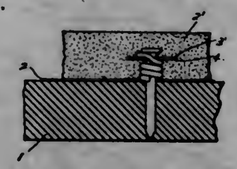
1. A thermostatic safety switch for electrical motors comprising a pair of contacts adapted to be positioned in the motor circuit, said contacts arranged in spaced relation, a resiliently suspended circuit breaker positioned rearwardly of and having circuit closing means normally clear of said contacts and adapted when the breaker is shifted forwardly to abut said contacts to close the motor circuit, and a thermostatic controlling element for engagement with the lower end of said breaker when shifted forwardly to hold it in engagement with said contacts thereby providing for the closing of the motor circuit, said element on the expansion thereof automatically shifting clear of the breaker to release the same whereby the latter will automatically move rearwardly to open the motor circuit.

1,640,301. EXCHANGEABLE SOLE FOR SHOES. ALBERTO TORCHIA, Brooklyn, N. Y. Filed Nov. 30, 1926. Serial No. 151,618. 2 Claims. (Cl. 36—15.)



1. The combination with a shoe having an inner sole and a heel, of an outer sole covering the inner sole, a rear element extending across the rear edge of the outer sole, means for hingedly connecting the rear element to the heel, lugs projecting from the rear element, the lugs being provided with axial apertures, engaging members with enlarged knurled heads, slidably engaged through the said axial apertures, and the ends of the engaging members remote from the enlarged heads, being

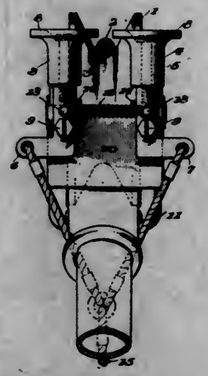
forced into the rear edge of the outer sole, a retaining plate attached to the inner sole at the forward end thereof, the said retaining plate being provided with an



elongated aperture, and an engaging plate slidably arranged in the said elongated aperture, and having one end forced into the front edge of the outer sole.

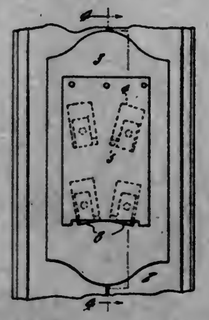
1,640,302. SHOE ATTACHMENT. CHARLES VAN TASSELL, Los Angeles, Calif. Filed July 10, 1924. Serial No. 725,229. 1 Claim. (Cl. 36—63.)

In a shoe attachment, spaced inner and outer soles, transversely spaced individual elastic tubes secured between and disposed longitudinally of the soles, with the inner ends of said members located adjacent the arch of the shoe and their outer ends terminating short of the outer edge of the toe and means to secure the attachment in position.



1,640,303. WALL CONSTRUCTION. GEORGE F. VOIGHT, Oakland, Calif., assignor to Economy Products Corporation, a Corporation of California. Filed Dec. 9, 1922. Serial No. 605,871. 5 Claims. (Cl. 72—120.)

1. In means of the character described, a grille bracket comprising, a nail element having a head at its upper end, and a spacing element formed of a length of wire wrapped around said nail element and having an extension at its upper end, said spacing element adapted to coact with said head for holding a grille wire on said spacing element between said extension and said nail element.

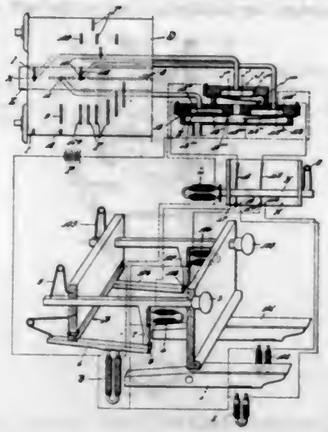


1,640,304. TROLLEY-WHEEL RETAINER. HERBERT G. WINTER, Pittsburgh, Pa. Filed Aug. 31, 1926. Serial No. 132,834. 1 Claim. (Cl. 191—80.)

In a trolley wheel retainer, the combination with a wheel fork and wheel, of a block mounted on the fork, a pair of bell crank levers pivoted on the block including vertical arms and horizontal arms, flanged rollers journaled on the upper ends of the vertical arms, a relatively heavy contractile spring connecting said arms and retaining the flanges of the rollers in operative position to engage a trolley wire and prevent accidental disengagement of the wheel from the wire, the block including stop means against which the vertical arms are held by the spring, the horizontal arms of the bell cranks ex-

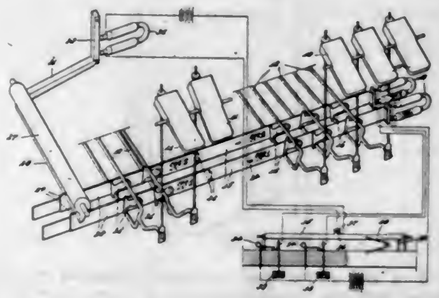
tending laterally beyond the block and being formed with means engageable with an operating rope, a trolley pole rope including branches engaged with said horizontal arms and acting through the arms to spread the rollers against the action of the spring and to transmit a downward pull to the trolley wheel through the intermediacy of the spring when it is desired to disengage the wheel.

1,640,305. TIRE RIM. BENJAMIN J. ZOBEL, Buffalo, N. Y. Filed Apr. 20, 1925, Serial No. 24,541. Renewed June 8, 1927. 4 Claims. (Cl. 301—35.)



2. A rim of the class described comprising two sections, inclinedly arranged lugs on the inner faces of the sections, locking plates having inclinedly arranged openings for receiving the lugs, said plates when moved forwardly acting upon the lugs to draw the sections together and means for locking the plates against movement, such locking means consisting of a spring on each plate and projections on some of the lugs for engaging the ends of the spring.

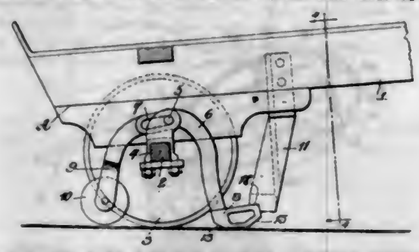
1,640,306. ORGAN ACTION. JOHN T. AUSTIN, Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 3, 1925. Serial No. 6,512. 19 Claims. (Cl. 84—88.)



10. In an automatic musical instrument, a tracker bar having a plurality of note playing ducts and a master duct, a plurality of key actions respectively and normally

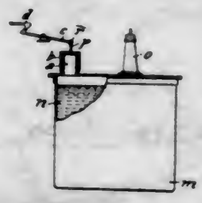
operatively connected with said note playing ducts, a plurality of stop actions adapted to be respectively and operatively connected with said note playing ducts, and

means controlled by said master duct for temporarily and operatively connecting all of the stop actions with their respective note playing ducts.



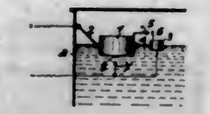
1,640,307. ORGAN STOP ACTION. JOHN T. AUSTIN, Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 3, 1925. Serial No. 6,513. 15 Claims. (Cl. 84—345.)

2. In a musical instrument, a set of stop action operating devices, a trace associated therewith, a second set of stop action operating devices, a trace associated with said second set, and a manipulative device associated with both of said traces and having two positions of operation in one of which one of said traces is moved and in the other of which the other trace is moved.



1,640,308. AUTOMATIC STEVEDORE-TRUCK BRAKE. ALLEN J. BECKER, Upper Montclair, N. J. Filed Jan. 26, 1927. Serial No. 163,742. 11 Claims. (Cl. 188—22.)

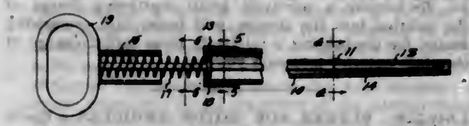
6. In combination with a stevedore truck, of a pair of shackles secured to the axle of the truck, pins supported by said shackles, brake bars having slots intermediate their ends receiving the pins, brake shoes at the forward ends of the bars, rollers at the rear ends of the



bars, and legs fixed to the truck and adapted to engage the shoes when the forward portion of the truck is in its lowest position.

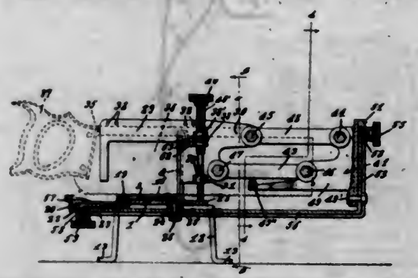
1,640,309. PROTECTIVE SYSTEM FOR ELECTRIC APPARATUS. MAX BUCHHOLZ, Cassel, Germany. Filed Apr. 16, 1925, Serial No. 23,677, and in Germany Feb. 5, 1923. 5 Claims. (Cl. 175—361.)

1. Protective system for insulated electric apparatus comprising a container and a supply of an insulating medium which is not volatile under normal conditions, surrounding the apparatus to be protected, a protective means and means adapted to be displaced bodily by the increase of pressure resulting from a decomposition of the insulation due to unnormal working of the apparatus and, when thus displaced, to operate said protective means.



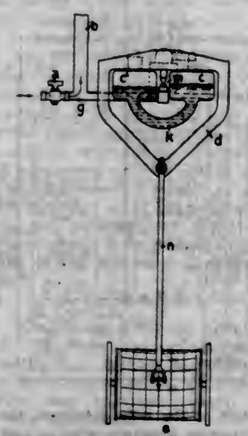
1,640,310. PROTECTING ELECTRIC APPARATUS. MAX BUCHHOLZ, Cassel, Germany. Filed Apr. 16, 1925, Serial No. 23,682, and in Germany Feb. 5, 1923. 2 Claims. (Cl. 175—361.)

1. Protective system for liquid insulated electric apparatus comprising a vessel containing liquid surrounding the apparatus, a protective circuit including a float system comprising a float and a contact adapted to cooperate with said float in varying the operative conditions of said circuit, said float being held in inoperative condition by the liquid and being arranged to become operative both at a lowering of the liquid level and at a sudden movement of the liquid.



1,640,311. SURGICAL INSTRUMENT. WILLARD C. DAWES, Bozeman, Mont. Filed Jan. 13, 1925. Serial No. 2,225. 2 Claims. (Cl. 128—329.)

1. A surgical instrument comprising in combination, a rod tapered to a fine point at one extremity, a tapered casing enclosing the greater portion of the rod and normally the pointed extremity thereof, a cap mounted upon one extremity of the casing, a spring member mounted upon the rod at the end opposite the pointed extremity and adapted to normally force the pointed extremity to a position within the casing, a sleeve member secured



to the same extremity of the rod adapted to enclose a portion of the spring, and a handle secured to the sleeve adapted to permit operation of the rod through the casing.

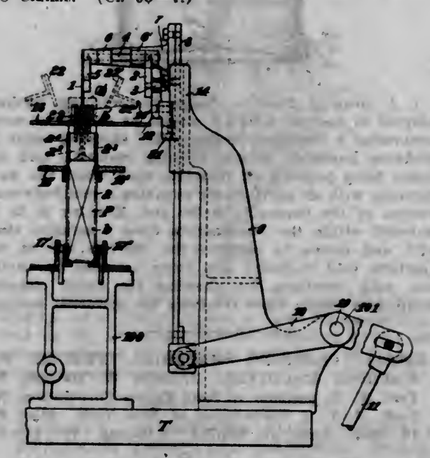
1,640,312. MITER BOX. MOSES S. DEARBORN, Oakland, Calif. Filed July 17, 1926. Serial No. 123,139. 4 Claims. (Cl. 143—88.)

1. In a miter box, a table provided at its rear with a pair of lengthwise opposed, spaced upright supports having oppositely extending inclined inner ends, a pair of lengthwise opposed, spaced independently adjustable, vertically disposed, shiftable members positioned against the front and overhanging the top of said supports and providing means to permit a combined saw guide and carrier element to tilt from a vertical plane and for supporting said element in tilted position, and means carried at the rear of the overhanging part of each of said members for fixedly securing the member in set position.

1,640,313. DEVICE FOR INDICATING AND RECORDING THE SPECIFIC GRAVITY OF GASES. OTTO DOMMER, Karlsruhe, Germany. Filed Feb. 5, 1925, Serial No. 7,186, and in Germany Nov. 10, 1923. 5 Claims. (Cl. 265—44.)

1. A device for indicating the specific gravity of gases, comprising a container with communicating

spaces, a liquid piston placed in said container and having normally liquid levels of even height in said spaces, means associated with each level and adapted to let a column of gas rest upon each of said liquid levels, a pivotal support for said container permitting a rotary motion thereof and indicating means adapted to indicate the displacement of the latter which is due to the weight of the columns of gases resting upon one of said liquid levels.



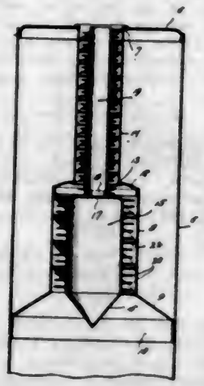
1,640,314. PROCESS OF MANUFACTURE OF ALKALI-METAL SULPHIDES. HORACE FREEMAN, Vancouver, British Columbia, Canada, assignor of one-half to Canada Carbide Company, Limited, Montreal, Canada. Filed Feb. 14, 1923. Serial No. 619,030. 21 Claims. (Cl. 23—137.)

6. The product which comprises sodium sulphide fused and associated with a sulphide of another alkali metal.

1,640,315. PROCESS OF MANUFACTURE OF ALKALI-METAL SULPHIDES. HORACE FREEMAN, Shawinigan Falls, Quebec, Canada, assignor of one-half to Canada Carbide Company, Limited, Montreal, Canada. Original application filed Feb. 14, 1923, Serial No. 619,030. Divided and this application filed June 30, 1924. Serial No. 723,135. 15 Claims. (Cl. 23—137.)

9. The product which comprises sodium sulphide fused with a sulphide of another metal which sulphide is insoluble in aqueous solutions of sodium sulphide, the sodium sulphide content of the product being upwards of 50%.

1,640,316. CLOSING BAGS. PAUL GANGLER, Esslingen, Germany, assignor to Firm: Fr. Hesser Maschinenfabrik-Aktiengesellschaft, Stuttgart-Canstatt, Germany. Original application filed Oct. 6, 1923, Serial No. 666,986, and in Germany Oct. 12, 1922. Divided and this application filed June 30, 1925. Serial No. 40,611. 8 Claims. (Cl. 93—7.)

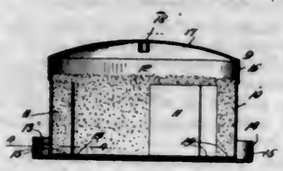


1. In a machine for closing a filled bag, a plurality of folding members arranged one above the other on either side of the empty portion of the bag, and means for successively advancing said folding members toward said empty portion so as to overlap each other and to cause said folding members to fold said empty portion in zigzag fashion.

1,640,317. STEAM BOILER. CLARENCE H. HAAS and LEWIS J. MITCHELL, Warren, Ohio. Filed Mar. 4, 1927. Serial No. 172,759. 5 Claims. (Cl. 110—97.)

1. A boiler of the class described including, in combination, a fire-box, a flue pipe extending from the fire-

box, a tube within the pipe, a drum within the fire-box, means about the drum and about the tube for causing the products of combustion to rise in a spiral path,

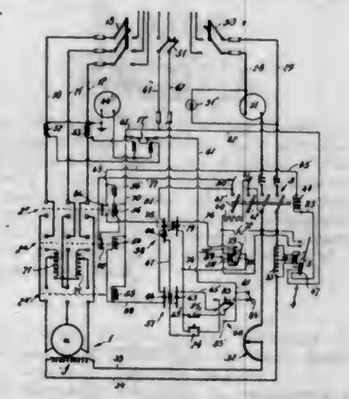


said means comprising a spirally arranged fin, and a plurality of ribs between the fins, said ribs being circumferentially disposed about the drum and tube.

1,640,318. CLEANING MATERIAL FEEDER FOR WASHING MACHINES OF THE SPRAY TYPE. NORMAN W. HALSEY, New York, N. Y., assignor to Soap Feeder Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 14, 1922. Serial No. 606,770. 8 Claims. (Cl. 141—9.)

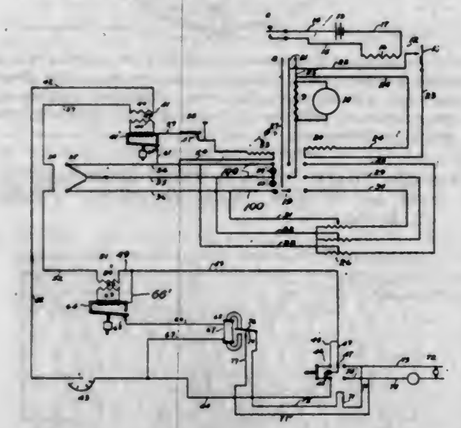
1. A cleaning material feeder for washing machines adapted to operate within a stream or shower of water, comprising a container having water shedding walls for confining powdered soluble cleaning material, said container being provided on that side upon which the water impinges with an aperture for receiving a relatively small portion of the impinging water and directing it to the material within the container to form a solution therewith and means to regulate the effective size of said aperture, said container also being provided on another side with apertures for allowing the liquid cleansing solution to escape while retaining the powdered material.

1,640,319. CLEANING MATERIAL FEEDER FOR WASHING MACHINES. NORMAN W. HALSEY, New York, N. Y., assignor to Soap Feeder Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 19, 1924. Serial No. 693,791. 6 Claims. (Cl. 141—9.)



1. A cleaning material feeder for washing machines adapted to operate within a stream or shower of water, comprising a container having water shedding walls for confining powdered soluble cleaning material, said container comprising means for feeding a portion of the water from the stream to the powdered cleaning material therein to form a solution therewith, and means for discharging a relatively small continuing charge of the solution into the stream, said feeder also comprising means for discharging a relatively large initial charge of cleaning material into said stream.

1,640,320. BUFFER FOR MOTOR VEHICLES. FRANZ HANEL, Berlin, Germany, assignor to Frita Konig & Co. Gesellschaft mit beschränkter Haftung, Magdeburg, Germany. Filed Jan. 21, 1927, Serial No. 162,550, and in Germany Dec. 2, 1926. 1 Claim. (Cl. 293—53.)

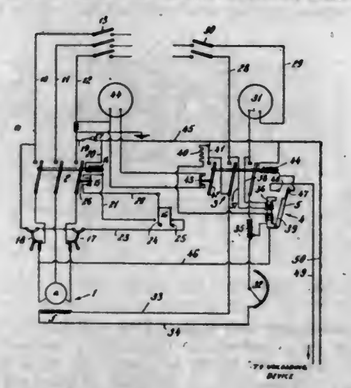


A buffer for motor vehicles of the character described, comprising two nested laminated leaf springs, the outer spring having elliptically curved breast and side portions and parallel ends for connection to the vehicle, the inner spring being bow-shaped and adapted to support the outer spring at the sides and in the center of the breast portions, the ends of the inner spring being looped back upon themselves and supported on the main spring body, and roller clamps holding the spring elements together at each supporting point so as to allow slidable relative displacement, substantially as and for the purpose set forth.

1,640,321. STARTING SYSTEM FOR SYNCHRONOUS MOTORS. CHARLES TRUMAN HIBBARD, Minneapolis, Minn., assignor to Electric Machinery Mfg. Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 19, 1924. Serial No. 726,028. 11 Claims. (Cl. 172—289.)

5. In a system of the type described, the combination of a motor having an armature winding and a field winding, an electromagnetic switch for applying reduced voltage to the armature winding, an electromagnetic switch for applying full voltage to the armature winding, automatically operating means for actuating said low voltage switch to apply reduced voltage to the armature winding, a control relay adapted to actuate said full voltage switch, a frequency relay adapted to supply current to said control relay, a resistance element normally connected in series with the field winding until the excitation current is supplied to the field winding; and means responsive to the frequency of the current induced in the motor field winding for connecting the said relay across said resistance element.

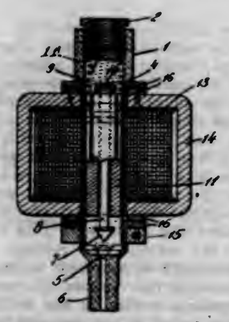
1,640,322. METHOD AND MEANS FOR STARTING SYNCHRONOUS MOTORS. CHARLES TRUMAN HIBBARD, Minneapolis, Minn., assignor, by mesne assignments, to Electric Machinery Mfg. Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 17, 1920. Serial No. 352,159. 49 Claims. (Cl. 171—118.)



19. The starting system for synchronous motors, comprising the combination with a motor of means including a switch for applying reduced voltage to the armature and means normally connected to the main field winding at all times and exclusively responsive to the induced current in the main field winding for automatically applying full voltage to the armature after the motor has attained a predetermined speed.

35. In a motor starter, the combination with a synchronous motor having a field magnet winding, and starting and running connections for said motor, of a switch controlled in accordance with the value of the current traversing said winding for controlling the circuit of said winding, a switch for effecting the transfer from starting connections to running connections and a relay having an actuating coil in circuit with said winding for controlling the second named switch.

44. The method of starting a synchronous motor comprising the application of low voltage to the motor and thereafter applying the full voltage of the supply circuit to the motor at a time when the frequency of the induced field current is a predetermined value and applying the field excitation current to the field winding at a time when the frequency of the induced field current is a predetermined value.

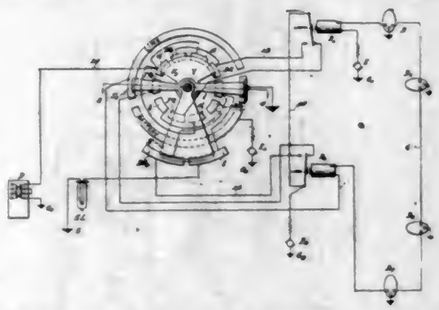


1,640,323. STARTING SYSTEM FOR SYNCHRONOUS MOTORS. CHARLES TRUMAN HIBBARD, Minneapolis, Minn., assignor to Electric Machinery Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed May 15, 1923. Serial No. 639,036. 3 Claims. (Cl. 172—289.)

1. In a system of the type described, the combination with a motor having a field winding, of a source of excitation for the field winding, a switch for supplying excitation current to the field winding of the motor, a polarised frequency relay for operating said switch, an ammeter for measuring the current supplied to the motor armature, and a resistance connected into the field circuit

of the motor, said switch having an arm arranged to short circuit said ammeter when said switch is open and to open the circuit of the resistance in the field circuit when said switch is closed.

1,640,324. ELECTRICALLY-OPERATED VALVE. CHARLES TRUMAN HIBBARD, Minneapolis, Minn., assignor to Electric Machinery Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 14, 1924. Serial No. 699,171. 15 Claims. (Cl. 137—139.)

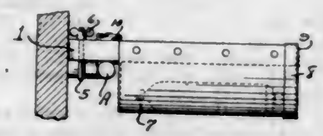


1. A device of the type described, comprising the combination of an electric motor, a valve for controlling the load on the motor, and means responsive to an electric current induced in the field winding of the motor for actuating said valve.

1,640,325. MESSENGER-CALL CIRCUITS AND SWITCHING APPARATUS THEREFOR. GEORGE W. JANSON, Nutley, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 26, 1925. Serial No. 58,911. 4 Claims. (Cl. 177—367.)

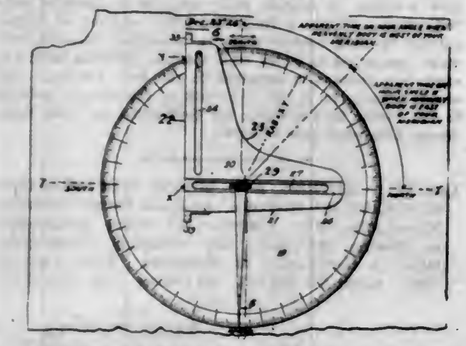
1. In a signaling system having outgoing and return lines forming a closed circuit containing a plurality of signal transmitting devices having contact mechanism for controlling the circuit and also for connecting it to ground, a current source having one terminal normally connected to ground and the other terminal connected to one side of said circuit, relays including in opposite sides of said circuit, signaling devices controlled respectively by said relays, and a unitary switch device having a plurality of segments connected to the front and back

contacts of said relays, to the grounded end of the line and to said signaling devices, and provided with a rotary shaft and blades movable thereby to different positions



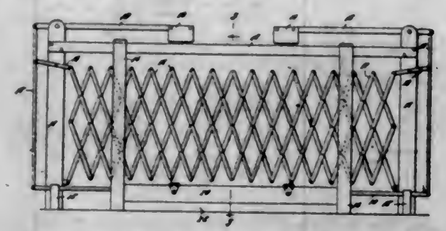
to interconnect said segments in a manner to cause the signals from said signal transmitting devices to be received, when the line is in normal condition or is open, or open and grounded, or grounded, or grounded and open.

1,640,326. STANDING BOARD. CARL VICTOR JONASSON and HARRY JOHN BOAL, Portland, Oreg. Filed Nov. 22, 1922. Serial No. 602,555. 1 Claim. (Cl. 248—41.)



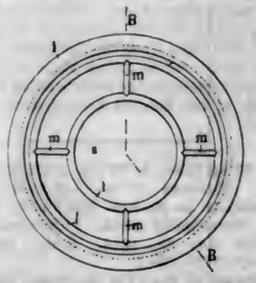
As a new article of manufacture, a standing board adapted to be supported on a floor comprising a board of an area large enough to permit a person standing thereon to walk in various directions thereon and formed with recesses on its under face at the corners thereof, a plurality of foot members, each formed with a recess in its upper face, said foot members being adapted to rest loosely on a floor, and springs each having its ends in a recess of the board and in a recess of a foot member, the diameter of the recesses being such with respect to the size of the springs that the springs will engage the walls of the recesses and be securely held therein by the expansion of the springs, the recesses being of such a diameter and depth with respect to the springs that the latter are held in the recesses by friction, said springs and foot members serving as legs for the board adapted to be readily applied to and removed from the board and when removed to be disconnected from each other.

1,640,327. TUBE-REPAIRING ATTACHMENT FOR AUTOMOBILES. ELLIS R. JUSTICE, Charlotte, N. C. Filed Mar. 22, 1927. Serial No. 177,352. 5 Claims. (Cl. 152—27.)



3. A device of the class described comprising a shelf forming member, means for detachably connecting said member with a door handle or other part of an automobile, a casing connected with said member and a cover for the casing having a roughened part for use in buffing a tube and a rounded flange for use in rolling a patch on a tube.

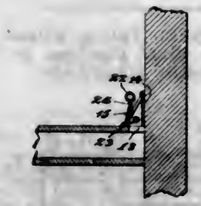
1,640,328. NAUTICAL INSTRUMENT. GEORGE KOVARSKY, New Orleans, La. Filed Jan. 8, 1924. Serial No. 685,031. 8 Claims. (Cl. 33—75.)



1. A nautical instrument comprising in combination, a board, a substantially triangular member, means for pivotally and slidably mounting said triangular member on the surface of said board, and a pointer pivotally carried by said means.

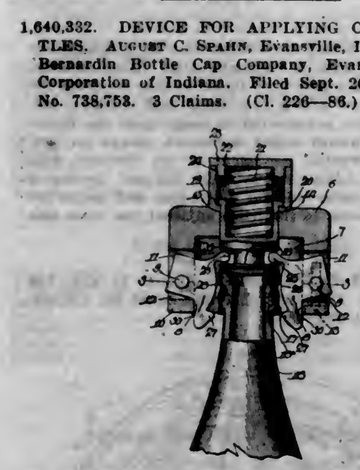
1,640,329. GATE. RUDOLPH KYPES, Locust Ridge, La. Filed Apr. 19, 1926. Serial No. 103,120. 1 Claim. (Cl. 30—50.)

A gate structure comprising pivotally mounted lazy tong gates, posts, rock levers mounted upon the posts and connected with the lazy tong gates, an operating beam extending longitudinally of the gates, inclines leading to and hingedly mounted upon the operating beam, shafts connecting the free ends of the beam and rock shafts, and weight bars eccentrically mounted upon the upper ends of the posts and connected with the shafts to facilitate an automatic closing mechanism for the gates subsequent to the passing of the vehicle therethrough.



1,640,330. DIAPHRAGM FOR TELEPHONIC APPARATUS. GEORGES LAKHOVSKY, Paris, France. Filed June 5, 1924, Serial No. 718,127, and in France June 14, 1923. 3 Claims. (Cl. 181—32.)

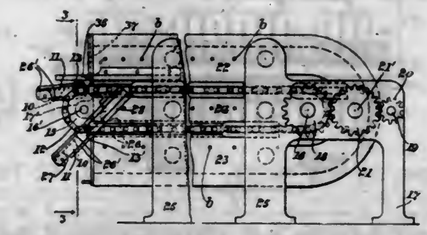
1. A diaphragm for sound sending and receiving apparatus formed of two thin discs provided with registering



grooves, and a layer of viscous material interposed between the discs whereby the diaphragm is absolutely without tone.

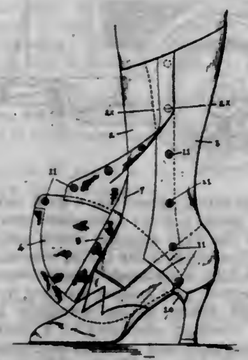
1,640,331. HEATING AND VENTILATING DEVICE. SAMUEL R. LEWIS, Chicago, Ill. Filed Aug. 20, 1925. Serial No. 51,432. 6 Claims. (Cl. 257—135.)

1. A heating device comprising a grille having a rear wall, a front wall inclined towards the rear wall and of less height than the rear wall, end walls connecting the front and rear walls, the upper and lower ends of the grille being open, bars connecting the upper edges of the front wall with the rear wall, and inclined at an angle to the horizontal, a supply pipe carrying a heating medium, means for securing the supply pipe to the upper edge of the front wall, and a return pipe for the heating medium disposed between the front and rear walls of the grille.



1,640,332. DEVICE FOR APPLYING CAPS TO BOTTLES. AUGUST C. SPAHN, Evansville, Ind., assignor to Bernardin Bottle Cap Company, Evansville, Ind., a Corporation of Indiana. Filed Sept. 20, 1924. Serial No. 738,753. 3 Claims. (Cl. 226—86.)

1. In a device for applying closure caps to bottles, the combination of a head provided with a chamber therein, a series of cap bending members pivoted in the head and provided with arms and bending fingers, and a plunger movable in the head and adapted to be engaged by the bottle cap and to which the arms are operatively connected, said members being provided at their inner margins with curved guide-surfaces for the bottle and cap which extend between the arms and the fingers and are disposed beneath the plunger.

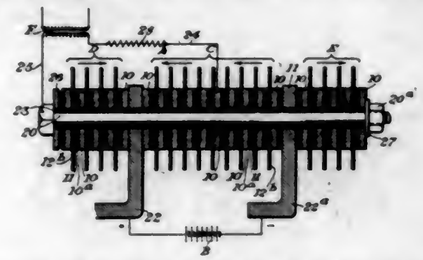


1,640,333. BAKER'S OVEN. CAMPBELL BROWN, Belfast, Ireland. Filed Aug. 31, 1926, Serial No. 132,810, and in Great Britain Aug. 4, 1925. 12 Claims. (Cl. 107—57.)

6. A baker's oven comprising a casing including slotted side walls formed to provide guideways, carrying members adapted for travel in a circuitous path in the oven, blocks co-operating with the guideways and connected to the carrying members to guide the latter in their movement through the oven, chains operating longitudinally of and immediately beyond the oven, each of said blocks being pivotally connected at one end to the chains, means arranged at one end of the oven for maintaining the carrying members in their horizontal position in movement from one portion of the circuitous path to another, the

path of travel of the chains being extended beyond the opposite end of the oven to thereby move the blocks free of the guideways to permit said blocks and thereby the carrying members to be inclined to discharge the material on the carrying members, and means for thereafter restoring the carrying members to their horizontal positions.

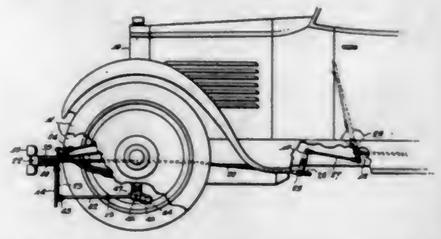
1,640,334. SHOE AND STOCKING PROTECTOR. FLORA A. COLBURN, Rochester, N. Y. Filed Oct. 26, 1926. Serial No. 144,362. 1 Claim. (Cl. 36—2.)



A shoe and stocking protector comprising a wide vertical section, a pair of narrow vertical sections fastened to said wide section one at each side thereof, an end section attached jointly to the bottom of said wide section and the first of said narrow sections, a strap permanently connecting the lower end of said wide section and the lower end of the second of said narrow sections to form a fixed opening between said strap and the lower edges of said wide section and said second narrow section, fastening means adapted to fasten said pair of vertical narrow sections together on a vertical line between said strap on one side and said end section on the other side, with said strap snugly embracing the top of the heel of a shoe over which said protector is placed to hold it firmly in place thereon.

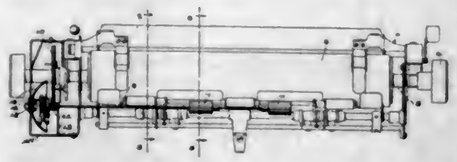
1,640,335. UNIDIRECTIONAL CURRENT-CARRYING DEVICE. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1925. Serial No. 1,111. 21 Claims. (Cl. 175—363.)

1. In combination, copper having cuprous oxide formed thereon, said combination constituting in and of itself a uni-directional current carrying device.



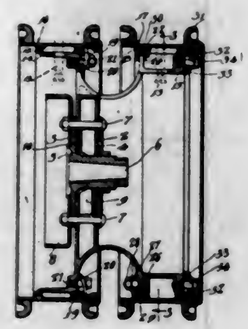
15. In a rectifying device, two dissimilar, bi-laterally conducting bodies integrally and permanently joined to

each other over an extended area, the junction between said two bodies constituting a uni-directional current valve permitting substantially free electron flow only in one



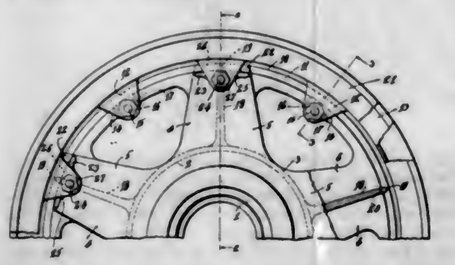
direction thereacross under substantial absence of electrolytic or chemical changes in the portions of the two bodies adjacent to said junction.

1,640,336. SAFETY APPARATUS FOR VEHICLES. JOSEPH EDWARD JUFE, New York, N. Y., assignor to Fannie Jufe, New York, N. Y. Filed Feb. 11, 1926. Serial No. 87,558. 3 Claims. (Cl. 180—83.)



1. In a vehicle safety apparatus, a fixed support in the form of a rigid plate, a front road wheel guard substantially similar to the fixed support, means associating the guard with the fixed support for sliding movement in overlapping relationship, a bumper, means supporting the bumper for movement, said bumper disposed in advance of said support and guard, means releasably holding the guard normally elevated consisting of a flexible portion embodied by said guard, and a lug on said flexible portion engageable in and disengageable from an opening in the fixed support; levers arranged respectively between portions on the bumper and an extension on said flexible portion, means acting on the levers and bumper holding the levers ready for operation and the bumper in a position from which it may move rearwardly to cause the levers to flex said flexible portion to disengage said lug to release said guard to drop to a guarding position.

1,640,337. AUTOMATIC LINE INDICATOR FOR TYPEWRITERS. GREYDON N. ALWORTH, South Milwaukee, Wis. Filed Oct. 7, 1926. Serial No. 140,171. 9 Claims. (Cl. 197—141.)



1. The combination with a typewriter carriage having paper feeding and holding means including a rotatable platen, of a shaft extending along and adjacent the platen, a roller fixed to the shaft and having teeth designed to engage and hold the lower edge of the paper, gearing for driving the shaft from and at a greater rate of speed than the platen, said gearing including normally interengaged elements automatically disengaged when the lower edge of the paper is caught, a signal, and means for actuating the signal when said elements are disengaged.

1,640,338. DUAL-TIRED TRUCK WHEEL. LLOYD D. KAY, Los Angeles, Calif. Filed Aug. 19, 1925. Serial No. 51,149. 4 Claims. (Cl. 301—36.)

1. In a truck wheel, the combination of a wheel-body having a felloe with a circumferential felloe member, a rim-seat having a groove on its inner face receiving the felloe member and fitting the same, said rim-seat consisting of sections constructed to come upon the felloe-member by an inward radial movement, means for preventing circumferential movement of the rim-seat with respect to the felloe-member, said rim-seat having a seat-face on its outer side for a tire-rim, and means for securing the tire-rim to the felloe adjacent the outer side of the wheel.

1,640,339. DUAL-TIRED WHEEL. LLOYD D. KAY, Los Angeles, Calif. Filed Sept. 1, 1926. Serial No. 133,059. 4 Claims. (Cl. 301—36.)

1. A dual-tired truck wheel having a hub portion with a plurality of spokes projecting outwardly therefrom, each of said spokes having an inboard wall near the inboard side of the wheel and an outboard wall near the outboard side of the wheel, said wheel having a circumferential rim-portion connecting the spokes and integral with the said inboard wall, said rim-portion having an inclined outer face operating as a seat for the inboard tire rim, said spokes having seats for the outboard tire rim and having transverse webs extending between the inboard and outboard walls of the spokes, operating to support and guide the inboard tire rim when being slid over the wheel onto the said rim-portion.

Patents Nos. 1,640,340 to 1,641,142.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 361—No. 5. TUESDAY, AUGUST 30, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,395,031, C. R. Birdsey, Plaster board, decided July 22, 1927, claims 1 to 4, inclusive.

Pat. 1,440,834, C. W. Logwood, Radiocommunication, decided June 11, 1927, claims 1 to 6, inclusive.

Pat. 1,556,032, H. G. Warr, Rail anchor, decided August 18, 1927, claims 1, 2, 3, 4, 5, 9, 10, 11, 12, 13, and 16.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 220,126, Dressed poultry—namely, fowls, chickens, broilers, cocks, turkeys, ducks, and geese, Josephy-Cook Corp., New York, N. Y. Registered November 2, 1926. Decided August 10, 1927.

T. M. 220,127, Dressed poultry—namely, fowls, chickens, broilers, cocks, turkeys, ducks, and geese, Josephy-Cook Corp., New York, N. Y. Registered November 2, 1926. Decided August 10, 1927.

Trade-Marks—Classification.

(Order No. 3,022.)

U. S. PATENT OFFICE, *Washington, Aug. 19, 1927.*

The classification of merchandise made under the provisions of the act of May 4, 1906, is hereby amended as follows:

The title of Class 48 is changed from "Malt beverages, extracts, and liquors" to *Malt beverages and liquors.*

Where a mark is used on a malt extract, or malt sirup, sold as an ingredient of foods, application for registration thereof should be made in Class 46, Foods and ingredients of foods.

Where a mark is used on a malt extract sold as a medicine, application for registration thereof should be made in Class 6, Chemicals, medicines, and pharmaceutical preparations.

The description of goods in any case must not be inconsistent with the specimens filed.

WM. A. KINNAN,
Acting Commissioner.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Aug. 10, 1927.*

Srinivas Ram Wagel, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Lester Kirschbraun, 100 North Wells Street, Chicago, Ill., and a patent granted August 17, 1926, No. 1,596,218, to Srinivas Ram Wagel, Vanderbilt Hotel, New York, N. Y., and a notice of such declaration sent by registered mail to said Wagel at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Wagel, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Aug. 12, 1927.*

Original Sample Cloak & Suit Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Lord & Taylor, 424 Fifth Avenue, New York, N. Y., for registration of a trade-mark, and trade-mark registered August 10, 1915, No. 105,697, to Original Sample Cloak & Suit Company, of Lyric Theatre Building, Cincinnati, Ohio, and a notice of such declaration sent by registered mail to said Original Sample Cloak & Suit Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Original Sample Cloak & Suit Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN.
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business August 19, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 68,489; Trade-Mark Division, 1,726. Oldest new case, Dec. 17, 1926; oldest amended, Dec. 17, 1926. The dates given are 1927 except where † indicates 1926.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

Ex parte McKay.

Decided July 27, 1927.

1. Application—Prosecution—Alleged Misinterpretation of References—Not New Ground of Rejection.

Where after decision by the Examiners in Chief affirming the Examiner requests for reconsideration were filed including affidavits purporting to show misinterpretation of the references which requests were denied, *Held* no new ground of rejection was given by the Examiners in Chief and the record constitutes no ground for remanding the application to the Examiner for further prosecution.

2. Same—Same—Affirmance of Rejection by Examiners in Chief—Remedy by Appeal.

Where claims have been repeatedly considered and applicant has had ample opportunity to present and have considered such claims as he desired, his remedy, after affirmance of the rejection by appellate tribunal, is by such appeal as provided by statute.

On petition.

External medicine for pneumonia, etc.

Mr. Victor J. Evans for the applicant.

Kinnan, *Acting Commissioner:*

Applicant petitions that the above entitled case be remanded to the Primary Examiner for further consideration under rule 139.

The records show that this case was finally rejected and an appeal taken to the Examiners in Chief, who rendered a decision affirming the action of the Examiner. The attorney then filed three successive persistent requests for reconsideration, raising various technical objections. The Examiners in Chief gave consideration to these requests and entered successive decisions.

The Examiners in Chief relied upon the references cited by the Examiner and no others. The Examiners in Chief agreed with the Examiner that the claims are not patentable over these references. Applicant thereafter filed certain affidavits which purported to establish that the Examiners in Chief misinterpreted the references. That, however, is not a new ground of rejection, nor does it warrant remanding the case to the Primary Examiner under rule 139. If applicant is of the opinion that the Examiners in Chief did not properly construe the references, his remedy is not by petition to remand, or by affidavits, but by appeal.

A mere reading of the decision of the Examiners in Chief is convincing that no case is presented here that would call for remanding the case to the Primary Examiner for further consideration. The great amount of work before this Office justifies and necessitates the holding that where claims of an application have been repeatedly considered by such tribunals of this Office as have been properly required to review them, and applicant has had ample opportunity to present and have considered any and all claims he desired, and such tribunals have been unable to find merit in the claims presented to them the proper procedure is not a remanding of the case to the Examiner or any other tribunal that has already considered it for a further review, but is by way of appeal as provided by statute.

The petition is denied.

Ex parte Parks and Miller.

Decided August 17, 1927.

"Renewal" Application—Fee.

The fee for filing a "renewal" application is the same as that for filing an "original" application, namely, under the recent amendment to the statute, $20 plus $1 for each claim in excess of 20.

On petition.

Messrs. Barnett & Truman for the applicants.

Kinnan, *Acting Commissioner:*

This is a petition from the requirement for an additional fee in a "renewal" application having more than 20 claims.

This application was allowed on October 23, 1926, and, as allowed, contained 43 claims. On July 28, 1927, the applicants, through their attorneys, filed a petition for renewal, accompanied by an amendment increasing the number of claims to 54 and a fee of $20. Applicants were notified by the Office that this renewal could not be given a filing date until an additional fee of $34—i. e., $1 for each claim in excess of 20, was paid.

It is contended that there is no authority for charging this additional fee, and it is requested that the application be accepted with the fee of $20.

In support of this argument it is contended that the recent amendment to section 4934, Revised Statutes, contained in the act of February 14, 1927, makes no reference to a fee for renewal applications, but provides only that the fee for filing "each *orginal* application for a patent, except in design cases," shall be "$20 and $1 for each claim in excess of 20." Reference is made to certain decisions as supporting the contention that a renewal application is not an "original" application.

The act of 1870, section 35, provides that where an application has been allowed, but the fee not paid within six months thereafter anyone who has an interest in the invention, either as an inventor or assignee, "shall have a right to make *an application* for patent for such invention or discovery the same as in the case of an original application." The language was carried forward into section 4897 of the Revised Statutes. Both the act of 1870 and section 4897 contain the further provision that "such *second* application" must be made within two years from the original notice of allowance.

Section 68 of the act of 1870, which was carried forward in section 4894 of the Revised Statutes, makes no reference to renewal applications, but fixed the fee for "filing each original application

for a patent" at $15. This fee was, by subsequent amendments, changed to $20, and then to $20 plus $1 for each claim over 20.

The uniform practice of the Office has always been to require a fee for a renewal application just as for any other application. It may be noted at this point that the statute makes no reference to a renewal application as such, but refers to the right of the party having an interest in the invention to make "an application" the same "as in the case of an original application" and further provides that the "*second* application" shall be made within two years of the notice of allowance. In the edition of the rules effective January 1, 1880, it was specifically provided that a fee will required with a renewal application. Rule 170 of that edition, after providing that the oath, petition, specification, and the drawing of the original application could be used in a renewal application, continued "but a new fee will be required." The recent amendment to the statute makes no change with respect to original applications except to change the amount of the fee.

Applicants admit that some fee is proper and argue that fee is $20 under the statute in force prior to the recent amendment. Obviously if some fee is required for "renewal" applications it is the fee which is required for "original" applications. Certainly the mere fact that Congress amended the law by changing the fee for original applications affords no ground for argument that it was intended either to dispense with all fees on "renewal" applications or to permit them to be filed with the fee which had been required with respect to original applications since the amendment of 1922. It would have been just as logical to have argued, after the fee for original applications was changed from $15 to $20, that a renewal application could be filed for $15.

The proper construction is believed to be that the term "original" in the statute is used only in contradistinction to reissue applications, and that the so-called renewal application is the "application" or the "second application" referred to in section 4897, Revised Statutes, and therefore the filing of such "second" application must necessarily be governed as to its fees by the statute which refers to original applications.

Certainly the long-established practice of this Office, continuing for over 60 years, in interpreting the statutes as to the requirement of fees for renewal applications is not to be set aside merely because Congress has seen fit to increase the filing fee.

In the decisions cited the courts were considering the question of the legal effect of the renewal application in so far as constituting a continuation of the prosecution of the application for patent on the invention of the forfeited application, and they are deemed to furnish no basis for changing the established practice of this Office that the fee for filing a "renewal" application is the same as the fee for filing an "original" application.

The petition is denied.

Court of Appeals of the District of Columbia.

NAAMLOOZE VENNOOTSCHAP LAKVERF & VERNISFABRIEK "IVORMICA" *v.* THE SHERWIN-WILLIAMS COMPANY.

No. 4,871. Decided March 7, 1927.

TRADE MARKS—SIMILARITY—REPRESENTATIONS OF THE GLOBE TO WHICH PAINT IS BEING APPLIED.

Where each of two marks applied to the same class of goods consists of the representation of the globe to which paint is being applied and they differ only in the manner of application of the paint, *Held* that registration was properly refused to the later user since an ocular inspection shows that the marks are deceptively similar.

APPEAL from the Patent Office. Affirmed.

Mr. James T. Newton for Naamlooze Vennootschap Lakverf & Vernisfabriek "Ivormica".

Mr. J. B. Fay for The Sherwin-Williams Co.

Before MARTIN, Chief Justice, ROBB, Justice, and GRAHAM, Presiding Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from concurrent decisions of the Patent Office tribunals, in a trade-mark opposition proceeding, sustaining the opposition and denying registration to appellant.

Many years prior to the adoption and use of its mark by the applicant, the opposer, The Sherwin-Williams Company, adopted a mark consisting of a terrestial globe and a representation of a tilted paint can discharging its contents over the upper half of the globe. The phrase "Cover The Earth" has been used by the opposer, in connection with its pictorial device. A very large business has been built up by the opposer and the mark has great value.

Applicant's mark is applied to goods of the same class. It also uses a representation of the globe, to which paint is being applied in a manner somewhat different from that employed in the Sherwin-Williams mark, but an ocular inspection of the two marks discloses that they are deceptively similar. The decision therefore is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

THE UNITED STATES, EX REL. SEARL, *v.* ROBERTSON, COMMISSIONER OF PATENTS.

No. 4,561. Decided April 4, 1927.

1. MANDAMUS—WHEN NOT GRANTED.

It is settled law that the writ of mandamus can not be used to perform the office of an appeal or writ of error, or be granted in any case where there is another adequate remedy.

2. SAME—SETTING TIMES FOR REBUTTAL TESTIMONY.

Where the Commissioner affirmed the action of the Examiner of Interferences denying a motion to fix a time to take rebuttal testimony, *Held* that mandamus will not lie to control the action of the Commissioner, since the question can be reviewed if appeal is taken to the Court of Appeals on the question of priority.

APPEAL from the Supreme Court of the District of Columbia. Affirmed.

Mr. H. A. Toulmin, *Mr. H. A. Toulmin, jr.*, and *Mr. Morgan H. Beach* for Searl.

Mr. T. A. Hostetler and *Mr. A. D. Salinger* for Commissioner of Patents.

Before MARTIN, Chief Justice, ROBB, Justice, and GRAHAM, Presiding Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

This is an appeal from a judgment in the Supreme Court of the District denying appellant's petition for a writ of mandamus to compel the Commissioner of Patents to fix a time for the taking of so-called rebuttal testimony in two interference proceedings (Searl against Thomas, No. 49,507, and Iredale against Searl and Lucas, No. 51,762), the case having been heard on the pleadings.

In the above interferences Searl was the junior party. In accordance with rules of the Office, Searl took his testimony in chief, Thomas and Lucas then took their testimony in chief and their rebuttal testimony, thereupon Searl took his rebuttal testimony. Thereafter, Searl moved for leave to introduce "newly discovered" prima facie testimony. The Commissioner, in the exercise of his discretion, directed the lower tribunals to admit this testimony. Thomas and Lucas were given an opportunity to introduce testimony in rebuttal of this additional testimony of Searl. After this rebuttal testimony had been taken, Searl requested an opportunity to take testimony to meet this rebuttal testimony. That request was denied, and this petition for mandamus followed.

It is settled law that the writ of mandamus can not be used to perform the office of an appeal or writ of error, or be granted in any case where there is another adequate remedy. In Moore against United States ex relatione Lindmark, 33 App. D. C. 597, we ruled that mandamus would not lie at the instance of one of the parties to an interference proceeding to compel the Commissioner of Patents to fix a time for the taking of testimony in an interference proceeding. There was an adequate remedy by appeal to this Court. The same situation obtains here. If the decision in the Patent Office on the question of priority is adverse to Searl he has his appeal to this Court, where the very question he attempts to raise in this mandamus proceeding may be passed upon. It follows that the judgement was right and is therefore affirmed with costs.

Affirmed.

Disclaimers.

1,411,231.—*Morris L. Weiss*, Brooklyn, N. Y. VULCANIZATION ACCELERATOR. Patent dated March 28, 1922. Disclaimer filed August 9, 1927, by the assignee, *Dovan Chemical Corporation*, patentee assenting.

Hereby disclaims from the scope of any of the claims of said Letters Patent all di-substituted guanidines except the one shown in the illustrative formula of said patent, and except di-substituted guanidines wherein one or more of the hydrogen atoms of either or both of the phenyl (C_6H_5) groups in said illustrative formula may be substituted by a hydrocarbon radical.

1,537,044.—*George Herbert Gibson*, Montclair, N. J. FLOW-PROPORTIONING APPARATUS. Patent dated May 5, 1925. Disclaimer filed August 5, 1927, by the patentee.

Therefore enters this disclaimer to methods of and apparatus for regulating or controlling combustion in a furnace as specified in claims 22, 23, 27, 28, 29, 30, 31, 32, 33, 35, 36, 37, 38, 52, and 53 of said Letters Patent except methods and apparatus wherein the volume of draft through the furnace is controlled by a draft-regulating adjustment, the extent of which is determined by the volume of draft as distinguished, for example, from adjustments of a draft regulating device to previously calibrated positions as disclosed in the Wilkinson Patent No. 1,093,161.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 30, 1927.

[VOL. 361. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

RAW OR PARTLY-PREPARED MATERIALS.

Ser. No. 233,761. BLANCHARD BRO. & LANE, Newark, N. J. Filed June 26, 1926.

VELVEAU

Particular description of goods.—Automobile, Carriage, and Furniture Leather.
Claims use since Apr. 21, 1926.

Ser. No. 242,169. E. W. COLLEDGE GENERAL SALES AGENT, INC., Jacksonville, Fla. Filed Dec. 30, 1926.

PIGMENTAR

Particular description of goods.—Pine Tar.
Claims use since June, 1926.

CLASS 2.

RECEPTACLES.

Ser. No. 241,187. SEXTON CAN COMPANY INCORPORATED, Everett and Boston, Mass. Filed Dec. 8, 1926.

AJAX

Particular description of goods.—Ash Cans, Garbage Receivers, and Storage Tanks for Oils, Gasoline, and Other Liquids.
Claims use since on or about Nov. 1, 1906.

Ser. No. 241,687. MARTHA W. AHLES, doing business as Tuck-A-Way Mfg. Co. (not inc.), Chicago, Ill. Filed Dec. 20, 1926.

"TUCK-A-WAY"

Particular description of goods.—Collapsible Cabinets Made of Cloth and Light Wood or Light Metal Shells.
Claims use since Dec. 4, 1926.

Ser. No. 246,631. THE REPUBLIC METALWARE CO., Buffalo, N. Y. Filed Mar. 30, 1927.

STEPON

Particular description of goods.—Garbage and Refuse Cans Made of Metal.
Claims use since Jan. 4, 1927.

Ser. No. 250,440. CHASE BAG CO., New York, N. Y. Filed June 13, 1927.

CHASE BAG CO.
SAXOLIN
PRODUCTS.

No claim is made to the words "Chase Bag Co." and "Products" apart from the mark as shown.

Particular description of goods.—Bags, Sacks, Containers, or Fabrics for Wrapping or Lining Packages, or Containers Composed of Paper, Paper Textile, Cotton, Jute, or Combinations of Cotton and/or Jute and Paper.

Claims use since May 1, 1927.

Ser. No. 251,692. STAR CORRUGATED BOX CO., INC., Maspeth, N. Y. Filed July 5, 1927.

Old Ironsides

Particular description of goods.—Paper and Corrugated Fiber Boxes.

Claims use since July 1, 1927.

Ser. No. 252,164. NEW YORK MERCHANDISE COMPANY, New York, N. Y. Filed July 16, 1927.

Particular description of goods.—Vacuum Bottles.

Claims use since May 27, 1927.

CLASS 3.

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.

Ser. No. 251,930. URBAND LEATHER GOODS CO. INC., New York, N. Y. Filed July 12, 1927.

BRIEF-O-NITE

Particular description of goods.—Brief Bags.

Claims use since about May 25, 1927.

CLASS 4.

ABRASIVE, DETERGENT, AND POLISHING MATERIALS.

Ser. No. 215,977. THE J. B. FORD COMPANY, Wyandotte, Mich. Filed June 18, 1925.

WYANDOTTE

Particular description of goods.—Cleaning and Cleansing Materials Comprising Dry Soluble Alkali Powders, Combinations and Mixtures Thereof, for Cleaning, Cleansing, Scrubbing, Scouring, and Washing, for Household, Laundry, Factory, and Other General Cleaning Purposes; Soap Powders, Burnishing Powder, Platers' Powder, Rustproof Metal Cleaner, Aluminum Cleaner, Electro Cleaner—Namely, Compounds of Alkalies Used for Removing Oils and Greases From Metals Before Plating; Metal Cleaners, Fruit Canners' Cleaner, Detergent for General and Industrial Cleaning and Cleansing Marble, Tile, etc.; Special and Modified Alkali Cleaner and Cleanser for Use in Creameries, Laundries, and General Cleaning; and Commercial and Modified Soda Ash Prepared for Washing, Cleaning, and Detergence.

Claims use since May 13, 1899.

CLASS 5.

ADHESIVES.

Ser. No. 251,524. J. A. WEBB BELTING COMPANY, INC., Buffalo, N. Y. Filed July 5, 1927.

Spider Webb

Particular description of goods.—Leather Belt Cement Both General and Waterproof.

Claims use since Aug. 20, 1926.

CLASS 6.

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.

Ser. No. 236,637. JOHN PETER CONNORS, doing business as Opportunity Products Company, Butte, Mont. Filed Aug. 30, 1926.

No claim is made to the words "Gives Proper Blend," "Smoother Taste," "Greater Body," or to the word "Powder" or for the representation of the envelope or container apart from the mark shown in the drawing.

Particular description of goods.—Compound Containing Charcoal and Extract of Celery Seed for Aging and Purifying Beverages.

Claims use since May 25, 1926.

Ser. No. 243,318. LEO MILLER, doing business as The Lion Home Remedy Co. of New York City, New York, N. Y. Filed Jan. 25, 1927.

Particular description of goods.—Lotion for Soothing, Healing, and Relieving Tired and Aching Feet.

Claims use since Jan. 15, 1927.

Ser. No. 247,038. PARK & TILFORD, New York, N. Y. Filed Apr. 6, 1927.

Tintex

Particular description of goods.—Dyes for Use in Cold Water.

Claims use since May, 1915.

Ser. No. 247,231. THE WILLIAM A. WEBSTER COMPANY, Memphis, Tenn. Filed Apr. 9, 1927.

BOROLINE

Particular description of goods.—Face and Hand Lotions, Eye Lotions, After-Shaving Lotions, Dental Creams, Antiseptic Mouth Washes and Gargles, Deodorants, and Antiseptic Solutions.

Claims use since 1909.

Ser. No. 247,403. ALBERT DIAMOND, Chicago, Ill. Filed Apr. 13, 1927.

DANDRO SALVE

The word "Salve" is disclaimed apart from the mark shown on the drawing.

Particular description of goods.—Dandruff Salve.

Claims use since Apr. 7, 1927.

Ser. No. 247,592. FIRMIN BEDARD, doing business as Gold Thread Syrup Compound Manufacturing Co., New Bedford, Mass. Filed Apr. 18, 1927.

The portrait appearing on the drawing is that of the applicant; the words "Syrup Compound" appearing also on the drawing are descriptive and are hereby disclaimed.

Particular description of goods.—Medicinal Preparation for Sick Headache, Dizziness, Indigestion, Coated Tongue, Bad Taste in Mouth, Heartburn, Ulcer of Stomach, Change of Life, Croup, Coughs, Rheumatism, Kidney Diseases, Pain in Back or Side, Catarrh, Itching, Pimples, Poor Blood.

Claims use since June 30, 1906.

Ser. No. 248,917. THE WM. S. MERRELL COMPANY, Cincinnati, Ohio. Filed May 12, 1927.

IMPASTO

Particular description of goods.—Detoxifying Agent for Oral Prophylaxis, for Treatment of Infections of the Mouth, for Use as a Dentifrice, and for Other Application to the Human Body.
Claims use since May 3, 1927.

Ser. No. 249,263. JAMES B. CARR, Chelmsford, Mass. Filed May 20, 1927.

FRANKLIN BLEACHING FLUID

The picture appearing in the drawing is a pen and ink representation of a portrait of Benjamin Franklin, an American patriot, writer, and diplomat. The term "bleaching fluid" is disclaimed apart from the other features of the mark shown in the drawing.
Particular description of goods.—Bleaches and Bluing.
Claims use since Nov. 1, 1925.

Ser. No. 249,280. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed May 20, 1927.

OPTILEN

Particular description of goods.—A Preparation Made From the Lenses of the Eyes of Edible Animals. It is to be Used in the Treatment of Cataract.
Claims use since Apr. 16, 1927.

Ser. No. 249,701. FOSTER H. BRANDHORST, St. Paul, Minn. Filed May 28, 1927.

Allo-mint

No claim is made to the word "Mint" apart from the mark shown on the drawing.
Particular description of goods.—Medicine for the Relief of Colds and Pain.
Claims use since Mar. 1, 1927.

Ser. No. 249,850. GULF SUPPLY CORPORATION, INC., New Orleans, La. Filed June 1, 1927.

May Jean

Particular description of goods.—Toilet Preparations—Namely, Egyptian Henna, Quinine Bay Rum, Face Lotions, Hair Tonics, Toilet Water, Hair-Waving Fluid, Hair Whitener, Cuticle Oil, Glycerine, Olive Shampoo, Nail Gloss, Ammonia, Face Powder; a Preparation for Removing Nail Gloss; Brilliantine; a Preparation for Usage Upon the Hair in Forming Curls; Shampoo Pastes, Refined Petrolatum, Almond-Meal Compound, Talcum Powder, Quinine Hair Pomade, Hair Oil, Mineral Oil, Bay Rum, Henna Shampoo, and White Henna Bleach.
Claims use since April, 1926.

Ser. No. 249,986. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed June 3, 1927.

BUFFALO

Particular description of goods.—Dyestuffs.
Claims use since January, 1887.

Ser. No. 250,361. NIACET CHEMICALS CORPORATION, Niagara Falls and New York, N. Y. Filed June 15, 1927.

Particular description of goods.—Acetaldehyde, Paraldehyde, Aldol, Crotonaldehyde, Acetic Acid.
Claims use since May 24, 1927.

Ser. No. 250,641. EDWIN M. ROSENBLUTH, doing business as Chemical Products Division of Rose Manufacturing Company, Philadelphia, Pa. Filed June 16, 1927.

TEROGEN

Particular description of goods.—Fungicides and Insecticides.
Claims use since Oct. 1, 1924.

Ser. No. 250,642. EDWIN M. ROSENBLUTH, doing business as Chemical Products Division of Rose Manufacturing Company, Philadelphia, Pa. Filed June 16, 1927.

INSECTROGEN

Particular description of goods.—Fungicides and Insecticides.
Claims use since Jan. 10, 1925.

Ser. No. 250,643. EDWIN M. ROSENBLUTH, doing business as Chemical Products Division of Rose Manufacturing Company, Philadelphia, Pa. Filed June 16, 1927.

APHISTROGEN

Particular description of goods.—Fungicides and Insecticides.
Claims use since Mar. 1, 1925.

Ser. No. 250,798. IRVING I. HELFGOTT, doing business as Lion Laboratories, Newark, N. J. Filed June 20, 1927.

No claim is made to the word "Tonic."
Particular description of goods.—A Reconstructive or General-Debility Tonic.
Claims use since June 1, 1925.

Ser. No. 250,998. LANMAN & KEMP, INC., New York, N. Y. Filed June 23, 1927.

Cleerface

Particular description of goods.—Face Cream.
Claims use since June 8, 1926.

Ser. No. 251,084. ISHBEL STEWART ROBERTSON, doing business as Ishbel Products, Los Angeles, Calif. Filed June 24, 1927.

ISHBEL

Particular description of goods.—A Hair Dressing and Rejuvenator.
Claims use since Jan. 5, 1925.

Ser. No. 251,109. FRANCES C. AXTELL, Bellingham, Wash. Filed June 25, 1927.

DR. AXTELL'S PILLS

W. H. Axtell

The name "W. H. Axtell" is a facsimile of Dr. Axtell's signature. The word "Pills" as shown in the drawing is disclaimed apart from the mark.
Particular description of goods.—Pills for Constipation.
Claims use since June 18, 1927.

Ser. No. 251,157. ZAL LABORATORIES, INC., New York, N. Y. Filed June 25, 1927.

Particular description of goods.—Depilatory Preparations.
Claims use since May 20, 1926.

Ser. No. 251,200. PARKE, DAVIS & CO., Detroit, Mich. Filed June 27, 1927.

NEMA

Particular description of goods.—Tetrachlorethylene.
Claims use since about June 8, 1927.

Ser. No. 251,202. PLOUGH CHEMICAL COMPANY, doing business as The St. Joseph Company, Memphis, Tenn. Filed June 27, 1927.

St. Joseph's Pure ASPIRIN

No claim is made to the words "Pure Aspirin" except in association with the other features of the mark as shown.

Particular description of goods.—A Medicinal Preparation—Namely, Aspirin.

Claims use since about Apr. 22, 1926.

Ser. No. 251,354. RAYNOR MEAD, doing business as Bis-Mint Co., New York, N. Y. Filed June 30, 1927.

BIS-MINT

Consisting of the word "Bis-Mint," no claim being made to the exclusive use of the word "Mint," without, however, waiving the common-law right to the use of the same in connection with the word "Bis" to form the complete mark.

Particular description of goods.—A Treatment for Indigestion.

Claims use since Apr. 1, 1926.

Ser. No. 251,432. CHLORO CHEMICAL CORPORATION, Dover, Del. Filed July 2, 1927.

Particular description of goods.—Healing Antiseptic Ointments and Liquids for the Relief of Skin Eruptions, Abrasions, Inflammations, Burns and Sunburn, Insect Bites, Head Colds, Hay Fever, Frost Bite, Sore Breasts, Sore Feet, Cuts, Wounds, Sore Throat, Tonsilitis, Laryngitis, and Cold and Fever Sores.

Claims use since Feb. 14, 1925.

Ser. No. 251,464. THE VALENTINE CHEMICAL CO., Boston, Mass. Filed July 2, 1927.

E-Zum

Particular description of goods.—Spray for Exterminating Insects on Livestock and for Disinfecting and Deodorizing Stalls and Pens of Animals.

Claims use since Apr. 23, 1927.

Ser. No. 251,466. THE VALENTINE CHEMICAL CO., Boston, Mass. Filed July 2, 1927.

SPRINK

Particular description of goods.—Deodorant and Purifier.

Claims use since Apr. 23, 1927.

Ser. No. 251,467. THE VALENTINE CHEMICAL CO., Boston, Mass. Filed July 2, 1927.

FYX-EM

Particular description of goods.—Insecticide for Destroying Flies, Mosquitoes, Moths, Ants, Bedbugs, Water Bugs, Roaches, Lice, and Fleas.

Claims use since Apr. 23, 1927.

Ser. No. 251,614. THE GLADIATOR CO., INC., New York, N. Y. Filed July 7, 1927.

Kolorzit

The lining on the drawing is intended for shading purposes and not to designate color.

Particular description of goods.—Preparation for Restoring Gray or Faded Hair to Its Natural Color.

Claims use since Oct. 27, 1926.

Ser. No. 251,632. BERTA M. SADTLER, doing business as Betty Warner Products Co., Chicago, Ill. Filed July 7, 1927.

BEAUTI-SHEEN

Particular description of goods.—Hair Rinse.

Claims use since June 1, 1927.

Ser. No. 251,670. HYNSON, WESTCOTT & DUNNING, Baltimore, Md. Filed July 8, 1927.

CALCICARB

Particular description of goods.—Antacids.

Claims use since about December, 1926.

Ser. No. 251,801. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed July 9, 1927.

Kerolysin

Particular description of goods.—Ointment for the Treatment of Skin Diseases.

Claims use since May 27, 1927.

Ser. No. 251,933. CHAS. A. STEVENS & BROS., Chicago, Ill. Filed July 12, 1927.

durante el invierno

Particular description of goods.—Perfumes.

Claims use since June 24, 1927.

Ser. No. 251,934. CHAS. A. STEVENS & BROS., Chicago, Ill. Filed July 12, 1927.

para el otono

Particular description of goods.—Perfumes.

Claims use since June 24, 1927.

Ser. No. 251,935. CHAS. A. STEVENS & BROS., Chicago, Ill. Filed July 12, 1927.

en el verano

Particular description of goods.—Perfumes.

Claims use since June 24, 1927.

Ser. No. 251,944. WILLIAM H. BAKER, doing business as Wa-Hoo Remedy Co., Independence, Mo. Filed July 13, 1927.

Wa-Hoo

Particular description of goods.—Blood and Nerve Tonic.

Claims use since June 1, 1899.

Ser. No. 251,967. ETTA HIXSON, doing business as Cactus Remedy Co., Kansas City, Mo. Filed July 13, 1927.

Mystic

Particular description of goods.—Antiseptic Deodorising Powder for the Feet and an Aid in Allaying Burning and Itching, In Checking Excessive Perspiration and Easing the Pains of Corns, Calli, Bunions, and Helping to Keep the Feet and Shoes Cool and Sanitary.

Claims use since June 9, 1927.

Ser. No. 252,021. VAN PELT & BROWN, Richmond, Va. Filed July 13, 1927.

OXY-PHOS

Particular description of goods.—Medicine in Liquid Form for Use as a Laxative.

Claims use since Feb. 1, 1927.

Ser. No. 252,027. JAMES E. BELL, doing business as "J. B." Products Co., La Porte, Ind. Filed July 14, 1927.

WIN

Particular description of goods.—Water Softener.

Claims use since June, 1926.

Ser. No. 252,034. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed July 14, 1927.

Snow Flake

Particular description of goods.—Laundry Starch.

Claims use since about 1878.

Ser. No. 252,086. THE BUERGER BROTHERS SUPPLY COMPANY, Denver, Colo. Filed July 15, 1927.

Glacier Bloom

Particular description of goods.—Face Lotion.
Claims use since about June 1, 1926.

CLASS 11.

INKS AND INKING MATERIALS.

Ser. No. 248,199. SIGMUND ULLMAN COMPANY, New York, N. Y. Filed Apr. 29, 1927.

Multi

Particular description of goods.—Printing Ink.
Claims use since Nov. 15, 1924.

CLASS 12.

CONSTRUCTION MATERIALS.

Ser. No. 198,462. MACKIE & BARNES, INC., Seattle, Wash. Filed June 12, 1924.

Particular description of goods.—Lumber and House Wooden Shingles.
Claims use since Mar. 1, 1922.

Ser. No. 246,243. THE W. S. TYLER COMPANY, Cleveland, Ohio. Filed Mar. 23, 1927.

METYLWOOD

Particular description of goods.—Articles Consisting of Wood Veneer on Steel, Bronze, and Other Metals—Namely, Plain Panels and Panels and Objects Ornamented in Tracery Designs Producing the Effect of Metal Inlays in Wood for Use in the Construction of Elevator Cars, Elevator Entrances, Corridor Doors, and the Construction Adjoining Elevator Corridors and Elsewhere.

Ser. No. 251,332. LOUIS P. GLASS, Brooklyn, N. Y. Filed June 30, 1927.

THE TICKER

Particular description of goods.—Cigars, Cigarettes, and Smoking Tobacco.
Claims use since May 10, 1927.

Ser. No. 251,371. GEORGE ZIFFERBLATT, doing business as Geo. Zifferblatt & Co., Philadelphia, Pa. Filed June 30, 1927.

HABANELLO

The drawing is lined for shading.
Particular description of goods.—Cigars, Cigarettes, Cheroots, and Smoking Tobacco.
Claims use since Sept. 9, 1909.

CLASS 19.

VEHICLES, NOT INCLUDING ENGINES.

Ser. No. 251,602. BOND FOUNDRY AND MACHINE COMPANY, Manheim, Pa. Filed July 7, 1927.

Bond

Particular description of goods.—Truck Casters.
Claims use since January, 1915.

CLASS 21.

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.

Ser. No. 217,137. DAYNITE AUTO LIGHT CO., Marion, Ind. Filed July 10, 1925.

DAYNITE

Particular description of goods.—Auxiliary Electric Lamps for Automobiles.
Claims use since Feb. 10, 1925.

Ser. No. 240,572. TELEFUNKEN, GESELLSCHAFT FÜR DRAHTLOSE TELEGRAPHIE M. B. H., Berlin, Germany. Filed Nov. 24, 1926.

Arco

Particular description of goods.—Radio Transmitting-Station Equipment and Parts Thereof—Namely, Generators, Transformers, Condensers, Electron Tubes, Transmitting Keys, Alternators, Inductances, Microphones; Antennæ, Radio Receiving Sets, and Parts Thereof—Namely, Electron Tubes, Transformers, Condensers, Crystals, Loud Speakers, Amplifying Horns, Head Sets, Resistances; Complete Aeroplane Transmitting and Receiving Sets; Radio Compasses and Direction Finders.
Claims use since Nov. 11, 1924.

Ser. No. 242,447. TELEFUNKEN, GESELLSCHAFT FÜR DRAHTLOSE TELEGRAPHIE M. B. H., Berlin, Germany. Filed Jan. 6, 1927.

Particular description of goods.—Receiving Apparatus for Wireless Telegraphy and Telephony Comprising Detectors, Electron Tubes, Wound Spools and Bobbins, Condensers, Transformers, Telephones, Batteries, Reenforcers, Loud Speakers, Antennæ; Transmission Apparatus for Wireless Telegraphy and Telephony Comprising Tube Transmitters, High-Frequency Machines, Frequency Transformers, Transmission Tubes, Microphones; Receiving and Transmission Apparatus for Wired Telephony and Telegraphy; Transmission and Receiving Apparatus for Electric Picture Conveying (Television) and Photocells, Light Relays, and Synchronizing Apparatus Therefor.
Claims use since May 1, 1926.

Ser. No. 248,292. OTTO RUDOLPH MONT ETON, doing business as Mont-Eton Radio Laboratories, San Francisco, Calif. Filed May 2, 1927.

MERL

Particular description of goods.—Radio Receiving Sets and Parts Thereof.
Claims use since Feb. 2, 1922.

Ser. No. 248,753. THE CARBORUNDUM COMPANY, Niagara Falls, N. Y. Filed May 10, 1927.

CARBORUNDUM

Ownership claimed of Certificate 49,394, the word "Carborundum," for abrasives, in Class 4.
Particular description of goods.—Certain Electrical Devices Comprising Detectors for Radio Apparatus, Resistance Rods, Lightning Arresters, Resistors, and Resistor Units.
Claims use since May 27, 1910.

Ser. No. 249,274. BEVIL G. GRANVILLE, doing business as Southwest Battery Co., Tucson, Ariz. Filed May 20, 1927.

The word "Everbrite" is disclaimed apart from the other features of the mark shown in the drawing.
Particular description of goods.—Dry-Cell Batteries.
Claims use since Apr. 4, 1927.

Ser. No. 249,890. BURGESS BATTERY COMPANY, Madison, Wis. Filed June 2, 1927.

The vertical lining on the representation of a shield appearing in the drawing indicates red color. Applicant disclaims any exclusive right to the words "Radio "A" Battery" apart from the mark shown in the drawing.
Particular description of goods.—Electric Batteries.
Claims use since Dec. 1, 1925.

Ser. No. 250,522. WESTINGHOUSE UNION BATTERY COMPANY, Swissvale, Pa. Filed June 14, 1927.

WESTINGHOUSE

Particular description of goods.—Secondary Batteries.
Claims use since June 25, 1925.

Ser. No. 250,821. H. E. SCHULSE, INC., New York, N. Y. Filed June 20, 1927.

KING SHINER

The word "Shiner" is disclaimed apart from the mark shown in the drawings.
Particular description of goods.—Electric Shoe-Shining Installations.
Claims use since on or about Dec. 11, 1926.

Ser. No. 251,647. BATTERIEN-U. ELEMENTE-FABRIK SYSTEM ZEILER AKTIENGESELLSCHAFT, Berlin, Germany. Filed July 8, 1927.

Particular description of goods.—Electric Bells, Dry Cells, Dry Batteries, Refill Batteries, Refill Cells, Electric Accumulators, and Batteries and Their Parts.
Claims use since Sept. 11, 1916.

CLASS 22.

GAMES, TOYS, AND SPORTING GOODS.

Ser. No. 251,405. R. H. MACY & CO., INC., New York, N. Y. Filed July 1, 1927.

SUPRE-MACY

Particular description of goods.—Tennis Rackets.
Claims use since May 14, 1927.

Ser. No. 251,504. THE JOHNSON FLYING TOYS COMPANY, Cleveland, Ohio. Filed July 5, 1927.

ATLANTIC FLYER

Particular description of goods.—Kites.
Claims use since on or about June 15, 1927.

CLASS 23.

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.

Ser. No. 221,203. PLOMB TOOL COMPANY, Los Angeles, Calif. Filed Oct. 3, 1925.

PLOMB

Particular description of goods.—Cold Chisels, Long Cold Chisels; Cape, Diamond, and Round-Nose Chisels; Floor Chisels, Plugging Chisels, Ripping Chisels, Soil-Pipe Chisels, Slitting Chisels, Tile Chisels, Tinners' Chisels, Tinners' Wire Chisels, Tinners' Hollow Chisels, Stone-Cutters' Chisels, Concrete Gads, Boilermakers' Beaders, Double-end Roof Scrapers, Tinners' Hand Reamers, Tinners' Hand Scrapers, Tinners' Hand Groovers, Tinners' Rivet Sets, Special Rivet Sets for Master-Ring Gears and Frames, Ripping Bars, Solid Punches, Rivet Punches, Long Taper Drift Punches, Prick Punches, Center Punches, Garage or Pin Punches, Key Punches, Heavy Octagon Nail Sets, Cotter-Pin Pullers, Staple Pullers, Oil Groovers, Star Drills, Telephone Drills, Marble Drills, Plain Drills, Brace Drills, Brace Reamers, Offset Screw Drivers, T-Handle Screw Drivers, T Screw Drivers, Drift Pins, Screw-Driver Bits, Screw Drivers, Scratch Awls, Long Calkers, Pony Calkers, Right and Left Calkers, Ceiling Calkers, Elbow Calkers, Gasket Calkers, Gas-Fitters' Calkers, Offset Yarners, Spring Yarners, Lead-Picking Tools, Bending Irons, Rivet Cutters, Brick Sets, Brick Jointers, Concave and Convex Jointers, Plaster Tools, Tile Markers, Prospectors' Picks, Concrete Picks, Brick Scutches, Bearing Scrapers, Carbon Scrapers, Open-End Wrenches, Special Tappet Wrenches, Special Wrenches, Linemen's Wrenches, Cap-Screw Wrenches, Double-End Pin-Handle Socket Wrenches, Double-End Socket Wrenches, Special Garage Wrenches, Speed Socket Wrenches, Special L Socket Wrenches, Box Wrenches, T Socket Wrenches, Sockets, Square Inside-Corner Trowels, Square Outside-Corner Trowels, Cement-Finishers' Square S Edgers, Round Inside-Corner Trowels, Round Outside-Corner Trowels, Jointers, Plastering Trowels, Pointing Trowels, Floor Scrapers.
Claims use since Aug. 1, 1925.

Ser. No. 222,962. SOCIÉTÉ ANONYME DES USINES RENAULT, Billancourt, France. Filed Nov. 6, 1925.

RENAULT

Particular description of goods.—Internal-Combustion or Explosion Motors and Parts Thereof and Agricultural Tractors, Endless-Track-Crawler Tractors, Lathes, Hand and Machine Drills, Hammers, Hatchets, and Saws.
Claims use since August, 1924.

Ser. No. 238,403. SHEET STEEL PRODUCTS COMPANY, Detroit, Mich., and Michigan City, Ind. Filed Oct. 9, 1926.

FILTRATOR

Particular description of goods.—Filters for Engines.
Claims use since Dec. 31, 1925.

Ser. No. 248,310. MARKT & HAMMACHER COMPANY, New York, N. Y. Filed May 2, 1927. Under 10-year proviso.

THE GREAT AMERICAN FLAG

The lining in the drawing indicates shading only.
Particular description of goods.—Farming and Garden Tools—Namely, Rakes, Spades, Manure Forks, Hayforks, Beet Forks, Coke Forks, Stone Forks, Hoes, Hooks, Cultivators, Shovels, Weeders, Turf Edgers.
Claims use since about July 1, 1878.

Ser. No. 248,845. THE KITCHENAID MANUFACTURING COMPANY, Troy, Ohio. Filed May 11, 1927.

KitchenAid

Particular description of goods.—Oil Droppers, Food Choppers, Coffee Mills and Cereal Grinders, Fruit-Juice Extractors, and Vegetable Slicers.
Claims use since Nov. 25, 1919.

Ser. No. 248,852. MARKT & HAMMACHER COMPANY, New York, N. Y. Filed May 11, 1927. Under 10-year proviso.

GREAT AMERICAN FLAG

The lining appearing in the drawing indicates shading only.
Particular description of goods.—Farming and Garden Tools—Namely, Rakes, Spades, Manure Forks, Hayforks, Beet Forks, Coke Forks, Stone Forks, Hoes, Hooks, Cultivators, Shovels, Weeders, Turf Edgers.
Claims use since about July 1, 1871.

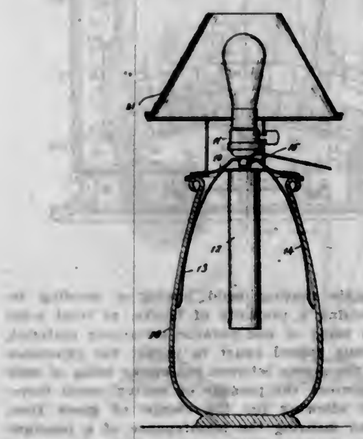
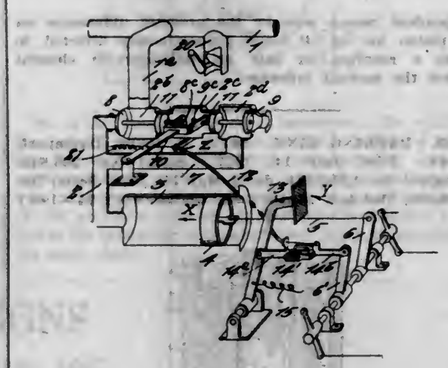
REISSUES



AUGUST 30, 1927.

16,721. ELECTRICAL SYSTEM FOR LOCOMOTIVES. SIDNEY W. FARNHAM, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 18, 1927. Serial No. 206,749. Original No. 1,518,137, dated Dec. 9, 1924, Serial No. 608,509, filed Dec. 22, 1922. 5 Claims. (Cl. 191—3.)

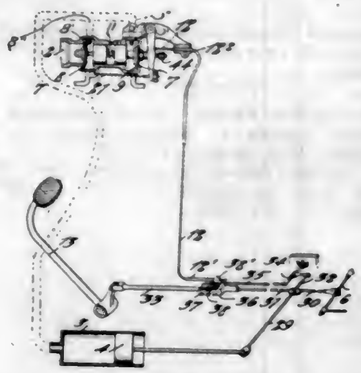


4. In a gathering locomotive provided with a motor circuit adapted to be selectively connected with a source of power supply through a trolley or a gathering reel, a double conductor cable and rotating contactor devices associated with said gathering reel, and switching means completing said motor circuit through the trolley and a ground connection on the locomotive frame in one position, and completing the circuit through the double conductor cable and contact devices on the gathering reel, when in a second position, said last named circuit being wholly disconnected from said locomotive frame.

16,722. LAMP DEVICE. MELBERT B. CARY, New York, N. Y., assignor to Vaslamp Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed July 2, 1927. Serial No. 203,222. Original No. 1,614,102, dated Jan. 11, 1927, Serial No. 674,429, filed Nov. 13, 1923. 9 Claims. (Cl. 240—52.)

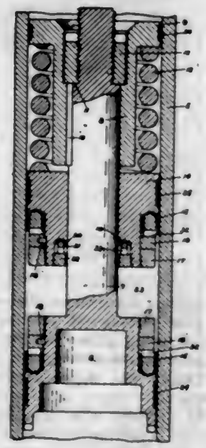
1. A lamp device comprising a disk, a lamp socket carried thereby at one side thereof, a stabilising weight secured to the opposite side of the disk and resilient members extending away from the same side of the disk as the weight.

16,723. MOTOR BRAKE. ALBERT DEWANDRE, Liege, Belgium, assignor to Societe Anonyme Servofrein Dewandre, Liege, Belgium. Filed May 17, 1927. Serial No. 192,125. Original No. 1,539,166, dated May 26, 1925, Serial No. 685,814, filed Jan. 12, 1924. 10 Claims. (Cl. 188—152.)



1. In a brake system for motors, the combination, with a suction pipe, and rodding for the brakes, of a brake cylinder capable of being placed in communication with the suction pipe or with the atmosphere, a piston working therein, and on which the engine suction acts to effect the braking operation, valves for controlling the communication of the cylinder with said pipe and with the atmosphere, a brake operating element, a lost-motion connection between said operating element and the brake-rodding embodying two movably-related parts and a movable element for directly actuating said valves operatively associated with said lost-motion connection so that its position depends upon the distance between the movably-related parts of said lost-motion connection.

16,724. POWER BRAKE. ALBERT DEWANDRE, Liege, Belgium, assignor to Societe Anonyme Servofrein Dewandre, Liege, Belgium. Filed May 17, 1927. Serial No. 192,126. Original No. 1,603,750, dated Oct. 19, 1926, Serial No. 698,022, filed Mar. 18, 1924, and in Belgium Feb. 12, 1924. 17 Claims. (Cl. 188—152.)

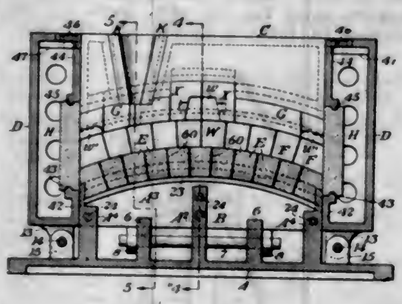


11. In a brake mechanism for automobiles, a cylinder, a piston within the cylinder, means whereby the piston

may be subjected to pressure differences, a manually-operable element for controlling said means and thereby such pressure differences, connections leading to the brakes and operated by the movement of such piston, and

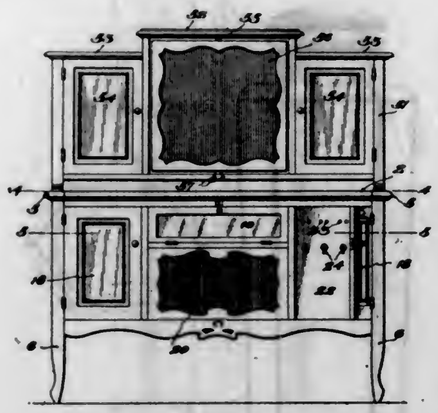
independent means whereby the pressure differences on the piston are at all times proportionally directed to create a reaction on said manually-operable element against the manual influence.

16,725. PACKING RING. BRYAN P. JOYCE, Davenport, Iowa. Filed July 14, 1927. Serial No. 205,813. Original No. 1,583,931, dated May 11, 1926, Serial No. 709,236, filed Apr. 26, 1924. 10 Claims. (Cl. 74—109.)



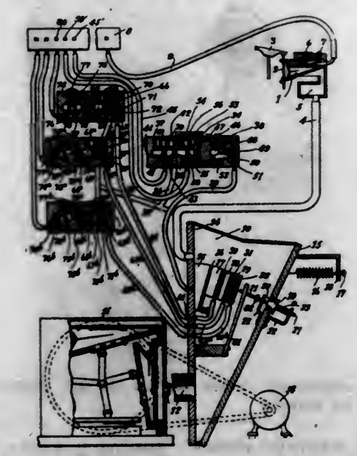
1. In combination with a cylinder and a floating piston, the piston head being reduced to form an annular seat, a packing ring embracing the piston stem and formed with annular seats on its inner and outer periphery, a cup ring disposed in each of the annular seats, reduced peripheral flanges formed on the contact portion of the cylinder engaging cup rings, a relatively wide tin band disposed between the flanges and flush therewith, compression rings mounted within the cup rings and spaced from the sides thereof, said compression rings being formed with vents, means for preventing rotation of the compression rings, and means spaced from the cylinder and piston stem for retaining the compression rings in fixed position.

16,726. RIM TOOL. RALPH T. MUNN, Melrose Highlands, Mass. Filed Oct. 9, 1926. Serial No. 140,666. Original No. 1,600,695, dated Sept. 21, 1926, Serial No. 85,918, filed Feb. 4, 1926. 1 Claim. (Cl. 157—1.)



A rim tool comprising two rods in alinement having means for longitudinally moving them relative to each other, one rod having a single finger projecting laterally therefrom, and the other rod having two spaced fingers projecting laterally therefrom, whereby the single finger can be engaged with the lug at a terminal of a split rim, and, without removing it therefrom, will permit the other fingers to be separately engaged with widely separated lugs of the rim.

16,727. CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed May 14, 1925. Serial No. 30,375. Original No. 1,455,353, dated May 15, 1923, Serial No. 622,262, filed Mar. 2, 1923. 38 Claims. (Cl. 22—126.)

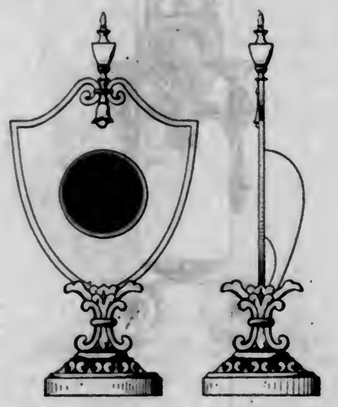


1. An openable casting mold having a molding receptacle comprising a plurality of blocks, at least some of said blocks being of non-metallic refractory material, said blocks being spaced apart to permit the expansion of the blocks, the spaces between the blocks being of such width as to prevent the passage of molten metal therethrough while allowing for the escape of gases from said metal, and insuring the maintenance of a constant overall length of the molding receptacle, and metallic supporting means to which said blocks are detachably secured.

16,728. RADIOGRAFONOLA. FRANK J. RENNER, Madison, Wis., assignor, by mesne assignments, to Finney B. Smith, Washington, D. C. Filed Mar. 19, 1926. Serial No. 96,108. Original No. 1,500,892, dated July 8, 1924, Serial No. 554,853, filed Apr. 18, 1922. 13 Claims. (Cl. 179—100.1.)

5. In combination, a talking machine provided with a sound conduit, a radio mechanism provided with a sound conduit, and a sound amplifier formed with an inlet portion, said sound inlet portion and said sound conduits being mounted for relative sliding movement whereby said sound conduits may be selectively registered with the sound inlet of said amplifier.

16,729. AUTOMATIC MUSICAL INSTRUMENT. GUY MANLY RUSSELL, deceased, Syracuse, N. Y.; by American Piano Company, New York, N. Y., assignee. Filed Mar. 12, 1924. Serial No. 698,783. Original No. 1,409,497, dated Mar. 14, 1922, Serial No. 208,758, filed Dec. 26, 1917. 38 Claims. (Cl. 84—39.)

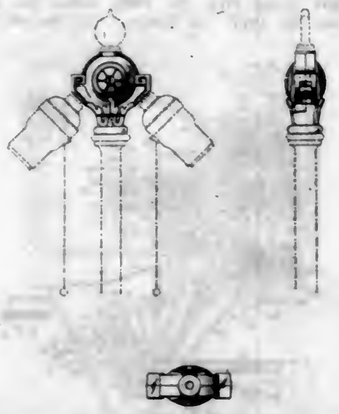


24. In an automatic musical instrument, the combination of a wind chest; a main source of power; a governor bellows having unrestricted communication with the main source of power and the wind chest; and expression means automatically operating to vary the action of the governor bellows by substantially distinct increments for producing incremental variations of pressure in the wind chest.

DESIGNS

AUGUST 30, 1927.

73,363. RADIO LOUD SPEAKER. SYLVESTER A. BAKER, San Francisco, Calif. Filed July 21, 1926. Serial No. 18,445. Term of patent 3½ years.



The ornamental design for a radio loud speaker, substantially as shown.

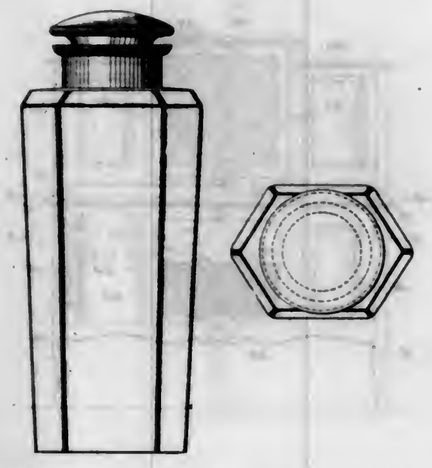
73,364. SMOKER'S TRAY. RAYMOND C. BAUSPIEN, Maywood, Ill. Filed May 20, 1927. Serial No. 22,107. Term of patent 14 years.

The ornamental design for a smoker's tray, as shown.

73,365. ELECTRIC CLUSTER LAMP FIXTURE. ALBERT T. BLACKBURN, Jersey City, N. J. Filed May 19, 1927. Serial No. 22,097. Term of patent 3½ years.

The ornamental design for an electric cluster lamp fixture, as shown.

73,366. KNITTED FABRIC. MILLARD D. BROWN, Philadelphia, Pa., assignor to Continental Mills, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1927. Serial No. 21,292. Term of patent 7 years.



The ornamental design for a knitted fabric, substantially as shown and described.

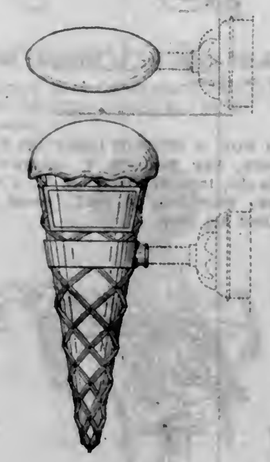
73,367. ATTACHMENT FOR BRIDGE ARM LAMPS. GEORGE W. CASSIDY, New York, N. Y. Filed Mar. 11, 1924. Serial No. 8,900. Term of patent 3½ years.

The ornamental design for an attachment for bridge arm lamps substantially as shown and described.

73,368. BOTTLE. FLORENCE S. CAVANAUGH, New York, N. Y. Filed May 31, 1927. Serial No. 22,251. Term of patent 7 years.

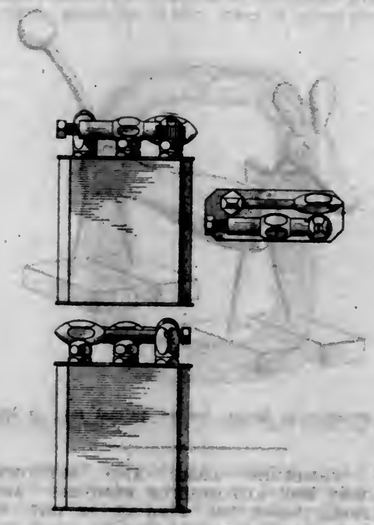
The ornamental design for a bottle, substantially as shown.

73,369. ELECTRIC WALL BRACKET. FREDERICK CRAIB, Martinez, Calif. Filed July 5, 1927. Serial No. 22,065. Term of patent 3½ years.



The ornamental design for an electric wall-bracket as shown.

73,370. RADIO SPEAKER STAND. ISAAC DE KAISER, Pittsburgh, Pa. Filed Apr. 12, 1927. Serial No. 21,563. Term of patent 7 years.

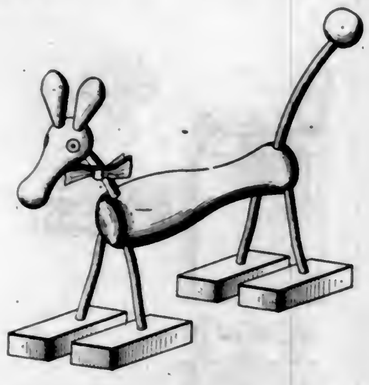


The ornamental design for a radio speaker stand as shown.

73,371. ELECTRIC-LIGHT SHADE. WINSLOW W. DUNN, Jr., St. Paul, Minn. Filed Jan. 22, 1923. Serial No. 4,959. Term of patent 14 years.

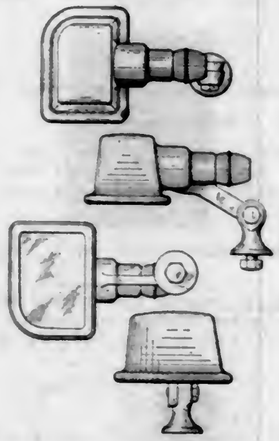
The ornamental design for an electric light shade, as shown.

73,372. CIGAR LIGHTER. HARRY ESTEROW, New York, N. Y. Filed May 12, 1927. Serial No. 21,950. Term of patent 14 years.



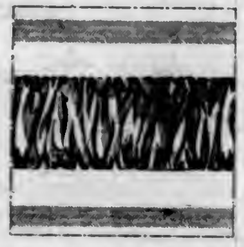
The ornamental design for a cigar lighter, as shown.

73,373. VASE. HAROLD K. GREEN and JAMES W. JENNINGS, Providence, R. I. Filed Mar. 28, 1927. Serial No. 21,381. Term of patent 14 years.



The ornamental design for a vase, as shown.

73,374. ANIMAL TOY. RENE D. GROVE, Middletown, Pa. Filed May 14, 1927. Serial No. 21,989. Term of patent 7 years.



The ornamental design for an animal toy, as shown.

73,375. COMBINED LAMP AND SUPPORTING BRACKET FOR AUTOMOBILE FENDERS. ARTHUR HALLIWELL, Denver, Colo. Filed Apr. 12, 1927. Serial No. 21,535. Term of patent 14 years.

The ornamental design for a combined lamp and supporting bracket for automobile fenders, as shown.

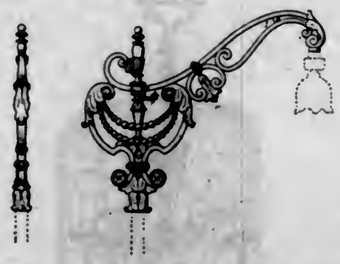
73,376. TEXTILE FABRIC. HARRIS HAUSMAN, Brooklyn, N. Y. Filed July 28, 1926. Serial No. 18,501. Term of patent 3½ years.

The ornamental design for textile fabric, as shown.

73,377. COMBINATION SALT AND PEPPER SHAKER. THOMAS CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a Partnership. Filed June 17, 1927. Serial No. 22,467. Term of patent 14 years.

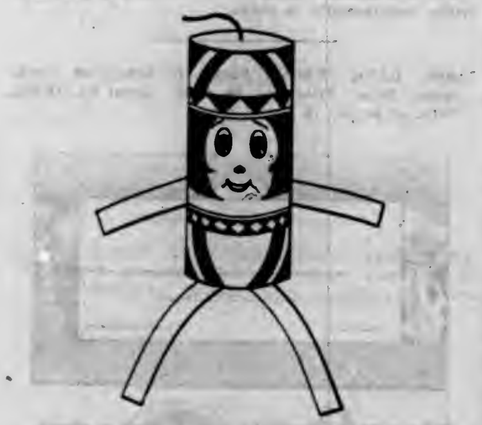
The ornamental design for a combination salt and pepper shaker, as shown.

73,378. ORNAMENT FOR RADIATORS OF MOTOR CARS. HAROLD S. HEWITT, Brantford, Ontario, Canada. Filed Feb. 8, 1927. Serial No. 20,649. Term of patent 3½ years.



The ornamental design for an ornament for radiators of motor cars as shown.

73,379. ARM FOR A BRIDGE LAMP OR THE LIKE. JACOB HIRSCH, New York, N. Y., assignor to Royal Lamp Shade Co., Inc., New York, N. Y., a Corporation of New York. Filed June 20, 1927. Serial No. 22,506. Term of patent 3½ years.



The ornamental design for an arm for a bridge lamp or the like, as shown.

73,380. ARM FOR A BRIDGE LAMP OR THE LIKE. JACOB HIRSCH, New York, N. Y., assignor to Royal Lamp Shade Co., Inc., New York, N. Y., a Corporation of New York. Filed June 20, 1927. Serial No. 22,507. Term of patent 3½ years.

The ornamental design for an arm for a bridge lamp or the like, as shown.

73,381. CANDY BOX. IMOGENE KIDDER, Portland, Oreg. Filed Feb. 14, 1927. Serial No. 20,757. Term of patent 3½ years.

The ornamental design for a candy box, as shown.

73,382. CANDY BOX. IMOGENE KIDDER, Portland, Oreg. Filed Feb. 14, 1927. Serial No. 20,758. Term of patent 3½ years.

The ornamental design for a candy box, as shown.

73,383. DOME-LIGHT BEZEL. ARCHER L. KNAPP, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 7, 1927. Serial No. 22,684. Term of patent 3½ years.

The ornamental design for a dome light bezel, as shown.

73,384. SPOON OR SIMILAR ARTICLE. JOHN LEECH, Bridgeport, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed May 3, 1927. Serial No. 21,838. Term of patent 7 years.

The ornamental design for a spoon or similar article substantially as shown.

73,385. WRAPPING PAPER. ARTHUR LEWIN, New York, N. Y., assignor to Kupfer Bros. Co., New York, N. Y., a Corporation of New York. Filed June 16, 1927. Serial No. 22,462. Term of patent 7 years.

The ornamental design for wrapping paper as shown.

73,386. ELECTRIC-LIGHT FIXTURE. GEORGE LIPSCHUTZ, Philadelphia, Pa. Filed June 28, 1927. Serial No. 22,589. Term of patent 3½ years.

The ornamental design for an electric light fixture as shown.

73,387. CLOCK. LOGAN L. MALLARD, Norfolk, Va. Filed June 24, 1927. Serial No. 22,550. Term of patent 3½ years.

The ornamental design for a clock as shown.

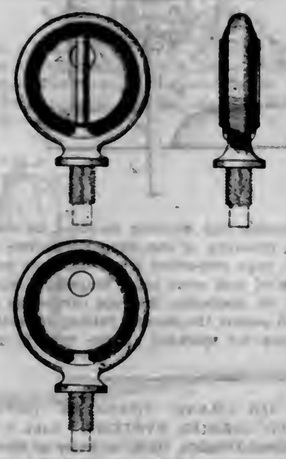
73,388. CHANDELIER OR SIMILAR ARTICLE. GLENN E. MCFADDEN, Kansas City, Mo. Filed Mar. 18, 1927. Serial No. 21,199. Term of patent 7 years.

The ornamental design for a chandelier or similar article, substantially as shown.

73,389. BANK CHECK. ALFRED B. SCHILLING, Stockbridge, Mass. Filed Aug. 24, 1926. Serial No. 18,851. Term of patent 14 years.

The ornamental design for a bank check as shown.

73,390. LIGHTING-FIXTURE CANOPY. MORRIS SCHLEPP, New York, N. Y. Filed June 10, 1927. Serial No. 22,388. Term of patent 7 years.



The ornamental design for a lighting fixture canopy substantially as shown.

73,391. BIRD CAGE. ELY W. SINTOW, Brooklyn, N. Y., assignor to Art Cage Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed May 31, 1927. Serial No. 22,238. Term of patent 14 years.

The ornamental design for a bird cage, as shown.

73,392. MOTOR-HEAT-INDICATING INSTRUMENT. GEORGE H. TOWNSEND, Greenwich, Conn. Filed June 15, 1927. Serial No. 22,444. Term of patent 14 years.

The ornamental design for a motor heat indicating instrument as shown and described.

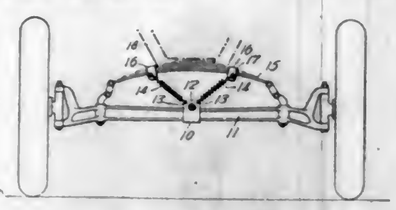
73,393. LANTERN. ALFRED WEBER, New York, N. Y. Filed June 11, 1927. Serial No. 22,394. Term of patent 3½ years.

The ornamental design for a lantern, as shown.

73,394. ASH TRAY. MORRIS M. WHITAKER, Nyack, N. Y. Filed July 2, 1927. Serial No. 22,657. Term of patent 14 years.

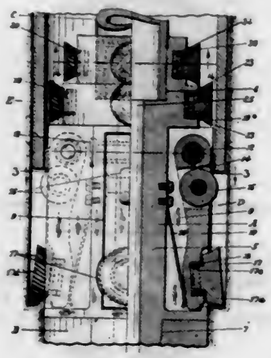
The ornamental design for an ash tray, as shown.

73,395. LIGHTING FIXTURE. CLARENCE G. WING, Lakewood, Ohio, assignor to The Scott-Ullman Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 8, 1926. Serial No. 16,452. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

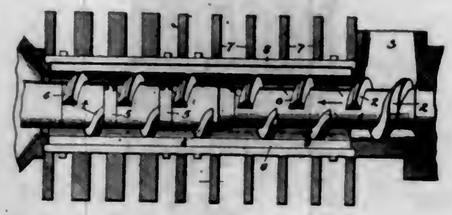
PATENTS



GRANTED AUGUST 30, 1927.

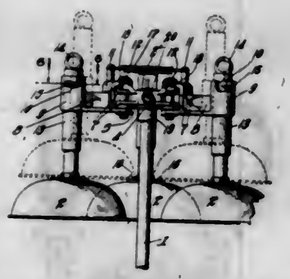
1,640,340. SHOCK ABSORBER. JOHN B. ADDUCI, Boston, Mass. Filed Feb. 27, 1926. Serial No. 91,087. 1 Claim. (Cl. 267—28.)

A shock absorber for automobiles, comprising clips to removably embrace the axle and leaf spring of an automobile, each of said clips having two lips each formed with two openings, a bolt for each clip and cooperating with an opening of each lip to secure the clip in place with the lips in spaced parallel relation whereby to arrange the remaining and free openings of the clip on opposite sides of the automobile part to which it is connected, and a coil spring having terminals to be loosely engaged with either free opening of the respective clips, whereby to vary the absorbing effect of the spring at will without loosening the clips.



1,640,341. REAMER FOR ROTARY WELL DRILLS. LEONARD ALDRIN, Denver, Colo. Filed Feb. 9, 1923. Serial No. 618,032. 4 Claims. (Cl. 255—76.)

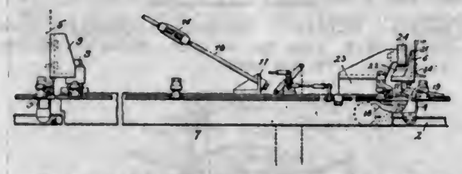
1. A reamer for well drills comprising a body provided with a peripheral recess, a pivoted arm in the recess of the body, a cutter mounted upon the outer face of the arm at an end thereof, to rotate about an axis at an angle to said face, and a spring acting upon the arm to yieldingly project the cutter from the body.



1,640,342. PRESS OR EXPELLER. FREDERICK V. ANDERSON, Cleveland, Ohio, assignor to The V. D. Anderson Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 26, 1919. Serial No. 326,612. 6 Claims. (Cl. 100—48.)

3. In a press, the combination of a worm the advancing face whereof inclines rearwardly toward its outer edge at an angle of approximately 45°; and a barrel surrounding the screw, said barrel being formed from a series of spaced bars with the forward edge of each bar, upon the interior of the barrel, and with reference to the advancing or thrust face of the worm, lying below the adjacent edge of the adjoining bar.

4. As a new article of manufacture, a worm for expressing presses, comprising a hollow body member with a flight extending thereabout, the forward or advancing face whereof inclines rearwardly toward its outer edge at an angle of approximately 45°.

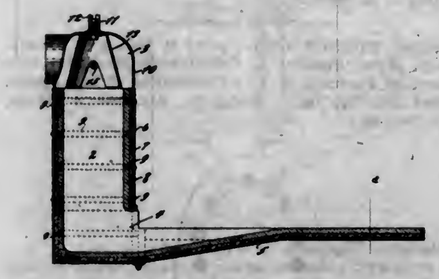


1,640,343. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Dec. 12, 1923. Serial No. 680,164. 10 Claims. (Cl. 68—19.)

1. In a vacuum cup washing machine, in combination, a support, a plurality of cup supporting arms carried by said support, cups suspended from the outer ends of said arms, certain of said arms being hingedly connected with said support for displacing the cups carried by said arms, and means to permit the manual raising of certain of said arms and cups for stacking all the cups in relation to each other.

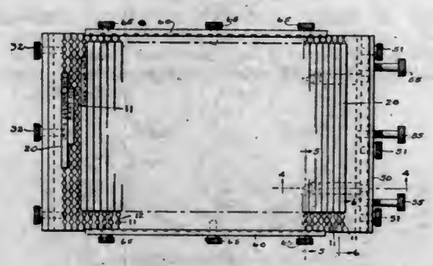
1,640,344. JIB-CRANE TRANSFER DEVICE FOR OVERHEAD CARRIER SYSTEMS. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Jan. 16, 1926. Serial No. 81,622. 6 Claims. (Cl. 104—92.)

1. In an overhead carrier system, a track having spaced sections, a transfer section pivotally supported adjacent the end of one of said track sections and adapted to be swung into and out of alignment with the other, and interengaging means adjacent the track section with which the free end of the pivoted section cooperates and on the pivoted section adapted to engage and lift the



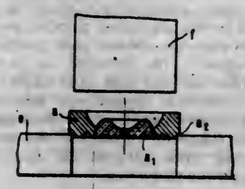
transfer section into horizontal alignment with the track section as the transfer section is swung into the position in which it bridges the space between said track sections.

1,640,345. PERMANENT WAVING OF HAIR. SAMUEL BONAT and HARRY BONAT, New York, N. Y. Filed Jan. 17, 1927. Serial No. 161,567. 14 Claims. (Cl. 132—33.)



1. A permanent hair waving device comprising a winder, and a mandrel therefor, having a threaded extension and coperating means thereon adapted to grip a lock of hair, one of said means being loosely supported on the extension and the other being in threaded engagement therewith.

1,640,346. FIRE BOX FOR STEAM GENERATORS. GEORGE ALFRED BRYAN, Peru, Ind., assignor to Bryan Harvester Company, a Corporation of New Mexico. Filed June 8, 1921. Serial No. 475,989. 4 Claims. (Cl. 158—29.)

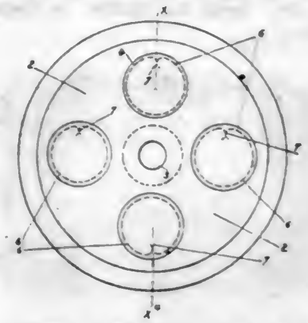


1. In combination with a steam generator including a boiler and a housing therefor, a fire box exterior of the housing and communicating therewith and having a combustion chamber comprising a sheet metal outer casing, heat insulating material lining the sheet metal casing, and refractory material covering the heat insulating material and applied in a continuous layer while in a plastic condition.

1,640,347. PRINTING CHASE. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Co., Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 4, 1926. Serial No. 139,294. 14 Claims. (Cl. 101—415.1.)

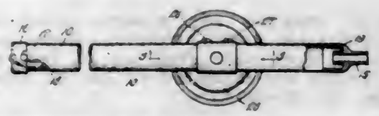
1. The combination of a flexible printing blanket, a flat support and means adapted to stretch the blanket on the support and hold it at its opposite ends, and means engaging the side edges of the blanket, all of said means conjointly holding the blanket on the support with the printing characters in a plane and type high.

1,640,348. PROCESS FOR MAKING CONCENTRIC BUSHINGS FOR JEWEL BEARINGS. HENRI COLOMB, Tavannes, Switzerland. Filed Aug. 11, 1924, Serial No. 731,535, and in Switzerland Jan. 15, 1924. 1 Claim. (Cl. 29—149.5.)



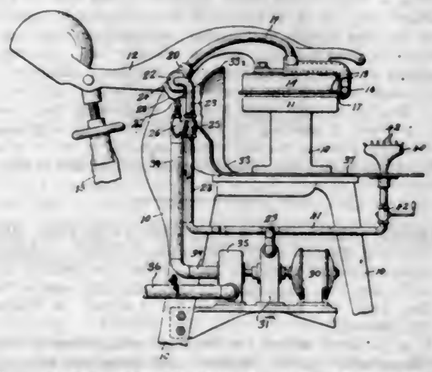
The herein-described process of forming a bushed jewel journal bearing which shall have an outer circumferential wall exactly concentric with the central perforation in the jewel, which process comprises the following steps: turning a short coned outer surface on one end of said bushing, the axis of which coned surface coincides exactly with the axis of said perforation; introducing such coned surface of said bushing into a circular die, the inner diameter of which is greater than the least diameter of said coned surface but less than its greatest diameter; and, finally, forcing said bushing completely into said die, whereby a shaving is removed from the originally protruding portion thereof which reduces it to a cylindrical form having the exact diameter of said die opening.

1,640,349. RESILIENT WHEEL FOR VEHICLES. JEAN FRANÇOIS PASCAL COSTE, Billancourt, France. Original application filed Aug. 30, 1922, Serial No. 585,179, and in France Nov. 19, 1921. Divided and this application filed Sept. 18, 1926. Serial No. 136,249. 4 Claims. (Cl. 152—28.)



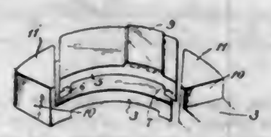
1. A resilient wheel for vehicles, comprising a shell, a rim member located without and extending into said shell with apertures in the portion within the shell, said shell having pockets substantially concentric with the apertures in the rim member and of a depth between opposite faces of the shell greater than the thickness of the rim member at the apertures, a longitudinally laminated

split looped spring contained in each pocket and the respective concentric aperture of the rim member for



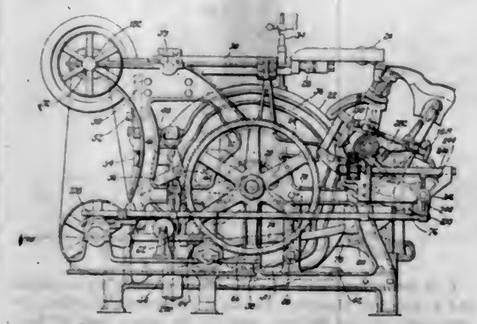
yieldingly resisting radial movement of the latter relatively to the shell, the ends of the split spring being turned inwardly at their abutting ends.

1,640,350. ROD AND REEL. CLARENCE L. DEWEY, Elkhart, Ind. Filed Sept. 11, 1924. Serial No. 737,069. 1 Claim. (Cl. 43—20.)



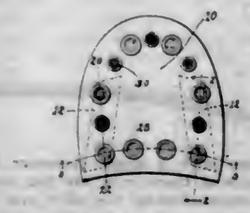
The combination with a fishing rod and reel, of means for connecting them; comprising a clamping band encircling the rod and having separated, parallel members intermediate the ends and the circular part thereof, said ends bent at right angles to the intermediate parts, one end overlying the other end and said ends having registering perforations to receive a headed reel spindle, two separated clamping screws passing thru said parallel members to clamp the connector to the rod and to the spindle and brake-applying arms pivoted on said screws and extending in alignment therefrom.

1,640,351. GARMENT PRESS. WILLIAM H. DORSEY, New Brighton, N. Y., assignor, by mesne assignments, to Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 10, 1924. Serial No. 736,865. 5 Claims. (Cl. 68—9.)



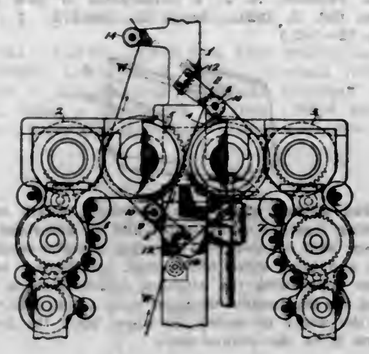
1. A garment pressing machine comprising cooperating press jaws one of which is provided with an air discharge orifice along the margin thereof, an air pipe to supply air pressure to the orifice by which the vapor and heat ordinarily arising from the work are blown away from the operator, a valve included in the air pipe, and means for automatically operating the valve to control the flow of air pressure when the press opens and closes.

1,640,352. BEARING. GERHARD FLINTERMANN, West Orange, N. J. Filed July 14, 1926. Serial No. 122,288. 13 Claims. (Cl. 308—160.)



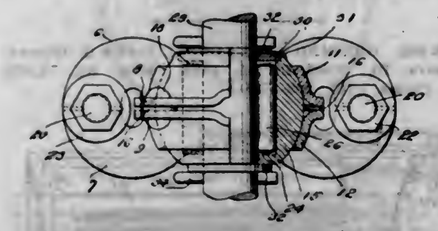
10. A bearing comprising a circular series of separate yielding plates each of said plates being supported at its ends to provide an intervening yielding portion and a bearing projection on such intervening portion, the two ends of each plate being parallel to each other.

1,640,353. MACHINE FOR PRESSING SOLES. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 26, 1922. Serial No. 597,151. 41 Claims. (Cl. 12—34.)



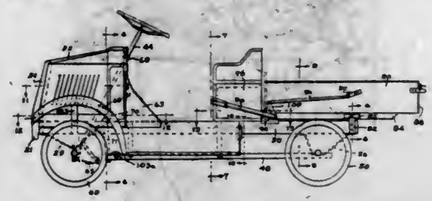
1. A sole pressing machine having, in combination, a sole pressing device, a shoe supporting jack, mechanism comprising a main drive for relatively actuating the pressing device and jack to press the sole of a shoe on the jack, and means actuated by relatively moving the pressing device and jack into operative position for adjusting the speed of the main drive in correspondence with the length of the sole to be operated upon, the extent of the said adjustment being controlled by the adjustment of the jack to fit the shoe.

1,640,354. RUBBER HEEL. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 12, 1923. Serial No. 651,126. 4 Claims. (Cl. 36—35.)



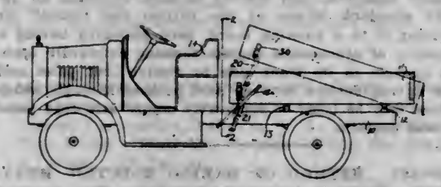
1. A rhomboidal stiffening or supporting element for rubber heels having a plurality of nail openings disposed in a line with respect to which the mass of the element is substantially balanced.

1,640,355. WEB-GUIDING MECHANISM FOR PRINTING MACHINES. JOHN J. HALLIWELL, Tuckahoe, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed July 23, 1924. Serial No. 727,610. 6 Claims. (Cl. 101—220.)



1. The combination of a printing couple including a plate cylinder and a blanketed impression cylinder, a second printing couple including a plate cylinder and a blanketed impression cylinder, all the cylinders of the couples being located closely adjacent and in substantial alignment, and means for indirectly guiding a web between the couples for impression, said guides acting to keep the web away from the surface of the impression cylinders except near the impression points, so that the web is kept out of contact with the surface of the cylinders for the major portion of their surfaces and breaks in the web due to too great a hug of the web about the cylinders are avoided.

1,640,356. BEARING MECHANISM. JAMES M. HOWE, Cleveland Heights, Ohio, assignor to The Murray Manufacturing Company, Cleveland, Ohio, a Corporation of Michigan. Filed Sept. 6, 1924. Serial No. 736,225. 6 Claims. (Cl. 308—72.)

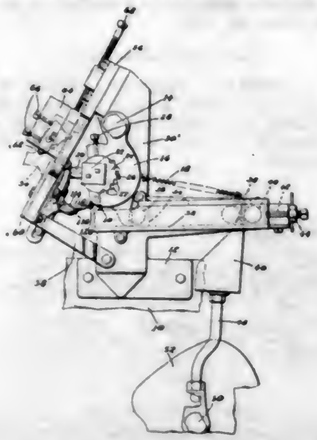


1. A bearing of the character described, comprising a pair of bracket members complementarily formed to provide bracket portions and having sockets formed therein, the sockets having complementary spheroidal surfaces, the journal member having a spheroidal surface engaging the complementary surfaces of the bracket members, a rotatable member to be borne, roller members encased by the journal member and bearing directly on the rotatable member, means maintaining the bracket members with the sockets thereof in engagement with the spheroidal surface of the journal member, said journal member having a roller receiving bore thereof closed at one end to retain the roller members and a disc closing the other end of the bore and retained in place by a portion of the journal member overlying the disc.

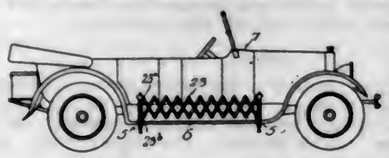
1,640,357. JUVENILE VEHICLE. JAMES M. HOWE, Cleveland Heights, Ohio, assignor to The Murray Products Company, Cleveland, Ohio, a Corporation of Michigan. Filed Feb. 9, 1925. Serial No. 7,842. 13 Claims. (Cl. 208—113.)

1. In a toy vehicle, the combination of a chassis structure comprising elongated side frame members having portions extending in planes disposed at an angle to each other, front and rear axle brackets secured to the side frame members, axle members rigidly secured to the bracket members a hood structure including a cowl formation, the hood structure comprising a transverse connecting means between the forward portions of said side frame members and thereby constituting a part of the chassis structure, a seat structure mounted upon said side frame members and attached thereto at two of said portions of each member and thereby constituting a transverse bracing means therebetween intermediate the forward and rearward ends of said side frame members.

1,640,358. DUMPING MECHANISM FOR VEHICLES. JAMES M. HOWE, Cleveland Heights, Ohio, assignor to The Murray Products Company, Cleveland, Ohio, a Corporation of Michigan. Filed Apr. 2, 1925. Serial No. 20,073. 6 Claims. (Cl. 298—19.)



1. In a dumping mechanism of the character described, a shaft mounted on the chassis of a vehicle, a linkage mechanism mounted on the shaft and connected to the dump body of the vehicle and resilient connecting mechanism permanently connecting the body of the vehicle to the link mechanism arranged to restrain the body against movement when such body is in normal position.



1,640,359. WOOD-HEEL MARKER. NORTON W. KINNEY, Haverhill, Mass., assignor to Slipper City Wood Heel Company, Haverhill, Mass., a Corporation of Massachusetts. Filed Sept. 26, 1924. Serial No. 740,060. 10 Claims. (Cl. 101—42.)

1. In a marking machine, a work support, an oscillating type-carrier, means for adjusting the angular position of the type-members with respect to said carrier to vary the impression point with respect to the work support, and means for supplying ink to the type-faces comprising an inking-roll, an oscillator supporting said

roll, means for actuating said oscillator, and means for guiding the oscillator constructed and arranged to cause the inking roll to have a dipping movement to insure proper contact of the roll with the type-faces in any position of adjustment.

1,640,360. LUGGAGE CARRIER FOR AUTOMOBILES. CHARLES B. LEFFERT, Chicago, Ill., assignor to United States Tent & Awning Company, Chicago, Ill., a Corporation of Illinois. Filed May 8, 1925. Serial No 28,803. 3 Claims. (Cl. 224—29.)

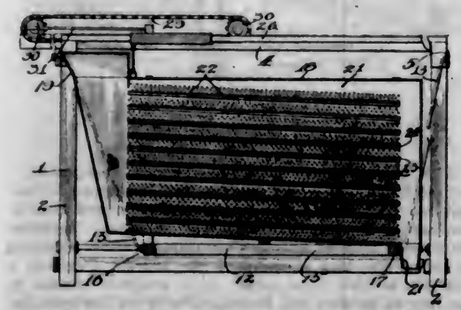
1. A luggage carrier embodying therein a pair of bracket members, each bracket member including an upright standard, means at the bottom end thereof for securing it to a running board, each standard having a plurality of depressions therein forming outwardly opening pockets in its front side to receive tent poles and also having devices between said pockets through which a cord may be laced to removably secure said tent poles in said pockets.

1,640,361. METHOD OF MAKING ELECTRIC HEATERS. EDWIN N. LIGHTFOOT, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 5, 1921, Serial No. 442,882. Renewed Feb. 2, 1927. 13 Claims. (Cl. 25—3.)

1. The method of insulating the resistor of an electric heater from the enclosing jacket thereof, which comprises surrounding the resistor with insulation in one form and subsequently changing the physical characteristics thereof.

1,640,362. MANUFACTURE OF SHOES. JOHN J. MAHLER, New York, and HORACE D. WEBB, Rochester, N. Y., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 1, 1921. Serial No. 504,573. 7 Claims. (Cl. 12—142.)

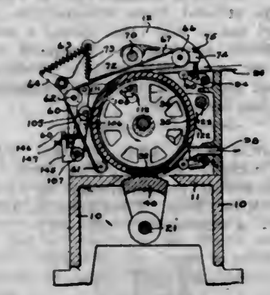
1. The method of making felt shoes, which consists in sewing together a shoe-upper and an absorbent counter-piece, said counter-piece carrying a water-soluble adhesive and being dried before such attachment, immersing the upper with the attached counterpiece in water, placing the thus-moistened upper upon a last, and evaporating the water to shrink the upper upon the last and conform it to the counter-piece.



1,640,363. PROCESS FOR PREPARING RUBBER-CONTAINING PLASTICS AND PRODUCTS OBTAINED THEREBY. JOHN MCGAVACK, Elmhurst, N. Y., assignor to The Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed July 3, 1923. Serial No. 649,376. 9 Claims. (Cl. 260—3.)

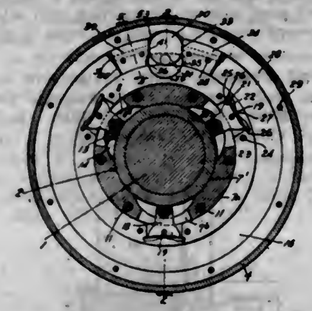
1. A process for making rubber combinations which comprises causing a reaction to occur between rubber, aldehyde and a condensing agent, and recovering the reaction product formed.

1,640,364. PROCESS FOR PREPARING RUBBER-CONTAINING PLASTICS AND PRODUCTS OBTAINED THEREBY. JOHN MCGAVACK, Jackson Heights, N. Y., assignor to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed Mar. 24, 1925. Serial No. 18,057. 8 Claims. (Cl. 260—4.)



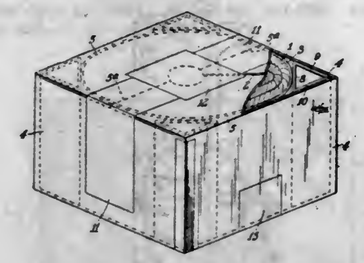
1. A process for making rubber combinations which consists in treating vulcanized rubber with a rubber solvent, combining a halogen, a phenol, and an aldehyde with the rubber, and recovering a combination of rubber, halogen, phenol and aldehyde.

1,640,365. GRADING APPARATUS. NORRIS G. MORGAN, Galva, Ill. Filed Dec. 5, 1925. Serial No. 73,330. 4 Claims. (Cl. 209—360.)



1. A device of the class described comprising a supporting frame, a relatively deep and narrow screening box supported therefrom and having a top inlet spout at one end and a bottom discharge spout at the other end, the sides of said box being perforate, means for laterally reciprocating said box, and partitions for dividing said box into successive longitudinally disposed compartments, all of said partitions similarly terminating short of both ends of the box and all of said compartments similarly communicating at their opposite ends with said top inlet and bottom discharge spout.

1,640,366. PAPER DETECTOR FOR PRINTING MACHINES. LAWRENCE H. MORSE, Cleveland, Ohio, assignor to the American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 10, 1925. Serial No. 49,253. 16 Claims. (Cl. 101—239.)

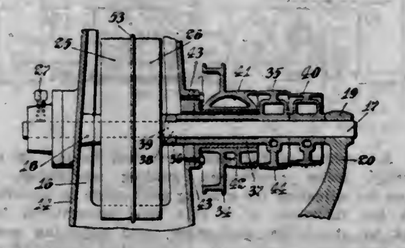


1. The combination of a rotary drum, means for holding paper thereon, said paper being adapted to overlie a recess in the drum, a detector adapted to bear against the face of the paper when overlying the recess or move into the recess when paper is absent, a platen adapted to coact with the drum, and means controlled by said detector for preventing coaction of the drum and platen.

1,640,367. BRAKE. WALTER D. NICKUM, Los Angeles, Calif. Filed Apr. 3, 1925. Serial No. 20,364. 8 Claims. (Cl. 188—30.)

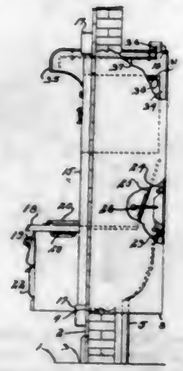
1. A chock brake means comprising, in combination with a rotatably mounted driven member, a rigidly mounted operating member having recess means with reversely inclined surfaces mounted around and adjacent to the periphery of said driven member, chock means within said recess means, a control member rotatably mounted in said operating member and having pivotally mounted resilient shift means engaging said chock means so as to move said chock means in said recess means upon rotation of said control member, and means for rotating said control member into position to bring said chock means into engagement with either one of said reversely inclined surfaces of said recess means or into an intermediate position in which said chock means are out of engagement with both of said reversely inclined surfaces and for holding said control member in any one of said positions to which it is moved.

1,640,368. ASBESTOS ROPE OR WICK PACKAGE. GUY U. OBETS and ROBINSON F. WALTER, Manheim, Pa., assignors to United States Asbestos Company, Manheim, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1926. Serial No. 154,337. 10 Claims. (Cl. 242—146.)



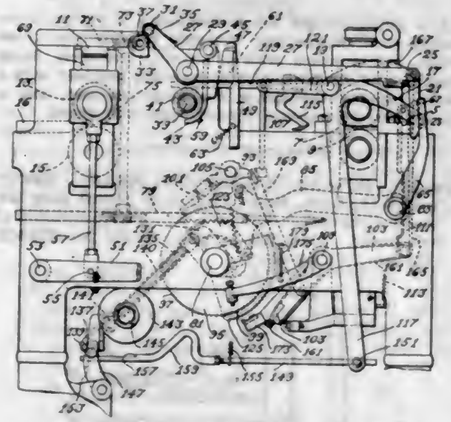
1. A dispensing package for coiled material, comprising a rectangular carton provided with cover flaps, having their meeting edges disposed substantially centrally of the carton, and provided with recesses located centrally of the length of said meeting edges, and adapted to form a centrally located dispensing aperture in the top of the carton.

1,640,369. GUTTER HANGER. WOOLF PEIREZ, New York, N. Y. Filed Nov. 24, 1925. Serial No. 71,183. 2 Claims. (Cl. 108—29.)



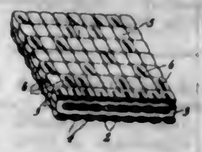
2. A gutter hanger shank comprising a vertically extending stem substantially U-shaped in transverse cross-section and provided with a laterally extending flange along each of its sides, each flange being provided with a groove running throughout the length thereof, and a support attaching means formed upon said shank.

1,640,370. ROTARY TRANSMISSION MEANS. MERTON D. PHELAN, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 7, 1920. Serial No. 379,522. 4 Claims. (Cl. 74—21.)



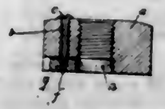
2. In combination, an annular transmission unit and a sectional transmission unit each rotatable independently of the other, the sectional unit extending through said annular unit and including two sections having interengaged coupling portions one of which is adapted to pass through said annular unit, and means for supporting said units.

1,640,371. ELECTRIC STOVE. CHARLES A. PIERSON, Toledo, Ohio, assignor to The Standard Electric Stove Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 15, 1924. Serial No. 699,514. 16 Claims. (Cl. 126—37.)



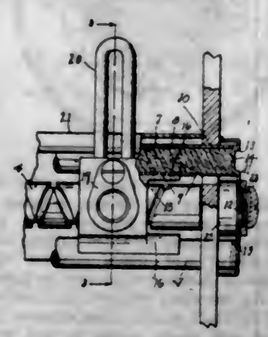
1. In combination, a casing having top, bottom, sides and back and open at its front, a range unit mounted in the lower portion of the casing, an oven unit mounted in the upper portion of the casing in vertically spaced relation to the range unit and cooperating with the casing to form an exit flue leading upward from the space between the two units.

1,640,372. GRADING MACHINE. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 13, 1922, Serial No. 588,000, and in Great Britain Sept. 16, 1921. Renewed Oct. 11, 1926. 24 Claims. (Cl. 69—13.)



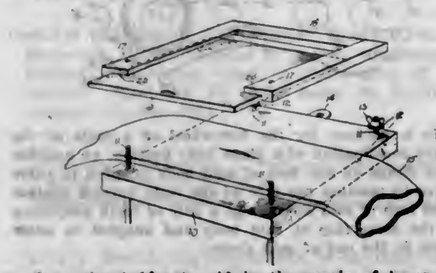
1. A machine of the class described having, in combination, feeler mechanism, grading mechanism, and means for adjusting the grading mechanism in accordance with the thickness of a thin spot encountered in a blank by the feeler mechanism, said adjusting mechanism including a rock-shaft, a controller angularly movable in response to the determinations of the feeler mechanism, an angularly movable setting member for the grading mechanism, an actuator located between the controller and the setting member, and means set into operation at the end of the feeling operation for causing the actuator to move the setting member into an angular position dependent upon that into which the controller was moved by the feeler mechanism.

1,640,373. FRICTION LINING AND PROCESS OF MAKING THE SAME. JOHN DONALD ROHRM, Manheim, Pa., assignor to United States Asbestos Company, Manheim, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1926. Serial No. 152,132. 7 Claims. (Cl. 188—259.)



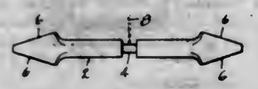
3. As a new article of manufacture, a friction lining having opposite abraded faces, substantially in parallel planes, at least one of said faces having a substantially uniform coefficient of friction throughout its extent, whereby a lining of accurate uniform thickness is provided which will give substantially its maximum efficiency immediately upon installation.

1,640,374. LOCK NUT AND ALLIED FASTENING MEANS. PHILIP J. RUSSELL, Fall River, Mass., assignor of forty-nine one-hundredths to Ernest Kellykoudas, Fall River, Mass. Filed June 12, 1926. Serial No. 115,571. 4 Claims. (Cl. 151—25.)



1. A lock nut comprising in combination, a nut having a threaded bore, one of the surfaces of said nut having a seat portion cut out therein, said seat portion being substantially aligned with said threaded bore the threads of the bore of said nut being cut away a distance equal to the depth of the seat portion one of the sides of said seat portion having a substantially V-shaped notch therein, a pawl member disposed in said seat portion, tooth means on said pawl member to grip the threads of the member to which said nut is applied and a second tooth means on said pawl member for coacting with said notch to prevent reverse rotation of said nut when in place.

1,640,375. FISHING REEL. SAMUEL G. RUSSELL, Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed Sept. 25, 1926. Serial No. 137,789. 7 Claims. (Cl. 242—84.4.)

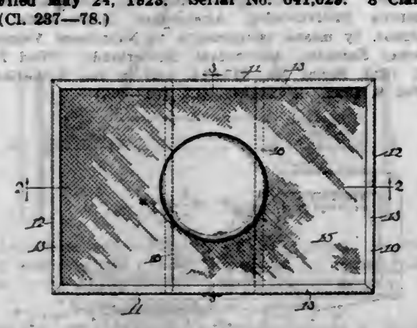


1. In a fishing reel, the combination of a frame, a traversing shaft, tubular way members disposed on opposite sides of said traversing shaft and provided with lubricant openings on their inner sides, said way members having a lubricant retaining material therein and being disposed with their ends projecting through the frame, a line guide carriage provided with bearing members coacting with said ways and with a pawl coacting with said traversing shaft, and a retaining plate on said frame engaging the ends of said way members and provided with apertures through which oil may be introduced to said way members.

1,640,376. TUBE-REPAIRING CLAMP. ROY SANTMYER, New York, N. Y. Filed July 7, 1927. Serial No. 204,127. 3 Claims. (Cl. 152—27.)

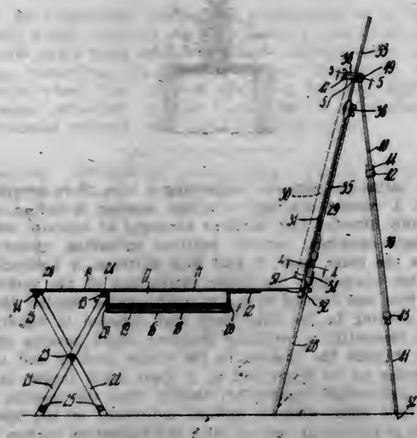
2. A tire holder to aid in the repair of inner tubes, comprising a bed board having a working face to receive the portion of the tube to be mended, a U-shaped frame to be clamped over the bed and against the tube, means carried by the bed to clamp the frame, and a deflating board slidably carried by the frame to press the tube and to be removed to expose the tube between the portions of the frame.

1,640,377. METHOD OF MAKING AND FINISHING SPOKES. GEORGE F. SCHERER, Jackson, Mich. Filed Oct. 9, 1926. Serial No. 140,583. 8 Claims. (Cl. 144—309.)



1. The method of forming spokes consisting in forming a billet of double length, turning the barrel of the spokes at the center, cutting a tenoning kerf at the center, guiding the spokes by the central kerf and cutting the miters simultaneously by opposed symmetrical knives, and then severing the tenon to form the finished spokes, as specified.

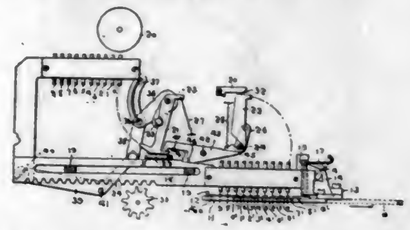
1,640,378. DISK WHEEL. FRED C. SCHOENTHAL, Buffalo, N. Y., assignor, by mesne assignments, to Steel Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Aug. 23, 1919. Serial No. 319,396. 13 Claims. (Cl. 301—63.)



1. In a disk wheel, a hub, a disk having a felloe portion, an auxiliary disk fixed to said first mentioned disk having a seating portion, a seating plate adapted to receive said seating portion of said auxiliary disk, means for fixing said seating plate to said hub, and other means for fixing said disk to said seating portion.

1,640,379. HUMIDIFIER. JOHN SCHULZ, Chicago, Ill. Filed May 24, 1923. Serial No. 641,029. 8 Claims. (Cl. 237—78.)

2. In the device of the character described, the combination with an open supporting frame; of a screen supported at the top of said frame; a second screen supported in said frame below said first named screen; a cup supported by said last named screen; a wick of absorbent material extending over said last named screen and projecting into said cup; and a receptacle closed at the top and open at the bottom supported by said frame above said wick, said receptacle having the bottom thereof extending through said first named screen and projecting into said cup, with the opening thereof disposed below the upper edge of said cup.

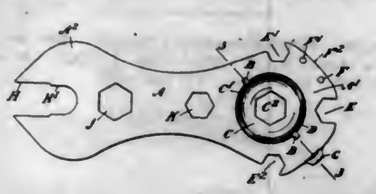


1,640,380. COLLAPSIBLE CHAIR AND EASEL. WILLIAM J. STEWARD, Jamaica Plain, Mass. Filed Oct. 26, 1925. Serial No. 64,800. 5 Claims. (Cl. 45—129.)

1. A collapsible chair and easel having, in combination, a seat, a back rest for a drawing or the like embodying therein a member pivotally attached to said seat and a member slidably mounted upon said pivoted member, means attached to said slidable member to support a drawing, means to clamp said slidable member to said pivoted member at different heights relatively to said seat, a leg adjustably secured to said back rest and supporting said seat at the front thereof, a plurality of X legs supporting said seat at the rear thereof, and means

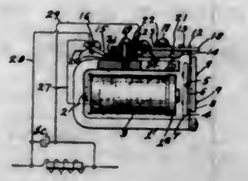
attached to said slidable member of said back rest to hold the latter at different angles relatively to said seat, said last-named means being adapted to swing both longitudinally of and laterally of said seat.

1,640,381. CALCULATING MACHINE. CORNELIS HENDRICUS STUIVENBERG, Amsterdam, Netherlands, assignor, by mesne assignments, to Naamlooze Vennootschap Kamatec, Amsterdam, Netherlands. Filed Feb. 8, 1923, Serial No. 617,814, and in the Netherlands Feb. 8, 1922. 9 Claims. (Cl. 101—93.)



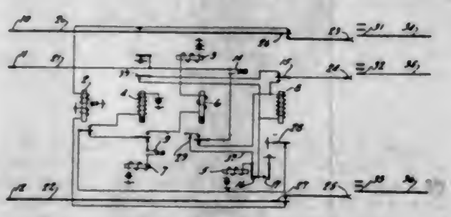
1. In a tabulating machine adapted to take data from perforated cards, movable frames, sets of type supported by said frames, a plate movable relatively to said frames and consisting of a support for a perforated card, and means adapted to enter a perforation in a card supported on the plate during movement of the latter whereby to couple the frames with the plate for simultaneous movement.

1,640,382. BOTTLE-CAP REMOVER. JOHN BOOTH SUMNER, Fort William, Ontario, Canada. Filed Oct. 23, 1924, Serial No. 745,436. Renewed Feb. 5, 1927. 1 Claim. (Cl. 65—47.)



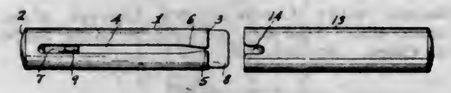
A bottle cap remover comprising a base plate provided with a central opening, a bridge member including oppositely directed foot portions arranged at opposite sides of said openings, vertical portions extending upwardly from the inner ends of said foot portions, a horizontal portion connecting the upper extremities of the vertical portions and formed with a central opening smaller than the opening in the base plate and disposed in registration therewith, a vertically disposed shank passing slidably through the opening in the bridge member and terminating at its lower end in a spear point larger than said last named opening but smaller than the opening in the base plate whereby upward movement of the spear point is limited by contact with the horizontal portion of the bridge member, said spear point being of such length as to project but slightly below the base plate when disposed in raised position between the vertical portions of the bridge member, a handle formed at the upper end of said shank and a spring confined between the handle and the foot portions of the bridge member and encircling the vertical portions of the bridge member so as to be thereby held in concentric relation with the shank, said spring serving to normally hold the shank in elevated position with the spear point engaging the horizontal portion of the bridge member.

1,640,383. SPANNER. ARTHUR EDWARD THOMAS, London, England. Filed Nov. 13, 1924, Serial No. 749,703, and in Great Britain Nov. 15, 1923. 3 Claims. (Cl. 81—90.)



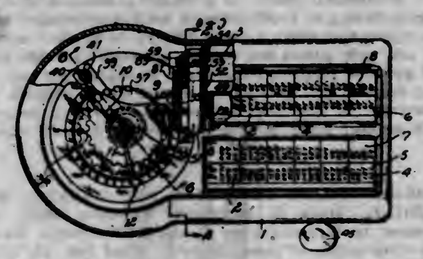
1. In a spanner for the free-wheel of a cycle or the like, the combination of a plane body portion, an annular ring or flange on one face of said body adapted to enter a sleeve to position the face of the body portion against the end face of said sleeve, and a pair of teeth projecting from the same face of said body and adapted to enter recesses in the end of said sleeve.

1,640,384. FIELD-MAGNET MECHANISM FOR TELAUTOGRAPH RECEIVERS. ARLEIGH NEIL VAN NOSTRAND, Flushing, N. Y., assignor to Telautograph Corporation, New York, N. Y., a Corporation of Virginia. Filed June 30, 1926. Serial No. 119,627. 8 Claims. (Cl. 178—18.)



1. In a telautograph receiver having a field magnet including a winding and a magnetic circuit, and having a movable pen-moving coil located in the field of the field magnet, the combination with the field magnet, of a shaker buzzer arranged to vibrate the magnet field of said magnet, said shaker buzzer having an electro-magnetic circuit including a vibratory armature and a winding smaller than those of the said field magnet, said shaker buzzer being provided with means for slowing down its period of vibration to substantially the natural period of charge and discharge of said field magnet.

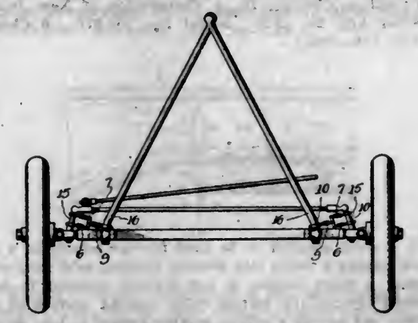
1,640,385. SELECTOR SWITCH. EDWIN O. WALKER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 11, 1923, Serial No. 638,152. Renewed Jan. 20, 1926. 16 Claims. (Cl. 179—18.)



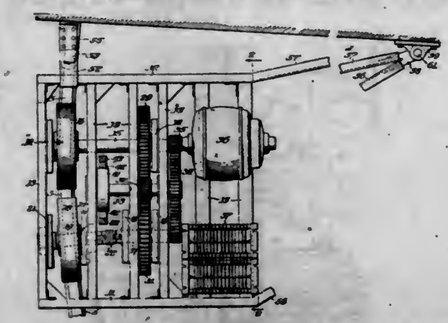
1. In an automatic switch, a stepping magnet, a plurality of operating circuits for said magnet, a locking circuit for said magnet, means for closing one of said operating circuits to cause the initial energization of said magnet, means responsive to a partial energization of said magnet for closing said locking circuit, means responsive to the complete energization of said magnet for opening said locking circuit to deenergize said magnet, and means effective only after said locking circuit has been opened for completing a second operation circuit for said magnet to continue the stepping action of the magnet.

1,640,386. LIP-STICK CONTAINER. GLENN H. WAYNE, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 27, 1926. Serial No. 84,010. 2 Claims. (Cl. 206—56.)

1. In a lipstick, the combination of an inner casing having a slot extending substantially the length of the casing and opening from the casing through a narrow throat, a cosmetic holder in the casing having an open end stamped from light metal with a smooth rounded bead or nib on one side forming a longitudinal channel or groove extending inwardly from the open end of the holder and arranged to project through and slide in the slot, and a cover or cap having a slot arranged to receive the head when the cover is in closed position on the casing.



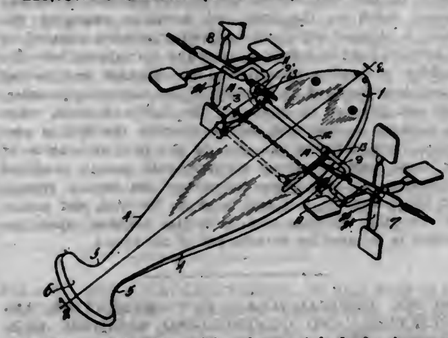
1,640,387. AUTOMATICALLY-CONTROLLED SHUTTER FOR MEASURING MACHINES. JOHN L. WHEELER and GREENE CABLTON HOSCH, St. Louis, Mo., assignors to The Measuregraph Company, a Corporation of Delaware. Filed Mar. 30, 1922. Serial No. 547,954. 16 Claims. (Cl. 33—133.)



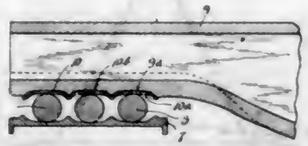
1. In a measuring and computing machine having an indicating member bearing computed numbers corresponding to different measurements and mounted so as to present the numbers at the reading point of the machine, a measuring roller which actuates the indicating member, a marker for marking the articles measured and a zero setting device, a shutter to cover the reading point of the computed numbers, means connecting the marking means with the shutter to open the same, and means actuated automatically in the resetting operation for effecting the closing of the shutter.

1,640,388. STEERING GEAR. BYRON WILLIAMS, Chicago, Ill. Filed Jan. 14, 1926. Serial No. 81,235. 1 Claim. (Cl. 280—94.)

In combination with a motor vehicle chasis having two steering arms, two devices each acting on one of said steering arms to resist an outward movement of said steering arms from said chassis, each of said devices comprising an evener bar, two springs attached one near each end of said evener bar and extending in the same direction therefrom, means for attaching said springs to one of said steering arms, a third spring attached to said evener bar intermediate said first two springs but extending from said evener bar in the opposite direction from said first two springs, and means for securing said third spring to the chassis.

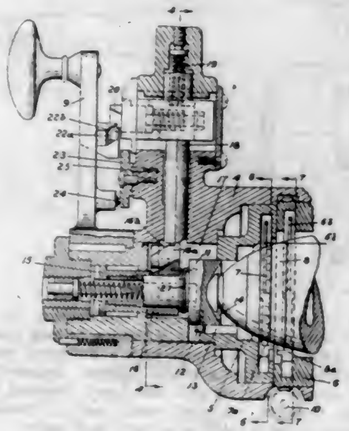


1,640,389. TURNTABLE TRACTOR. ROBERT W. YOUNG, Wilmette, Ill. Filed Sept. 8, 1924. Serial No. 736,418. 3 Claims. (104—88.)



1. In a turntable tractor, the combination of a truck frame, a pair of wheel axles journaled in said frame, one of said axles being sectional with a universal joint coupling connecting the sections thereof, supporting and driving wheels fast on said axles and disposed tandem, a motor mounted on said frame, and a transmission mechanism between said motor and said axles.

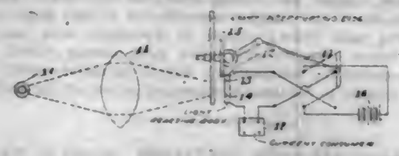
1,640,390. SWIMMING APPLIANCE. VICTOR V. BACON, Spokane, Wash. Filed June 12, 1926. Serial No. 115,637. 5 Claims. (Cl. 9—18.)



1. The combination with a buoyant body having a narrow trail portion and an enlarged upturned seat portion forming an extension thereof, of a pair of paddle wheels, and manually operated, mechanical propulsion mechanism adjustably supported on said body for said wheels.

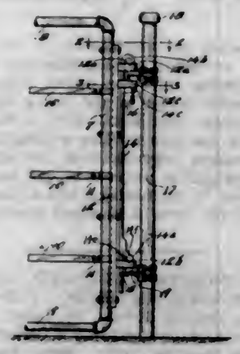
1,640,391. SHIM FOR CAR TRUCKS. FRANKLIN L. BARBER, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 24, 1926. Serial No. 104,376. 6 Claims. (Cl. 105—186.)

1. A shim adapted to be used for the bolster of a car truck having a roller side bearing therein, said shim comprising a plate having a top surface adapted to bear directly against the bottom roller bearing surface of the bolster and having a bottom surface formed to bear directly against the top surface of the roller bearing.



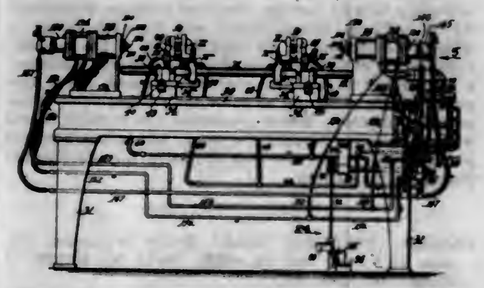
1,640,392. FUSE-SETTING MACHINE. GEORGE W. BEATTY, Decatur, Ill. Filed Mar. 29, 1926. Serial No. 98,286. 12 Claims. (Cl. 86—23.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A fuse setting machine embodying an adjusting member formed with a slot and a groove, a crank for driving the same, a spring pressed bolt normally positioned in the slot of the adjusting member, a spring pressed latch in the bolt and normally engaging the crank, a plunger within the adjusting member adapted to be retracted when struck by a round introduced into the machine, a member mounted on the plunger and having a cam arm disposed in the slot of the adjusting member, said arm adapted to disengage the bolt and latch when the plunger is retracted, means whereby the bolt is prevented from entering the slot on the first revolution of the crank and adjusting member, said means rendered inoperative as the crank commences its second revolution to permit the bolt and latch to function and means for restoring the cam arm to initial position when the plunger is released by withdrawal of the round.



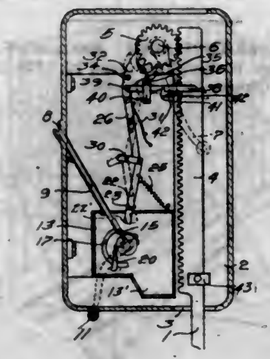
1,640,393. OPTICAL MEANS FOR GENERATING, AMPLIFYING, AND CONTROLLING ELECTRIC CURRENTS. WILLIAM W. COBLENTZ, Washington, D. C. Filed Sept. 18, 1923. Serial No. 663,411. 17 Claims. (Cl. 250—1.)

1. Means for generating electric currents or electromotive forces optically comprising a light reactive body having spots of maximum positive actinoelectromotive force or maximum negative thermal electromotive force



or both, and optical means for selectively exposing said spots to secure photo-electric currents in either direction as desired.

1,640,394. GATE LATCH. EDWIN CROWLEY, Minneapolis, Minn. Filed Mar. 20, 1925. Serial No. 16,996. 12 Claims. (Cl. 292—162.)



1. A latching means for a swinging member, such as a gate, having in combination, a stationary member having upper and lower keepers thereon, a member carried by said gate guided for vertical movement thereon having portions adapted, respectively, to engage and seat in said keepers, said gate having spaced means adapted, respectively, to pass and be disposed above said keepers, said member being movable and guided in said means.

1,640,395. SHAFT CENTERING AND MARKING MACHINE. MARK H. DAMERELL, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1925. Serial No. 9,884. 18 Claims. (Cl. 33—191.)

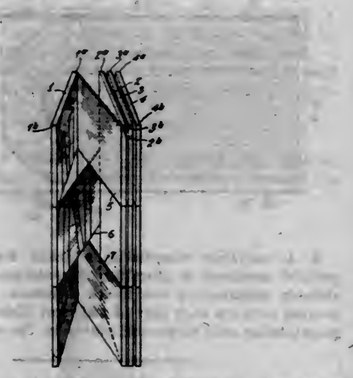
1. A shaft centering and marking machine comprising shaft centering and holding devices, a pair of marking heads, a marking device movable in each head, means to advance said marking device against an end of a shaft positioned by said holding devices and means to hammer said marking device into said shaft.

1,640,396. VENDING MACHINE. HERBERT W. DART, Colbert, Wash., assignor of one-half to William H. Ziegler, jr., Colbert, Wash.; Mila S. Dart executrix of said Herbert W. Dart, deceased. Filed Oct. 11, 1924. Serial No. 743,066. 7 Claims. (Cl. 194—66.)

1. The combination with a rotary shaft having a coin-pocket and means for delivering a coin thereto, of a pivoted lever in the path of movement of the coin, a rack wheel, a pivoted pawl for co-action with the rack wheel and an opposed pivoted detent on said pawl, a pivoted link pivotally connecting said lever and pawl, means for locking said pawl in inoperative position after actuation by said lever, a rack actuated by said rack wheel, and means on the rack for releasing said locking means.

1,640,397. CARD-INDEX TRAY. GEORGE H. DAWSON, Cambridge, Mass., assignor, by mesne assignments, to Remington Rand, Inc., Tonawanda, N. Y., a Corporation of Delaware. Filed Dec. 5, 1921. Serial No. 520,184. 15 Claims. (Cl. 129—16.)

1. A card-supporting tray comprising a member having side channels, guideways adjacent said channels, a stationary bar mounted in one channel and an adjustable bar mounted in the other channel, and mechanism connecting said adjustable bar to said member for shifting said adjustable bar to locking or unlocking position.

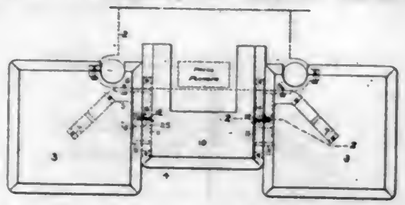


2. In a card-supporting tray having guideways for slidably receiving cards, a support for the lowermost card comprising a plate member having a flange forming the front end of said tray, and a flange upon which the lowermost card is adapted to be supported.

1,640,398. PAPER FASTENER. DUDLEY M. DIGGS, Schenectady, N. Y., assignor of one-half to Henry E. Butler, Schenectady, N. Y. Filed Nov. 12, 1925. Serial No. 68,539. 2 Claims. (Cl. 24—153.)

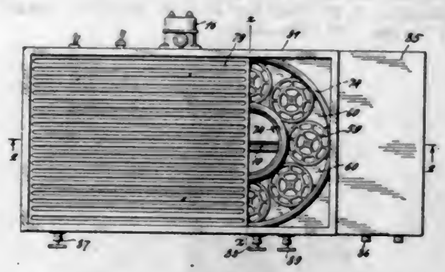
2. A paper fastener comprising a flat head having advertising indicia on its outer surface, and a pin formed integral with the head and extending across the back of the head at an angle of about 45 degrees to the line of the indicia, the end of the pin extending well beyond the confines of the head.

1,640,399. MECHANICAL TOY BOOK. HERMAN DRUCK, Brooklyn, N. Y. Filed Feb. 8, 1927. Serial No. 166,627. 3 Claims. (Cl. 273—155.)



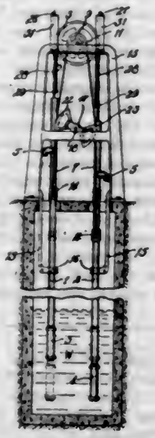
1. In a device of the character described, a plurality of plates positioned face to face and between each two of which are interposed at least two hinge strips, one end of one hinge strip being pivotally secured to one edge of one adjacent plate and the other end of said hinge strip being secured to the opposite edge of the contiguous plate, and one end of the other hinge strip being secured to the other edge of the first mentioned plate, and the other end of the latter hinge strip being secured to the opposite edge of the second mentioned plate, and corelative picture elements delineated on corelative surfaces of the strips and plates with each complete picture conjointly carried by a plate and at least one of its associated strips, whereby the picture elements on the plates and strips are mutually cooperative to form three different complete pictures for each of the end plates and four different complete pictures for each of the intermediate plates.

1,640,400. DETACHABLE FEEDING TABLE FOR MACHINES. WALTER C. FELLOWS, Philadelphia, Pa., assignor to C. R. Carver Company, a Corporation of Pennsylvania. Filed June 18, 1926. Serial No. 116,816. 9 Claims. (Cl. 271—61.)



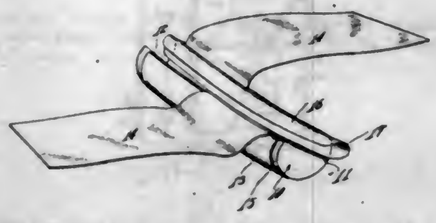
1. The combination with a machine, of a feed table comprising brackets spaced apart, a detachable table board supported on both of the brackets, means for definitely

positioning the table board upon the brackets, and separate locking devices secured to each of the brackets and adapted to engage the opposite side portions of the table



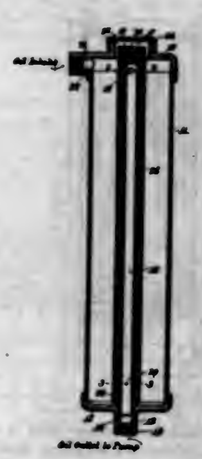
board and clamp it down firmly upon the brackets and thereby prevent its rising and disengagement from the means for positioning it upon the brackets.

1,640,401. WASHING AND STERILIZING DEVICE. WILLIAM C. FLINTHAM and ELMER H. BRIDENBAUGH, Denver, Colo.; said Bridenbaugh assignor to said Flintham. Filed May 3, 1926. Serial No. 106,343. 5 Claims. (Cl. 198—181.)



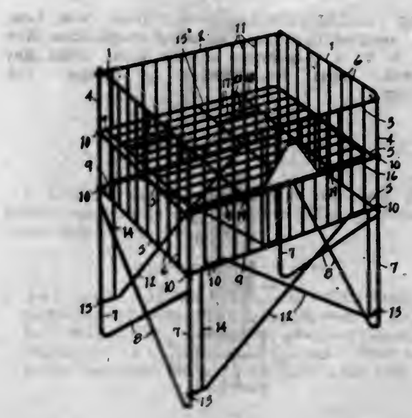
1. A conveyor comprising a track formed from two parallel members, a plurality of perforated circular disks slidably mounted on said track members, a spacing plate located between each pair of adjacent disks and means for maintaining said disks and plates in the same plane.

1,640,402. DUPLEX PUMP. KARL F. GERHARD, Hatton, Wash. Filed Jan. 23, 1926. Serial No. 83,281. 4 Claims. (Cl. 103—200.)



4. In a duplex pumping mechanism the combination with a pair of oppositely reciprocating pump rods and a pair of complementary pump tubes, an oscillatable shaft having a large pulley and a pair of smaller pulleys thereon, a pair of chains connected at their ends to said pump rods and suspended over said smaller pulleys and a chain connected at its ends with said rods and suspended over the larger pulley, means for guiding the pump rods, fixed guides for the pump tubes, and an oscillatable guide for co-action with the chains of the pump tubes.

1,640,403. INNER-TUBE BOOT. BENJAMIN V. GILMORE, Gauley Bridge, W. Va. Filed Sept. 22, 1926. Serial No. 137,059. 6 Claims. (Cl. 152—24.)

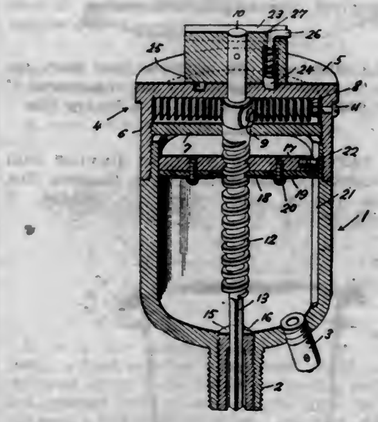


6. The combination with a rim, a casing therein having beads, and an inner tube within the casing, of a split boot embracing the inner tube and provided with straps extending in crossed relation beneath the beads of the tire casing and anchored between said beads and the rim for retaining the boot against opening movement at the split therein.

1,640,404. PRIMING AND VACUUM TANK. SINIUS M. HANSEN, Lynn, Mass., assignor, by mesne assignments, to Victor Shoe Machinery Company, Lynn, Mass., a Corporation of Massachusetts. Filed May 8, 1924. Serial No. 711,911. 5 Claims. (Cl. 103—203.)

1. A tank having an inlet near the top thereof and an outlet in the bottom; and a pipe extending upwardly in the tank from said outlet closed at its upper end and having lateral openings in the wall thereof near the top and also near the bottom, said wall being otherwise imperforate.

1,640,405. DISPLAY RECEPTACLE. CHARLES T. HATCH, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Feb. 21, 1927. Serial No. 169,881. 5 Claims. (Cl. 211—14.)



1. In a collapsible receptacle, the combination of end members including corner uprights, front and rear members including vertically spaced horizontal members provided with eyes engaging said end member uprights permitting collapsing, a bottom provided with transverse members projecting at their ends, the front ends of said transverse members being formed into downturned hooks adapted to be engaged with horizontal members of the front, the rear ends terminating in eyes, and links on the rear member engaging said eyes whereby the bottom may be supported with the links in upright position or in a depending position with the hooks engaged with different front longitudinal members or the hooks may be disengaged and the bottom suspended in vertical position from said links permitting collapsing of the receptacle.

1,640,406. STANDING-VALVE PULLER. ROB C. HAWKINS, Long Beach, Calif. Filed Oct. 23, 1926. Serial No. 143,716. 7 Claims. (Cl. 103—180.)

1. In a pump comprising a standing valve and a plunger, a post rising from said standing valve, a sleeve yieldably mounted on said post and means on said plunger adapted to engage said sleeve, whereby the standing valve may be pulled.

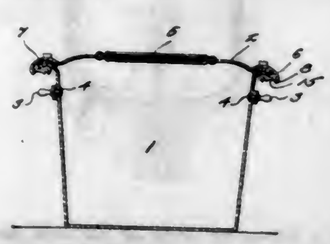
1,640,407. AUTOMATIC LUBRICATING CUP. GEORGE F. HERBST, Underhill, Wis. Filed May 28, 1926. Serial No. 112,315. 4 Claims. (Cl. 184—45.)

1. In a lubricating device of the class described, a lubricant containing cup having a discharge neck at its bottom, a regulating plug threaded into said neck, a rotary shaft in said cup connected at its lower end to said plug for operating the latter, and spring means for operating said shaft.

1,640,408. STANDING VALVE. JOHN W. HOUSE, Corsicana, Tex. Filed May 20, 1926. Serial No. 110,518. 6 Claims. (Cl. 103—228.)

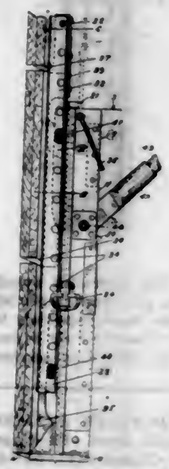
1. A valve of the character specified comprising a body, similar heads at opposite ends of the body, having their inner and outer faces oppositely inclined, and wings projecting radially from the body beyond the sides of the head and having the projecting corners cut away.

1,640,409. PIE-PLATE ATTACHMENT. WILLIAM HOUSTON, Haverhill, Mass. Filed Apr. 19, 1927. Serial No. 184,874. 2 Claims. (Cl. 53—6.)



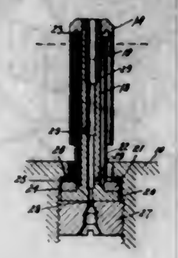
1. A pie plate attachment comprising a continuous flat metal ring formed to be removably fitted to the edge of the plate rim and to extend above the surface thereof and a transversely fluted metal strip enclosed within and

secured to one edge portion of the inner surface of the ring and having its ends meeting, to permit the opposite edge portion of the ring to form a retaining flange



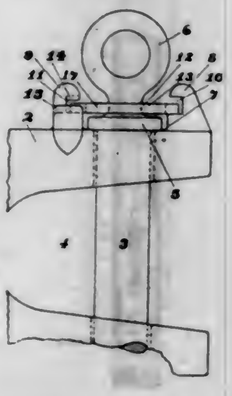
adapted to be passed onto the plate rim from above the same and to be supported thereon by the engagement of the adjacent edge of the fluted strip with its top side.

1,640,410. FASTENING OR SEALING DEVICE FOR BURIAL CASKETS. IRA IRVING INMAN, Hartford City, Ind. Filed Apr. 28, 1926. Serial No. 105,246. 2 Claims. (Cl. 27—6.)



1. The combination with conforming rims on the adjacent marginal edges of a body and a cover of a burial casket including a packing between the rims, a bolt passing through the conforming rims and the packing and provided with means to engage the under face of the rim of the body to draw the two rims together, means for holding the tightening means in fastened position, said bolt including opposite shoulders, and means carried by the bolt consisting of eccentrically mounted cams adapted to engage with said shoulders, when said means engage with the under face of one of the rims to limit disconnection of such means from the bolt, when the fastening means is in a position at right angles to the bolt, a position such as used to prevent detachment of such means.

1,640,411. JACK. FRED J. JACKSON, Minneapolis, Minn. Filed Jan. 25, 1926. Serial No. 83,753. 4 Claims. (Cl. 254—133.)

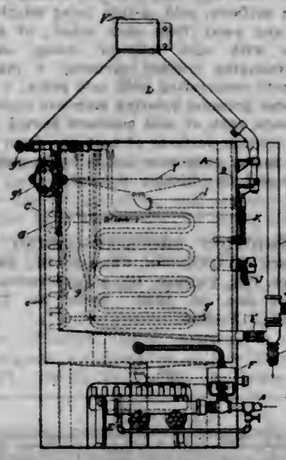


1. A jack, for raising grain car doors having separable vertically movable sections, comprising a rack, means for raising the rack, section engaging devices, and means for associating the section engaging devices with the rack whereby the upward movement of the latter will successively engage the devices to space the sections from each other before raising the entire door.

1,640,412. CARBURETOR. JOHN JUHASZ, New York, N. Y., assignor to Juhasz Carbureter Corporation, New York, N. Y., a Corporation of New York. Filed May 9, 1923. Serial No. 637,743. 3 Claims. (Cl. 261—121.)

2. A carburetor nozzle comprising a suction-controlled tube provided with a bore having a stepped cross-section, a fuel connection leading to the lower end of said tube, said tube being provided with openings at different levels between said fuel connection at its upper end, and means for supplying air to the said openings and at the same time preventing leakage of fuel therethrough, said openings being normally sealed by the fuel at low speeds and admitting air into said tube in succession at high speeds.

1,640,413. COUPLING-PIN RETAINER. BENJAMIN F. KURTZ, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 1, 1926. Serial No. 99,083. 10 Claims. (Cl. 213—188.)

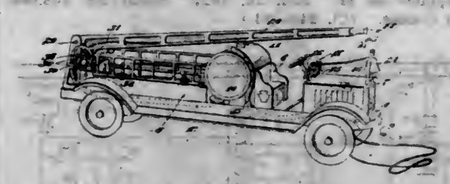


1. In a car, a coupler mounted thereon, a coupling pin movably mounted in said coupler, and movable means for maintaining said pin in said coupler, said means being caused to operate transversely of the axis of said pin by certain movements of said car.

1,640,414. FLEXIBLE HAND STAMP. FRED L. LAKE, Dallas, Tex. Filed May 7, 1926. Serial No. 107,498. 2 Claims. (Cl. 101—406.)

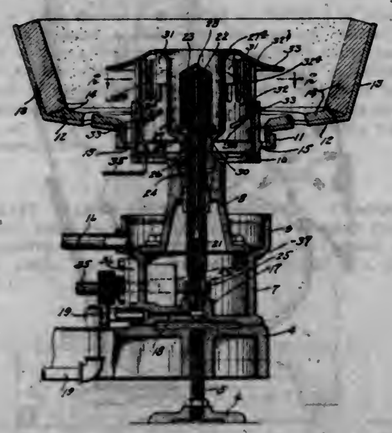
1. A hand stamp comprising a base and stem of flexible rubber, said stem having a stiffening element entirely embedded in the stem.

1,640,415. APPARATUS FOR PURIFYING USED MINERAL LUBRICATING OIL. ROBERT E. LANGSTON, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Sept. 27, 1921. Serial No. 503,533. 2 Claims. (Cl. 196—16.)



1. An apparatus for purifying lubricating oil contaminated with volatile fluids and other foreign matter; consisting of a tank adapted to hold said contaminated oil while under treatment, a heating jacket for said tank, means for heating the contents of said jacket to a temperature substantially above 212° Fahrenheit, coils of metal tubing within said jacket and extending from said jacket into said tank and opening thereinto, and means for feeding water into said coils for generating steam.

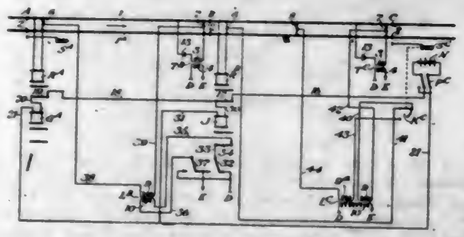
1,640,416. PILE TRUSS. DONALD J. MACDONALD, Cambridge, Mass. Filed June 25, 1926. Serial No. 118,589. 3 Claims. (Cl. 128—98.)



1. A truss comprising a supporting member normally adapted to bear against the rectum, and a harness for retaining the same on the body of a wearer and including a crotch strap, the said supporting member having an opening therethrough to loosely receive the crotch strap to movably retain said member thereon, another opening communicating with the first opening, and said member adapted to be moved from its normal position when desired to register said opening with the rectum for the purpose defined.

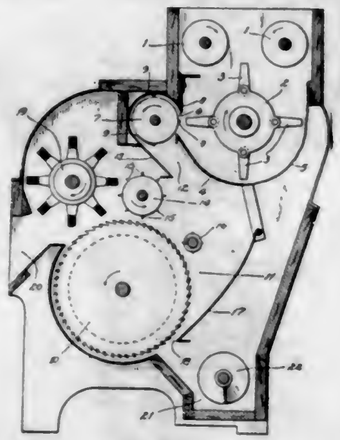
1,640,417. PUMPING-ENGINE TRUCK. ISIDORE MARKS, Dorchester, Mass., assignor to Keystone Mfg. Co., Boston, Mass., a Corporation of Massachusetts. Filed May 8, 1926. Serial No. 107,625. 8 Claims. (Cl. 46—48.)

1. In a toy pumping engine four-wheeled truck, a frame, a hood mounted on the front end of the frame, an air pump on the frame within the hood, a combined water and pressure tank mounted on the frame at the rear of the hood, a cab between the hood and tank, a hose for delivering water from the tank and having a discharge nozzle, a hose extending from the pump to the tank, a tower for the water hose pivotally mounted at the rear end of the frame, manually operable means cooperating with the tower for raising and lowering the same, a pump operating crank of the motor starting type located at the front of the frame, and means connecting the crank with the pump, all of the aforesaid parts being in miniature and constructed and combined as a toy.



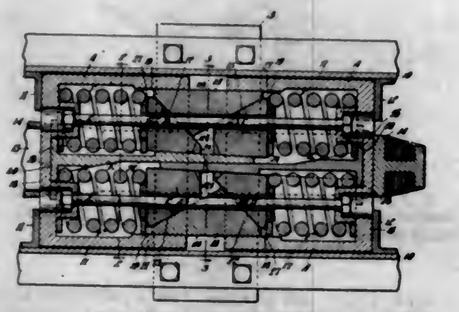
1,640,418. OIL BURNER. EARL MARR, Minneapolis, Minn., assignor to Marr Oil Heat Machine Corporation, Minneapolis, Minn., a Corporation. Filed Oct. 26, 1925. Serial No. 64,741. 4 Claims. (Cl. 158—77.)

1. In a centrifugal oil burner, the combination with an upright non-rotary oil delivery pipe provided with a distributing head having a downturned oil delivery conduit offset from the axis thereof so as to deliver the oil radially outward of said oil delivery pipe, a rotary sleeve journaled around said oil delivery pipe, an open deep atomizing cup secured to said sleeve for rotation therewith, and an inverted cup-shaped cap enclosing said distributing head and secured at its lower portion to the bottom of said cup for rotation therewith around said



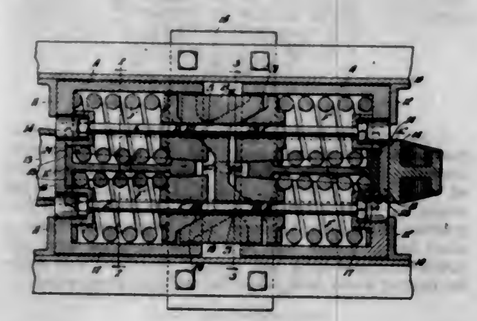
cup, said cap being open at its lower portion for the discharge of oil to the bottom of said cup, the upper end of said sleeve being extended upward within said cup and terminated close to the top of said cap.

1,640,419. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Mar. 1, 1924, Serial No. 696,344, Patent No. 1,629,832, dated May 24, 1927. Divided and this application filed Jan. 26, 1927. Serial No. 163,690. 6 Claims. (Cl. 246—34.)



6. In combination, a forward and a rear section of railway track, traffic governing means for the rear section including a relay, a circuit for said relay controlled in accordance with traffic conditions in advance of the forward section, a second relay connected in parallel with the first relay, and means controlled by the second relay for supplying train governing current to the rails of the rear section.

1,640,420. COTTON EXTRACTING AND CLEANING MACHINE. JOHN E. MITCHELL, St. Louis, Mo. Filed Jan. 4, 1926. Serial No. 79,084. 13 Claims. (Cl. 19—36.)



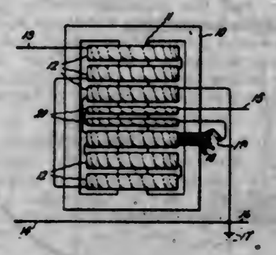
1. In a cotton cleaning machine affording a working chamber having a free passage for hulls from an inlet at the top to an outlet at the bottom, a saw cylinder operating in said chamber and past which the outlet from said chamber extends, and a pair of kicker rolls located in said chamber in unobstructed relation to each other to co-operate with said saw cylinder in knocking back hulls in cotton carried around by the latter, the one being located above the other, and the lower kicker roll being positioned at a greater distance from the surface of the saw cylinder than the upper.

1,640,421. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 27, 1925. Serial No. 71,795. 11 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with front and rear follower casing having interior friction surfaces, said casings being relatively movable toward and away from each other; of a friction post movable with each follower casing, said posts having inter-engaging friction surfaces; a plurality of friction elements cooperating with said posts; a plurality of lateral, wedge pressure creating members engaging said friction elements, each of said members having frictional contact with friction surfaces of both the front and rear casings; and spring resistance means interposed between each follower and the friction elements.

1,640,422. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 26, 1925. Serial No. 77,787. 2 Claims. (Cl. 213—36.)

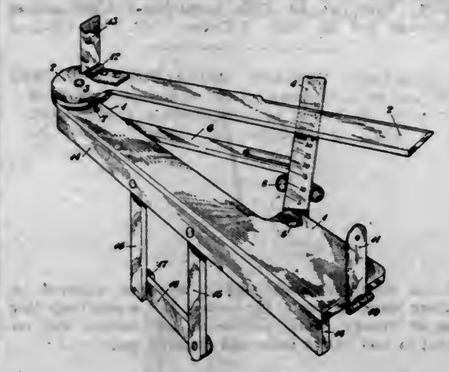
1. In a friction shock absorbing mechanism, the combination with front and rear follower casings; of a friction post movable with each casing, each post having friction surfaces on the opposite sides thereof converging inwardly of the mechanism; a wedge member disposed between said casings and embraced thereby, said member having front and rear sets of opposed interior wedge faces; front and rear pairs of friction shoes, the shoes of each pair cooperating with one of said posts and being disposed at opposite sides of the latter and having friction surfaces co-operating with the friction surfaces of said post, each shoe also having a wedge face co-operating with one of the faces of said wedge member;



and twin arranged springs in each casing disposed on opposite sides of the corresponding post and resisting relative movement of said casing and the corresponding friction shoes.

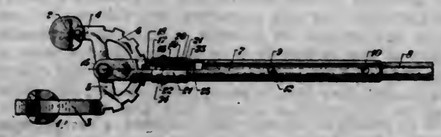
1,640,423. ILLUMINATING DEVICE. JAMES A. O'NEIL, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 16, 1924. Serial No. 706,830. 1 Claim. (Cl. 240—103.)

A lighting unit comprising a globe, a source of light, a reticular trough reflector, said light source being located along the axis of the globe, said reflector being located between the light source and the globe, the axis of the reflector extending transverse a plane at right angles to the axis of the globe and crossing the axis of the globe.



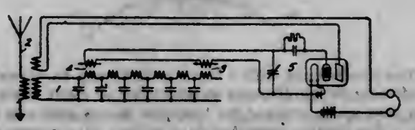
1,640,424. AUTOTRANSFORMER. KONSTANTIN K. PALUEFF, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 29, 1926. Serial No. 84,729. 2 Claims. (Cl. 171—119.)

1. An auto transformer comprising a core, a main winding and a protective winding on said core, said main winding having a plurality of taps, and a tap switch connected between said protective winding and said taps, whereby a line conductor may be connected through said protective winding to any selected tap.



1,640,425. MEASURING INSTRUMENT. HARRY S. PERCIVAL, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 17, 1923. Serial No. 632,720. 4 Claims. (Cl. 88—2.4.)

1. An instrument of the class described comprising a fixed arm, a calibrated scale pivoted to and fixable with relation to said fixed arm, a movable arm pivoted to one end of said fixed arm and slidable over said scale, sighting means on the other end of said fixed arm, and a



mirror mounted on said movable arm at the pivotal end thereof in a plane perpendicular to the upper and lower surfaces and to one long edge of said arm.

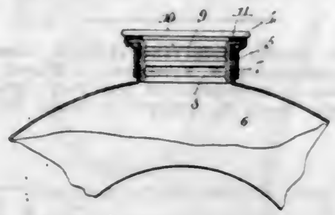
1,640,426. CABLE BENDER. VERNON B. PIKE, Cheltenham, Pa. Filed Aug. 24, 1923. Serial No. 659,195. 7 Claims. (Cl. 81—15.)

1. A cable bender comprising a plurality of arms of different lengths, a cable gripping shoe on each of said arms, a yoke joining said arms in fixed co-relation, a lever handle adjustable as to length and pivotally attached to the middle portion of said yoke, and means for securing said handle with respect to the axis of said yoke at any one of a plurality of angles within an arc of approximately 180°.

1,640,427. RADIO RECEIVING SYSTEM. CHESTER W. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 21, 1922. Serial No. 602,427. 6 Claims. (Cl. 250—20.)

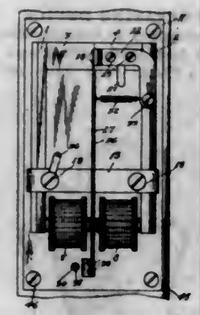
1. The combination in a radio receiving system of an artificial transmission line having an effective length equal to several wave lengths of the signals to be received, means for impressing received signaling impulses upon said artificial line and a receiving set having an input circuit coupled to said artificial line at two different points along its length at least a wave length apart.

1,640,428. ELECTRODE FOR ELECTRIC-DISCHARGE DEVICES. FRANZ SKAUPY, MARCELLO PIRANI, FRITZ BAHR, and WERNER FEHSE, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Oct. 30, 1923, Serial No. 671,795, and in Germany Dec. 22, 1922. 3 Claims. (Cl. 176—136.)



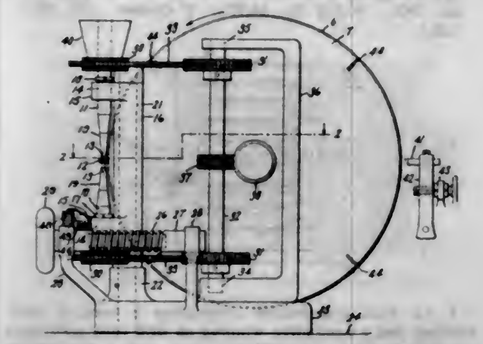
3. An electrode comprising a mass of sintered refractory metal having a flat surface and a relatively thin stem of wrought metal oblique to said surface and imbedded in and united with said sintered mass.

1,640,429. COMB. MINNIE L. SPEER, Pittsburgh, Pa. Filed Mar. 8, 1927. Serial No. 173,642. 1 Claim. (Cl. 132—21.)



In an article of the character described, a flexible outer shield and a flexible comb formed integrally therewith positioned inwardly of said shield and along the lower edge thereof, said shield being curved in the sense of its height, for the purpose set forth.

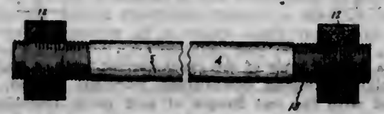
1,640,430. BOTTLE OR BAG GASKET. STANLEY J. STANLEY, New York, N. Y. Filed June 12, 1925. Serial No. 36,663. 1 Claim. (Cl. 150—8.)



The combination with a bottle neck having an outwardly projecting flange disposed substantially at right angles to the neck and a stopper for insertion in the neck and having a flat portion overlying said flange; of a gasket comprising a flat ring of pliant material of substantially the same breadth as said flange and adapted to lie upon the latter and to be compressed by said flat portion, a channel portion to receive the outer edge of said bottle neck, and a skirt extending beneath said flange; said gasket having its channel and skirt portions of slightly less diameter than said bottle flange and neck respectively, whereby to snugly embrace the latter upon its top, bottom and outer edges.

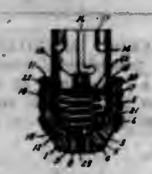
1,640,431. RELAY. MICHAEL B. STAZAK, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1922. Serial No. 601,014. 10 Claims. (Cl. 200—91.)

1. In a relay of the class described including a mounting plate, a pair of permanent magnets mounted upon said mounting plate and parallel to each other, the ends of said permanent magnets of like polarity being disposed opposite each other, a pair of electromagnet coils secured to and between one pair of ends of said permanent magnets, an armature operatively associated with and between the ends of the cores of said electromagnets, a spring contact member normally in engagement with said armature for closing a circuit between said armature and said contact member, said armature adapted to vibrate when current impulses of high frequency flow through said electromagnets, whereupon said spring member vibrates to open the circuit periodically so long as said armature is vibrating, and a yoke member for maintaining said magnets on said mounting plate and also for retaining said coils in operative relation with said armature.



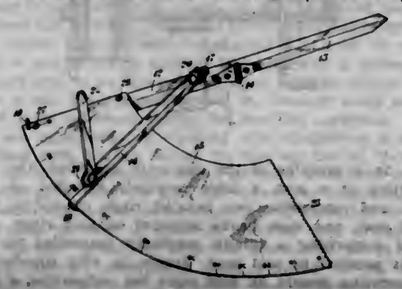
1,640,432. METHOD AND MEANS FOR MANUFACTURING GEAR WHEELS. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 27, 1925. Serial No. 25,991. 6 Claims. (Cl. 90—3.)

1. The method of producing finished gear teeth on a gear wheel blank in one operation, which comprises removing surplus material from the blank to form gear teeth thereon by rotating the blank about its axis of rotation in frictional contact with a smooth rapidly moving gear tooth generating thread which corresponds in shape and in pitch with the shape and circular pitch of the desired gear teeth, the blank being gradually moved toward the generating thread until the desired tooth depth is obtained, the removal of material being thereby effected by friction assisted by the heat developed thereby and all of the gear teeth being formed substantially simultaneously, and then permitting the formed gear wheel to continue to revolve in slight contact with the generating thread to finish and polish the teeth while said gear wheel is cooling.



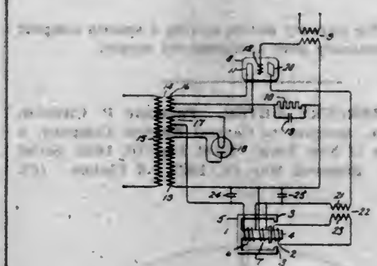
5. In a gear tooth forming machine, the combination with a disk of relatively large diameter, of a rigid supporting bearing means for the disk providing a fixed axis about which the disk revolves, a gear tooth generating means on the periphery of the disk, means adjacent the periphery of the disk for releasably gripping and holding a pinion blank and rotating the same in tangential relation with the periphery of the disk, said means being movable toward and away from the disk, and means forming a driving connection between the disk and the last-named means which provides a speed reduction from the disk to said means.

1,640,433. INSULATING ELEMENT. JOHN J. WELDON, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1926. Serial No. 123,774. 4 Claims. (Cl. 154—2.6.)



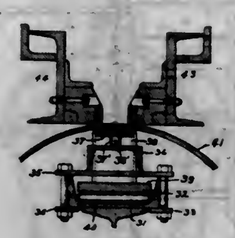
1. An element comprising a bundle of hard twisted textile material cords which extend side by side from end to end of the element and are in mutual contact, and a phenolic condensation product which holds the cords under compression.

1,640,434. SOCKET ADAPTER. FREDERICK H. WESTON, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed July 5, 1923. Serial No. 649,681. 4 Claims. (Cl. 173—344.)



1. A socket adapter comprising an insulating base, a threaded shell contact embracing said base and provided with a flange at one end, a metal tube located within and attached to said flange, lamp holding means provided in said tube, an external center contact mounted on said base, and a spring-pressed contact located within said tube and electrically connected with said center contact.

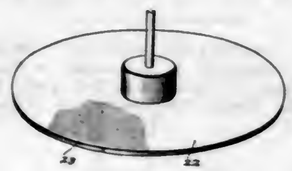
1,640,435. SIGHTING INSTRUMENT FOR MEASURING ANGLES. FRANK C. ARMSTRONG, Little Neck, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 17, 1923. Serial No. 632,742. 1 Claim. (Cl. 33—64.)



An instrument of the class described comprising a calibrated scale, a fixed sighting arm composed of two sections, the first of said sections being pivoted to said scale at one point, and the second of said sections being hinged to the first, means for attaching said first section to said scale at a second point, and a movable sighting arm pivoted to said first section and slidable over said scale.

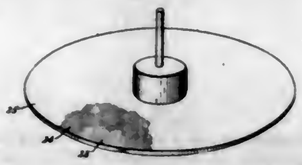
1,640,436. AMPLIFYING SYSTEM. FREDERICK C. BARTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 14, 1925. Serial No. 69,200. 4 Claims. (Cl. 179—171.)

1. The combination of a sound reproducing device comprising a plurality of field circuits and an operating circuit, an amplifier provided with a grid for controlling the transmission of current between its cathode and anode to cause voltage impulses to be applied to said operating circuit, and current supply means connected between said anode and cathode through one of said field circuits and to another of said field circuits independently of said amplifier.



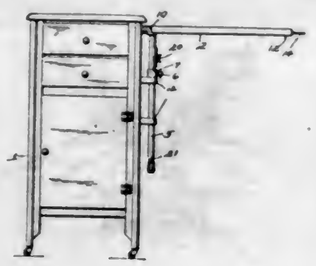
1,640,437. ELECTRIC WELDING. VERNI J. CHAPMAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 16, 1925. Serial No. 9,403. 9 Claims. (Cl. 219—8.)

6. An electric arc welding machine comprising magnetizable holding members extending along the line of the seam to be welded, means adapted to clamp the work against said holding members, and means for magnetizing said holding members to produce a magnetic field directed across and extending along the line of the weld.



8. An electric welding apparatus comprising a flexible backing member adapted to contact with the parts to be welded, and means comprising a distensible hose extending along the line of the weld for forcing said backing member against said parts.

1,640,438. MERCURY METER. FREDERIC P. CHURCH, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 3, 1923. Serial No. 649,385. 3 Claims. (Cl. 171—265.)

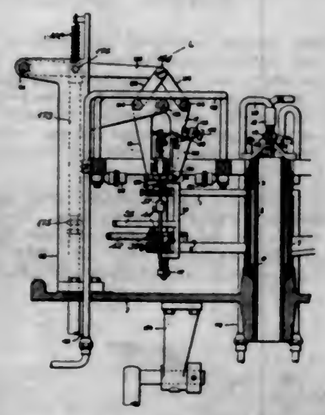


1. A rotor for mercury meters having a smooth compact surface of chemically pure amalgamated copper.

1,640,439. MERCURY METER. FREDERIC P. CHURCH, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 16, 1925, Serial No. 2,947. Renewed May 14, 1927. 3 Claims. (Cl. 171—265.)

2. A rotor for mercury meters comprising a disc of copper having a first coating of cobalt and a second and outer coating of substantially chemically pure copper.

1,640,440. COMBINATION TABLE AND TRAY. ISIAH CONRAD, Columbus, Ohio, assignor to F. O. Schoedinger, Columbus, Ohio. Filed Aug. 8, 1925. Serial No. 49,098. 2 Claims. (Cl. 115—82.)

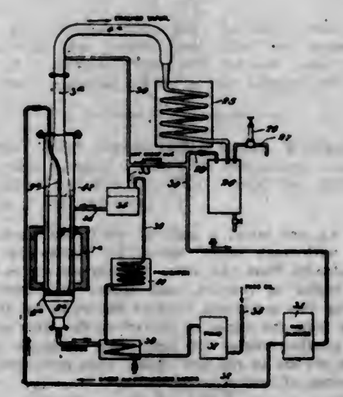


1. An adjustable tray structure for bed side tables comprising a shaft mounted in connection with a support for turning movement about a vertical axis, a substantially rectangular frame pivoted to the upper end of said shaft for turning movement about a horizontal axis, connecting means for maintaining said frame in its various positions of adjustment relative to said shaft, a tray member slidably received by said rectangular frame, a bracket fixed to one end of said tray and arranged to engage with said frame so as to maintain the tray when inactively positioned in vertical suspended relationship with respect to said frame, and a second bracket secured to the opposite end of said tray and engaging with the walls of said frame to maintain said tray when actively positioned in a horizontal plane and in projecting relationship with respect to said frame.

1,640,441. PORTABLE AND COLLAPSIBLE TABLE OR TRAY. ISIAH CONRAD, Columbus, Ohio, assignor to F. O. Schoedinger, Columbus, Ohio. Filed Aug. 8, 1925. Serial No. 49,097. 1 Claim. (Cl. 45—11.)

In a folding table of the character set forth, a supporting plate including downturned marginal flanges, lugs formed with the end flanges of said plate, foldable end frames for said plate pivoted to said lugs whereby said frames are capable of being moved from inactive positions lying substantially in the plane of said plate to active positions occupying planes substantially at right angles to that of said plate, each of said frames being formed to include transversely spaced longitudinally extending side bars, a connecting upper bar and a loop shaped leg connection between the lower ends of the side bars, an offset arm provided upon one of said side bars, a spring means engaging with the arm of each of said frames for retaining the latter locked in their active vertical positions.

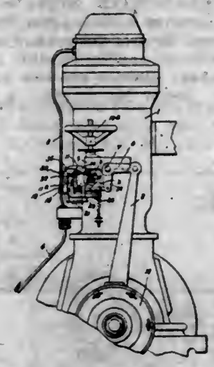
1,640,442. STEM-MAKING MACHINE. HENDRIK DE JONG, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed July 9, 1924, Serial No. 724,953, and in the Netherlands July 19, 1923. 13 Claims. (Cl. 49—2.)



1. In a machine of the character described, the combination of a post, a table rotatably mounted on said post and comprising two parallel rings concentric with said post, and stem heads mounted on said rings, each head comprising a spindle rotatably journalled in said rings parallel to said post, fingers on said spindle and cooperating fingers on said table for supporting a stem tube and an exhaust tube with their ends juxtaposed, and means for holding leading-in wires within said stem tube.

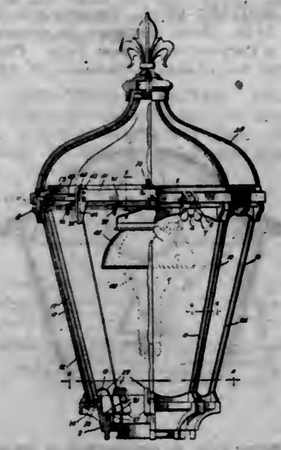
1,640,443. ELECTRICAL DISCHARGE DEVICE. PHILIP K. DEVERS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 27, 1926. Serial No. 157,030. 3 Claims. (Cl. 176—123.)

1. An electric discharge device comprising an envelope, cooperating spaced electrodes therein, a starting circuit therefor, a quantity of normally liquid vaporizable conducting material in said envelope, and a receptacle within said envelope located and shaped to contain a quantity of said vaporizable material in position to close said starting circuit.



1,640,444. PROCESS AND APPARATUS FOR CRACKING HYDROCARBON OILS. WARREN F. FARAGHER and WILLIAM ARTHUR GRUSE, Pittsburgh, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Jan. 15, 1921. Serial No. 437,479. 4 Claims. (Cl. 196—68.)

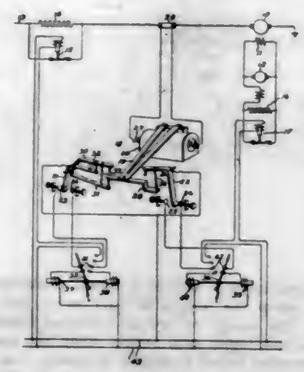
1. The method of cracking oils, which comprises subjecting a body of oil in a still to the action of heated surfaces and thereby heating the oil to a cracking temperature under pressure and introducing a current or currents of gas, acting on the "air-lift" principle, in upwardly directed jets in an upwardly directed passage within the body of oil, the gaseous current or currents being made up of gases produced during the cracking operation.



3. An apparatus for cracking oils, comprising a still provided with heating means for heating the oil therein to a cracking temperature under pressure, means for withdrawing gases from the still, and means for reintroducing a gaseous current or currents comprising a portion of the same into the still in upwardly directed jets, acting on the "air-lift" principle, near the lower end of an upwardly directed circulation pipe arranged in the still and adapted for coacting with the gaseous current or currents for effecting circulation of the oil over the heating surfaces of the still.

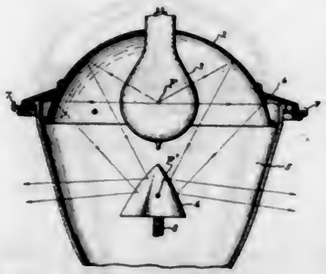
1,640,445. INTERNAL-COMBUSTION ENGINE. JOHANN GERSTMAIR, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed June 23, 1924, Serial No. 721,756, and in Germany July 7, 1923. 7 Claims. (Cl. 123—140.)

1. The combination with an internal combustion engine, having a pump for supplying fuel to it and actuating means for the pump, of means which at normal speeds is inactive and comes into action when the speed of the engine decreases below a certain minimum low value for increasing the amount of fuel supplied by the pump to the engine, whereby the amount of fuel supplied to the engine cannot be diminished to an extent such that the engine will stop.



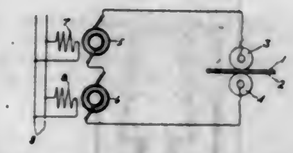
1,640,446. LANTERN. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,483. 3 Claims. (Cl. 240—25.)

1. A lantern having a top frame and a bottom frame and a series of ribs interposed between the top and the bottom frames, said elements forming a series of panel frames, a glass panel for each frame, a non-metallic gasket imbedded in each rib for protecting the glass



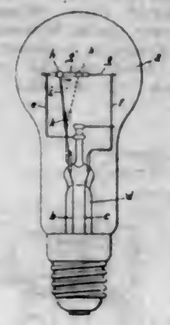
from the metal, each of said ribs serving as a frame element for two adjacent panels, the gasket on each rib protruding between the two adjacent panels to prevent the panels from coming into contact.

1,640,447. THERMAL-RESPONSIVE SWITCH MECHANISM AND PROTECTIVE SYSTEM EMPLOYING THE SAME. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Original application filed Dec. 16, 1924, Serial No. 756,343. Divided and this application filed Mar. 4, 1926. Serial No. 92,303. 6 Claims. (Cl. 171—312.)



1. The combination with a plurality of electric switches, each operable between a plurality of positions and having electro-responsive means for operating the same to each position, of a thermal responsive movable element, and control switch mechanism connected to be actuated by said element for controlling said means to separately operate each of said electric switches to each position responsively to a different predetermined temperature of said element.

1,640,448. LIGHTING UNIT. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 28, 1925. Serial No. 12,424. 3 Claims. (Cl. 240—103.)



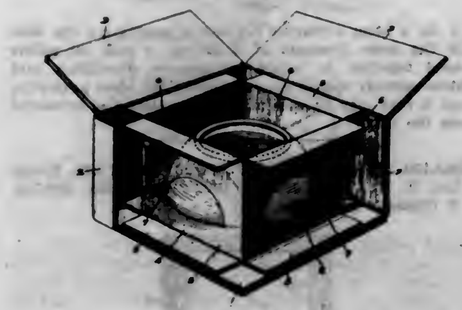
3. In a lighting unit, in combination, a main ellipsoidal reflector, a source of light located at one focal region of the reflector and a convex reflector covering the conjugate focal region of the main reflector, the convex surface of the convex reflector being toward the main reflector and also being asymmetrical in configuration whereby a zone of light is produced about the axis of the unit having asymmetric distribution.

1,640,449. RESISTANCE LINE WELDING. EDWARD M. HEWLETT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 22, 1924. Serial No. 751,600. 5 Claims. (Cl. 219—4.)

1. The method of resistance line welding which comprises continuously transmitting currents of different frequencies through the weld metal for periodically varying the value of the resultant current transmitted through said metal in a manner to cause it to be alternately heated to its welding temperature and cooled to a temperature at which it hardens.

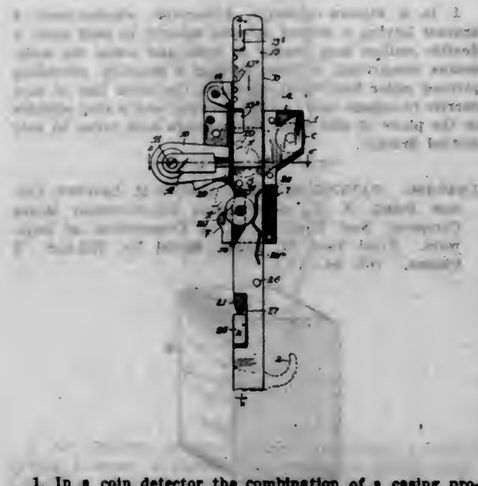
1,640,450. ARC LIGHT. ALOIS IHLN, Berlin-Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Dec. 24, 1923, Serial No. 682,371, and in Germany May 5, 1923. 3 Claims. (Cl. 176—1.)

1. In an arc lamp, a pair of electrodes normally in contact with each other, means for separating one of said electrodes from the other whereby an arc is started in the region of contact, said means also serving for continuing the movement of said electrode to draw the arc away from the region of contact on the other electrode toward another region of said other electrode and to maintain the arc in the new region, thus preventing rapid deterioration of said point of contact.



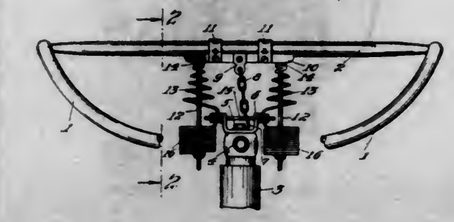
1,640,451. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 15, 1926. Serial No. 109,419. 4 Claims. (Cl. 253—77.)

1. The combination with a rotor member having a rim provided on one side with an axially-projecting shoulder, and means providing an upwardly-facing groove



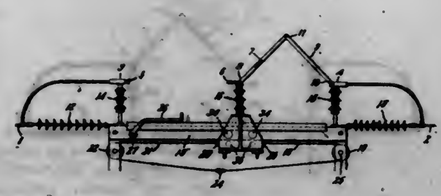
spaced from the shoulder, of a bucket structure having a base provided with a shoulder which locks with the shoulder on the rotor, and two tongues which project from opposite sides of the base and extend axially and radially inward, the end of one of said tongues engaging in said upwardly-facing groove and the other tongue overlying the side of the rim.

1,640,452. PACKING CASE. HARRY N. KNOWLTON, St. Paul, Minn., assignor to General Electric Company, a Corporation of New York. Filed Oct. 30, 1923. Serial No. 671,744. 3 Claims. (Cl. 206—65.)



1. A packing case comprising an inner case member and an outer case member, said inner case member consisting of a polygonal tube with its side walls provided with article engaging apertures and integral end flanges.

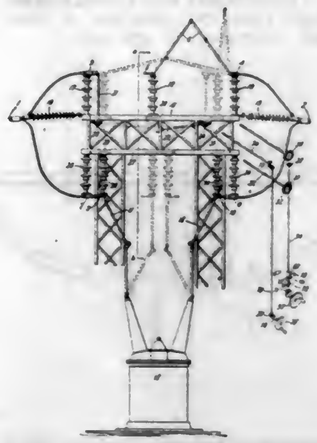
1,640,453. COIN DETECTOR. MORRIS F. KRAUS, Chicago, Ill., assignor to Michael Perciabosco and James Rosinia. Filed Feb. 29, 1924. Serial No. 695,909. 4 Claims. (Cl. 194—97.)



1. In a coin detector the combination of a casing provided with a coin passage, a bar passing through said casing and adapted to be depressed to operate the machine, a locking member mounted on said casing and yieldably held in position to engage a notch in said bar, to prevent the depression of said bar, a coin detecting stud carried by said locking member and having an end extending laterally within said coin passage, means for retarding a coin opposite the end of said stud, whereby the genuineness of the coin is detected by the position of the stud in contact therewith, and the consequent shifting of said locking member to permit the functioning of said bar, and means actuated by said bar for ejecting a coin.

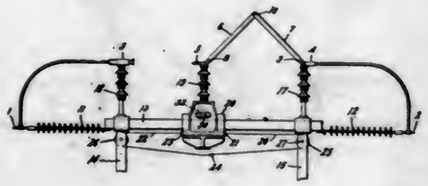
1,640,454. ATTACHMENT FOR HANDLEBARS. ERNST KARL KÜHN, Delhi, Ill. Filed Feb. 19, 1926. Serial No. 89,379. 2 Claims. (Cl. 208—119.)

1. In combination, a steering post, a pair of handle bars connected to the steering post and capable of vertical rotatable movement with respect to the steering post, a cross bar connected to the handle bars, means secured to the cross bar to limit in one direction the vertical movement of the handle bars, a pair of threaded rods associated with said cross bar, a third rod rigidly carried by the steering post and disposed at right angles to said threaded rods, coil springs connecting said threaded rods and the third rod, and spring coils connecting said threaded rods and said third rod, said spring coils being arranged upon the opposite side of said third rod with relation to said coil springs.



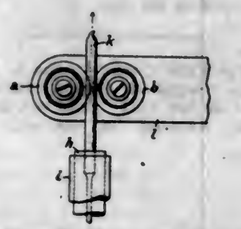
1,640,455. HIGH-TENSION SWITCH. FRANK P. LAWLER, San Francisco, Calif., assignor to General Electric Company, a Corporation of New York. Filed July 9, 1924, Serial No. 725,048. Renewed June 25, 1927. 5 Claims. (Cl. 200—48.)

1. A circuit control mechanism wherein line terminals are arranged to be interconnected through a fixed contact and a movable contact adapted to engage said fixed contact in its closed position and wherein a trackway and a carriage movable along said trackway are provided for moving said movable contact to and fro be-



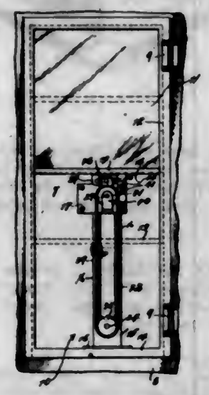
tween its open and closed positions, characterised by the fact that said carriage comprises means suspended from and extending over said trackway to afford a support for said movable contact.

1,640,456. HIGH-TENSION SWITCH. FRANK P. LAWLER, San Francisco, Calif., assignor to General Electric Company, a Corporation of New York. Filed July 9, 1924. Serial No. 725,049. 11 Claims. (Cl. 200—48.)



1. In a mechanism for controlling a circuit through a power line, the combination of a trackway comprising a pair of guide members, a plurality of insulators, switch line terminals located at opposite ends of said trackway and supported by said insulators, a grounding switch rotatable between said members to ground one of said terminals, and means comprising a carriage movable along said trackway for interconnecting said terminals when said grounding switch is open.

1,640,457. HIGH-TENSION SWITCH. FRANK P. LAWLER, San Francisco, Calif., assignor to General Electric Company, a Corporation of New York. Filed July 9, 1924, Serial No. 725,050. Renewed June 25, 1927. 5 Claims. (Cl. 200—41.)

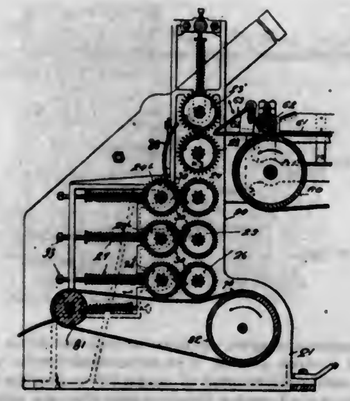


1. A circuit control mechanism wherein a line terminal is connected to a fixed contact and wherein a movable contact operable to open and closed positions is arranged to engage said fixed contact in its closed position, comprising an angle member, and a carriage having a wheel arranged to roll along the corner of said angle member for supporting said movable contact.

1,640,458. APPARATUS FOR UNFITTING TUBING. WILLY LEDIG and HEINRICH ASMUSSEN, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed May 3, 1924, Serial No. 710,926, and in Germany June 7, 1923. 5 Claims. (Cl. 176—2.)

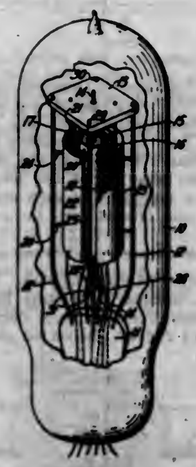
1. In a stem extractor for use in separating the tube and the stem elements of a fitting, a pair of rollers geared together to rotate in opposite directions, said rollers suitably spaced apart whereby the stem projecting from a tube may be gripped by the rollers and extracted from the tube.

1,640,459. WINDOW REGULATOR. NIXON LEE, Brooklyn, N. Y. Filed Jan. 3, 1922. Serial No. 526,701. 3 Claims. (Cl. 268—128.)



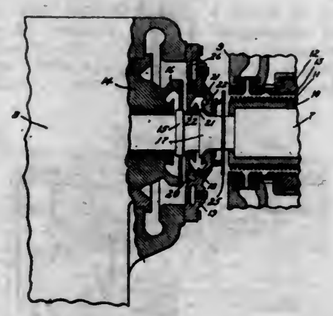
1. In a window-regulator, a movable window-sash, a bracket having a slotted opening secured to said sash, a flexible endless loop carrier to raise and lower the sash, means comprising a block having a laterally extending pivoted roller both mounted above the pitch line of said carrier to engage said bracket opening, and a stop slidable in the plane of said block to maintain said roller in said slotted bracket.

1,640,460. PAVING BLOCK. AUGUST H. LEIPERT, College Point, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 27, 1924. Serial No. 722,648. 5 Claims. (Cl. 94—11.)



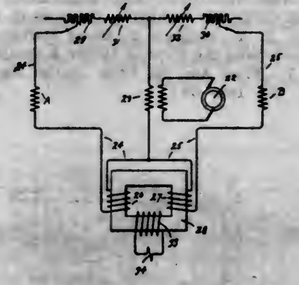
1. A paving block comprising a band of rubber wound in substantially spiral form under tension.

1,640,461. FLAX-CLEANING MACHINE. GEORGE A. LOWAY, New York, N. Y., assignor to Fabricord Incorporated, trustee, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1925. Serial No. 61,631. 6 Claims. (Cl. 19—32.)



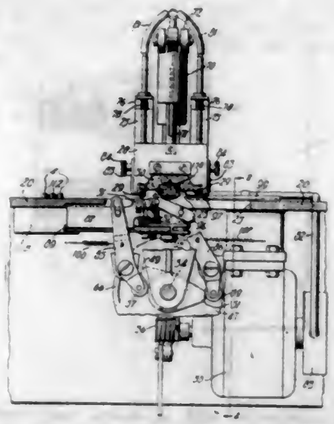
1. In a machine for cleaning flax and similar fibrous plants, the combination of means for feeding the material, a gate through which the material is fed, means for breaking or bending the material and then folding it against said gate, means for advancing the folded material intermittently in unison with the unfolded material to thereby fold more and more of the material for repeated breaking and subsequent folding.

1,640,462. ELECTRON-DISCHARGE DEVICE. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1924. Serial No. 743,903. 7 Claims. (Cl. 250—275.)



1. An electron discharge device comprising a vessel having a press, a plurality of concentric hollow semi-cylindrical electrodes supported from said press, and shielding means disposed between the ends of two of said electrodes.

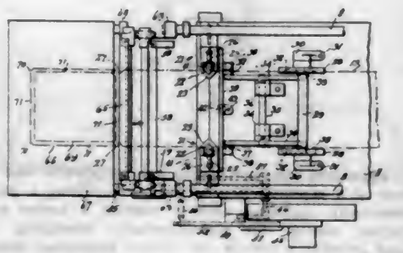
1,640,463. PROTECTIVE MEANS FOR TURBINE BEARINGS. EDWARD H. MCFARLAND, Power, W. Va., assignor to General Electric Company, a Corporation of New York. Filed July 12, 1923. Serial No. 651,019. 6 Claims. (Cl. 308—77.)



3. The combination with an elastic fluid turbine having a casing and a shaft extending therefrom, of a bearing for the shaft, a pillow block for the bearing axially separated from the casing by an air space, means providing a wall between the pillow block and the casing, said wall being mounted out of contact with the casing, and means for cooling said wall.

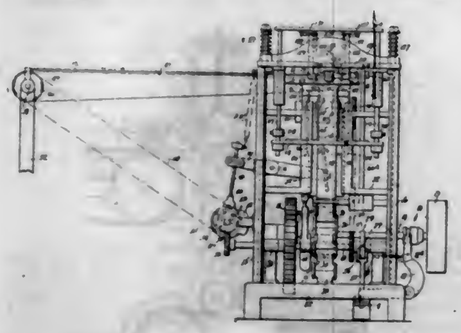
1,640,464. ELECTRIC MICROMETER. ALFRED V. MERSHON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 31, 1923. Serial No. 654,942. 2 Claims. (Cl. 177—351.)

1. Apparatus for measuring the amplitude and frequency of a rapidly vibrating body comprising a pair of differentially connected electric circuits, a source of alternating current for simultaneously energising both of said circuits, a coil in one circuit positioned with respect to the vibrating body so as to have its reactance varied by such vibrations, a coil in the other circuit provided with means for manually adjusting its reactance, adjusting impedances in both circuits, a transformer having primary coils connected in opposition and a secondary coil, said primary coils being included in said differentially connected circuits, and an oscillograph recording instrument connected to said secondary coil.



1,640,465. BANDING MACHINE. OTTO MULLER, Richmond Hill, N. Y., assignor of one-half to John G. Kneber, Richmond Hill, N. Y. Filed Jan. 22, 1925. Serial No. 3,924. 14 Claims. (Cl. 131—61.)

1. In a banding machine, means for placing a band and an article to be banded in juxtaposition, a block of soft resilient material and means for pressing said block of resilient material against the middle portion of said band, the adjacent surface of said block being wide enough to extend partially along the sides of said article thereby partially wrapping said band about said article.



7. In a banding machine, means to partially wrap a band about an article, a movable reservoir, and a roller carried by said reservoir, the path of movement of said roller being such as to cause it to engage an end of said band.

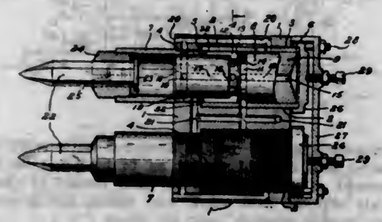
1,640,466. WEB NOTCHING AND BLANKING MECHANISM FOR OUTSIDE COVERS. CHARLES H. OHLSSON, New York, N. Y., assignor to David Hefter and Ray Hefter, comprising the Firm of Hefter & Company, New York, N. Y. Filed Apr. 29, 1926. Serial No. 105,429. 2 Claims. (Cl. 164—50.)

1. In a machine adapted to have a web fed therethrough, a die adapted to cut notches along the edges of said web, operating means for the said notching die, a blank cutting mechanism, and blank cutting mechanism operating means releasably associated with the notching die operating means.

1,640,467. GLUING MACHINE. CHARLES H. OHLSSON, New York, N. Y., assignor to David Hefter and Ray Hefter, comprising the Firm of Hefter & Company, New York, N. Y. Filed Apr. 29, 1926. Serial No. 105,430. 5 Claims. (Cl. 93—54.)

1. A machine adapted to paste a cover to a box, comprising a movable carrier, a plate on said carrier, guideways on said plate adapted to hold a cover between them, automatic box advancing means, paste applying means in the path of travel of said box and means for automatically pasting said cover to the box.

1,640,468. PLASTER-BOARD-FASTENING MEANS. JOHN S. RAYNOR, Philadelphia, Pa. Original application filed May 12, 1926, Serial No. 108,478. Divided and this application filed Aug. 24, 1926. Serial No. 131,239. 4 Claims. (Cl. 72—46.)

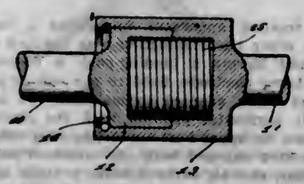


1. The herein described combination of a support; a sheet of stiff material lying against said support and having apertures therethrough at each side of the support; a clip including a body to span the space between the two apertures; a U shaped leg at one end of said body; an L shaped leg at the other end of said body, said legs projecting in opposite directions to each other and passing through separate ones of said holes for coaction with the support.

1,640,469. LEADING-IN CONDUCTOR. VICTOR L. RONCI, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 2, 1923. Serial No. 636,078. 1 Claim. (Cl. 176—126.)

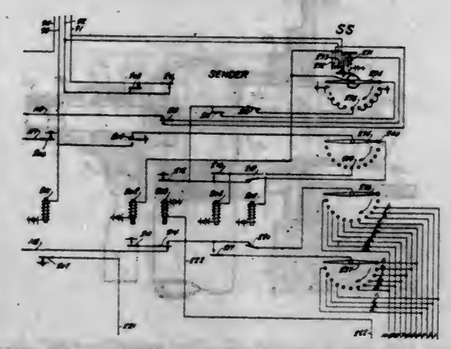
The method of making a leading in conductor comprising a copper wire passing through a copper disc which consists in joining the wire to the disc by an alloy of copper and silver the melting point of which is substantially the same as that of pure silver, the proportions of copper and silver being such that the addition thereto of copper from said wire and disc during the soldering operation will raise the melting temperature of the solder above that of silver.

1,640,470. PNEUMATIC TOOL. CHARLES SAULIA, New York, N. Y. Filed Feb. 9, 1924. Serial No. 691,727. 3 Claims. (Cl. 121—15.)



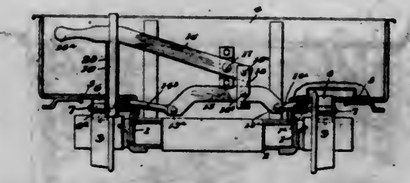
1. In a pneumatic tool, a frame element having a plurality of parallel passages from face to face, a hammer reciprocating in each passage independently of the others, a separate tool arranged to be struck by each hammer, a cap closing each passage at the end opposite the tool, a member carried by the element and extending over all the caps, and individual means acting between each cap and said member for taking up the thrust on the caps endwise of the passages.

1,640,471. TANK. EARL B. STALEY, Seattle, Wash. Filed June 2, 1926. Serial No. 113,317. 7 Claims. (Cl. 220—71.)



1. A tank body having end and transverse partition plates extending well below the tank bottom to form bolsters, and a stiffening beam extending lengthwise of and beneath the tank body towards each side thereof and through the intermediate bolsters, said beams being integrally secured to all of said bolsters to form a structural reinforcement for the tank.

1,640,472. FRICTION CLUTCH. WILLIAM CARLETON STARKEY, Indianapolis, Ind., assignor to L. G. S. Devices Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 12, 1925. Serial No. 74,957. 7 Claims. (Cl. 192—41.)

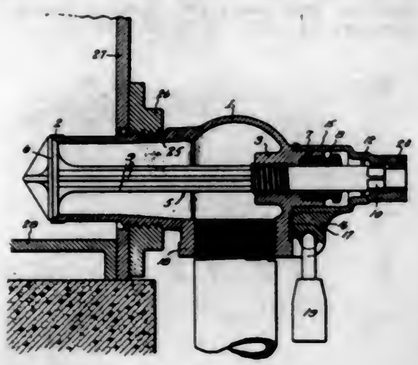


1. In combination, two relatively rotatable parts, an axial circular recess in one of said parts, a helical spring located in said recess and operatively engaged with the other of said parts so that said spring will expand and clutch said two parts together when they tend to rotate relatively in a direction to unwind said spring, the wire from which said spring is wound being strained transversely of itself and longitudinally of the spring so that adjacent turns of said spring will be forced together.

1,640,473. IMPULSE SENDER. RUDOLPH F. STEHLIK, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 9, 1924, Serial No. 718,683. Renewed Dec. 29, 1926. 19 Claims. (Cl. 179—18.)

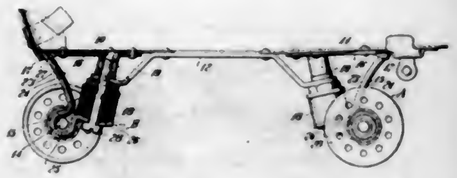
1. In an impulse sender, contacts for transmitting impulses, a counting switch for counting the impulses as they are transmitted, a stop relay controlled by said counting switch to terminate a series of impulses, two stop wipers for said counting switch for controlling said stop relay, two normal positions for said counting switch, means for starting said switch from either of the two normal positions, and means for connecting up one or the other of said wipers selectively, depending upon which normal position the switch is started from.

1,640,474. BRAKE FOR MINE CARS AND OTHER VEHICLES. AUDLEY HART STOW, Charleston, W. Va., assignor to Edith S. White, Caldwell, N. J. Filed Jan. 24, 1923. Serial No. 614,651. 8 Claims. (Cl. 188—204.)



1. In a car structure, a body having walls and a bottom, an approximately horisontal hand lever, together with an equaliser member including unequal lever arms.

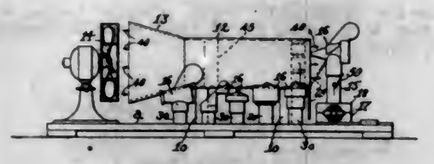
1,640,475. FROSTPROOF DRAIN VALVE. AUSTIN L WERTZ, Lakewood, Ohio, assignor of one-half to Mortimer C. Rosenfeld, Cleveland, Ohio. Filed Dec. 28, 1925. Serial No. 77,067. 1 Claim. (Cl. 251—6.)



A valve of the character set forth comprising a relatively long casing having a through passageway that opens at its outer end through a side of the casing, the inner end of the casing being formed to provide a valve seat while its outer end is provided with a boss that

is in substantially axial alignment with the valve seat, the boss having a bore the inner portion of which is threaded while the outer portion is enlarged to provide a packing gland cavity, a compression member operating within said cavity, a valve stem extending axially through the casing and through the bore of said boss and having threads for cooperation with the threads of said bore, the outer end of said stem being designed for the application of an operating device, a valve body carried by the inner end of the stem for cooperation with

the valve seat, a shroud removably fitted over the outer end of the aforesaid boss and enclosing the protruding end of the valve stem, said shroud being reversible and being designed, when in reversed position, to be applied to the outer end of the valve stem for rotating it, the shroud and casing having parts adapted to be brought into register for the application of a lock, the casing incorporating means remote from its inner end for attaching it to the wall of a container so that the valve seat will be spaced a material distance inwardly of said wall, as and for the purpose specified.

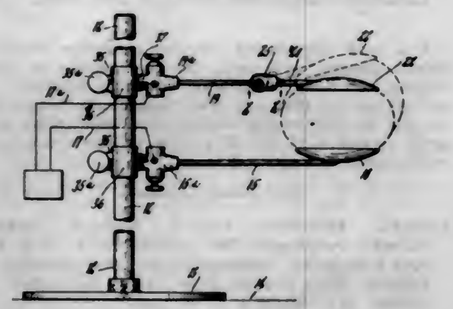


1,640,476. ROLLER SKATE. HENRY F. WHITCOMB, Jr., Milwaukee, Wis., assignor to Richardson Ball Bearing Skate Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 6, 1926. Serial No. 146,642. 6 Claims. (Cl. 208—179.)

1. A roller skate roller axle carrier consisting of a sheet metal element, one end of which has a curved configuration in cross section with the lateral edges of the element converging to provide a rounded stud for engagement with a socket member of the skate.

1,640,477. TESTING APPARATUS FOR VENTILATORS. JAMES HOWARD YOUNG, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 1, 1924. Serial No. 741,092. 3 Claims. (Cl. 73—51.)

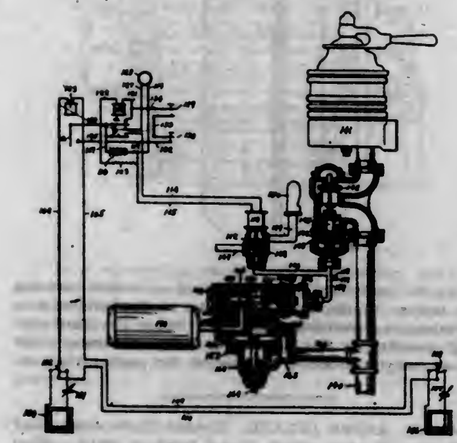
1. In a ventilator testing apparatus, in combination, a portable base, an air tunnel mounted on said base, means mounted on said base and co-operating with said tunnel to pass a current of air therethrough, an air stack co-operating with the outlet end of said tunnel, means for mounting said air stack on the base, said air stack being adapted to have a ventilator to be tested detach-



ably mounted thereon and so arranged with relation to the outlet end of said tunnel as to be acted upon by the current of air passing from said tunnel to thereby draw air through said stack, and means for measuring the air drawn through said air stack.

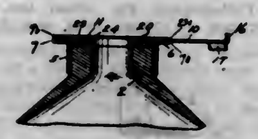
1,640,478. METHOD OF DEGREASING SKINS. CHARLES A. BROWN, Salem, and GUSTAVUS J. ESSELEN, Jr., Swampscott, Mass., assignors to Manufacturing Improvement Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 25, 1924. Serial No. 728,117. 3 Claims. (Cl. 87—6.)

1. The method of degreasing sheep skins prior to tanning, which consists in uniformly penetrating the skins and dissolving the contained greases with an aqueous emulsion of an inflammable hydrocarbon grease solvent insoluble in water and sufficiently free from high boiling fractions to avoid leaving objectionable odors in the skins, and subsequently removing the liquid grease bearing solvent emulsion from the skins.



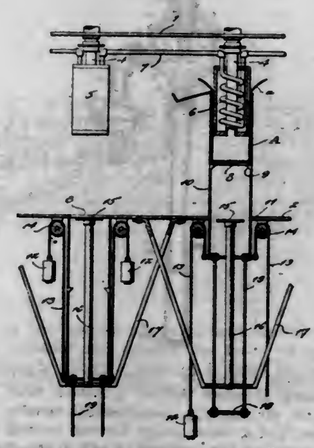
1,640,479. TESTES-TREATING APPARATUS. DE FOREST B. CATLIN, Boston, Mass. Filed Aug. 11, 1926. Serial No. 128,612. 5 Claims. (Cl. 174—89.)

1. Testes-treating apparatus comprising a supporting standard, a lower heat-conducting arm engaged with the standard, and having a binding-post, a dished testes-supporting lower electrode, fixed to one end of said arm, the standard being adapted to maintain the arm in a substantially horizontal position with the electrode under the testes, an upper heat-conducting arm composed of an inner section engaged with the standard and having a binding-post, and an outer section, a hinge connecting the sections, and a dished upper electrode, fixed to the outer section and adapted to bear on testes supported by the lower electrode, the hinge being arranged to permit



a swinging movement of the upper electrode from the lower electrode, to compensate for an increase in the diameter of the testes, the heat-conducting arms being insulated from each other.

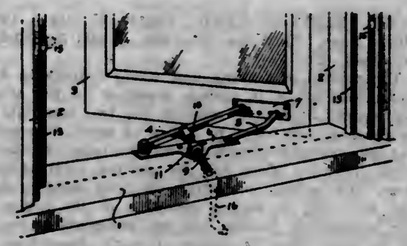
1,640,480. AIR-BRAKE-CONTROL DEVICE. THOMAS E. CLARK and CHARLES B. STONE, Detroit, Mich., assignors to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 24, 1925. Serial No. 39,214. 7 Claims. (Cl. 303—18.)



2. In an air brake control device adapted to be connected to the train-pipe of a vehicle, a cylinder connected to the train-pipe and a piston in said cylinder, a valve connected to the piston and normally closing a passage adapted to relieve the train-pipe pressure, said cylinder being formed to provide equal air pressure in both sides of the piston, a slide valve and passages controlled thereby to relieve the air pressure on one side of the piston to that the pressure on the other side may move the piston to cause the valve connecter thereto to open a passage to relieve the train-pipe pressure, and an electro-pneumatic valve to control said slide valve.

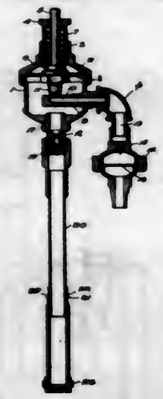
1,640,481. CLOSURE FOR TUBES OR THE LIKE. FREDERIC C. COLLINS, Akron, Ohio. Filed Aug. 5, 1926. Serial No. 127,244. 13 Claims. (Cl. 221—60.)

1. A container having a screw-threaded nozzle thereon, an apertured cap in screw threaded engagement therewith, an apertured gasket lying over the nozzle, a slidable cut-off on the gasket, and an apertured top over the cap, the gasket being compressed against the slide by screwing the cap upon the nozzle.



1,640,482. ATTACHMENT FOR FILLING MACHINES. HENRY M. CRUMBAUGH and HOWARD M. WILSON, Sr., Columbus, Ohio. Filed Dec. 11, 1925. Serial No. 74,811. 6 Claims. (Cl. 226—19.)

1. In combination with the discharge pipe of a pressure filling apparatus, a package receiving form on the pipe, yieldable means for holding the package on the form, and means for heating the form.



6. In combination with the discharge pipe of a pressure filling apparatus, a package receiving form on said pipe, a vertically movable casing for enclosing the package, projections in the casing, a bottom resting on the projections, a post passing through the bottom of the casing, a support thereon for the bottom, weighted means for holding the casing in its raised position, a pedal connected with the bottom of the casing for enabling it to be lowered, a latch for holding the casing in its lowered position and means for heating the form.

1,640,483. CASEMENT-WINDOW MOUNTING. EARLE W. CUMMINGS, Santa Barbara, Calif. Filed Aug. 23, 1926. Serial No. 130,895. 4 Claims. (Cl. 268—120.)

1. A mounting for a swinging window of the character described comprising a pair of spaced levers at each of opposite aligned points of the sash adjacent the edge of same, each pair of levers being pivoted to the sash at one end of the levers and to the window frame at the opposite end and with similar pivotal points of both pairs of levers in alignment, and means operative on one of the levers for positively forcing same to swing, for swinging the sash.

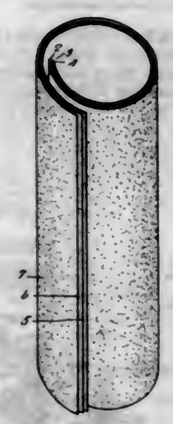
1,640,484. VAPORIZING APPARATUS. GEORGE W. D'ARCY, Boston, Mass. Filed Mar. 31, 1923. Serial No. 629,208. 5 Claims. (Cl. 299—86.)

1. Vaporizing apparatus comprising a controller having a mixing chamber therein, a water inlet, a valve therefor, an air inlet, a compression member for the water valve, and a vapor gauge for and leading from the mixing chamber of the controller; and a vaporizing head connected thereto.

1,640,485. BLAST-FURNACE METHOD. FRANK W. DAVIS, Milford, Del., assignor to Samuel G. Allen, trustee. Filed Oct. 4, 1924. Serial No. 741,604. 3 Claims. (Cl. 75—14.)

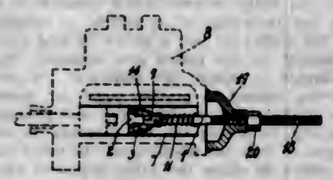
1. In the smelting of iron in the blast furnace, the increase of the high temperature heat in the smelting zone by the introduction of an additional supporter of combustion with the blast, and the introduction of a reducing material to the shaft at the lower end thereof.

1,640,486. REFINING LEAD. PHILIP W. DAVIS, Cambridge, Mass. Filed Jan. 11, 1926. Serial No. 80,671. 2 Claims. (Cl. 75—15.)



1. The method of refining lead which consists in exposing lead alloys in molten condition to the action of litharge by causing the two materials to be exposed to each other in bodies of small dimensions and at temperatures between the melting point of litharge carrying the alloy metal and the melting point of pure litharge (approximately 883° C.).

1,640,487. REFINING LEAD. PHILIP W. DAVIS, Cambridge, Mass. Filed Jan. 11, 1926. Serial No. 80,672. 3 Claims. (Cl. 75—15.)

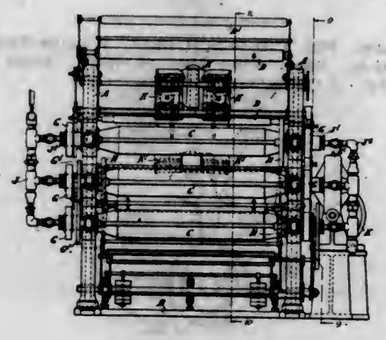


1. The method of refining lead which consists in first exposing lead alloys in molten condition to the action of pulverulent litharge by causing the two materials to be exposed to each other in bodies of small dimensions and at temperatures between the melting point of litharge carrying the alloy metal and the melting point of pure litharge, and second, subjecting the lead alloy product of the first step in molten condition to the action of molten litharge by causing the two materials to be exposed to each other in bodies of small dimensions at temperatures above the melting point of pure litharge.

1,640,488. DRY CELL AND LINING FOR SAME. CYRIL P. DEIBEL and WALTER G. WAITT, Lakewood, Ohio, assignors to General Dry Batteries, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 19, 1926. Serial No. 149,299. 9 Claims. (Cl. 136—131.)

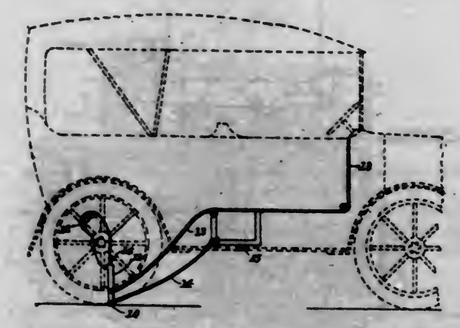
1. A dry cell of the character described comprising a cup, a lining for said cup comprising a plurality of sheets of paper disposed within said cup with their ends overlapping, the outer sides of said sheets of paper being coated with paste, whereby a layer of paste is provided between the cup and the outer sheet of paper and between the individual sheets of paper, a washer covering the bottom of the cup, a quantity of depolarizing mix containing an electrode compressed within the lined cup, said quantity of mix and lining being permeated with an electrolytic solution, and means for sealing the cup.

1,640,489. LINER PULLER. ROBERT W. DONOWHO and HARVEY M. BALLWEBER, Home Gardens, Calif. Filed June 14, 1926. Serial No. 115,847. 4 Claims. (Cl. 29—88.2.)



1. A liner puller comprising a post, a plurality of shoe segments slidably mounted on said post, and cam means on said post adapted to be engaged by the segments to expand said segments and a slip slidably mounted on each of said shoe segments, said slips being adapted to engage the liner.

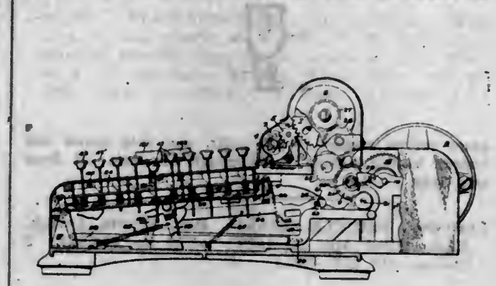
1,640,490. FINGER ATTACHMENT. MATHEW DOVIDAITIS, Philadelphia, Pa. Filed Dec. 28, 1926. Serial No. 157,563. 3 Claims. (Cl. 294—25.)



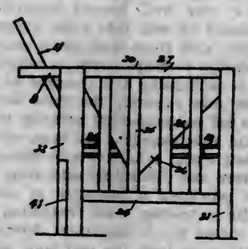
1. A finger attachment comprising a metal sleeve having a beveled outer end and adapted to be placed upon a user's finger, and a pick secured to the longer side of the sleeve with its prong projecting substantially at right angles to the wall of the sleeve on which it is mounted.

1,640,491. CALENDERING OR IRONING MACHINE. BERTRAM JOSEPH DYKES, Gleadless, near Sheffield, England. Filed Dec. 5, 1923, Serial No. 678,716, and in Great Britain Dec. 12, 1922. 2 Claims. (Cl. 26—39.)

1. In a calendering machine, in combination, pairs of superimposed calendering cylinders, housings, bearings on said housings for said cylinders, expandible gauges arranged one above the other, adjustable carriages carrying the uppermost gauge, and positively driven guide rollers on the carriage for the purpose substantially as herein described.



1,640,492. EMERGENCY BRAKE. HARRY EVERETT, Casper, Wyo. Filed Nov. 7, 1922, Serial No. 599,545. Renewed Jan. 21, 1927. 4 Claims. (Cl. 188—5.)



1. In a device of the character described, a contact member approximately the length of the distance between the wheels of a vehicle and pivoted upon the axle of a vehicle, a counterbalance on the other side of the axle partially counterbalancing the weight of the contact member, manually movable means governing the position of the member, and other means preventing the movement of the contact member to a position directly beneath the axle.

1,640,493. CALCULATING MACHINE. CARL M. F. FRIDEN, Oakland, Calif. Filed Oct. 25, 1926. Serial No. 143,858. 20 Claims. (Cl. 235—82.)

1. In a calculating machine, numeral wheels, a reversible rotary actuator therefor, means for introducing one factor of the calculation into the actuator, keys for introducing the second factor into the machine, a motor for rotating the actuator and means operated by the depression of a key for causing the motor to rotate the actuator in the desired direction and means correlated with the actuator for causing the motor to rotate the actuator for the duration required to effect the calculation represented by the value of the depressed key.

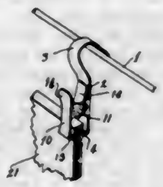
1,640,494. ADJUSTABLE CHAIR. PHILIP BERNARD FRIEDMAN, Winnipeg, Manitoba, Canada. Filed Oct. 20, 1924, Serial No. 744,819, and in Canada June 17, 1924. 3 Claims. (Cl. 155—45.)

2. A chair equipped with side frames having front and rear supporting posts and side arms extending between the supporting posts of each side frame, table leaves having edge portions thereof hinged to the lower edge portions of said side arms and adapted to normally lie flat against the side frames in depending relation to the side arms, a pair of auxiliary side gates having front and rear supporting posts, the rear supporting post of each side gate being hinged to the front supporting post of one of said side frames by means permitting the side gate to swing rearwardly to lie flat against the side frame or to swing forwardly into a position of alignment with the side frame, each of said side gates being equipped with a hook engageable with an eyelet carried by one of said table leaves to support the latter in horizontal position when the side gate is disposed in a predetermined angular position with reference to the side frame.

1,640,495. OIL CUP. FREDERICK M. FURBER, Revere, Mass.; Samuel R. Cutler administrator of said Frederick M. Furber, deceased. Filed Nov. 28, 1923. Serial No. 677,390. 2 Claims. (Cl. 184—94.)

1. An oil cup comprising a cup-shaped body having a hemispherical end, a shank secured to said end, and a tongue projecting from said shank and fitting in a slot

formed in said end of the body, said shank having faces at opposite sides of said tongue fitting snugly against the

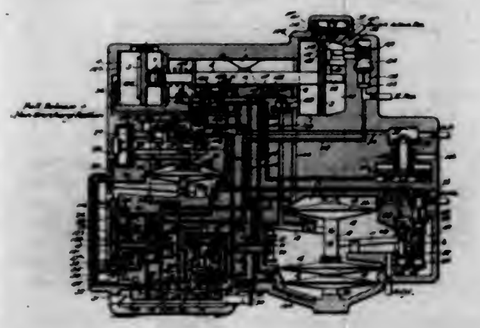


outer curved surface of the body, and said shank and tongue having a hole therethrough to drain oil from said body.

1,640,496. VEHICLE SIGNAL. EARL GONDER, Detroit, Mich. Filed Apr. 17, 1922. Serial No. 553,874. 2 Claims. (Cl. 177—329.)

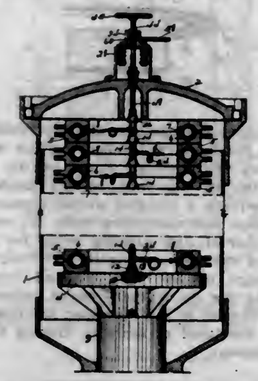
2. The vehicle signal casing comprising curved side walls, having a rear wall formed integral thereof; a front wall mounted on said side walls adapted for overlapping the same, said front wall being provided with a plurality of openings formed therein; a plurality of partitions mounted in said casing and arranged to form a yoke, the tree of said yoke engaging the inner surface of said side walls at its end and projecting inwardly therefrom, and the arms of said yoke engaging the inner surface of said side wall at their ends; a horizontally disposed partition positioned between and connecting said arms intermediate their ends for providing a plurality of compartments; and a vertically extending wall separating all of said compartments except the compartment determined by the free ends of said arms from the rear wall, said rear wall having an opening formed therein in registration with said compartment.

1,640,497. MAGAZINE CLIP. WILLIAM HALKET and WALLACE L. VAN VALKENBURG, Holyoke, Mass. Filed Mar. 26, 1925. Serial No. 18,399½. 2 Claims. (Cl. 24—84.)



1. An article holding clip comprising in combination, an upper and lower plate member, each having integral upturned jaw portions, which engage, each member having integral oppositely extending ears with openings therein, which register with each other, a spring located between the plate members and having extensions on its opposite edges which extensions are located in the registering openings of the ears of the said members to pivotally connect the members together, the ears of the upper member being substantially longer than these of the lower member and the pivot openings in the ears of the upper member being located a greater distance from its plate than are the pivot openings of the lower member, whereby when the upper member is operated the jaws will be widely separated.

1,640,498. PEN AND PENCIL CLIP. WILLIAM HALKET, Holyoke, Mass. Filed Mar. 26, 1925. Serial No. 18,647. 3 Claims. (Cl. 24—11.)

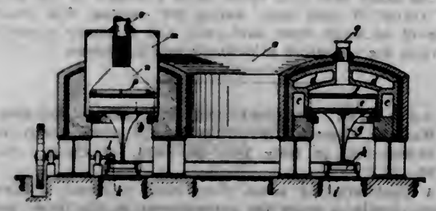


1. An article holding clip consisting of a gripping bar having an article holding element on one end thereof and a button back which is integral with the gripping bar at the other end thereof and means on the back of the button back to engage the article being gripped by the holding element.

1,640,499. AIR-BRAKE APPARATUS. MAURICE E. HAMILTON, La Fayette, and RAYMOND R. HOPKINS, West La Fayette, Ind., assignors to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 7, 1926. Serial No. 139,989. 43 Claims. (Cl. 303—27.)

1. A control valve for air brake apparatus comprising a service valve subject to brake pipe, brake cylinder and emergency reservoir pressures and operating upon a reduction of brake pipe pressure to place a source of braking pressure in communication with the brake cylinder for a service application of the brakes, the brake cylinder pressure assisting the brake pipe pressure in moving the service valve to lap position, a slide valve, and means operating upon an emergency reduction of brake pipe pressure to move the slide valve to emergency position and to connect an emergency reservoir to the slide valve chamber, said slide valve in emergency position opening an emergency port to admit the emergency reservoir air to the brake cylinder for an emergency application of the brakes.

1,640,500. VULCANIZING APPARATUS. RAYMOND HANSEN, Cudahy, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 28, 1924, Serial No. 716,426. Renewed Feb. 16, 1927. 13 Claims. (Cl. 18—17.)



1. The combination with a vulcanizing press of a sectional manifold comprising a series of loosely assembled sections and means, associated with one of the press members, adapted to force the sections into fluid tight relation, said means being operable independently of the action of the press members.

1,640,501. COAT LINING. DAVID H. HODES, New York, N. Y. Filed Apr. 22, 1924. Serial No. 708,220. 6 Claims. (Cl. 2—97.)

4. An outer garment comprising, in combination with the outer fabric ply thereof, a lining consisting of a coarsely woven foraminous fabric foundation permanently secured within the garment and to the outer fabric ply thereof, the said lining foundation being foraminous and freely pervious to air and having a nap surface.

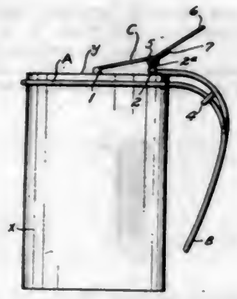
1,640,502. DISTILLATION AND COKING OF CARBONACEOUS MATERIALS. LUDWIG HONIGMANN, Bichlerhof, Bad Tolz, and FRIEDRICH BARTLING, Munich, Germany. Filed Jan. 7, 1927, Serial No. 159,700, and in Germany Nov. 26, 1925. 4 Claims. (Cl. 202—8.)

1. In the process of distilling and coking solid carbonaceous material on annular revolving hearths, the steps which comprise maintaining a layer of such material on the hearth in a thickness less than one centimeter and subjecting the material to a coking heat until coked.

1,640,503. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1922. Serial No. 597,748. 13 Claims. (Cl. 250—27.5.)

1. In an electron discharge device, an electrode comprising a frame member, a wire helix, and a pair of wires alternately passing over the turns of said helix and being fastened to each other behind said frame member.

1,640,504. GROUND ANCHOR. MARK ISAACS, Minneapolis, Minn. Filed Feb. 19, 1926, Serial No. 89,492, and in Canada Dec. 18, 1925. 5 Claims. (Cl. 189—92.)



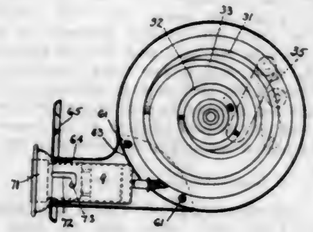
1. A ground anchor comprising a pipe adapted to be driven into the ground, a rod extending lengthwise through the pipe, a head secured to the lower end of the rod and designed to pass through the pipe, said head being substantially rectangular and having vertical slots in the sides thereof, pendent fingers crossing the slots of the head and fitted at their upper ends with inturned angularly slotted lugs, pins passing through the slots of the fingers and into the head and slidably attaching the fingers to the head, said fingers being lengthwise bowed and having their lower ends pointed whereby in the down driving of the rod the fingers will straighten out in the soil at the end of the pipe bending at the bases of the lugs and will take a radial position overlying the corners of the head.

1,640,505. CAN-PUNCTURING DEVICE. JOSEPH A. KRAUS, St. Louis, Mo. Filed Mar. 25, 1926. Serial No. 97,296. 3 Claims. (Cl. 220—51.)

1. A puncturing device for sealed cans, comprising a ring-shaped member and a handle formed from a piece of wire, one terminal portion of which is bent so as to form a horizontally-disposed trunnion and the other terminal portion of which is bent so as to form a depending portion at one end of said ring-shaped member that is arranged in opposed relation to one side piece of said handle, a link that embraces said depending portion and

handle side pieces and which is adapted to be adjusted to expand or contract said ring-shaped member, and a puncturing member rockably mounted on said trunnion

portion and provided with prongs or sharp-pointed projections for forming an air hole and a pouring hole in the can head.



1,640,506. ANTISPASMODIC. FRIEDRICH LEUCHS, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Filed Dec. 16, 1925, Serial No. 75,872, and in Germany Mar. 24, 1925. 2 Claims. (Cl. 260—106.)

2. The herein described para-methyl-benzyl-urethane having most probably the formula

which crystallizes from water in needles melting at 122–123° C. soluble in alcohol and hot water, soluble with difficulty in ether and cold water, and being a valuable antispasmodic.

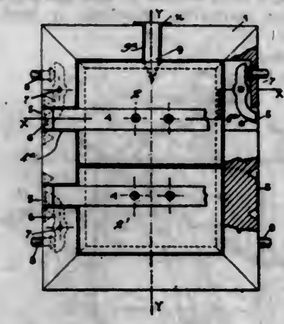
1,640,507. COMBINED TROUBLE LIGHT AND CIGAR LIGHTER. HOWARD C. LIEBING, Cleveland, Ohio, assignor, by mesne assignments, to The Cuno Engineering Corporation, Meriden, Conn., a Corporation of Connecticut. Filed Nov. 20, 1924. Serial No. 751,033. 14 Claims. (Cl. 200—153.)

1. In an article of the character described, the combination of a reel, a flexible cable carried by said reel, a spring for recoiling said reel, a switch separate from said reel, means associated with said switch for moving the same into and out of contact in accordance with the direction of motion of such reel, and means for rendering said recoiling spring inactive.

1,640,508. STOPPER OR CLOSURE FOR CONTAINERS. FREDERICK LOBL, Middleboro, Mass. Filed July 9, 1926. Serial No. 121,418. 6 Claims. (Cl. 150—8.)

1. In a stopper for containers comprising a circular cover-plate, a hollow threaded body-portion with an outwardly flaring, easily flexed flange at its upper edge, the outer peripheral edge only of said flange contacting with the cover-plate, a yielding washer-element encircling the body portion and contacting with the under surface of the flange thereof, and securing means for permanently clamping all of the elements together at their outer edges with the flange of the body portion constituting a flexible backing for the washer-element, whereby a tightening of the stopper in the container deforms the flexible flange and a continual pressure is exerted thereby upon the washer element.

1,640,509. FUEL-PUMPING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. EDWARD L. LOWE, Palo Alto, Calif., assignor to J. W. Clune Co., Los Angeles, Calif., a Corporation of California. Filed Nov. 30, 1926. Serial No. 151,637. 7 Claims. (Cl. 103—38.)

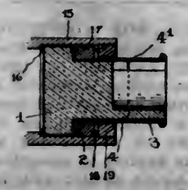


1. In an apparatus of the character stated, a plunger housing, a plunger operable therein, a cam, a cam shaft therefor, a rocker arm arranged in said housing and having a roller at one end and means above said roller contacting with the bottom of said plunger, and a finger at its other end, said roller being arranged in the path of travel of said cam, means for moving said finger toward or away from said cam, and manually operable devices for operating said finger moving means.

1,640,510. PHOTO-PRINTING PRESS. GIUSEPPE MARCONI, Genoa, Italy. Filed Feb. 21, 1925, Serial No. 10,808, and in Italy Dec. 20, 1924. 1 Claim. (Cl. 95—77.)

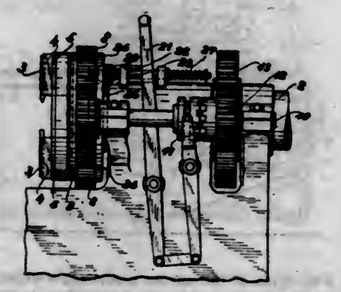
A photo-printing press, comprising a frame, a glass pane therein, a cover for arrangement in the frame and on the said pane and comprising a pair of hingedly connected members, one of said members being provided with

a cross sectional V-shaped elastic stop, projecting from the free side thereof, said frame being provided in one side with a slot to receive said stop and so arranged that



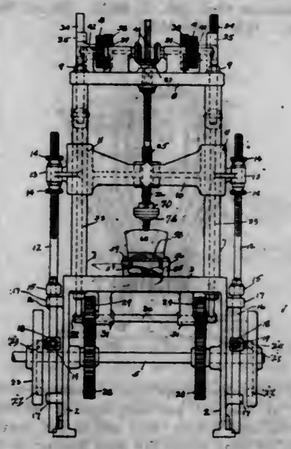
the sides of said slot may be frictionally engaged by said stop, and detachable means to press said cover against said pane.

1,640,511. LUBRICATING-OIL CAN. GEORGE MERZ, Fergus Falls, Minn. Filed Feb. 15, 1927. Serial No. 168,400. 4 Claims. (Cl. 221—52.)



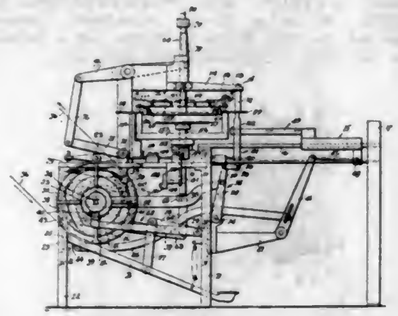
1. An oil can including a can proper, a nozzle pipe connected therewith and serving as a handle, a spring actuated valve within the nozzle, a handle grip pivoted to the nozzle pipe for shifting the valve from its seat against the action of a spring, and having an end portion disposed approximately parallel with the nozzle pipe, and means for pumping air into the upper end of the oil can.

1,640,512. LOCOMOTIVE-LUBRICATOR SIGHT. WILLIAM FRANCIS MITCHELL, Passaic, N. J. Filed July 14, 1925. Serial No. 43,441. 3 Claims. (Cl. 240—2.)



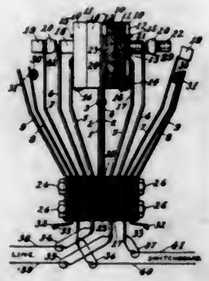
1. In a locomotive lubricator the combination of a casing, a window mounted in said casing, a U-shaped extension at right angles to the plane of said window and integral therewith, a separable two part sleeve supported by said extension, and an illuminating device supported by said two part sleeve.

1,640,513. CUTTING AND WORK-TREATING MACHINE. WILHELM MÖBUS, Dusseldorf, Germany. Filed Feb. 14, 1925, Serial No. 9,239, and in Germany Feb. 15, 1924. 12 Claims. (Cl. 164—60.)



1. In a cutting tool, the combination with a cutting head and tools radially operated thereby, of gearing for advancing the tools, coupling means in operative connection with the said gearing, and adapted to cause the engagement and disengagement thereof with the tools, and means for withdrawing the tools connected to the cutting head, and adapted for operation by said coupling means.

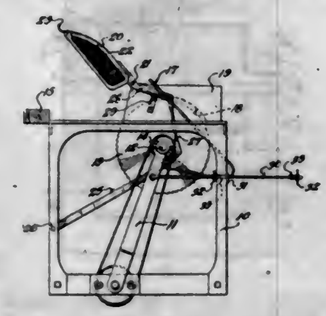
1,640,514. PRESS FOR FORMING PLASTIC MATERIALS. FERDINAND C. H. MÜLLER, Findlay, Ohio, assignor to The Findlay Electric Porcelain Company, Findlay, Ohio, a Corporation of Ohio. Filed May 1, 1924. Serial No. 710,232. 7 Claims. (Cl. 25—3.)



1. In a die pressing machine, the combination of a base having a mold table, vertical guideways with a platform at the top, a reciprocable cross-head mounted in said guideways, a die carrying spindle slidably mounted through said platform and passing through said cross-head and having threaded engagement therewith, a main driving shaft in said base, positive driving connections between said main shaft and said cross-head for reciprocating the latter, and other positive driving means connecting said main shaft and said spindle for rotating the latter.

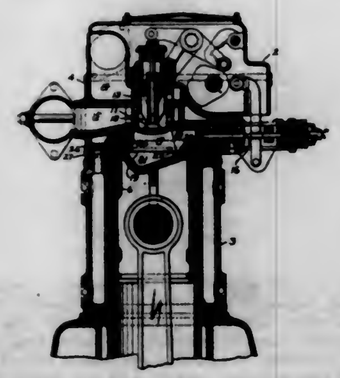
1,640,515. MACHINE FOR FOLDING COVER EDGES. CHARLES H. OHLSSON, New York, N. Y., assignor to David Hefter and Ray Hefter, New York, N. Y., composing the Firm of Hefter & Company. Filed Mar. 15, 1926. Serial No. 94,652. 24 Claims. (Cl. 154—41.)

2. In a machine of the nature described, a slide, a blank holder associated with said slide adapted to hold a blank with projecting flaps thereon, means for operating the slide and holder in a forward direction, a carrier, comprising a lower table plunger adapted to be moved into a plane even with the lower surface of the blank, an upper table plunger adapted to be lowered to a plane even with the upper surface of the blank to grip the blank between said plunger tables when the blank holder is in forward position, means for moving the blank between the upper and lower table plungers to a position for folding some of the said flaps and means for returning the holder to normal position.



1,640,516. ELECTRICAL PROTECTIVE APPARATUS. FREDERICK R. PARKER, Chicago, Ill. Original application filed June 1, 1915, Serial No. 31,487. Divided and this application filed Feb. 3, 1922. Serial No. 533,739. 21 Claims. (Cl. 200—115.)

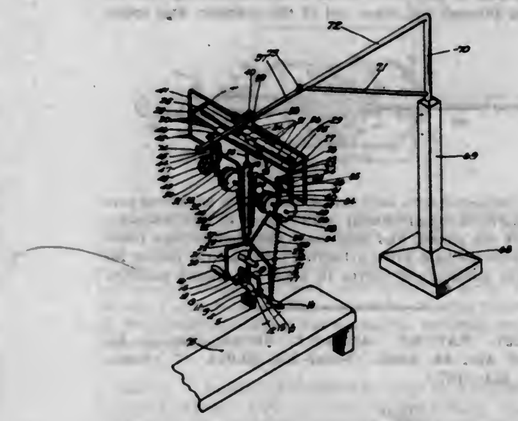
1. A heat-cartridge comprising a resistance heater and a plurality of thermal portions one of which is under control of the said heater, and means for preventing the free passage of heat from the said heater to another of the said thermal portions.



1,640,517. SAW GUARD. GEORGE J. PROCKNOW, Oshkosh, Wis., assignor to Paine Lumber Company, Ltd., Oshkosh, Wis., a Corporation of Wisconsin. Filed Apr. 17, 1924. Serial No. 707,148. 1 Claim. (Cl. 143—159.)

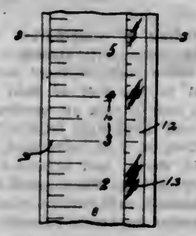
The combination with a saw table and a swinging saw frame having a saw rotatably mounted thereon, a stationary saw guard mounted on said table and enclosing the saw in its retracted position, a movable saw guard pivotally mounted at the forward end of said stationary saw guard and therewith forming an enclosure for the swinging saw, a lever secured to said movable saw guard and extending rearwardly therefrom, a lever pivotally

mounted at the forward portion of said table and extending rearwardly and upwardly therefrom, and a link connecting the free ends of said levers, said last-named lever being adapted to be depressed by said saw frame on its rearward movement to lift said movable saw guard away from the work.



1,640,518. INTERNAL-COMBUSTION ENGINE. CARL G. A. ROSÉN, San Francisco, Calif. Filed Feb. 14, 1924. Serial No. 692,750. 6 Claims. (Cl. 123—33.)

1. In an internal combustion engine, a cylinder, and a piston reciprocating therein and having at the head end thereof a conoidal depression whose axis forms an acute angle with the axis of the cylinder and whose base opening is symmetrically disposed about the axis of the cylinder.



1,640,519. DEVICE FOR ADJUSTING THE SPINE. LEON SCHAEFFER, Sulphur, Okla. Filed Nov. 3, 1925. Serial No. 66,459. 2 Claims. (Cl. 128—69.)

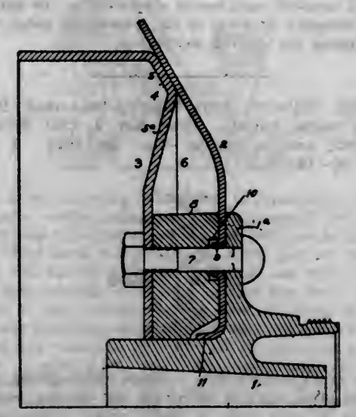
1. In combination with an instrument, as described, of a substantial supporting platform and bracing arms thereover, supporting a carriage rail, an operable carriage thereon, a plurality of weights and weight-supporting members adjustably working in connection with said carriage, a two-way handle member with intermediate bent connecting rods, said instrument, as described, adjustably securely connecting said intermediate rods, an axial rod connecting said weight members by bifurcated arms with said two-way handle member, means for adjustably lowering and raising said weights, weight members, axial rod, bifurcated arms, handle member, and said instrument as

described; and means for adjustably removing the whole from a position over the patient's body to its normal position.

1,640,520. WEIGHT-REGISTERING GAUGE FOR WEIGHING SCALES. MORRIS SCHERR, Baltimore, Md. Filed May 15, 1926. Serial No. 109,316. 3 Claims. (Cl. 265—39.)

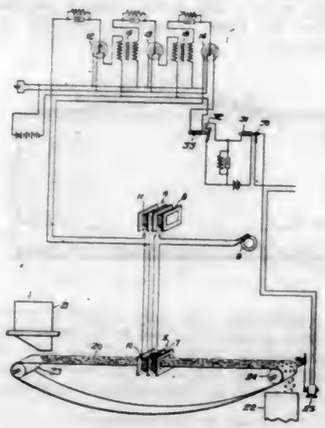
1. In combination with a weighing scale and its mechanism, of a weight registering member comprising a body having depicted thereon graduation marks and characters, and a reflecting member carried by said body and having corresponding marks and characters thereon.

1,640,521. BOX CONNECTER. FRANK T. WHEELER, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Dec. 5, 1921. Serial No. 519,808. 3 Claims. (Cl. 247—1.)



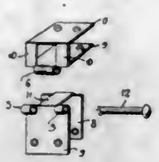
1. An electric box connecter comprising a U-shaped sheet-metal member having positioning lugs formed by cutting the opposite ends of said member and bending portions outwardly and leaving flangeless portions projecting endwise beyond the lugs, and a relatively narrow cover hinged to one edge of said member and adapted to detachably engage the other edge and having laterally extending lugs adapted to be engaged by a cooperating switch box cover.

1,640,522. HANDLE FOR HAND BAGS AND THE LIKE. MORRIS WHITE, New York, and DANIEL I. REITER, Brooklyn, N. Y.; said Reiter assignor to said White. Filed Nov. 24, 1926. Serial No. 150,579. 5 Claims. (Cl. 150—33.)



1. In combination, two strap members, means on one of said strap members for loosely receiving the other of said strap members, gripping means on said other strap member for tightly engaging said first mentioned strap member, and means for disengaging said gripping means.

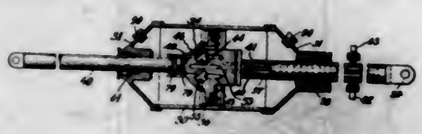
1,640,523. VEHICLE WHEEL. JOHN R. WINTER, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed June 7, 1921. Serial No. 475,797. 2 Claims. (Cl. 301—6.)



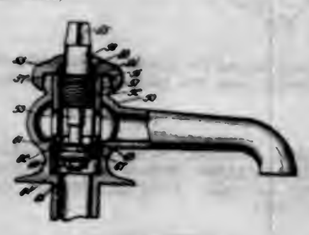
1. In a disk wheel, the combination of a hub having a flange, a disk on the hub having a dished portion, a brake drum on the hub comprising a dished peripheral portion and a main reversely dished portion inwardly thereof, the brake drum being arranged with the inner portion thereof spaced a substantial distance from the inner portion of the disk, the main dished portion of the brake drum being oppositely dished to and disposed opposite the dished portion of the disk in spaced relation therewith, and the dished peripheral portion of the brake drum extending at an inclination parallel with and in supporting contact with a section of the dished portion of the disk to permit slight relative movement between the contacting portions of the disk and brake drum, a spacing and reinforcing member between the inner portions of the disk and the brake drum, and means for clamping the spacing member, and the inner portions of the disk and the brake drum together to the hub flange.

1,640,524. MEANS FOR DETECTING METAL PARTICLES IN NONMETALLIC MATERIAL. ROY WILBERT AUGUSTINE, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1921. Serial No. 447,606. 8 Claims. (Cl. 192—125.)

1. In a mechanism for detecting metal particles in non-metallic material, an induction balance, a conveyor for the material adapted to pass through the direct magnetic field of the induction balance, driving mechanism for said conveyor, and means controlled by the unbalance of the induction field due to the presence of metal therein for stopping the driving mechanism.



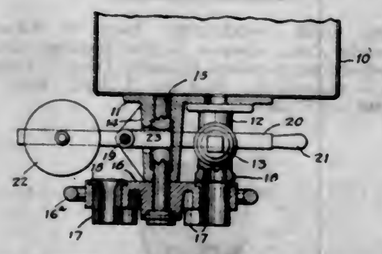
1,640,525. HINGE. JOHN EDMUND BELLIVEAU, Halifax, Nova Scotia, Canada. Filed Nov. 4, 1921, Serial No. 512,902, and in Canada Sept. 23, 1921. 1 Claim. (Cl. 16—167.)



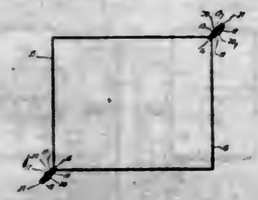
In a hinge construction, a hinge blank having a back and two sides integral therewith, an opening positioned centrally of said back, a pintle socket projecting outwardly of said back and integral with one of the sides in combination with a second blank having a back and two sides, and pintle sockets integral with one of the sides extending outwardly of said back and on each side thereof.

1,640,526. POWER ACTUATOR. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 6, 1924. Serial No. 748,293. 12 Claims. (Cl. 121—41.)

11. In a power actuator, the combination with a cylinder closed at its ends, a double acting piston therein, and means for producing differential pressures on opposite faces of the piston, of reversing valve mechanism comprising a pair of valve seats located in the piston, each provided with passages communicating with the cylinder on opposite sides of the piston, a piston rod extending through one end of the cylinder and provided with separate inlet and outlet passages, one of which communicates with each of said valve seats, a rotary valve engaging each of said valve seats, a valve actuating part extending through the other end of the cylinder, and operatively connected with said valves, said valve actuating part being movable longitudinally with respect to and independently of the piston, and oppositely disposed springs interposed between said valve actuating part and the piston for normally holding the valves in a predetermined position.

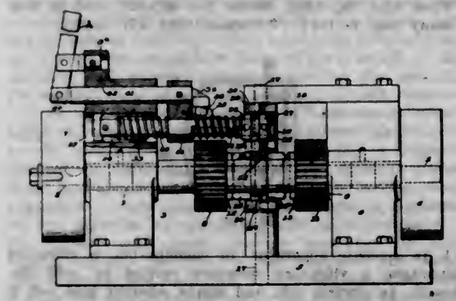


1,640,527. FAUCET. ALBERT C. BROWN, Chicago, Ill. Filed Apr. 18, 1925. Serial No. 24,024. 7 Claims. (Cl. 251—167.)



6. A faucet including in combination with the body thereof, a removable valve unit structure comprising, a sleeve within the valve body, a sheet metal valve seat frictionally secured to one end of said sleeve, a diaphragm within said body having an opening therethrough, a beveled seat on said diaphragm adjacent to said opening, a tapered portion on said valve seat, a cap for engagement with said sleeve, and arranged to move said sleeve longitudinally to force the tapered portion of said valve seat firmly against said beveled diaphragm seat, a valve washer and means for actuating said washer carried by said sleeve.

1,640,528. REGULATING DISCHARGE FROM CONTAINERS. BRUNO BAUHN, Bethlehem, Pa., assignor to G. Polysius, Dessau, Germany, a Firm. Filed Apr. 5, 1927. Serial No. 181,102. 4 Claims. (Cl. 83—44.)

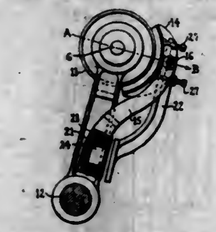


1. An apparatus of the character described including a container having a discharge passage, a pivot pin substantially parallel to said passage, a disk rotatably mounted on said pin and having an annular row of nozzles of different diameters, said disk being axially movable and having means for yieldingly pressing it in one direction to hold a nozzle firmly against the end of said passage.

1,640,529. ELEVATOR LEG. LOUIS BURMEISTER, Milwaukee, Wis. Filed Mar. 22, 1926. Serial No. 96,397. 3 Claims. (Cl. 137—75.)

1. In an elevator, a conduit made up of complementary sections having abutting portions engaging in face to face relation without interlocking, one of said abutting portions having an outwardly directed projection and a spring clip cooperable with said abutting portions and having a seat receiving the outwardly directed projection of the abutting portion for releasably securing the sections in assembly.

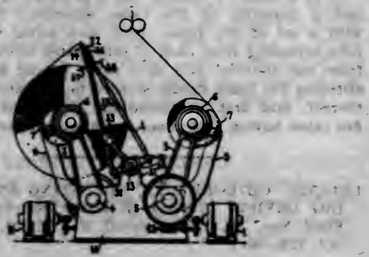
1,640,530. SPRING-OPERATED CLUTCH-SHIFTING MECHANISM. PAUL C. BURTON, La Grange, Ill., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed June 20, 1924. Serial No. 721,226. 13 Claims. (Cl. 192—82.)



1. A clutch-shifting mechanism combining a non-translatable clutch-member; a shiftable clutch-member adapted to be engaged therewith; a clutch-shifter having a portion engaging said shiftable clutch-member, means including a single element movable in opposite direction for placing said clutch-shifter under oppositely directed spring pressure; an abutment member carried by said element and adapted to engage said clutch-shifter to hold it against movement in either direction until a predetermined pressure has been applied thereto, means for moving said abutment member to permit said clutch-shifter to move under said pressure to engage said clutch members; and means including said abutment-member for positively locking said clutch-shifter in its adjusted position.

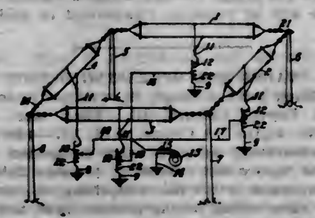
1,640,531. CLEANING COMPOSITION AND SPOT REMOVER. LOUIS N. COHN, Rock Island, Ill., assignor to Gleam Manufacturing Co., Davenport, Iowa, a Corporation of Iowa. Filed Oct. 14, 1925. Serial No. 62,466. 1 Claim. (Cl. 87—5.)

A cleaning composition in the form of a paste the constituent ingredients of which consist of 10 gallons of water, 5¼ pounds of chipped soap, 2½ pounds of sal soda, 10 ounces of turpentine, 3 ounces of oil of wintergreen and one cup of table salt.



1,640,532. WEB-FEEDING MECHANISM. JOHN S. COLDWELL, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 26, 1924. Serial No. 752,818. 6 Claims. (Cl. 242—75.)

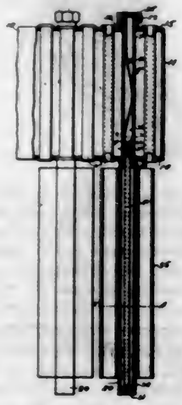
6. In a web feeding mechanism for material drawn from a web roll into a receiving machine, in combination, a brake drum fixed to said roll, a brake shoe for engaging said drum, said drum being held in engagement with said shoe under the action of the weight of said web roll and said shoe being adapted in a position normal to said drum to impose a given dragging effect on said web roll for tensioning of the material drawn therefrom, and being



movable to a position wherein the friction surface thereof is eccentric to the friction surface of said drum to provide an augmented dragging effect on said web roll for quick stopping thereof upon quick stopping of said receiving machine, and electromagnetic means associated with said brake shoe for moving the same from its normal position to its last mentioned position.

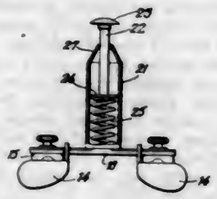
1,640,533. WEB-SUPPLYING SYSTEM. JOHN S. COLDWELL, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 6, 1924. Serial No. 754,241. 8 Claims. (Cl. 242—58.)

4. In a web renewing mechanism, in combination, a pair of spindles, either being adapted to support an active web roll and the other a reserve web roll, the latter having a folded back portion on the outer end of the web thereof, and having adhesive applied to one face of such folded back portion, means for holding the outer end of the web of said reserve roll, said means being movable in opposite directions between said rolls and being adapted to press the adhesive face of said reserve roll against the web of said active roll, and means associated with said former means for severing the web of said active roll upon sealing of the web of the reserve roll thereto.



1,640,534. WIRELESS ANTENNA SYSTEM. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1920. Serial No. 430,630. 4 Claims. (Cl. 250—33.)

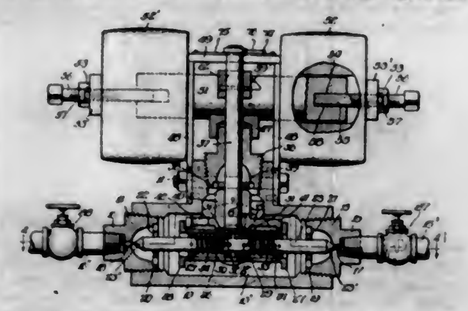
1. In a wireless signaling system, a plurality of non-parallel adjacently disposed antennæ grouped about a central point, a ground-lead to the mid-point of each



antenna, a tuning coil included in each ground lead and connections whereby each tuning coil may function as a power-transformer.

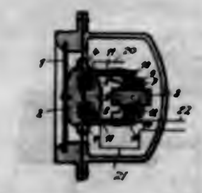
1,640,535. STEAM BOILER. LUCIUS D. COPELAND, Los Angeles, Calif. Filed July 5, 1923. Serial No. 649,430. 7 Claims. (Cl. 122—42.)

1. In a boiler, a shell having a plurality of water tubes and a plurality of fire tubes extending therethrough, with a set of fire tubes about each water tube, a drop tube extending from each of said water tubes and spaced from one another, said drop tubes having members constituting fire tubes fixedly secured to the exterior surfaces thereof, said first mentioned fire tubes and said second fire tubes having their axes arranged parallel.



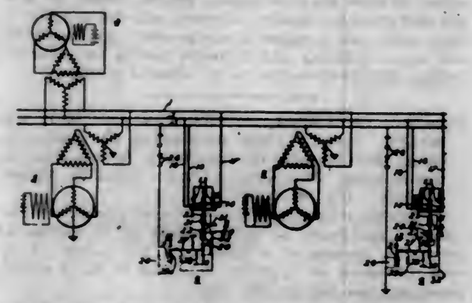
1,640,536. CHIROPRACTIC ADJUSTING AND MASSAGING DEVICE. TANOUS H. DAVID, Sacramento, Calif. Filed Nov. 30, 1925. Serial No. 72,331. 4 Claims. (Cl. 128—60.)

1. A chiropractic treatment device comprising a pair of spaced pad members, covers therefor held in yieldable relation with the pads, a bridge connecting said covers, means in said bridge whereby relative adjustment of said pads is obtained and a spring supported plunger associated with the bridge through which a blow directed to the device will be yieldably transmitted to said pads.



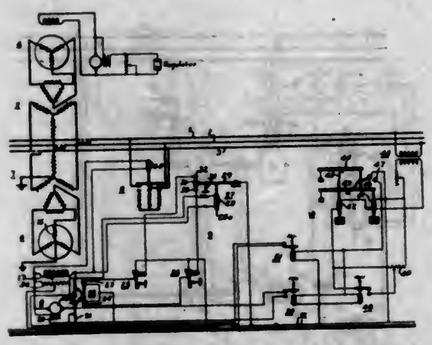
1,640,537. VALVE AND OPERATING DEVICE THEREFOR. MARK DEAN, Chicago, Ill., assignor of one-half to Michael Farrell, Chicago, Ill. Filed Mar. 4, 1926. Serial No. 92,189. 8 Claims. (Cl. 137—139.)

3. An electrically actuated valve mechanism for controlling the supply and exhaust of pressure fluid to and from a diaphragm or the like, comprising, in combination, a tubular valve casing having pressure inlet and exhaust ducts at its opposite ends respectively, a slidably mounted valve rod in said casing the ends whereof are adapted to open and close said ducts, a sleeve slidably mounted on said valve rod, oppositely acting spring thrust connections in the train of mechanical action between said sleeve and



said rod, a double-acting magnet, and means actuated by the armature of said magnet for moving said sleeve endwise in either direction.

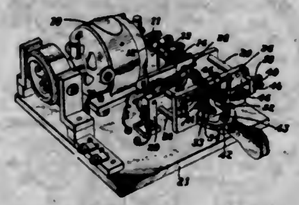
1,640,538. SOUND APPARATUS. ALARD DU BOIS-REYMOND, Plon, near Kiel, Prussia, Germany, assignor to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Mar. 24, 1921, Serial No. 455,321, and in Germany Aug. 6, 1917. 7 Claims. (Cl. 177—386.)



1. In acoustic apparatus, in combination, a vibratory diaphragm, a vibratory structure carried by said diaphragm, an electric coil, and means whereby said coil is carried by said vibratory structure but is acoustically insulated therefrom.

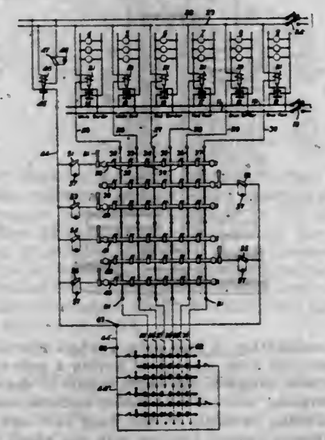
1,640,539. TRANSMISSION SYSTEM. ROBERT D. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 26, 1923. Serial No. 634,750. 3 Claims. (Cl. 172—237.)

1. The combination with a three-phase transmission line, of a generator for supplying energy thereto, a normally inactive three-phase reactor device, a switching device for connecting said reactor device across said line, and means for effecting the actuation of said switching device in the event of abnormally high or abnormally low voltage of the line.



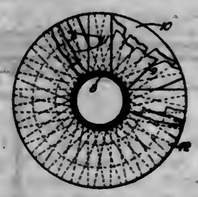
1,640,540. TRANSMISSION SYSTEM. ROBERT D. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1923. Serial No. 665,369. 11 Claims. (Cl. 172—237.)

1. In a transmission system, the combination with a supply circuit, of regulating means adapted to maintain a substantially constant voltage throughout the length of said supply circuit, said means comprising a synchronous dynamo-electric machine connected thereto and a regulator, a reactive device, means controlled in accordance with the amount of wattless current exchanged with said supply circuit for connecting said reactive device to said machine, and means similarly controlled for extending the normal range of effective operation of said regulator.



2. In a transmission system, the combination with a supply circuit, a synchronous dynamo-electric machine connected thereto, an exciter therefor, and a regulator adapted to maintain a substantially constant voltage upon said supply circuit, of an inductive device, means controlled in accordance with the degree of excitation of said machine for connecting said inductive device to the machine, and means similarly controlled for maintaining effective operation of said regulator and permitting relatively low excitation of said machine while maintaining the exciter voltage above the residual value thereof.

1,640,541. TELEGRAPH TRANSMITTER. WILLIAM G. FLUHARTY, Rockville Center, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1924. Serial No. 729,599. 4 Claims. (Cl. 178—82.)

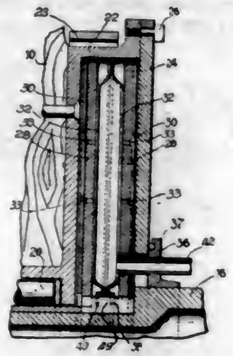


1. A transmitter comprising a single set of transmitting contacts operative to transmit either dots or dashes, a shaft carrying an actuating cam for said transmitting contacts, a continuously operating motor having a constantly engaged friction clutch operatively connected to said shaft, and means for controlling the operation of said shaft including a pair of stop members adapted to arrest said cam in different relative positions with respect to said transmitting contacts to thereby cause the transmission of uniformly spaced impulses of uniform length or to arrest said cam in a position to transmit prolonged impulses of variable length and a single manually actuated lever controlling the operation of both stop members.

1,640,542. CIRCUIT-CONTROLLING APPARATUS. BERT F. FULLER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1922. Serial No. 577,830. 23 Claims. (Cl. 171—97.)

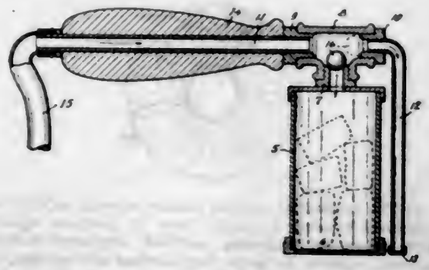
1. In an electrical system, a main feed circuit, a plurality of load circuits, means for controlling the load circuits, including a group of conductors connected thereto and a second group of conductors crossing the first group, means for selectively connecting the conductors of the second group to the feed circuit, and adjustable means on the conductors of the second group for selectively conductively engaging the conductors of the first group.

1,640,543. BUSHING AND METHOD OF FORMING THE SAME. BENJAMIN J. GUDOE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 341,006. 9 Claims. (Cl. 18—56.)



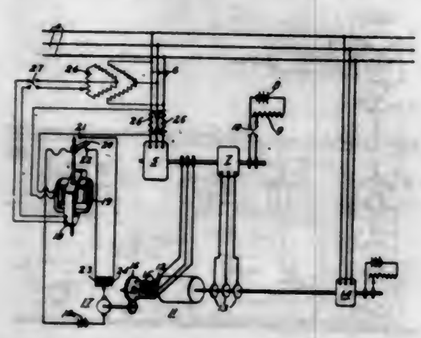
1. The method of forming flanged tubular objects that comprises forming a tubular body of moldable material with outwardly projecting portions, disposing moldable material against the projecting portions and molding the material thus assembled to compact and harden it into a tubular structure provided with a flange formed by the projecting portions of the tubular body and the material disposed against them.

1,640,544. SOAPY EMULSION OF BITUMEN SUITABLE FOR PAVING AND METHOD OF MAKING THE SAME. WILLIAM T. HEADLEY, Philadelphia, Pa. Filed Aug. 5, 1926. Serial No. 127,489. 3 Claims. (Cl. 134—1.)



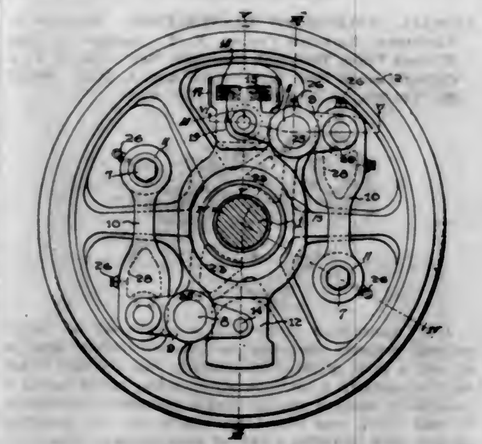
2. An aqueous bituminous emulsion, suitable for paving purposes and capable of withstanding exposures to temperatures below zero F. without breaking, containing a soapy emulsifying agent which has been subjected to a heating of from 400° to 600° F. at any stage of its preparation.

1,640,545. BRAKE. HERMAN C. HEATON, Berwyn, Ill. Filed Apr. 8, 1921. Serial No. 459,570. 7 Claims. (Cl. 188—152.)



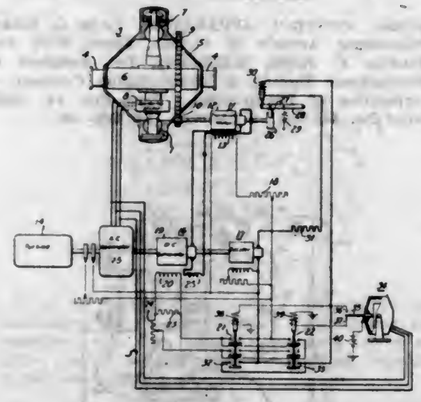
1. In combination, a fixed axle, a wheel rotatably journaled upon said axle, said wheel having a pair of spaced brake surfaces rotatable therewith, a pair of spaced brake shoes interposed between said brake surfaces, said brake shoes extending inwardly to the fixed axle and secured directly thereto against rotation with the wheel, the connection between said shoes and the fixed axle being removed from the sides of the shoes and disposed adjacent the axis of the wheel, said connection permitting sliding of said shoes with respect to the fixed axle, a resilient diaphragm between said brake shoes and means for forcing liquid into said diaphragm to expand same and force said shoes apart in opposite directions and into frictional engagement with the rotatable brake surface on the wheel for the purpose of braking rotation of the wheel.

1,640,546. SPRAY-FORMING DEVICE. JOHN ISENHART, EDWIN A. ISENHART, and WILLIAM E. JOHNSON, Wenatchee, Wash. Filed Feb. 19, 1924. Serial No. 693,766. 1 Claim. (Cl. 299—84.)



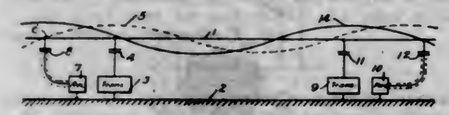
In a spray forming device of the class described a soap container, having perforations formed in one end, a T fitting having one branch connected with the other end of said soap container, a clear water supply pipe connected with another branch of said T fitting, means forming a handle on said water supply pipe, a clear water spray tube connected with a third branch of said T fitting, reducing means forming valve seats at the points of connection of said T fitting with said soap container and said clear water spray tube respectively, and a ball valve loosely disposed and freely movable within said T fitting for selectively seating upon either of said valve seats to control the flow of water to said soap container or to said clear water spray tube, said valve being adapted to roll from one seat to the other when it is not subjected to water pressure and to be held seated when it is subjected to water pressure.

1,640,547. VARIABLE-SPEED INDUCTION-MOTOR SET. CHARLES W. KINCAID, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 15, 1922. Serial No. 543,819. 8 Claims. (Cl. 172—274.)



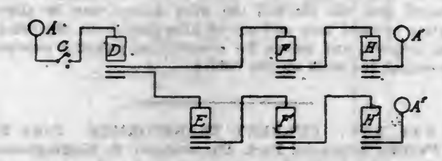
1. A variable-speed induction-motor set, comprising an induction motor having a wound secondary member, a synchronous machine mechanically connected thereto, frequency-converting means interconnecting said secondary member and said synchronous machine, means for variably exciting said synchronous machine in a direction producing under-synchronous operation, means for increasing the excitation in the opposite direction sufficiently to produce synchronous operation, means for still further increasing the excitation in said opposite direction for producing over-synchronous operation, automatic regulating means of a type requiring reversal of connections when the set passes through synchronism, and means mechanically interlocked with said several exciting means for effecting said reversal at the proper point in the adjustment of said exciting means.

1,640,548. LINK-DRIVE MECHANISM. CHARLES N. F. KNAPP, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1924. Serial No. 739,242. 11 Claims. (Cl. 105—131.)



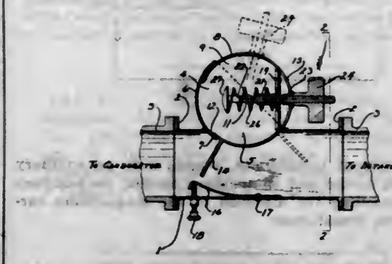
1. In a railway vehicle drive, the combination with a pair of drive wheels, of a drive quill having its axis in parallel relation to the axis of said wheels, a pair of crank arms pivotally mounted on one of said wheels, a resilient link connecting said arms and a plurality of coupling rods pivotally mounted on said arms and secured for universal movement on said quill.

1,640,549. GYROSCOPIC STABILIZER SYSTEM. BENJAMIN G. LAMME, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1922. Serial No. 561,181. 3 Claims. (Cl. 74—78.)



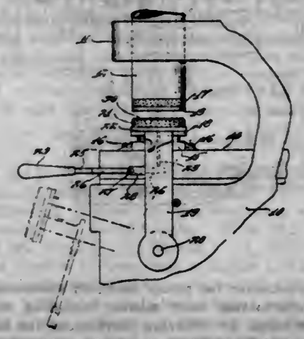
1. In a control system for a gyroscopic ship stabilizer, the combination including a gyroscope flywheel, a spinning motor therefor, a prime mover having a falling speed-torque characteristic, generating means coupled thereto and connected to said spinning motor, the spinning motor being inherently capable of operating regeneratively and operating normally at a speed which varies substantially in accordance with the speed of the prime mover, a direct-current precession motor having a commutator-type armature and a field-magnet, a direct-current generator coupled to said prime mover and connected to said precession-motor armature, a brake mechanically connected to said precession motor, means adapted to be automatically responsive to the rolling motion of the ship in one direction for releasing the brake and energizing the generator field magnet at the incipience of such motion and for de-energizing the generator field magnet and applying the brake at the end of such motion, means adapted to be automatically responsive to the rolling motion of the ship in the opposite direction for releasing the brake and energizing the generator field magnet in the opposite direction at the incipience of such opposite motion and for deneregizing the generator field magnet and applying the brake at the end of such opposite motion, and means for causing the field magnet of said precession motor to be independently energized.

1,640,550. CARRIER-CURRENT SIGNALING SYSTEM. DONALD G. LITTLE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,668. 4 Claims. (Cl. 178—44.)



2. In a high-frequency signaling system, a line, two signal-sending devices for impressing high-frequency energy upon said line at a distance apart greater than a half-wave-length and a receiving device adjacent each signal-sending device, each signal-receiving device being at a quarter-wave-length from the adjacent signal-sending device.

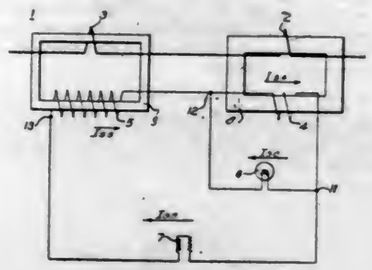
1,640,551. AUTOMATIC TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 30, 1920, Serial No. 392,943. Renewed June 25, 1926. 19 Claims. (Cl. 179—18.)



1. In a telephone system, a subscriber's line, a series of switches comprising group selectors, hundreds selectors, and connectors directively controllable by the subscriber on said line for connecting with a second line, a second series of switches comprising group selectors, thousands selectors, hundreds selectors, and connectors similarly controlled for connecting with a third line, and automatic telephone numbers assigned to said lines all having the same number of digits.

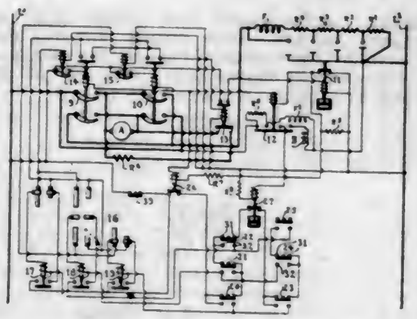
1,640,552. INTERNAL-COMBUSTION ENGINE. VERNER AUGUST NELSON, Oakland, Calif. Filed May 10, 1926. Serial No. 108,026. 6 Claims. (Cl. 137—152.)

6. A control for the intake of an internal combustion engine comprising a rotary valve having an element extending into the intake to be operated by the draft passing therethrough, a second valve associated with a port opening of the first valve, and an adjusting element for the second valve arranged to yieldingly oppose operation of the first valve by the draft.



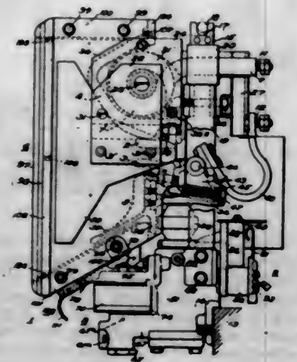
1,640,553. ATTACHMENT FOR STEEL DIE AND PLATE PRESSES. ELIOT O'HARA, Waltham, Mass., assignor to O'Hara Waltham Company, Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1926. Serial No. 102,510. 6 Claims. (Cl. 101—41.)

1. In a machine of the character described, a die having thereon the design to be printed, a reciprocable carrier therefor, a vertically movable printing member, a



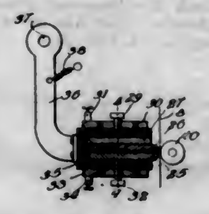
surface adapted to take up the design from the inked die, a movable work holder, means for moving the die into and out of alinement with the printing member, and means for moving the work holder into and out of alinement with the printing member, said operating means for the die holder and for the work holder being so controlled that the die and the work holder may be alternately brought into and out of alinement with the printing member, and means for causing the printing member to engage the work on the holder.

1,640,554. CURRENT TRANSFORMER. JOHN F. PETERS, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 1, 1925. Serial No. 59,770. 7 Claims. (Cl. 171—95.)



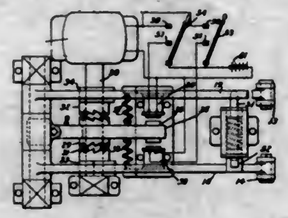
1. In a current transformer, a main unit, an auxiliary unit, a main burden and an auxiliary burden, the auxiliary burden controlling the direction of the magnetising currents for the transformer.

1,640,555. ELEVATOR CONTROLLER. HARRISON P. REED, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 29, 1921. Serial No. 511,354. 6 Claims. (Cl. 172—152.)



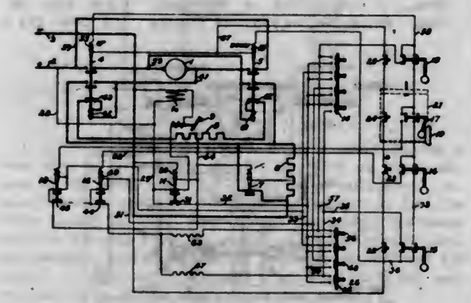
1. In a controller for motor operated elevators and the like, the combination with means, including voluntarily operable switches, for effecting starting of the motor and automatic stopping following a predetermined range of operation thereof, of associated means for rendering all of said switches ineffective to influence the action of the motor during the interval between starting and stopping thereof, and means for maintaining certain of said switches similarly ineffective for a predetermined period after stopping of the motor while maintaining other of said switches effective during such predetermined period.

1,640,556. CONTROL APPARATUS. LYNN G. RILEY, Wilkinsburg, ANDREW H. CANDEE, Forest Hills, and MAURICE F. JONES, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1921. Serial No. 444,708. 3 Claims. (Cl. 200—82.)



1. The combination with a switching device comprising a stationary arc horn and a stationary valve member, said horn and said valve member having surfaces which are substantially parallel, of an arcing box having surfaces substantially parallel to the parallel surfaces of said horn and said valve member for mounting said box upon said horn and said valve member, the said surfaces of said box slidingly engaging the corresponding surfaces of said horn and said valve member, and means for latching said box into position.

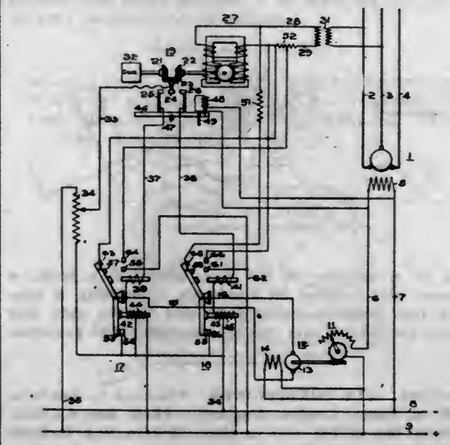
1,640,557. METHOD OF AND MEANS FOR TRANSMITTING, RECORDING, AND REPRODUCING SOUND. JOSEPH TYKOCINSKI-TYKOCINER, Urbana, Ill. Filed Feb. 1, 1923. Serial No. 616,450. 20 Claims. (Cl. 179—100.1.)



1. In combination, a plurality of elements physically in contact with each other and separated by a gap of molecular dimension, and means for creating a discharge of high actinic value between said elements.

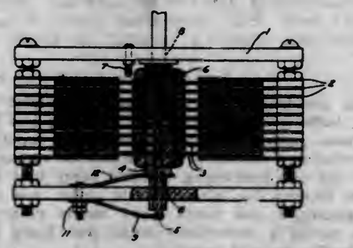
1,640,558. OPERATING DEVICE AND DISCONNECTING SWITCH. CHRISTIAN AALBORG, Pittsburgh, and FREDERICK C. WILHARM, Homewood, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 8, 1923. Serial No. 611,267. Renewed Jan. 25, 1927. 8 Claims. (Cl. 175—375.)

1. In an electrical apparatus, a plurality of circuit interrupters at different levels, a disconnecting switch associated with each circuit interrupter, and a power device adapted to operate either said circuit interrupters or said disconnecting switches.



1,640,559. CONTROL SYSTEM. EDGAR M. BOUTON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,844. 4 Claims. (Cl. 172—152.)

1. The combination with an elevator and a hoisting motor, of reversing contactors therefor, controlling means comprising a plurality of push-button switches and selector switches, a brake for the motor, a relay responsive to the operation of one of said reversing contactors in response to the operation of one of said push button switches for controlling said brake, and a switch actuated by the brake relay for rendering all the other of said push buttons ineffective.

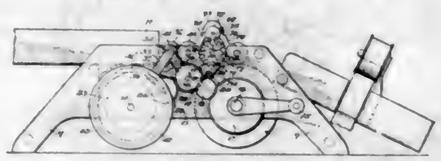


1,640,560. VOLTAGE-REGULATOR SYSTEM. WILLIAM M. BRADSHAW, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1925. Serial No. 39,046. 6 Claims. (Cl. 171—119.)

1. In a regulator system, a dynamo-electric machine, means for varying the excitation of said dynamo-electric machine comprising a differential device, a contact member actuated thereby, a pair of contact members cooperating therewith, a clock mechanism for actuating one side of said differential device, electro-responsive means energized in accordance with the voltage of said dynamo-electric machine for actuating the other side of said

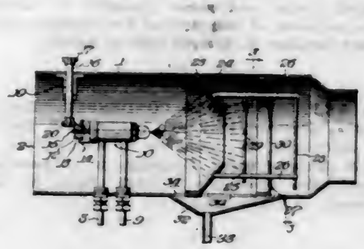
differential device, and means energized in accordance with the excitation of said machine for actuating said pair of contact members to prevent hunting action.

1,640,561. VARIABLE CONDENSER. EDGAR W. BREISCH, Edgewood Park, and LAWRENCE R. GOLLADAY, East Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 24, 1925. Serial No. 45,728. 4 Claims. (Cl. 175—41.5.)



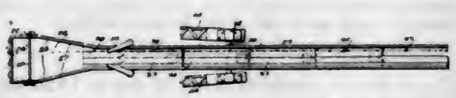
1. An electrical instrument having a rotating electrical part mounted for limited rotative movement, a hollow shaft supporting said rotating part, a stationary frame member including a bearing for said hollow shaft, a flexible connecting conductor disposed within said shaft, the inner end of said flexible conductor being conductively connected to the shaft and turning therewith, the outer end of said flexible conductor being held against turning, and a terminal, conductor mounted on said frame member and secured to said outer end of the flexible conductor.

1,640,562. CONDENSATION-PRODUCT VARNISH. ARTHUR L. BROWN, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 29, 1924. Serial No. 702,807. 12 Claims. (Cl. 134—26.)



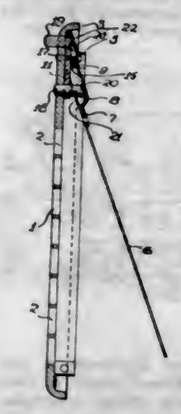
3. The process of preparing a liquid coating composition that comprises heating a mixture of China wood oil and cresol with a material containing an active methylene group for a time sufficient to initially condense said mixture, heating at a higher temperature for dehydrating the same, heating the resulting composition with a drier soluble therein and then adding a thinner.

1,640,563. MACHINE FOR COUNTING SHEETS. CHARLES L. BURDICK, Wood Green, London, England. Filed July 14, 1923, Serial No. 651,469, and in Great Britain July 29, 1922. 9 Claims. (Cl. 235—132.)



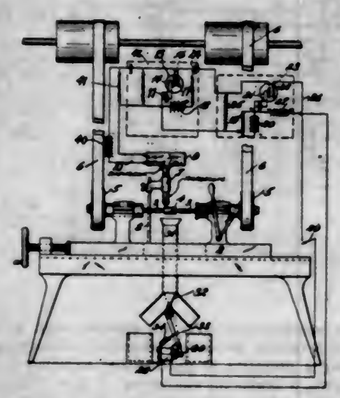
7. In a machine of the class described, a shaft, a Geneva gear mounted on said shaft, a plurality of tripping lugs pivotally mounted on said Geneva gear, and means for holding said lugs in operative radial positions.

1,640,564. AIR CONDITIONER. CHARLES L. BURDICK, Wood Green, London, England. Filed May 4, 1925, Serial No. 27,709, and in Great Britain May 7, 1924. 4 Claims. (Cl. 261—116.)



1. In combination, a casing having an inlet and an outlet, baffle means mounted in the casing and forming a tortuous passage between the inlet and outlet, means for projecting a current of air through the casing to said outlet and for discharging a liquid spray into said air current between the inlet and said outlet, said air current projecting and liquid spray means comprising a nozzle having a controllable outlet and liquid and air lines leading to said nozzle.

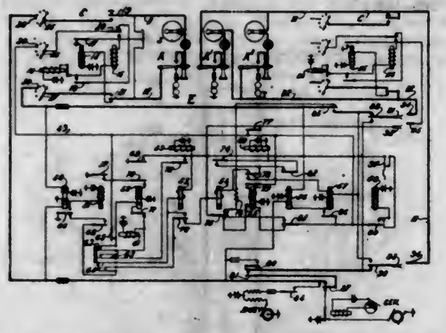
1,640,565. PLACER MACHINE. ARTHUR CRISFIELD DENNIS, Piedmont, Calif. Filed Aug. 18, 1926. Serial No. 129,997. 8 Claims. (Cl. 262—2.)



1. In a placer machine, a bucket-sluice structure comprising a bucket having a sluice contiguous thereto, said sluice having mineral savings devices therein, and mechanism for tilting said structure into and causing said bucket to scoop a charge of the deposit and then tilting said structure into a position to discharge the contents of said bucket through said sluice and over said mineral savings devices.

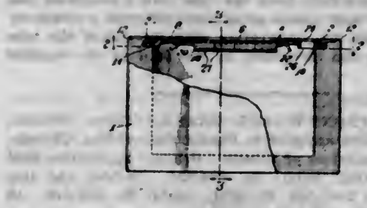
1,640,566. HEATING OR VENTILATING REGISTER. CHARLES ENGLERT, Rochester, N. Y. Filed Aug. 3, 1926. Serial No. 126,885. 6 Claims. (Cl. 98—106.)

1. A heating or ventilating register comprising a face plate, a shutter pivoted on the rear face of said face plate and having portions on opposite sides of its pivot, and two independently mounted operators on the face plate arranged to cooperate each with one of said portions on opposite sides of the pivot to shift the shutter in opposite directions.



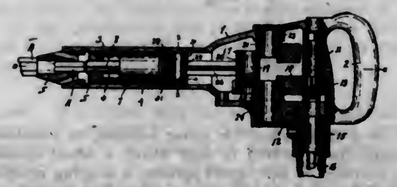
1,640,567. MACHINE FOR DETECTING FLAWS. FLOYD FIRESTONE, Ann Arbor, Mich., assignor to The Regents of The University of Michigan, Ann Arbor, Mich., a Corporation of Michigan. Filed July 20, 1925. Serial No. 44,955. 11 Claims. (Cl. 209—211.)

1. A machine of the kind described comprising an optical system, a light-sensitive cell operatively related to said system to be affected thereby, means for bringing the surface of an article within the field of action of said system in successive small areas, and an electromagnetic device operatively electrically related to said light-sensitive cell to be controlled thereby.



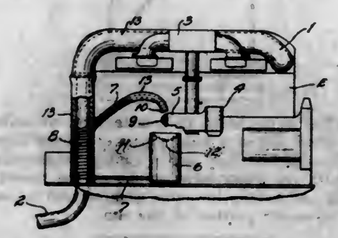
1,640,568. AUTOMATIC TELEPHONE SYSTEM. ROY F. GOULD, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 28, 1925. Serial No. 53,030. 11 Claims. (Cl. 179—17.)

1. In a telephone system, an automatic switch for extending a connection to a line, after being first operated and released, said switch including a pair of line wipers, a source of signaling current, said source being normally associated with one of said wipers, and means responsive



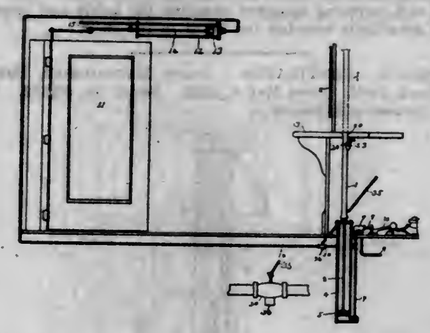
to a preliminary operation of said wipers corresponding to a particular digit for transferring said source into association with the other wiper.

1,640,569. SAVINGS BANK. HENRY J. HALVERSON and WILLIAM HAROLD YOUNGSTROM, Chicago, Ill., assignors to New Business Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1925. Serial No. 965. 5 Claims. (Cl. 232—4.)



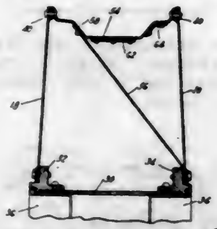
1. A savings bank having a body, a cover having a coin slot, a latch plate slidably mounted on the under side of the cover and long enough to simultaneously engage the body at diametrically opposite points to hold the cover locked in place, and springs connecting the cover and the latching plate for urging the latter toward locking position, said springs being arranged parallel and adjacent to each other beneath the coin slots for preventing issue of the contents of the bank.

1,640,570. POWER HAMMER. GEORGE E. HIBBER, Cincinnati, Ohio, assignor to The Concrete Surfacing Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 20, 1925. Serial No. 16,962. 6 Claims. (Cl. 125—32.)



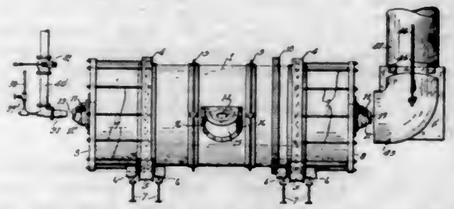
1. In a power hammer, the combination of a body, a cylinder slidable therein, a crank-shaft mounted in said body, a connecting rod extending therefrom to the cylinder to move the cylinder inwardly and outwardly, a piston-hammer in said cylinder, a pin connecting the cylinder to the connecting rod, said pin and cylinder being formed with air passages which aline while the cylinder is making the middle portion of its inward stroke and are out of alinement during the remainder of the time to cause the piston hammer to be cushioned during the outward movement of the cylinder.

1,640,571. FUEL ECONOMIZER FOR INTERNAL-COMBUSTION ENGINES. HENRY H. HUMPHREY, St. Louis, Mo. Filed May 3, 1926. Serial No. 106,396. 1 Claim. (Cl. 123—25.)



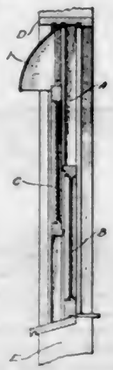
In a device of the character described for internal combustion engines having intake and exhaust manifolds, a carburetor for admitting fuel to said intake manifold, a container for water subjacent the carburetor, a conduit leading from said container to a point adjacent the air inlet of the carburetor and having its outlet above the container, means for vaporizing the water passing from the container to the outlet of the conduit, said vapor being sucked into the carburetor by the action of the engine to augment the fuel action, and means for breaking up any unvaporized globules discharging from the conduit outlet.

1,640,572. BURGLAR-CATCHING AND CASHIER-PROTECTIVE APPARATUS. JOHN J. KENNEDY and THOMAS W. STENE, Los Angeles, Calif. Filed June 30, 1924. Serial No. 723,411. 2 Claims. (Cl. 268—2.)



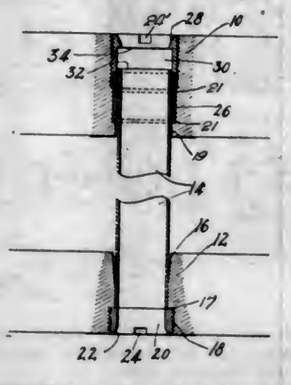
1. In an apparatus of the class described wherein a building is equipped with automatically operated means for fastening the doors and windows thereof and a burglar alarm sounded so that a burglar may be captured, the combination of a counter, a bullet proof shield slidably associated with said counter, a projection on the upper portion of said shield, said counter being equipped with a countersunk portion for receiving said projection when said shield is in lowered position so that said shield may be concealed, a motor for elevating said shield, and means for operating said motor, said means comprising an inclined rectangular frame and means for holding said frame in inclined position whereby said motor may be caused instantly to function by reason of the sudden elevation of the operator's foot.

1,640,573. REENFORCED WHEEL. ISAAC M. LADDON, WILLIAM A. RINO, and FRED W. HERMAN, Dayton, Ohio, assignors to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 6, 1927. Serial No. 181,352. 2 Claims. (Cl. 301—63.)



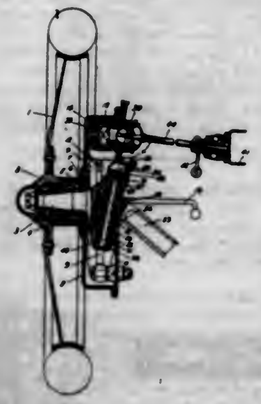
2. A wheel comprising, in combination, an outer rim having a drop center, a hub, a pair of spaced disks connecting the rim and hub, and a conical reenforcing disk secured with the inner edge of one of the spaced disks to the hub and having its outer edge secured to one side of the drop-center portion of the rim.

1,640,574. SMELTING FURNACE. TANNIS LEWIN, St. Louis, Mo., assignor of one-half to William Lewin, St. Louis, Mo. Filed July 6, 1925. Serial No. 41,839. 5 Claims. (Cl. 263—33.)



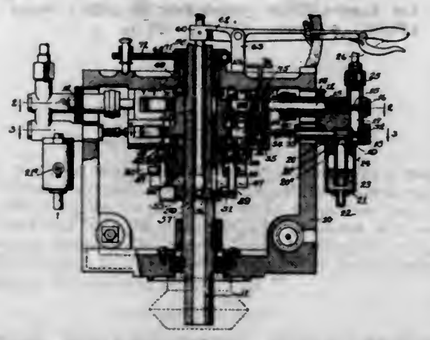
1. In a smelting furnace, an elongated cylindrical shell, closure-heads disposed on the ends of the shell, rings fixed circumferentially about the shell adjacent the ends thereof, and fastening members engaging the heads and rings for detachably securing the heads to the shell.

1,640,575. VENTILATOR. ANTON MATTHIESSEN, Oakland, Calif. Filed May 6, 1925. Serial No. 28,332. 3 Claims. (Cl. 98—98.)



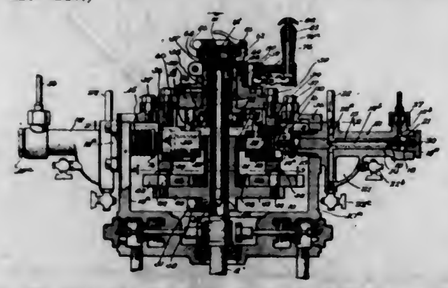
1. A device of the type described comprising a sectional canopy adapted to extend outside of a window, a sectional screen carried by said canopy, beads carried by the canopy sections and being receivable in the grooves of a window, said screen sections having reversed beads on their opposite ends insertable vertically over the beads on the ends of the canopy sections.

1,640,576. CONDENSER-TUBE NIPPLE AND MOUNTING. WILLIAM S. MONROE, Chicago, Ill., assignor to Sargent & Lundy, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1925. Serial No. 29,323. 2 Claims. (Cl. 285—48.)



1. In combination, a tube, a sheet associated therewith having an aperture in which an end of the tube is movably fitted, and a ferrule fitted in the said aperture forming an annular pocket intermediate its orifice and the end of the tube for permitting endwise movement of the tube, the orifice of the said ferrule being in alignment with the bore of the tube and being flared outwardly so as to conduct a fluid from the tube with a minimum loss of head, the said ferrule being provided with a relatively sharp shoulder for co-operating with the end of the tube in governing the turbulence of the fluid in the annular pocket.

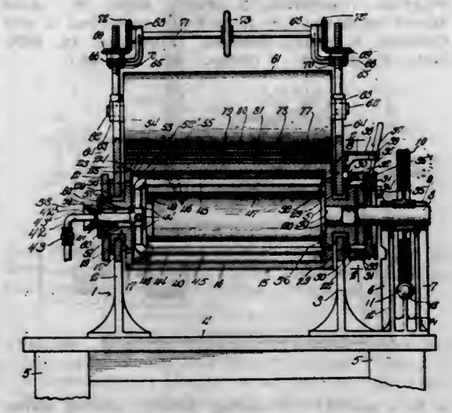
1,640,577. FRONT-WHEEL BRAKE. HENRI PERROT, Paris, France, assignor to Bendix Corporation, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 25, 1922, Serial No. 584,324. Divided and this application filed Jan. 29, 1924. Serial No. 689,219. 10 Claims. (Cl. 188—194.)



1. In a front wheel for motor vehicles, in combination, a brake drum secured to said wheel, a wheel spindle, a disc provided on said wheel spindle, a steering spindle rotatably mounted on said disc, another disc secured to the said first disc, two brake segments pivotally secured to said second disc at one extremity, a hollow boss on said second disc, two slits provided on said boss, the movable extremities of said brake segments entering said slits, a brake cam in said hollow boss supported by the latter and cooperating with the inner faces of said movable extremities of the brake segments, means for operating said cam, and means connected to said first disc for turning the wheel.

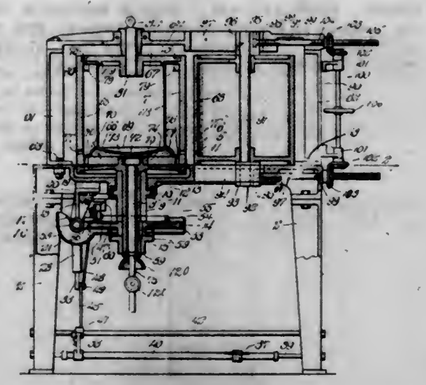
1,640,578. GOVERNING MECHANISM FOR OIL ENGINES. FRANK W. SEVERIN, Chicago, Ill., assignor to Venn-Severin Machine Co., Chicago, Ill., a Corporation of Illinois. Filed July 9, 1921. Serial No. 483,628. 9 Claims. (Cl. 123—140.)

1. In governing mechanism for oil engines, the combination of a pump for feeding oil to the cylinder, a spring closed suction valve for controlling the volume of oil forced into the cylinder, mechanism for operating the pump, mechanism comprising a positively driven cam for opening the valve, a controller-cam coaxial with the cam for opening the valve, and a governor connected to operate the controller cam, to control the periods during which the valve remains open during the pumping strokes.



1,640,579. FUEL-FEED MECHANISM FOR OIL ENGINES. FRANK W. SEVERIN, Chicago, Ill. Filed July 27, 1925. Serial No. 46,379. 16 Claims. (Cl. 123—140.)

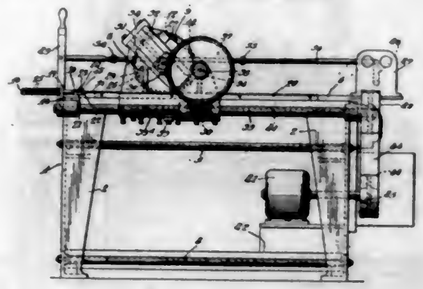
1. In fuel feed mechanism for oil engines, the combination of a reciprocatory pump for feeding fuel oil to the engine cylinder comprising a piston and a cylinder, a cam for operating the piston to pump the oil, a valve in the cylinder, for rendering the piston effective to deliver oil and operated by the piston, and means for adjusting the cam to vary the pumping stroke of the piston to vary the charges delivered to the engine.



1,640,580. MACHINE FOR HEATING AND BENDING METALLIC PRINTING PLATES, SUCH AS ELECTROTYPE AND STEREOTYPE PLATES. CHRISTIAN N. SMITH, Elgin, Ill., assignor of one-half to William P. Topping, Elgin, Ill.; Alice Minnie Smith and Lily Irene Smith executrices of said Christian N. Smith, deceased. Filed May 5, 1924. Serial No. 711,297. 10 Claims. (Cl. 153—40.)

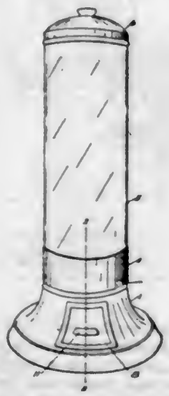
1. In a machine for heating and bending metallic printing plates, the combination of a plurality of parallel rolls including a horizontal rotative hollow heating and bending roll adapted to be interchanged with other similar rolls of different sizes, driving shaft and gear mechanism for rotating such interchangeable hollow heating and bending rolls of different sizes successively, means for heating said hollow heating and bending rolls during the rotation thereof, stationary supporting means adapted to support said rolls in position to rotate upon horizontal

axes, and connecting means adapted to detachably connect said driving shaft with each of a plurality of such interchangeable hollow heating and bending rolls successively and acting to permit the removal of any heating and bending roll so detachably connected with said driving shaft independently of and without removing said driving shaft from its support.



1,640,581. MACHINE FOR HEATING AND BENDING METALLIC PRINTING PLATES, SUCH AS ELECTROTYPE AND STEREOTYPE PLATES. CHRISTIAN N. SMITH, Elgin, Ill., assignor of one-half to William P. Topping, Elgin, Ill.; Alice Minnie Smith and Lily Irene Smith, executrices of said Christian N. Smith, deceased. Filed May 5, 1924. Serial No. 711,298. 11 Claims. (Cl. 153—40.)

1. In a machine for heating and bending metallic printing plates, the combination of a hollow heating and bending roll adapted to rotate upon a vertical axis, rotative supporting and driving mechanism in supporting engagement with said roll, supporting bearings for said driving mechanism, means for connecting said roll with the supporting and driving mechanism, a burner located inside of and adapted to rotate with the roll, and a

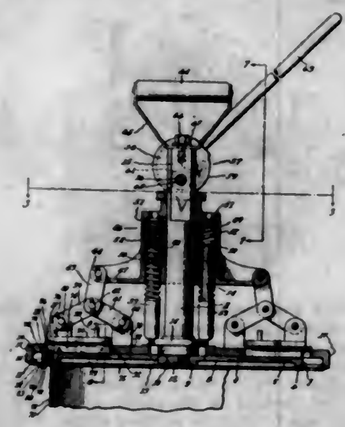


fuel-supply conduit extending upward through the axial center of said rotative supporting and driving mechanism and adapted to communicate with said rotative burner for supplying fuel to said burner.

1,640,582. MACHINE FOR BENDING PRINTING PLATES. CHRISTIAN N. SMITH, Elgin, Ill.; Alice Minnie Smith and Lily Irene Smith executrices of said Christain N. Smith, deceased. Filed Apr. 12, 1926. Serial No. 101,404. 6 Claims. (Cl. 153—40.)

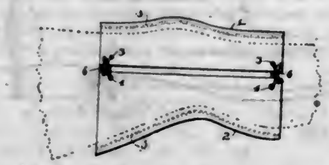
1. In a machine for bending metallic printing plates, the combination of a bed, a carriage movably mounted and adapted to travel over the bed, a plate-bending roll rotatively mounted on and movable with said carriage, a flexible metallic backing sheet having one end attached to the periphery of said bending roll, said sheet being adapted to extend between the bed and the bottom surface of the bending roll and acting to admit a metallic printing plate between said flexible sheet and the bending roll, a stationary sheet-holding member connected with the opposite end of said flexible metallic backing sheet and acting to hold said flexible sheet taut, a spur gear fixed to said bending roll, a toothed rack supported independently of the carriage and in toothed engagement with said spur gear, a spur gear rotatively supported on the carriage and in toothed engagement with a spur gear on said bending roll, and means for rotating said last-mentioned spur gear.

1,640,583. DISPLAY CASE. HERMAN STEINRUCK, Erie, Pa., assignor to Sterling Aluminum Company, Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1925. Serial No. 56,856. 6 Claims. (Cl. 221—146.)



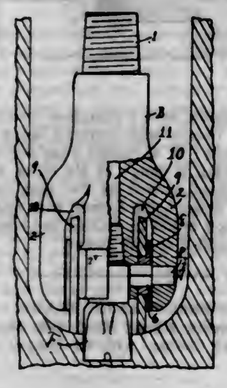
1. In a display case, the combination of a base formed of sheet metal of annular form flared toward the bottom and creased to form an internal shoulder and extending above the shoulder in cylindrical form; a door in the flared part of the base; a bottom forming a closure of the bottom end of the flared portion of the base; and a transparent cylindrical shell telescoping the cylindrical portion of the base and supported on the shoulder.

1,640,584. COMBINED ASH TRAY AND CIGARETTE AND CIGAR EXTINGUISHER. JOHN F. THIESSEN, Los Angeles, Calif. Filed July 19, 1926. Serial No. 123,403. 4 Claims. (Cl. 131—51.)



1. In a device of the class described, in combination, a horizontal bar, sets of curved legs extending from each end of said bar for supporting the same, a lighted cigarette or cigar extinguisher on said bar, an ash tray positioned below said bar and between said legs, and loop and hook means associated with said bar and said tray whereby said tray may be detachably supported by said bar.

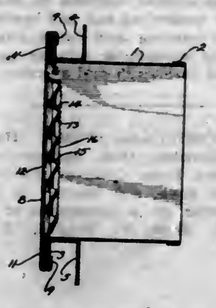
1,640,585. METAL-CONTAINER SEALING-CLOSURE-FASTENING APPARATUS. FRANK C. THORNTON, East Cleveland, Ohio. Filed July 19, 1926. Serial No. 123,560. 5 Claims. (Cl. 113—18.)



1. In a machine for applying a sheet metal closure to a container having a projecting bead at the top, the combination of a head adapted to rest upon said closure within said rim, a set of radially movable bending members mounted upon said head and having depending hook-shaped flanges at their outer ends adapted to be contracted and bend the edge of the closure under said rim, a post standing on the head, a lever pivoted on the post, and operating connections between the lever and said members, adapted to contract said members inwardly and simultaneously press downwardly on the closure when pressure is applied to the lever.

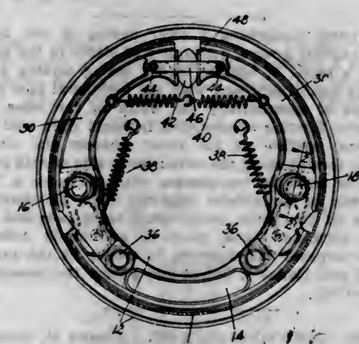
1,640,586. BODY SUPPORT. MAT TUSUP, Campbell, Calif. Filed Nov. 13, 1926. Serial No. 148,214. 1 Claim. (Cl. 128—91.)

A device of the character described, comprising a pair of complementary elements molded to the general conformation of the portion of the body which they are to embrace and made of plastic fire clay hardened with reinforcing means bedded therein, the said elements having orifices formed in their opposing edges, and lacing means engaging the opposing orifices.



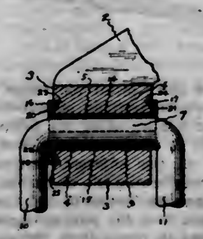
1,640,587. EARTH-BORING TOOL. THOMAS C. WHISLER, Redondo Beach, Calif. Filed May 28, 1925. Serial No. 33,363. 5 Claims. (Cl. 255—71.)

3. In an earth boring tool, in combination, a hollowed out and internally screw-threaded body member, a pair of side members positioned in spaced relation with said body member, a fixed element connecting each of said side members to said body member, a cutting element on each of said fixed elements, and adapted for rotation thereon, and an additional cutting device screw-threaded into said body member and positioned between said rotary cutting elements and adapted to prevent said fixed elements from emerging from the tool when it is operated.



1,640,588. LOUVER VENTILATOR. RALPH C. YAGER and GEORGE L. YAGER, Oakland, Calif., assignors to Yager Sheet Metal Company, Oakland, Calif., a Copartnership. Filed June 19, 1926. Serial No. 117,021. 1 Claim. (Cl. 98—121.)

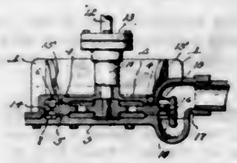
A device of the type described, comprising a casing, a cover secured to said casing, said cover having a portion thereof spaced inwardly from the plane of said cover, said portion having a plurality of parallel cuts therein for forming sections, said sections being bent on a line midway between the cuts, so that portions of said sections project in front of the inwardly spaced portion of the cover and portions of the sections project inwardly



from the inwardly spaced portions of the cover, the outer extremities of said sections lying flush with the plane of the cover and being strengthened by reinforcing ribs.

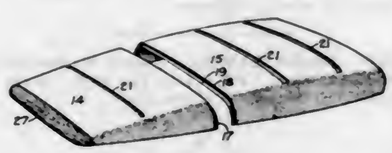
1,640,589. BRAKE. WILLIAM J. ANDRES, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 25, 1925. Serial No. 46,041. 19 Claims. (Cl. 188—78.)

1. A brake for a vehicle comprising, in combination, a retarding device, anchoring means engaging the retarding device, and a pair of oppositely-effective servo devices, one of which is arranged to operate the retarding device when the vehicle is moving forward and the other of which is arranged to operate the retarding device when the vehicle is moving backward.



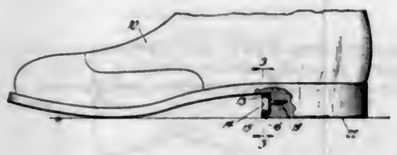
1,640,590. BRAKE HANGER. JOSEPH W. BETTENDORF, Bettendorf, Iowa. Filed July 26, 1926. Serial No. 124,808. 10 Claims. (Cl. 188—209.)

1. In brake mechanism, in combination, a brake hanger support having a bearing portion provided with a bearing aperture, said bearing portion being provided with a slot



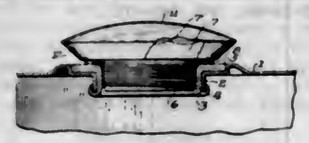
extending outwardly of said bearing portion from said aperture, a brake hanger end disposed in said aperture, a longitudinally split cylindrical bushing comprising a plurality of bushing sections disposed in said aperture between said brake hanger end and said bearing portion and substantially surrounding said brake hanger end, and means to prevent appreciable rotative and longitudinal movement of said bushing in said aperture.

1,640,591. CENTRIFUGAL PUMP. HERMAN A. F. BOARNEMAN, Columbus, Ohio, assignor of one-half to Westco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Iowa, and one-half to Decatur Pump Company, Decatur, Ill., a Corporation of Illinois. Filed Oct. 19, 1923. Serial No. 660,568. 2 Claims. (Cl. 103—96.)



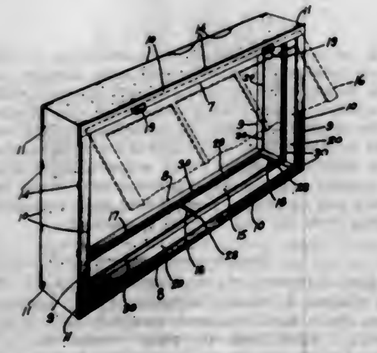
1. A pump comprising a rotor having in one lateral face an annular groove, a plurality of blades in the groove forming a series of buckets, and a casing making a substantially liquid tight seal with the peripheral face of the rotor and of substantially the width of the rotor, said casing also forming a substantially liquid tight seal with the lateral surface of the rotor wherein the annular groove is formed along the radial inner side of said groove to thereby refine in conjunction with the rotor a liquid passageway of no greater diameter than the maximum diameter of the rotor, said casing being provided with suitable inlet and outlet portions and liquid deflecting means interposed therebetween to closely fit the exposed edges of said blades to deflect liquid from the passageway to the outlet.

1,640,592. TOP CONSTRUCTION. JOSEPH H. BOURGON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Dec. 13, 1924. Serial No. 755,726. 3 Claims. (Cl. 296—137.)



1. A continuous sheet metal top frame composed of a plurality of transverse sections permanently secured together along their joining edges, the joining edge of each section being bent to form in conjunction with the corresponding edge of the adjacent section a transverse trough-shaped strengthening rib, and trough-shaped transverse strengthening ribs formed in and from the metal of each section remote from the joining edges thereof, all of said ribs increasing in depth from the sides of said top to the center thereof to impart to said top structure relatively equal transverse strength against bending throughout the full width thereof.

1,640,593. ANTIFRICTION DEVICE FOR SHOE HEELS. SAMUEL BUCHSBAUM, Chicago, Ill. Filed Sept. 19, 1921. Serial No. 501,555. 4 Claims. (Cl. 36—34.)

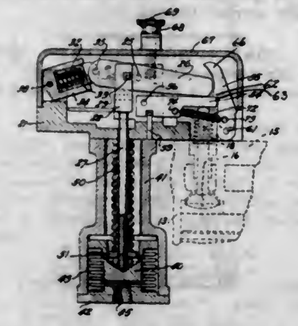


1. The combination with a shoe having a heel, of anti-friction means adjacent said heel at the forward end thereof, and adjacent the inner edge of said heel, said anti-friction means being substantially flush with the bottom face of said heel.

1,640,594. CONTAINER AND SEALING MEANS THEREFOR. FRANCIS R. BURGESS, Chicago, Ill., assignor to American Flange & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1927. Serial No. 172,377. 3 Claims. (Cl. 220—39.)

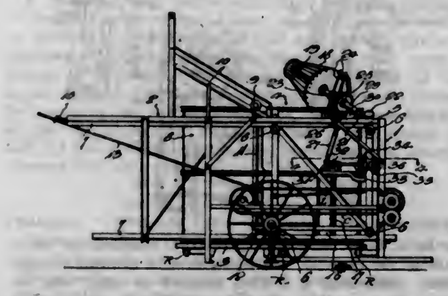
3. The combination with a container formed with a hole through a wall thereof and carrying screw threads surrounding said hole; of a closure plug screwed into said threads and having a flange at its outer portion which tapers; and a hood carried by the plug and embracing said flange, said flange being formed with angular portions adjacent said hood to aid in tearing the hood when a dislodging tool is applied to said flange.

1,640,595. FIREPROOF SASH FRAME. OTTO W. L. BUSS, Minneapolis, Minn. Filed Nov. 16, 1925. Serial No. 69,389. 10 Claims. (Cl. 72—09.)



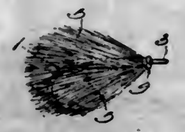
1. A sash frame including a skeleton metal frame adapted to be partially embedded in masonry, the opposed sides of said metal frame providing facings for the sash frame, and longitudinal recesses in said facings adapted to receive a sash.

1,640,596. TREATMENT OF FABRICS, PAPER, AND OTHER MATERIALS. ROBERT H. CHATHAM, Manchester, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed July 18, 1921. Serial No. 485,650. 11 Claims. (Cl. 91—70.)



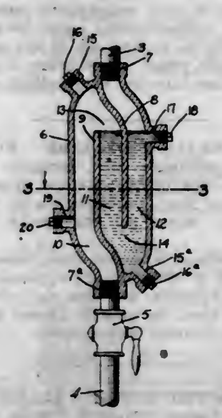
2. Process for treating paper, textile and other materials, comprising applying thereto a solution containing a precipitable organic substitution derivative of cellulose, and thereafter precipitating the cellulosic derivative thereon by water.

1,640,597. COMPRESSOR CONTROL. NIELS A. CHRISTENSEN, Cleveland, Ohio. Filed Sept. 17, 1926. Serial No. 136,158. 9 Claims. (Cl. 230—24.)



1. In a compressor control, the combination with a compressor and the system supplied thereby, said compressor having a valve controlling passage to atmosphere, of mechanism for controlling the operation of said valve while the compressor is running, comprising a pair of latches lockingly engageable with each other to hold said valve open, a hammer member for moving said latches to locked position to hold said valve open under conditions of maximum pressure in said system to prevent said compressor from functioning and for releasing said latches under conditions of minimum pressure in said system to permit said compressor to function, means, responsive to pressure changes in said system, for moving said hammer member including a member having lost motion connection with said hammer member, and a single spring associated with said hammer member to impart a quick throw thereto upon the occurrence of maximum or minimum pressure conditions in said system.

1,640,598. SHOCKER. CHRISTIAN CHRISTIANSEN, Sioux Falls, S. Dak., assignor to New Way Harvester Company, Sioux Falls, S. Dak. Filed Oct. 13, 1922. Serial No. 594,319. 13 Claims. (Cl. 561—402.)

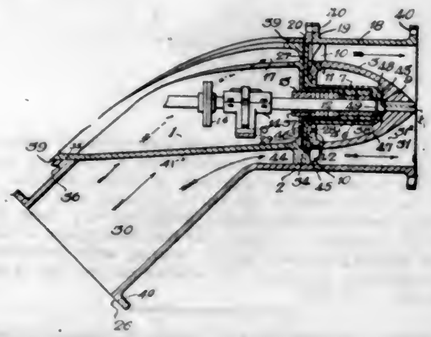


4. In a grain shocker, the combination of a frame structure having upstanding side frames, a rearwardly movable receiver mounted between said side frames and having a front section and a rearwardly and upwardly swinging rear section, a pair of guides on the rear ends of said side frames at the upper portions thereof, and a pair of rods received slidably in said guides, said rods declining forwardly and being pivoted at their front ends to the front section of the receiver, said rods forming guides for said rear receiver section during swinging of the latter.

1,640,599. PROCESS OF MANUFACTURING FISH LURES. RAY H. CONN, Winamac, Ind. Filed Apr. 2, 1925. Serial No. 20,269. 4 Claims. (Cl. 43—48.)

1. A process of forming a fish lure having a mass of filaments all extending longitudinally of the lure, consisting in securing a multiplicity of flexible filaments to a strand in transverse relation to the latter with the filaments projecting in opposite directions only from the strand, wrapping the strand and filaments around a body and holding the strand against twisting while performing the wrapping operation, and securing the free end of the strand to the body.

1,640,600. GAUGE TRAP. RALPH H. CROSBY, Minneapolis, Minn., assignor to American Plumbing & Heating Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 20, 1924. Serial No. 721,268. 5 Claims. (Cl. 73—31.)

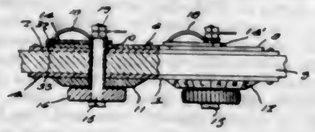


1. A gauge trap comprising a casing having similar attaching means at either end whereby either end may be attached to the same connection, overlapping walls dividing the interior of said casing into communicating upwardly and downwardly extending passages, thus forming reverse traps, said casing having a test gauge opening in communication with said passage on a level with the upper edge of a wall whereby when said trap is used as a gauge trap, an additional test gauge may be attached to the trap.

1,640,601. AXIAL-FLOW PUMP OR TURBINE. EUGENE F. DELERY, New Orleans, La. Filed June 8, 1923. Serial No. 644,256. 2 Claims. (Cl. 103—89.)

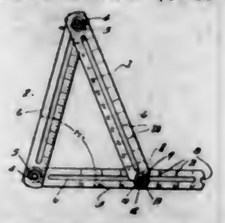
1. In combination, in a pump of the type described, a casing having an elbow portion, a central directing body in the casing, the directing body tapering from a wedge

shape form, where it intersects the suction elbow to a cylindrical form, a shaft extending through the directing body and into the casing, a hollow rotatable discharge impeller cone attached at its forward end to the shaft, impeller blades on the other end of the cone, a bearing for the shaft, placed within the hollow impeller cone at a point between the discharge edge of the impeller blades and the point at which the cone is attached to the shaft, means providing communication between the discharge side of the impeller and the interior of the impeller cone, said shaft being formed with an annular groove, and communicating means between the annular groove and the suction side of the impeller.



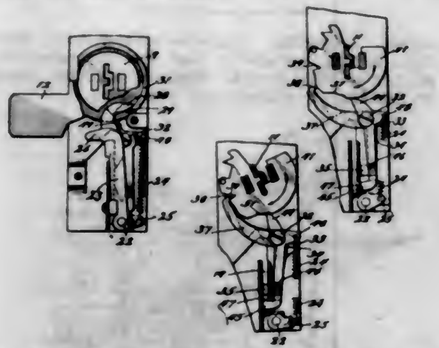
2. In combination, in a pump of the type described, a hollow rotatable cone, impeller blades on the cone, means for communication between the pump discharge chamber and the interior of the hollow cone whereby pressure within the cone is made substantially equal to the discharge pressure, communicating means between the pressure chamber and the suction side of the impeller, a central directing body wedge shaped where it intersects the suction elbow and tapering to a cylindrical form next the impeller.

1,640,602. HYDRATION OF LIME. HIPPOLYT DITTLINGER, New Braunfels, Tex., assignor, by mesne assignments, to The Dittlinger Crow Process Company, New Braunfels, Tex., a Corporation of Texas. Filed Nov. 5, 1923. Serial No. 672,799. 3 Claims. (Cl. 23—189.)



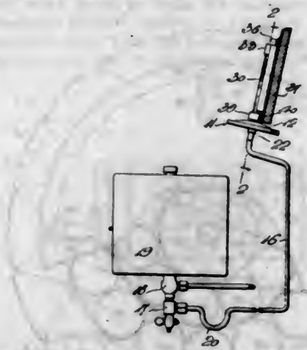
1. A dry powdered hydrated lime formed by slaking quick-lime with a solution of a plasticity-increasing reagent which hydrated lime has no greater apparent specific gravity than the product formed by slaking the same quick-lime without said reagent.

1,640,603. ELECTRIC BURGLAR ALARM FOR MOTOR VEHICLES. LAURENCE HADDOW, Colmor, N. Mex. Filed Dec. 12, 1925. Serial No. 75,065. 1 Claim. (Cl. 200—43.)



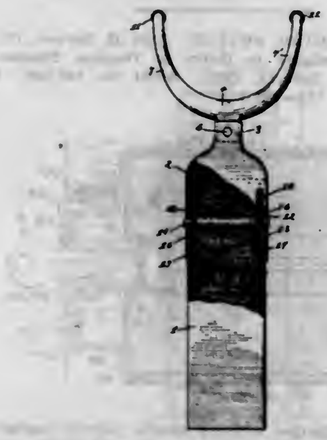
A switch comprising a pair of plates adapted to be secured on opposite sides of an automobile dashboard, a contact plate supported on one of the aforementioned plates, a sleeve of non-conductive material extending through the dashboard and through the first mentioned pair of plates, and also through the contact plate, a strip of non-conductive material secured on the inner end of the sleeve and adapted to cover a portion of the contact plate, said contact plate being provided with a series of spaced annular depressions in the outer face thereof, a projection formed on the bottom face of the insulated strip adapted for cooperation with said depression for holding the strip in any adjusted position, a dial member secured on the outer end of the sleeve and adapted for rotation therewith, a rotatable spindle extending longitudinally through the sleeve, a spring contact finger carried by the inner end of the spindle and normally adapted to rest on the insulated strip, and a knob on the outer end of the spindle for actuating the same whereby the spring contact finger may be moved out of engagement with the insulated strip and into engagement with the contact plate, and a pointer element carried by the knob and cooperating with the dial for indicating the positions of the spindle and the spring contact finger carried, thereby.

1,640,604. COMBINATION SQUARE. ROBERT W. HAUBER, Bremerton, Wash. Filed Sept. 17, 1923. Serial No. 663,299. 1 Claim. (Cl. 33—105.)



A device of the character described comprising three rule sections having ends pivotally connected whereby the sections may be folded one upon the other or moved to different positions of adjustment between such folded relation and co-extensive relation; each of said sections being provided with a longitudinally extending slot and the outer ends of the outer sections being provided with notches, a clamping device applicable to the slots of said sections and adjustable therealong and adapted to receive the notched ends of the outer sections thereagainst; said clamping device comprising a tightening nut whereby the end of said sections may be held.

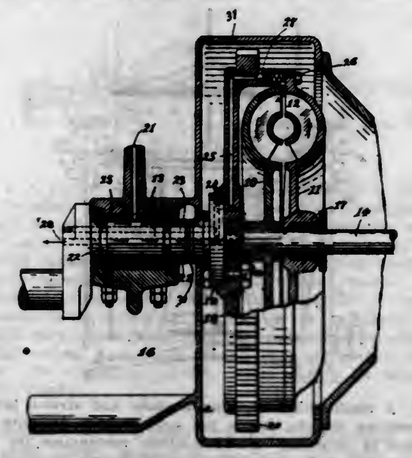
1,640,605. COIN-CONTROLLED LOCK. HARVEY L. JOHNSON, Chicago, Ill., assignor to American Locker Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 15, 1923, Serial No. 657,480. Renewed July 14, 1927. 12 Claims. (Cl. 194—92.)



1. In a coin controlled lock, the combination of a rotatable key cylinder, a coin receiver, a cylinder locking member comprising a portion adapted to enter said receiver and a portion adapted to lockingly engage said cylinder, and means for yieldingly urging said member into locking position, the presence of a coin in said receiver being adapted to render said member inoperative.

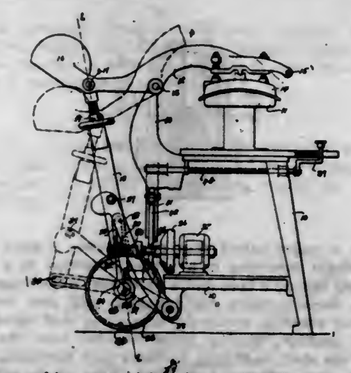
1,640,606. LIQUID-LEVEL GAUGE. BAYAN P. JOYCE, Davenport, Iowa. Filed Nov. 5, 1925. Serial No. 67,140. 7 Claims. (Cl. 73—110.)

1. In a gauge, a casing having a short upstanding collar, a gauge glass whose lower end only is fluid-tightly and securely mounted in said collar, said gauge glass communicating with the interior of said casing, and a support having a clamp surrounding and holding said collar to thereby support both the casing and the gauge glass.



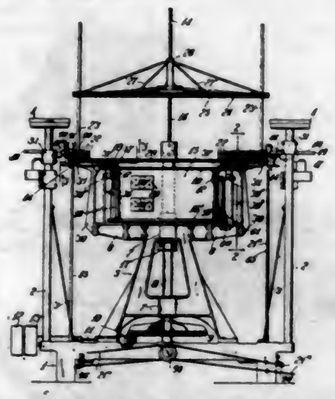
1,640,607. DENTAL-FLOSS HOLDER. CLYDE KITLEY, Berkeley, Calif. Filed June 7, 1926. Serial No. 114,180. 6 Claims. (Cl. 132—92.)

1. A dental floss holder comprising a handle arranged to receive a spool of dental floss; a pair of prongs secured to the end of the handle, one of said prongs having a longitudinal passage extending therethrough to guide a strand of the floss from the spool to the end of said prong, and the other prong having means formed thereon for engaging the end of said strand; and means mounted within the handle for tightening the strand across the ends of the prongs whereby said strand may be inserted between the teeth of a user.



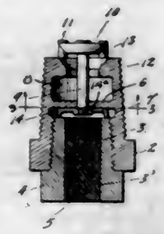
1,640,608. HYDRAULIC POWER TRANSMITTER. GUSTAV A. KLIMEK, East Rutherford, N. J., assignor to Turbine Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 6, 1925. Serial No. 7,210. 11 Claims. (Cl. 60—54.)

1. A hydraulic power transmitter having rotary driving and driven members provided with fluid passages, a fluid chamber including said passages, a shaft connected to one of said members, a bearing for said shaft, and connections between said bearing and the interior of said chamber for conducting oil from one to the other, said oil serving as the operating fluid for said transmitter, and for lubricating said bearing.



6. In combination an internal combustion engine having a lubricating system, a hydraulic power transmitter coupled to said engine, and means for conducting oil from said lubricating system to the interior of said transmitter to serve as the drive fluid of the latter.

1,640,609. POWER PRESS. JAMES C. LEDBETTER, Brooklyn, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,593. 6 Claims. (Cl. 192—138.)

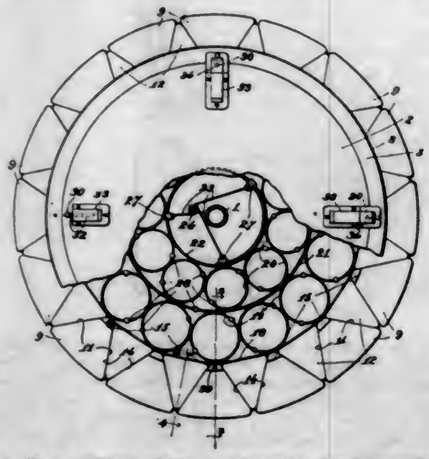


8. A machine comprising in combination, cooperating pressing members, a pivotal press lever carrying a pressing head on one end thereof adapted to be manually closed, a swing link pivotally suspended on the other end thereof, a thrust link having a lost motion connection with the lower end of the swing link, motor means supporting the thrust link and adapted to push upwardly thereon, an overbalancing means operating on the press lever to open the press when the operator removes his hand from said lever, a manually operable control handle by which the operator sets the motor means in operation with one hand while he holds the press closed with the other hand, and means which breaks the swing link and thrust link away from straight line only when the motor means is not functioning and when the overbalancing means is functioning.

1,640,610. REED-WEAVING MACHINE. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1925. Serial No. 50,230. 25 Claims. (Cl. 139—14.)

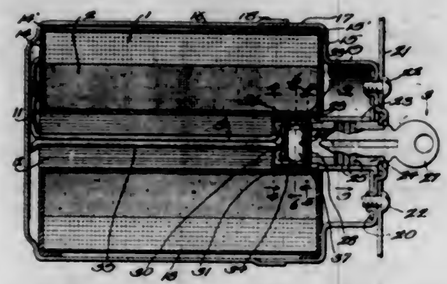
1. A machine for weaving a stake and strand fabric embodying therein, means for supporting a plurality of stakes in arcuately spaced relation, mechanism for rotating said stake supporting means, devices actuated in the rotative movement of said means for projecting alternate stakes out of their normal plane, means for laying a filler strand over and under said stakes, and means actuated by said rotative stake supporting means for successively projecting the same stake out of its normal plane so that a plurality of successive courses of filler strand is laid on the same side of said stake.

1,640,611. FUSIBLE BOILER-CHECK PLUG. JAMES A. MASCHO, Dallas, Tex. Filed Apr. 30, 1925. Serial No. 26,842. 5 Claims. (Cl. 122—504.1.)



1. In a boiler safety fuse plug device, a shell screw-threaded for inserting in a vertical position in a boiler, said shell having a bore and a valve seat at the upper end of said bore, a valve for engaging said seat normally supported above it, means for supporting said valve in its normal position, a plug screw-threaded into the lower end of the shell, said plug having a bore extending therethrough, and a fusible core in the bore of the plug, the plug carrying means for supporting the valve in its normal position after the core has melted.

1,640,612. PROCESS FOR THE RECOVERY OF PULP FROM PRINTED WASTE PAPER. ERNEST THEODORE MCGREGOR, Vancouver, British Columbia, Canada. Filed June 21, 1926. Serial No. 117,570. 7 Claims. (Cl. 92—3.)

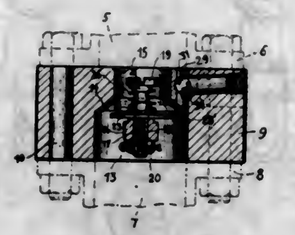


1. In a process for the recovery of pulp from printed waste papers by treating the said papers in a trisodium phosphate, (Na_3PO_4) solution, the said solution being kept cool, then pulping, beating, unknotting and washing in clear, fresh, cold water whereby the pulp is freed of all impurities.

1,640,613. RESILIENT WHEEL. LAWRENCE PAXTON MILLER, Philadelphia, Pa. Filed Feb. 21, 1927. Serial No. 169,846. 18 Claims. (Cl. 152—29.)

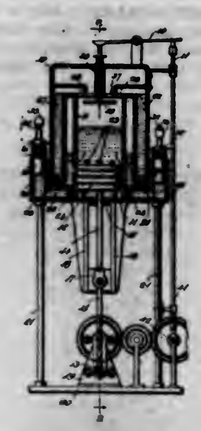
1. In a resilient wheel, a deformable tread comprising a series of oppositely disposed alternately arranged movable wedge blocks, and means for exerting yielding pressure normally tending to force said blocks outwardly, substantially as described.

1,640,614. ELECTRIC SWITCH. JOHN H. NELSON, Chicago, Ill., assignor to Harry A. Douglas, Bronson, Mich. Filed Feb. 18, 1927. Serial No. 169,348. 8 Claims. (Cl. 175—361.)



1. The combination with an electric current conducting winding tubular in form; spaced apart electric current conducting contacts placed abreast on opposite sides of the bore of said winding; a connector in the zone of said contacts and comprising two electrically connected contacts in telescoping relation and a spring pressing these contacts outwardly from each other, said connector being adapted to turn with respect to and into engagement with the aforesaid contacts and out of connection therewith; and a locking structure in controlling relation to said connector.

1,640,615. LIMIT GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. GUSTAVE NIEDEREHE and WILLIAM E. LAWRENCE, Brooklyn, N. Y. Filed Apr. 17, 1924. Serial No. 707,132. 2 Claims. (Cl. 137—152.)



1. A device automatically regulating the volume of the gas mixture supplied to the motor of an automobile, said device being adapted to be interposed between the carburetor and the intake manifold of the engine and consisting of a body having a passageway tapering inwardly

in its upper part to end in a reduced channel, a screw adjustably supported centrally of said passageway, a spring pressed disk-shaped valve slidably mounted on said screw so as to choke the cross-sectional area of the inwardly tapered region, a vertically disposed by-pass communicating with the passageway below and above the tapering portion of the same and provided in its wall

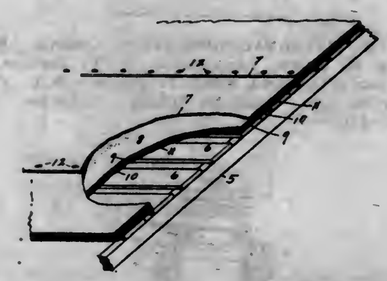
with a valve seat, a slightly upwardly inclined straight channel, positioned lengthwise of the automobile with its highest closed end to the rear, and branching off the by-pass above the tapering portion, and closed at its outer end, and a gravity influenced rolling valve within the side channel adapted to normally rest in its seat to close the by-pass.

1,640,616. FLUID ENGINE. ALBA R. D. REESE, Bisbee, Ariz. Filed Dec. 24, 1925, Serial No. 77,548. Renewed Jan. 27, 1927. 5 Claims. (Cl. 60—52.)

1. A fluid engine comprising a master cylinder and a master piston therein, a crank shaft and connecting means between the same and the master piston, a fluid reservoir surrounding the master cylinder, a plurality of force pumps in valved communication with said fluid reservoir and said master cylinder, means independent of said crank shaft for operating said pumps to inject fluid into the master cylinder to operate the master piston, and fluid exhaust means from said cylinder to said fluid reservoir, including valve means synchronized with the crank shaft.

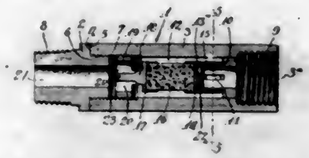
4. In a fluid engine, a cylinder having main exhaust portage in its head and an inwardly opening valve therefor, said cylinder also having additional exhaust ports through its wall adjacent said head, and spring-pressed valve means for said additional ports, said spring-pressed valve means being carried by said first named valve and slidably engaging said cylinder wall.

1,640,617. DRY BATTERY. EDWIN J. REICH, Brooklyn, N. Y., assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed May 22, 1923. Serial No. 640,690. 4 Claims. (Cl. 136—135.)



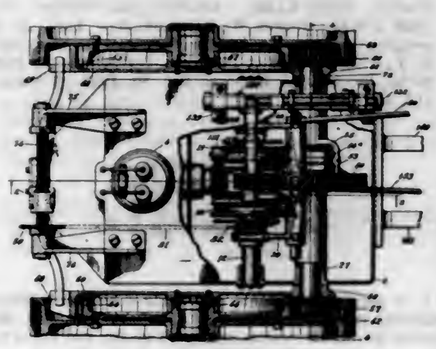
1. A battery having a metal casing pierced to receive a terminal, a binding post having a shank adapted to pass through the aperture in the casing, insulating washers on the shank and facing respectively the outside and inside casing wall, said shank being spread to rivet the parts together and being of non-circular contour, the aperture in one of the washers through which the shank passes being shaped to the contour of the latter, together with means for holding said washer against angular displacement, said means consisting of a rivet held member, the insulating washer being notched to straddle said member.

1,640,618. PNEUMATIC CUSHION, MATTRESS, AND THE LIKE. ROBERT W. SAMPSON, New York, N. Y., assignor to Sampson Martin Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1925, Serial No. 25,181. Renewed Dec. 30, 1926. 7 Claims. (Cl. 155—179.)



1. A pneumatic cushion, embodying a hollow, inflatable marginal supporting rim, and a hollow, inflatable seat portion having its bottom supported by the rim above the plane of the bottom of said rim.

1,640,619. ROOFING. CHARLES W. SCOGGIN, Indianapolis, Ind., assignor of one-half to Niels Nissen, Indianapolis, Ind. Filed July 9, 1926. Serial No. 121,457. 3 Claims. (Cl. 108—9.)

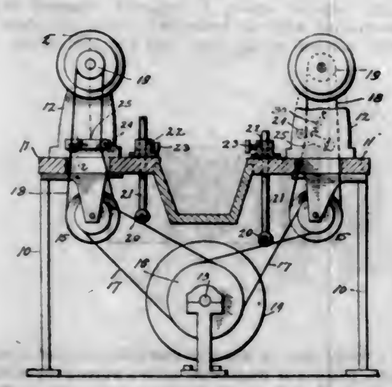


1. In a roof, an outer water-proofed layer of prepared roofing, a support to which it is nailed having depressions horizontally across the roof forming shoulders with sharp corners and a cushion between the first two comprising corrugated straw-board having air spaces in the corrugations.

1,640,620. GOVERNOR FOR PRESSURE-FLUID-OPERATED TOOLS. ERNEST H. SHAFF, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Aug. 29, 1925. Serial No. 53,241. 5 Claims. (Cl. 137—153.)

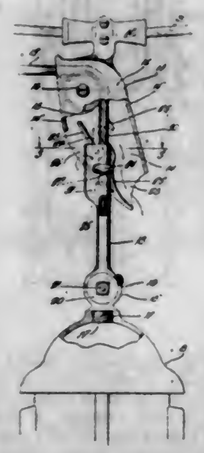
4. A governor of the character described having, in combination, a casing and a longitudinally resilient cork mounted therein and carrying a valve to control the flow of fluid through the casing.

1,640,621. TRACTOR. WILLIAM F. SMITH, Brooklyn, N. Y., assignor of one-half to Herman A. Schatz, Poughkeepsie, N. Y. Filed Dec. 7, 1921. Serial No. 520,703. 17 Claims. (Cl. 180—41.)



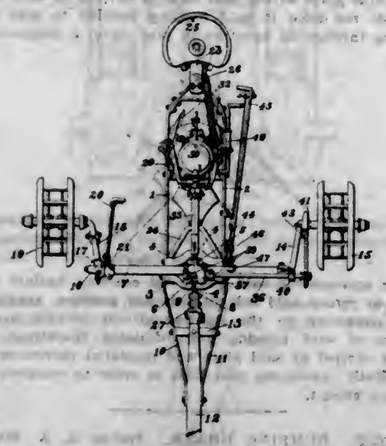
2. In a tractor, two wheels, forward and backward driving means therefor, mechanism controlled by the forward driving means for raising one wheel, and mechanism controlled by the backward driving means for raising the other wheel.

1,640,622. INTERNAL-COMBUSTION ENGINE. WILLIAM F. SMITH, Poughkeepsie, N. Y., assignor of one-half to Herman A. Schatz, Poughkeepsie, N. Y. Filed May 23, 1924. Serial No. 715,338. 12 Claims. (Cl. 123—171.)



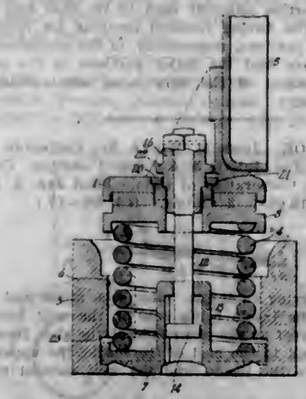
1. In a gasoline engine, a cylinder having cooling fins, a cylinder head having cooling fins and in contact with said cylinder, and screws for holding said head on said cylinder the longitudinal axes of which are at substantially right angles to the vertical axis of said cylinder.

1,640,623. BELT TIGHTENER. SAMUEL F. STEIN, Williamsport, Pa. Filed Jan. 5, 1918. Serial No. 210,453. 4 Claims. (Cl. 74—21.)



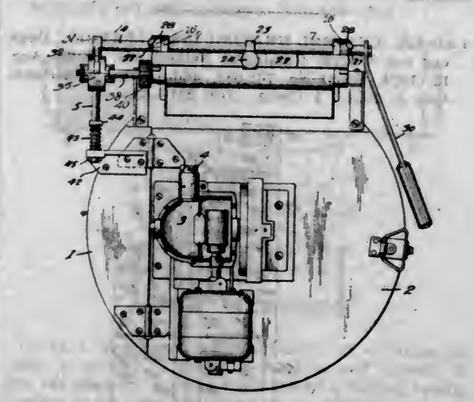
2. The combination of a sewing machine table, a sewing machine mounted thereon, a main driving shaft below the table, a transmitter belted to said driving shaft, and means for transmitting power from the transmitter to the sewing machine, a belt tightener extending from below the table and reaching above the table through the table top.

1,640,624. SAFETY PULLEY. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 15, 1926. Serial No. 88,467. 2 Claims. (Cl. 240—63.)



1. In a device of the class described, a housing having openings therein, guides formed on the inside walls of the housing and cooperating with the openings to form an entrance and an exit, a pulley mounted in the housing, a flexible member trained thereover, a fixture carrying member secured to one end of the flexible member, an annular enlargement on the fixture carrying member adapted to, when drawn up by the flexible member, engage the guides, and a lateral projection on the fixture carrying member for aligning the fixture in a predetermined relation with the housing.

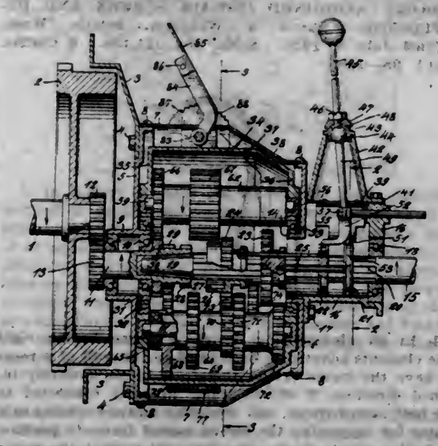
1,640,625. LISTER PLOW AND PLANTER. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 19, 1920. Serial No. 397,202. 11 Claims. (Cl. 111—68.)



1. The combination of the main frame, the seeder having positively actuated seed-delivering mechanism, the furrow opening plow, the seeder and the plow being mounted for vertical adjustment relatively to the main frame, the transverely positioned wheel-carrying frame arranged to rock around a longitudinal axis relatively to the main frame, the power transmitter for the seeder positioned in the vertical plane of the said axis and having its power-receiving end at the central part of the traverse wheel frame, and power devices extending from said transmitter to one of the wheels and arranged to be operated uniformly irrespective of the positions, vertically, of said wheels relative to the seeder.

1,640,626. BOGIE FOR RAILWAY CARS AND THE LIKE. CARL ALFRED SVENSSON, Falun, Sweden. Filed Apr. 26, 1927, Serial No. 186,665, and in Sweden May 3, 1926. 1 Claim. (Cl. 105—194.)

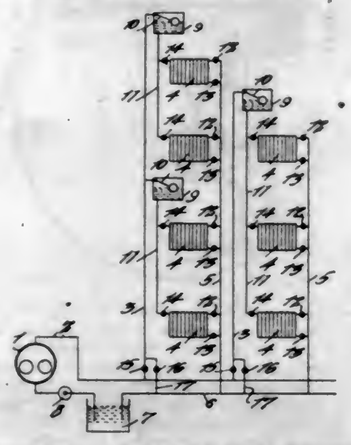
In bogies for railway cars and the like, the combination of a spring, a spring holder, a washer placed in a recess in the said spring holder, a bolt serving to compress the said spring, a nut screwed on to the said bolt, said nut having a flange bearing on the said washer, and a bottom washer supporting the spring and fitting with its edge in the beam, substantially as and for the purpose set forth.



1,640,627. WRINGER. LOUIS SWENINGSON, Cleveland, Ohio. Filed Apr. 24, 1925. Serial No. 25,482. 13 Claims. (Cl. 68—32.)

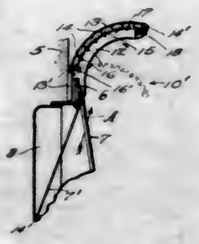
1. A wringer comprising a pair of supports, a roll journaled between said supports, a rod journaled in said supports, a pair of brackets carried by said rod, a roll journaled between said brackets, means for rotating said rod to move the last mentioned roll toward the first mentioned roll, spring means connected with said brackets and rod for providing a resilient support for said last mentioned roll, and means for rotating said rolls.

2. A wringer comprising a pair of supports, a roll journaled between said supports, a rod journaled in said supports, a pair of brackets carried by said rod, a roll journaled between said brackets, means for rotating said rod to move the last mentioned roll toward the first mentioned roll, and means rendered operative by movement of said rod for rotating said rolls.



1,640,628. TRANSMISSION-GEAR SET. IRA OTIS THORLEY, Denver, Colo. Filed Dec. 13, 1926. Serial No. 154,400. 14 Claims. (Cl. 74—34.)

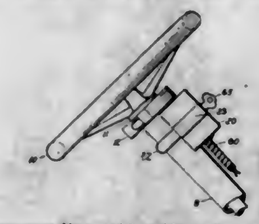
1. A transmission gear set having aligned, relatively rotatable driving and driven shafts, a drum mounted for rotation about the common axis of said shafts, a countershaft carried by said drum, said countershaft being spaced from and parallel with the axis of rotation, a plurality of gears nonrotatably secured to the countershaft, a gear secured to the driving shaft and operatively connected with one of the gears on the countershaft, two gears slidably connected with the driven shaft, means for selectively



moving said gears into mesh with a cooperating gear on the countershaft and means for locking the drum against rotation.

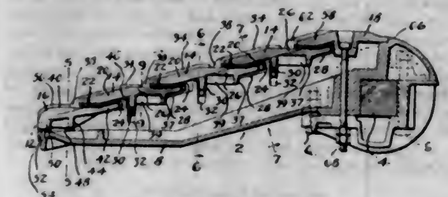
1,640,629. CENTRAL HEATING INSTALLATION. DERK VAN DER WOUDE, Groningen, Netherlands. Filed Aug. 12, 1924. Serial No. 731,688, and in the Netherlands June 3, 1924. 1 Claim. (Cl. 237—63.)

A central water heating installation comprising radiators, an open reservoir placed below certain of said radiators, a radiator return pipe opening into said reservoir, a water pump, a pipe leading from the open reservoir to the suction side of said pump, chambers elevated with respect to the radiators which they serve, pipes leading from the pressure side of the pump to said chambers, pipes leading from each chamber to the corresponding radiators below, means for heating the water fed by the pump to the radiators, and means to maintain a substantially constant level in each chamber.



1,640,630. COMBINED HOT-AIR SCREEN AND DEFLECTOR. FRANK A. WALLOCH, Seattle, Wash. Filed July 8, 1926. Serial No. 121,158. 6 Claims. (Cl. 98—108.)

1. In an air-screening device, a frame having rigid side elements adapted to be secured to the wall of a room to have the frame extend therefrom in an upwardly inclined direction, a second frame hingedly connected to the first named frame, and releasable means engaging said frame for supporting the second named frame in position to hold a sheet of screening material against the under side of the first named frame.



1,640,631. AUTOMOBILE LOCK. ROBERT G. WEISSEL, Oakland, Calif. Filed Dec. 22, 1924. Serial No. 757,347. 1 Claim. (Cl. 70—127.)

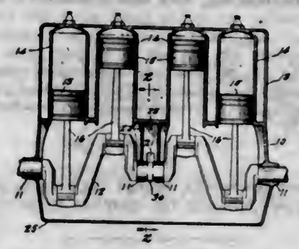
An automobile steering wheel lock comprising a collar attached to the steering wheel, a housing adjacent said collar attached to the steering wheel column, a locking bolt extending through said housing and adapted to be manually pushed to locking position with said collar, a spring operated latch cooperating with said bolt to hold it in locked position, means for releasing said latch, a transverse plate within said housing carried by said bolt, a guide rod fixed in said housing parallel to said bolt passing through an aperture in said plate, a compression

spring surrounding said guide rod reacting against said plate to return said bolt to unlocked position, separated clips connected to the ignition circuit located in the bottom of said housing and insulated therefrom and means carried by said plate and insulated therefrom for electrically connecting said clips in order to complete the ignition circuit.

1,640,632. DUMPING GRATE. SIGURD J. A. WIEBE, East Orange, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 5, 1925. Serial No. 6,957. 9 Claims. (Cl. 110—33.)

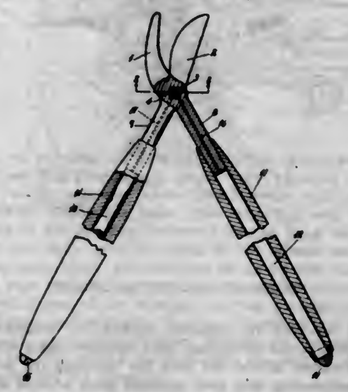
1. A dump grate of the class described having, in combination, a frame having longitudinal side walls vertically arranged, and grate bars mounted at their ends on the top longitudinal edges of said side walls and arranged in overlapping relation, each of said bars having a depending portion adjacent each of its ends and each of the side walls having recessed portions for receiving said depending portions, respectively, of the corresponding ends of the bars, and the major portions of the refuse supporting surfaces of the bars being substantially in the same plane.

1,640,633. SHOE. JOHN M. WILKE, Sr., Covington, Ky., assignor to The Julian & Kokenge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 2, 1923. Serial No. 610,088. 2 Claims. (Cl. 36—17.)



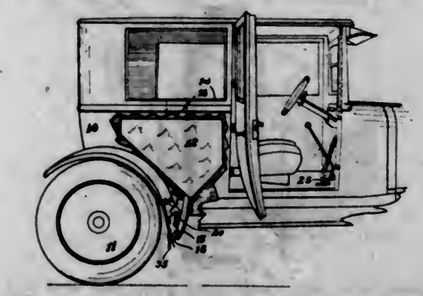
1. A shoe having an insole, outer sole, upper and welt, the body of the insole being free of the welt and the sewing rib thereof at the inner side of the shoe from the break of the ball to the heel of the insole, the upper and welt secured to the insole, and the welt secured to the outer sole.

1,640,634. INTERNAL-COMBUSTION ENGINE. KARL M. WISE, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Mar. 18, 1927. Serial No. 176,535. 12 Claims. (Cl. 123—192.)



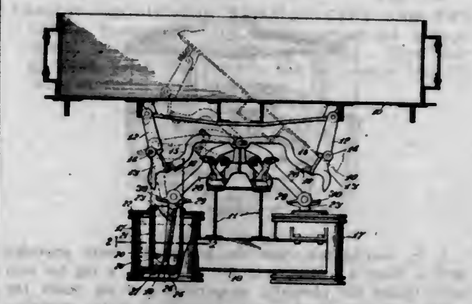
1. In combination with an internal combustion engine and its supporting means, a vibratory mass supported by

said engine having a natural period of vibration approximately equal to the natural period of vibration of said



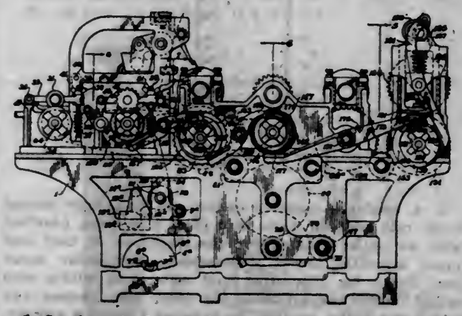
supporting means, or a harmonic thereof, and means for imparting vibratory impulses to said mass in direct proportion to the speed of said engine.

1,640,635. PRUNING SHEARS. HENRY W. ATKINS, Oakland, Calif. Filed Oct. 27, 1924. Serial No. 746,120. 4 Claims. (Cl. 47—57.)



1. Pruning shears comprising a hook and a knife, a pin extending through said hook and knife to pivot them together, shanks extending from said hook and said knife, hollow handles secured to said shanks, said shanks having ducts formed therein, extending from said hollow handles to said pivot pin.

1,640,636. SAND DISTRIBUTOR. THOMAS EDWARD BARTON, Toronto, Ontario, Canada. Filed Feb. 2, 1927. Serial No. 165,415. 2 Claims. (Cl. 291—28.)



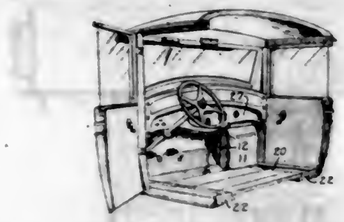
1. In a sand distributor of the class described the combination with the body of an automobile, of a sandbox disposed between the inner and outer wall partitions of the body in the vicinity of the road driving wheels, and a fill opening having external communication with respect to the wall.

1,640,637. DUMP CAR. JAMES D. BENBOW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Feb. 7, 1924. Serial No. 691,188. 5 Claims. (Cl. 105—27.)

1. In a dump car, the combination of a tilting car body, a cylinder, a piston movable in said cylinder to tilt the car body, a plunger bar having a rocking bearing surface at its lower end seated on the piston, means connected with the upper end of said bar for rocking it on the piston into position to operatively engage the car body when the said piston moves upwardly, and means for normally maintaining said bar and piston in operative connection with each other.

1,640,638. MEANS AND METHOD FOR MAKING PAPER BOXES AND THE LIKE. SAMUEL BERGSTEIN and ARTHUR C. E. LINDNER, Middletown, Ohio, assignors to The Interstate Folding Box Company, Middletown, Ohio. Filed Nov. 11, 1925. Serial No. 68,458. 11 Claims. (Cl. 93—36.)

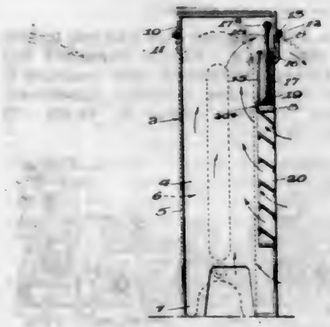
1. In the art of paper box making the herein described method of production consisting in causing a sheet of paper to be moved in a given plane in causing a strip of an adhesive element to move in a plane parallel to the plane of movement of the sheet, in causing adhesion between said element and sheet incident to the forward movement thereof, in cutting a box blank from said sheet according to the position of the tape thereon and forming the box by effecting adhesive joints through the instrumentality of said element.



1,640,639. MANUFACTURE OF BORNEOL ESTERS. HENRI BLUM, Mulhouse, France, assignor to Société Alsacienne de Produits Chimiques, Paris, France. Filed Mar. 18, 1925, Serial No. 16,581, and in France Mar. 28, 1924. 2 Claims. (Cl. 260—99.)

2. As new articles of manufacture, the borneol esters obtained by condensing pinene with an acid of the type

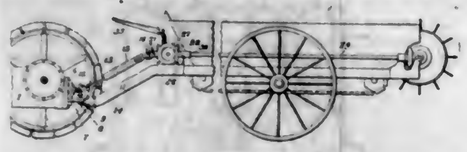
COOH—R—CO—R',



wherein R and R' represent aromatic nuclei, said borneol esters being easily saponifiable by aqueous soda solution.

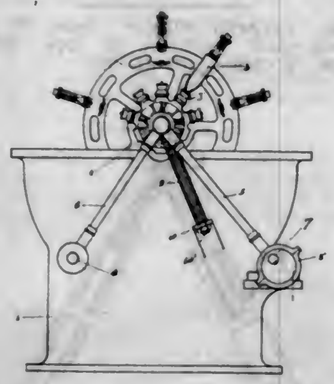
1,640,640. BODY CONSTRUCTION. JOSEPH H. BOURDON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed June 21, 1926. Serial No. 117,413. 5 Claims. (Cl. 96—65.)

5. In combination with an automobile body provided with a floor, a folding seat for said body, a leg for said seat, means for pivotally supporting said leg below the surface of said floor, a slot in said floor for receiving said leg when said leg is in folded position, and a plate movable by said leg closing said slot when said leg is in upright position.



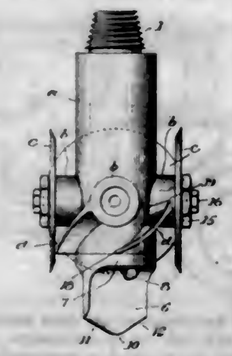
1,640,641. AIR-CLEANSING HUMIDIFIER. WALTER JUDD BRIDGES, Two Rivers, Wis. Filed May 22, 1926. Serial No. 111,075. 3 Claims. (Cl. 257—138.)

2. A combined radiator casing and humidifier having front, rear and end walls, said front wall being provided with an outlet opening for the discharge of heat and vapor saturated air, a substantially rectangular water pan, means for supporting said water pan within said casing in flat contact with the front wall thereof and below said outlet opening, an inverted U-shaped supporting rod removably positioned in said pan, means whereby the legs of said inverted U-shaped supporting rod will be held against swinging movement and in close proximity to the front wall of said pan, said inverted U-shaped rod having its bight portion located above the upper edge of said pan and above the plane of said opening, an absorbent screen supported upon the bight portion of said U-shaped supporting rod and depending into said pan, the width of said screen being co-extensive with the width of said opening, and said inverted U-shaped supporting rod serving to hold said screen against the front walls of said pan.



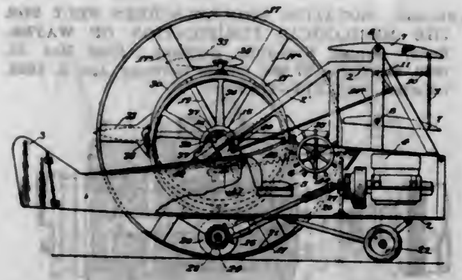
1,640,642. TRACTOR HITCH. THEOPHILUS BROWN, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 19, 1920, Serial No. 367,133. Renewed July 18, 1923. 8 Claims. (Cl. 180—14.)

1. In combination with a tractor, an agricultural machine having operative mechanism, a shaft on the tractor rotatable by power from the motor thereof to actuate the tractor wheels and extending to the rear of the tractor, a housing on the rear of the tractor, a pinion on the rear of said shaft within the housing, a gear journaled in the housing and meshing with said pinion and having its



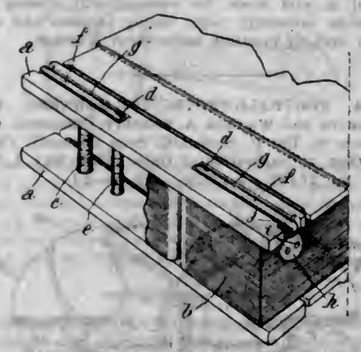
hub extended rearwardly through the housing, and means connecting said hub with the operative mechanism of said machine.

1,640,643. BOTTLE-WASHING MACHINE. JOSEPH BRUSSON, Liege, Belgium. Filed July 17, 1924. Serial No. 726,626. 1 Claim. (Cl. 141—7.)



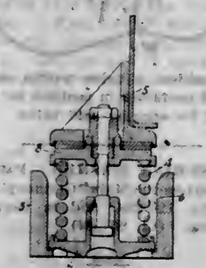
In a machine for washing bottles, in combination, a tank, projections extending from opposite sides thereof, a disc arranged within the tank for carrying the bottles, a shaft supporting said disc, opposed pairs of rods arranged on both sides of the tank and adapted to impart an oscillatory movement to the shaft as well as the disc, and expansion springs arranged between one set of said rods and the projections for absorbing shocks produced by the oscillation of the bottle carrying disc.

1,640,644. DRILLING TOOL. STEVE BULLUM, Fellows, Calif. Filed Dec. 15, 1922. Serial No. 607,164. 3 Claims. (Cl. 255—61.)



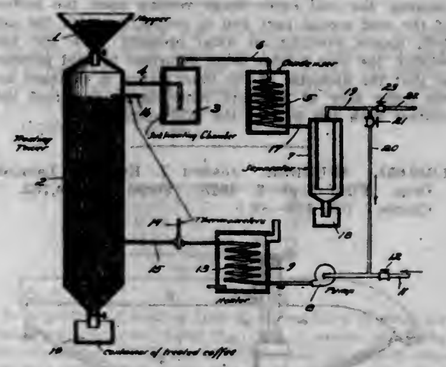
1. In a rotary drill, an annular body formed at one end with a screw-threaded shank, the other end of said body being adapted to receive a diamond point bit, and said diamond point bit; said diamond point bit being formed with circulation openings permitting communication with the opening in said body and exterior of the diamond point bit, there being a disc bit spaced from the curved periphery of the annular body above the diamond point bit with the axis of the disc bit intersecting at a substantially right angle the axis of the body, and a spiral vane associated with the body and confined in the space included between said disc bit and the periphery of the body.

1,640,645. AEROPLANE. JONATHAN E. CALDWELL, Santa Monica, Calif. Filed Feb. 8, 1923, Serial No. 617,746. Renewed Dec. 29, 1926. 4 Claims. (Cl. 244—13.)



1. In an aeroplane, a fuselage, suitable frame work for supporting the fuselage, a main axle mounted in the frame work across and above the fuselage and near its longitudinal center, the main axle extending well beyond the sides of the fuselage, wheels mounted upon the outer ends of the main axle, the rims of the wheels extending some distance below the fuselage so as to rest upon the ground and support the fuselage, an engine mounted in the forward end of the fuselage, driving pinions mounted in the frame and engaging the inner faces of the rims of the wheels, and transmission mechanism between the pinions and the engine so that when the engine operates the wheels will be operated.

1,640,646. LOOSE-LEAF BINDER. HENRI EUGÈNE DÉSIRÉ COGERY and CLAUDE FRANCOIS BENOIT GEORGES BERTRAND, Paris, France. Filed Aug. 28, 1926, Serial No. 132,154, and in Belgium Aug. 31, 1925. 8 Claims. (Cl. 129—8.)

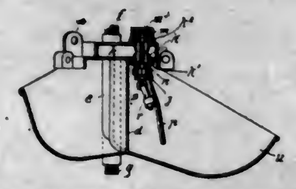


1. A loose leaf binder comprising a first cover member, a second cover member, a pin connected to said first cover member and extending into the second cover member, a pin pivotally connected to the first mentioned pin and overlying the second cover member, the second cover member having a tongue at the edge thereof and located adjacent the free end of the pivoted pin, and a locking element embodying resilient means connected to the free end of the said pivoted pin, the said locking element being adapted to detachably engage the said tongue.

1,640,647. BOGIE FOR RAILWAY CARS AND THE LIKE. THEODOR COLLIN, Falun, and LARS GUSTAF HARRY HELMSTEIN, Gottenborg, Sweden. Filed July 13, 1926, Serial No. 122,217, and in Sweden July 16, 1925. 1 Claim. (Cl. 105—194.)

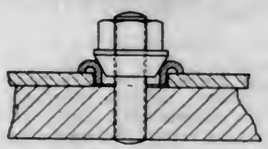
In a bogie supporting device, the combination of beams having vertically extending, through-going holes, supporting springs for the bogie placed in the said holes, shoulders provided at the lower part of the said holes, said shoulders extending along a portion of the circumference of the holes, washers carried by the said shoulders and serving to support the said springs, and projections extending from the edges of the said washers and fitting in recesses in the shoulders in the hole of the beam, substantially as and for the purpose set forth.

1,640,648. METHOD OF TREATING COFFEE. ROY CROSS, Kansas City, Mo. Filed Nov. 2, 1925. Serial No. 66,192. 5 Claims. (Cl. 99—11.)



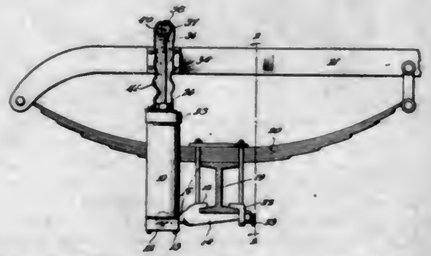
1. A process for the treatment of coffee which comprises the steps of soaking coffee with an alkaline substance, passing a heated inert gas through a body of said alkaline treated coffee, separating the caffeine in a circulating stage and the water and volatile oils in a separating stage, and recycling the uncondensed material through the coffee undergoing treatment.

1,640,649. WATERING APPARATUS FOR CATTLE. KARL DICKOW, Gorlitz, Germany. Filed May 4, 1925, Serial No. 27,950, and in Germany May 23, 1924. 3 Claims. (Cl. 119—75.)



1. An apparatus for watering cattle, comprising a container, a conduit for supplying water to said container, a tubular valve casing passed through said conduit and through opposite walls thereof and communicating with said container, said casing being formed at one end with a collar bearing on the outer face of the adjacent

wall and at its opposite end with screw-threads, a cap-screw screwing on the threaded end of said casing and bearing on the adjacent wall of said conduit for clamping

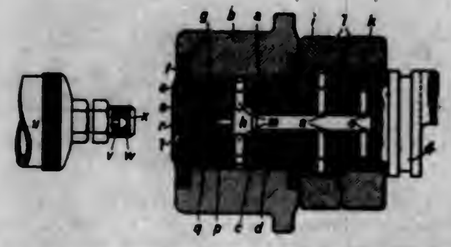


said casing in position, a valve within said casing, and means within said container in position for being operated by the cattle and for opening said valve.

1,640,650. PRESS-RING WASHER. PAUL GEORG EHRHARDT, Frankfort-on-the-Main, Germany. Filed July 2, 1926, Serial No. 120,224, and in Germany May 11, 1925. 11 Claims. (Cl. 85—1.)

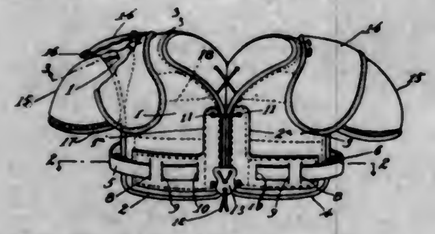
1. The combination with a first part, and a second part connected to the first part, of a bolt passing through an opening of the said second part, this opening having a greater diameter than the diameter of the said bolt, a ring formed washer, having a J-shaped cross section, the inner flange of which has a greater length than the outer flange, the said inner flange entering into the annular space between the bolt and the wall of the said opening, the said outer flange resting upon the surface of the said second part and in connection with the said bolt, means exerting an axial pressure upon the said washer, the said washer being deformed by said pressure so that the diameter of the inner flange is enlarged and the outer face of the said inner flange is forced into contact with the wall of the said opening.

1,640,651. SNUBBER. JOSEPH I. EVEREST, Langlois, Oreg. Filed Sept. 5, 1925. Serial No. 54,763. 5 Claims. (Cl. 188—88.)



1. A snubber including a fluid cylinder, means for anchoring said cylinder, a plunger head reciprocable in the cylinder, a plunger rod extending from the plunger head through an end of the cylinder, means for anchoring said rod, the plunger head being provided with a fluid passage, and a valve freely mounted on the plunger rod and resting in closed position on the plunger head overlying the passage therethrough, said valve being provided with a restricted passage to register with the passage of the head and with a central fluid passage accommodating the plunger rod and appreciably greater than the rod in diameter.

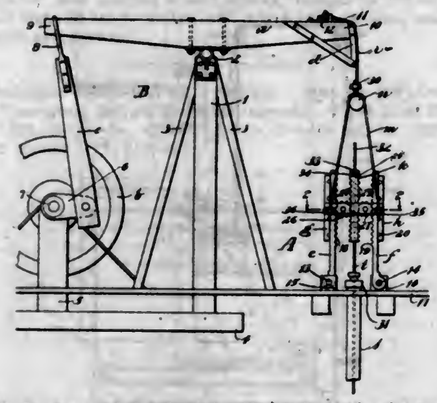
1,640,652. PROCESS FOR THE MANUFACTURE OF PURE BARIUM CARBONATE. FERDINAND FALCO, Haspe, Germany. Filed Sept. 8, 1926, Serial No. 134,337, and in Germany Nov. 27, 1925. 3 Claims. (Cl. 23—66.)



1. A process for the manufacture of barium carbonate free of sulphur compounds consisting in adding to the barium carbonate produced by precipitating a solution of barium sulphide with carbon dioxide, volatile organic reducing agents, passing at the same time some carbon dioxide into the mass and heating the mass after previous drying to some higher temperature, whereupon the foreign impurities originating as products of decomposition from the reducing agents are separated out.

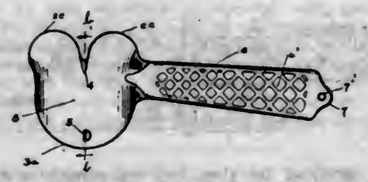
1,640,653. ROTATING ENDLESS-SCREEN BELT FOR THE MECHANICAL PURIFICATION OF WATER. EUGEN GRIGER, Karlsruhe, Germany. Filed Mar. 25, 1926, Serial No. 97,394, and in Germany Apr. 2, 1925. 7 Claims. (Cl. 210—175.)

1. In a rotating endless screen belt for the mechanical purification of water, being composed of a number of screen sections, in combination with a number of frames holding said screen sections, two endless chains carrying said frames on both sides, bolts connecting together the links of said chains, guiding rollers carried by the ends of said bolts, each of said ends forming a bearing pin, a bush closed at its outer end and mounted upon said bearing pin, one of said rollers being loosely mounted upon said bush, means for preventing said roller moving outwardly and inwardly, an axial bore in said pin, transverse passages in said pin and said bush connecting said axial bore with the spaces between the contact faces of said bush and said roller, a headed screw passing through the closed end of said bush and engaging with the outer end of said axial bore, an axial bore in said screw communicating with that in said pin, and means contained in said screw for automatically closing said bore therein outwardly under spring pressure and automatically opening inwardly under outer pressure.



1,640,654. FOOTBALL PROTECTIVE HARNESS. HUGO GOLDSMITH and WILLIAM A. SONNETT, Cincinnati, Ohio, assignors to The P. Goldsmith Sons Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 2, 1925. Serial No. 27,592. 1 Claim. (Cl. 2—2.)

In combination with an athlete's protective vest provided with means for adjusting the vest along a front opening therein, auxiliary adjustments for the sides of



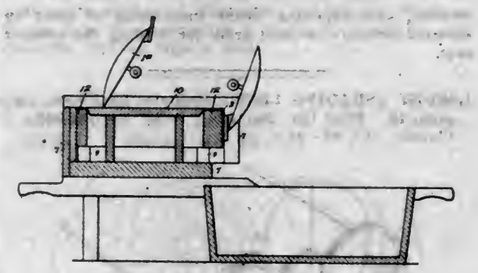
the vest comprising elastic straps secured at the back of the vest, at least one strap for each side, said straps adapted to pass under a wearer's arms, with slots on both sides in the lower front part of the vest, and at least one strap on each side inserted within the slots and interlaced therein so that sufficient widthwise surfaces of interlaced portions of the straps will lie in frictional engagement to retain the straps in adjusted position, said straps so arranged that the pulling of the straps through the slots will adjust the vest to the size of the wearer's chest.

1,640,655. MECHANICAL MOVEMENT. CLIFFORD C. HARTMAN and HENRY A. WEICHER, Los Angeles, Calif. Filed May 11, 1925. Serial No. 29,488. 2 Claims. (Cl. 74—14.)

2. In means of the character disclosed, a pair of spaced fixed rack members, guides slidable upon said fixed rack members, a pair of pinions in mesh with the teeth of the fixed rack members, and a pinion frame joined with the guides and enclosing the fixed rack members and the pinions; there being a movable rack member between the pinions.

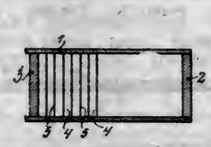
1,640,656. FRUIT PEELER. DAVID HELLER and ALEXANDER C. PARLINI, New York, N. Y. Filed May 21, 1927. Serial No. 193,161. 2 Claims. (Cl. 30—9.)

2. In a peeling device, formed of one piece of material, having a suitable handle, terminating in a curved portion having adjacent to one end of the surface a lip formed at one end at right angles and on the center line of such portion and curved lobes to deflect the removed portion, freeing and facilitating the action of the peeling instrument.



1,640,657. DYEING. WILHELM HERZBERG, Berlin-Wilmersdorf, and HEINRICH OHLENDORF, Berlin-Friedenau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Oct. 4, 1926, Serial No. 139,549, and in Germany June 9, 1925. 36 Claims. (Cl. 8—5.)

1. Process of producing dyeings consisting in treating the fibre in succession with an alkaline solution of a hydroxy-para-diazine derivative and a diazo compound, the hydroxy-para-diazine derivative being a substitution product of the para-diazine corresponding to the general formula:

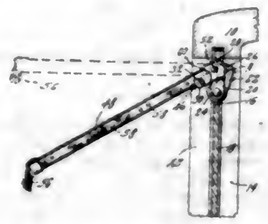


R and R' being radicles of the group including benzene and naphthalene.

1,640,658. MEANS FOR APPLYING MORTAR TO HOLLOW BRICKS. KARL ERIK WILHELM JAGDMANN, Stockholm, Sweden. Original application filed June 25, 1920, Serial No. 391,738, and in Sweden Aug. 2, 1918. Divided and this application filed June 30, 1921. Serial No. 481,703. 9 Claims. (Cl. 72—136.)

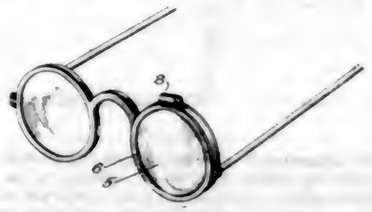
4. An apparatus to be used in applying mortar to hollow bricks by means of a trowel adapted to be moved across the surface to be covered with mortar before laying a brick, comprising a support for the brick and guides carried by said support for directing the movement of the trowel across said surface.

1,640,659. PROCESS OF MANUFACTURING FLOOR SLABS AND THE LIKE OF CORK AND SIMILAR MATERIALS. JOSEF EMANUEL JENSEN, Frederiksberg, near Copenhagen, Denmark. Filed Sept. 7, 1926, Serial No. 133,962, and in Great Britain Sept. 16, 1925. 2 Claims. (Cl. 18—48.)



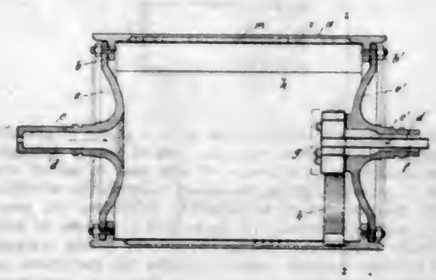
1. A process of making thin slabs or plates of granular fibrous material, comprising the steps of loosely arranging heat-conducting partitions vertically and in spaced relation in a mould; filling the spaces between the partitions with the material to be moulded; subjecting the mould to a single compression to force said partitions to move laterally toward one another therein and hereby compress the material between them; clamping the partitions and the interposed slabs or plates thus formed in compressed relation to produce a single unit; withdrawing such unit from the mold; and then subjecting it to baking heat.

1,640,660. AWNING STRUCTURE. ERNEST S. JOHNSON, Webster City, Iowa. Filed Oct. 4, 1926. Serial No. 139,301. 16 Claims. (Cl. 156—15.)



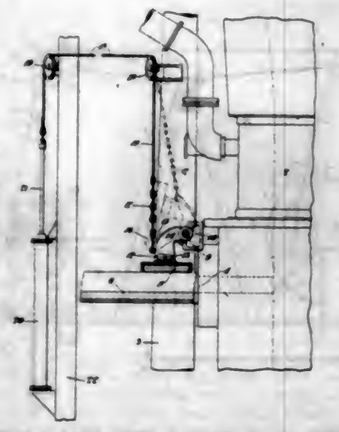
1. An awning structure comprising a pair of fittings adapted to fit against the casing of a window, side arms carried by said fittings, a tie rod connection between said fittings, means for adjusting the tie rod connection for spacing said fittings and arms different distances

apart and placing the fittings under pressure for frictionally engaging the window casing, a flexible element carried by said arms and spanning the distance there-



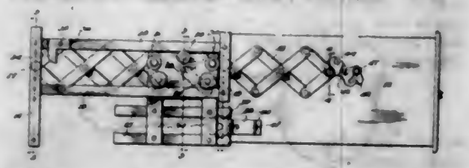
between, said adjusting means functioning to exert an outward pressure on said arms for holding the element taut.

1,640,661. SHADING LENS. MICHAEL LA ROCCO, Chicago, Ill. Filed Oct. 29, 1926. Serial No. 144,996. 3 Claims. (Cl. 88—41.)



3. A shading lens comprising a transparently-colored disk, a ring in register with the same and in spaced relation, and an arched member connecting the disk and the ring at a common marginal site, said member having tension to maintain the disk and the ring in closely spaced relation.

1,640,662. DRYING CYLINDER FOR PAPER MACHINES AND TEXTILE-GOODS-DRYING MACHINES. EWALD LÖTSCHEN, Munich, Germany. Filed Dec. 24, 1926. Serial No. 156,955. 1 Claim. (Cl. 34—4.)



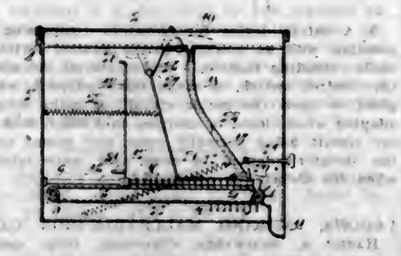
A drying cylinder for paper machines and drying machines for textile goods, comprising in combination with the cylinder proper, two annular flanges inwardly projecting from the inner surface of said cylinder near the ends of the same, a perforated sheet-metal strip inserted into said cylinder between said two annular flanges the joint edges of said sheet-metal strip being soldered to form a drum, a number of spacing blocks between the outer surface of said perforated drum and the inner surface of said cylinder for holding said perforated drum at a uniform short distance from the inner surface of said cylinder, a hollow journal in one end of said cylinder the inner end of said journal forming a disk fixed on the corresponding annular flange of the cylinder a hollow journal in the other end of said cylinder the inner end of said journal forming a disk fixed on the corresponding annular flange of the cylinder, a scooper on the inner end of said second mentioned journal, a discharging pipe extending from said scooper through said hollow journal, and a scooping tube extending from said scooper to the inner wall of said cylinder for collecting the water from condensation.

1,640,663. SPLASHER PLATE FOR BLAST FURNACES. JAMES LESTER MAUTHE, Elyria, Ohio. Filed Feb. 9, 1927. Serial No. 166,898. 8 Claims. (Cl. 266—38.)

1. The combination with a blast furnace having the usual tapping hole and runner trough, of a splasher plate pivotally supported on said furnace for vertical movement and adapted to be raised and lowered into and out of position over said trough adjacent the tapping hole, and power means for raising and lowering said splasher plate.

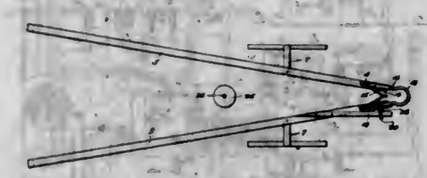
1,640,664. EXTENSION-DRAWER SUPPORT. CHARLES S. MOORE, Grand Rapids, Mich. Filed Jan. 21, 1925. Serial No. 3,855. 6 Claims. (Cl. 45—77.)

1. A device of the class described comprising a fixed track for a horizontally slidable part, a carrier mounted to travel on the track, a supplemental track movable with the carrier, a lazy tongs connected at opposite ends to the fixed track and slidable part, respectively, and intermediate its ends to the carrier, and an auxiliary support on the said slidable part and mounted on said supplemental track.



1,640,665. FLAPPING-SHOE-ORNAMENT HOLDER. FAUSTO A. MUSCENTE, Providence, R. I. Filed Nov. 13, 1926. Serial No. 148,209. 3 Claims. (Cl. 2—245.)

1. In an article of the character described, a strip of fabric of predetermined length, an integral tab formed upon one end of the fabric strip and turned downwardly with respect thereto in such a manner as to enable said tab to flap or swing up and down, said strip of fabric adapted for disposition between the foot of a shoe wearer and the instep portion of the shoe while said tab is adapted for disposition upon the outer side of the shoe instep portion, an ornament arranged upon the outer side of the

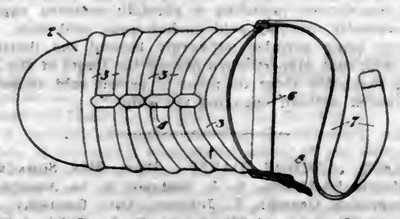


said tab and securing means between said ornament and said tab, said securing means passing through the tab and said strip of fabric at the connecting point between said fabric and said tab.

1,640,666. NEWSPAPER VENDER. JOHN D. O'FLYNN, Vancouver, British Columbia, Canada. Filed July 17, 1925. Serial No. 44,276, and in Canada May 9, 1925. 1 Claim. (Cl. 211—8.)

A device for vending newspapers comprising a casing having a shallow depressed pocket across the front of the bottom into which the lower edges of the papers are delivered, said pocket being open at the front to expose said lower edges of the paper only, a pair of spaced endless chains passing over idler pulleys and over sprockets, a driving shaft on which said sprockets are mounted and by which said chains may be moved, a series of L-shaped angled strips, the horizontal component of each of which is provided with anchoring hooks for connecting the same to the respective chains, said strips adapted to receive the papers in vertical file, a follower plate secured to and between the chains and movable with the same, guide rods paralleling the chains on which said follower plate is slidably mounted, all being arranged substantially as shown and described.

1,640,667. AIRCRAFT COLLECTING DEVICE. FRED M. OSBORN, Los Angeles, Calif. Filed Nov. 9, 1926. Serial No. 147,369. 1 Claim. (Cl. 258—1.)

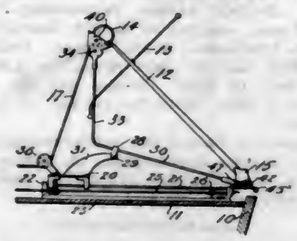


An apparatus of the class described including a supporting structure comprising a pair of horizontal coextensive plates and angularly disposed bars; an engaging member resting on the bars and including a pair of hinged bars projecting inwardly of the member, and spring means associated with said pair of hinged bars to hold the extremities in abutment, and spring clips on the supporting structure projecting upwardly therefrom and having depending projections engaging in depressions formed in the engaging member.

1,640,668. PROCESS FOR THE REGENERATION OF METAL CATALYSTS CONTAMINATED BY SULPHUR. EUGÈNE ALBERT PRUDHOMME, Neuilly-sur-Seine, France, assignor to Société Internationale des Procédés Prudhomme, Paris, France. Original application filed Jan. 20, 1925, Serial No. 3,655, and in France May 19, 1924. Divided and this application filed May 8, 1926. Serial No. 107,833. 6 Claims. (Cl. 23—238.)

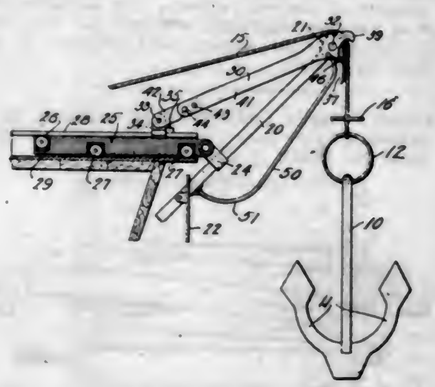
1. A process of regenerating sulphur-contaminated catalysts which consists in eliminating the sulphur therefrom in the form of sulphuretted hydrogen by combining said catalysts with an organic acid.

1,640,669. FOOT PROTECTOR. CLINTON E. SANKEY, Ellwood City, Pa. Filed May 18, 1927. Serial No. 192,360. 1 Claim. (Cl. 36—72.)



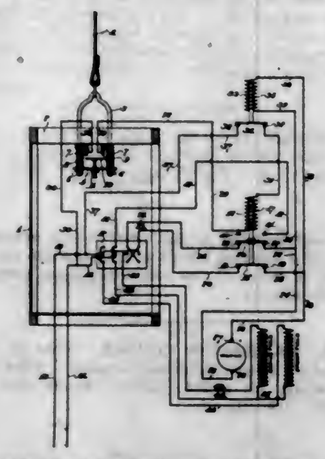
A toe and foot protector comprising a metal body portion generally convex in cross-section and shaped to fit over the toe and instep portion of a shoe encased foot of the wearer, said body portion being of greater width than the wearer's shoe so that its side edges will be free to engage the ground, said body portion being provided with a plurality of transverse stiffening and reenforcing ribs and at least one longitudinal stiffening and reenforcing rib, and means for securing said protector to the foot of the wearer.

1,640,670. SHAFT CONSTRUCTION. CHARLES D. R. SCHAEFFER, Fort Dodge, Iowa. Filed Dec. 16, 1925. Serial No. 75,779. 1 Claim. (Cl. 64—96.)



In a device of the class described, a pair of shafts arranged in alignment and spaced from each other, said shafts having at their adjacent ends annular discs, a plurality of spring steel rods having their ends mounted non-slidably in said discs, collars mounted on said discs for holding said rods in place, said discs having aligned sockets, a shaft section having its ends arranged in said sockets and having flanges adjacent to said discs, said shaft section being of such length as to permit limited rotary movement of said first shafts with relation to each other, whereby said rods are twisted for slightly shortening the distance between the first shafts, and being of such length as to then bind at its ends and prevent further relative rotary movement of the first shafts.

1,640,671. DAVIT. BROR MAX SCHAUMAN, Atlantic Highlands, N. J., assignor to an Association comprising Grandin V. Johnson, Otto Gautschy, and Harry W. Johnson, Highlands, N. J.; William Koch, Long Branch, N. J.; and Bror Max Schauman, Atlantic Highlands, N. J., one-fifth to each member. Filed Aug. 3, 1922, Serial No. 579,369. Renewed Nov. 17, 1926. 13 Claims. (Cl. 114—210.)

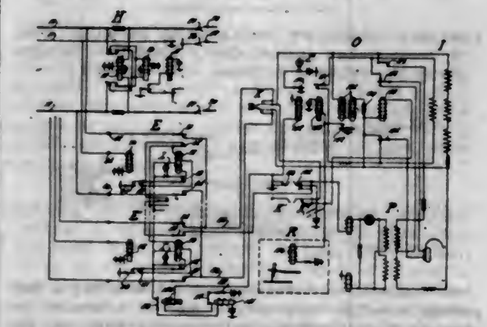


1. A ship's davit contrivance for facilitating the hoisting and lowering of an anchor without injury to the ship, said contrivance including a pivotally-mounted support for normally carrying said anchor upon said ship, said support being movable outwardly beyond the limits of said ship, said support when beyond the limits of the ship being swingable about its pivot to permit said anchor to be lowered without engaging the ship.

1,640,672. ANCHOR DAVIT. BROR MAX SCHAUMAN, Atlantic Highlands, N. J., assignor to an Association comprising Grandin V. Johnson, Otto Gautschy, and Harry W. Johnson, Highlands, N. J.; William Koch, Long Branch, N. J.; and Bror Max Schauman, Atlantic Highlands, N. J., one-fifth to each member. Filed Aug. 3, 1922, Serial No. 579,370. Renewed Nov. 17, 1926. 15 Claims. (Cl. 114—210.)

1. An anchor davit mounted on a vessel for raising and lowering an anchor by means of a cable, said davit comprising a carriage movable inwardly and outwardly upon said vessel, a support for said anchor, said support being pivoted near its lower end on said carriage and foldable upon said carriage, an anchor resting upon the support when said support is in folded position, the center of gravity of said anchor when resting upon the support and with the carriage in outward position being outside of the vessel so that release of said cable permits the anchor to rotate the upper end of the support outwardly so that the anchor may be lowered clear of the vessel and means for limiting the outward movement of the support.

1,640,673. SAFETY DEVICE FOR ELEVATORS. MORRIS SCHEINFELD, Philadelphia, Pa., assignor of one-half to Jacob Friedman, Philadelphia, Pa. Filed Sept. 4, 1926. Serial No. 133,648. 11 Claims. (Cl. 187—29.)



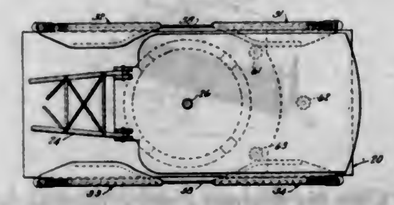
5. A safety device for elevators comprising in combination with an elevator car, a control switch, power leads extending thereto, a motor circuit extending from the control switch, a main relay adapted when energized to open the motor circuit, a main relay circuit adapted when closed to energize said relay, said main relay circuit being normally open, and means carried by the elevator adapted to close said main relay circuit when the elevator is overloaded.

1,640,674. MAKING MALLEABLE-IRON CASTINGS. HARRY A. SCHWARTZ, Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 30, 1924. Serial No. 746,870. 5 Claims. (Cl. 75—45.)

1. The process of making malleable iron castings containing an inappreciable percentage of silicon, which comprises adding a small amount of zirconium as a graphitization accelerator, casting the metal without precipitating a substantial proportion of the carbon, annealing the casting and thereby precipitating the carbon in the form of small particles.

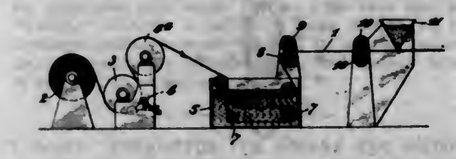
1,640,675. SERVICE-OBSERVING EQUIPMENT FOR TELEPHONE SYSTEMS. MICHAEL SCHWARTZ, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 10, 1922, Serial No. 574,038. Renewed June 6, 1927. 20 Claims. (Cl. 179—27.)

1. In a telephone system, a plurality of trunk lines, each of said plurality terminating in an automatic switch,



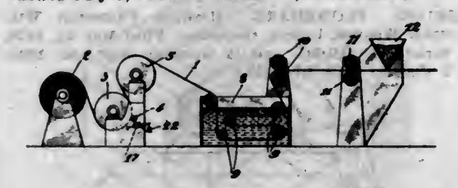
operator's equipment, subscriber controlled means for seizing any trunk line of said plurality and for operating the associated automatic switch, means responsive to such seizure for connecting said seized trunk line to said equipment, and a registering device associated with said equipment operated in synchronism with said associated automatic switch.

1,640,676. SHAMPOO SHIELD. JULIA EPPERS SHAEFFER, Philadelphia, Pa. Filed Apr. 7, 1925. Serial No. 21,388. 2 Claims. (Cl. 2—174.)



2. A shampoo shield comprising a flexible body adapted to fit the forehead of a user with its end portions extending rearwardly over and protecting the ears, ear-engaging straps carried by the respective end portions of said body on the inner face thereof, each strap being secured to the body at spaced points in a line inclined rearwardly and downwardly, and means for connecting the ends of said body.

1,640,677. SAFETY APPLIANCE. WILLIAM E. SMILEY, Brooklyn, N. Y. Filed Sept. 25, 1926. Serial No. 137,724. 17 Claims. (Cl. 212—70.)

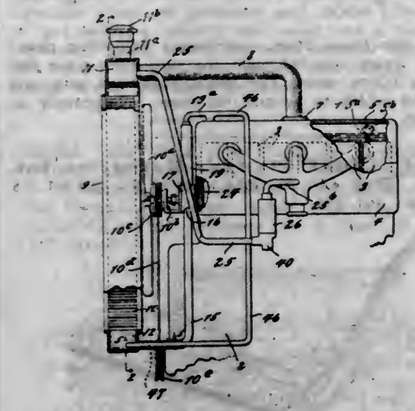


1. In combination with a crane having a platform and a rotatable cab thereon, a fender arm pivotally mounted at the side of the platform for excluding persons from the area of danger between the cab and platform edges.

1,640,678. APPARATUS FOR PRINTING DESIGNS. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to Central Trust Company of Illinois, a Corporation of Illinois, and Aksel K. Bodholdt, Evanston, Ill. Filed Feb. 9, 1921, Serial No. 443,513. Renewed July 9, 1923. 9 Claims. (Cl. 91—16.)

1. In apparatus of the character specified, means for applying a protective coating to one face of a waterproofed web of absorbent material, and means for impressing designs upon the opposite face before the protective coating is applied.

1,640,679. METHOD OF PRINTING DESIGNS. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to Central Trust Company of Illinois, a Corporation of Illinois, and Aksel K. Bodholdt, Evanston, Ill. Filed Feb. 9, 1921, Serial No. 443,514. Renewed July 9, 1923. 7 Claims. (Cl. 91—67.9.)



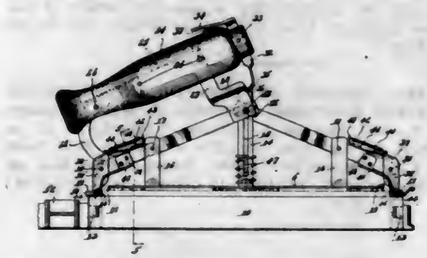
1. A method of forming designs upon one face of materials having a base or body of waterproofed absorbent material and a protective coating on the other face, in such manner that the design is visible only on the face of the material on which it is imprinted, which consists in impressing the design on the base or body before it has been waterproofed, waterproofing the material and passing it between compression rollers, and applying the protective coating on the opposite face from the designs.

1,640,680. METHOD OF PERPETUATING HUMAN REMAINS AND ARTICLE MADE THEREBY. ALBERT VANDERLAAN, Larchmont, N. Y. Filed Dec. 10, 1924. Serial No. 754,975. 7 Claims. (Cl. 25—157.)

6. A method of commemorating the deceased, which consists of integrally intermixing ashes of the deceased to be commemorated with a clay of permanent character, fashioning the mixture into a memorial article of permanent arbitrary form, and giving permanence thereto by baking.

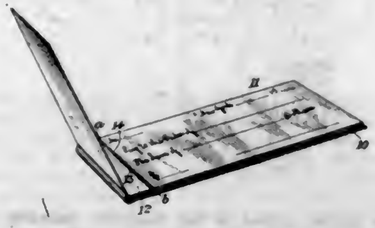
1,640,681. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. MARSHALL H. WARD, Brooklyn, N. Y., and EDWARD L. AURAND, Teaneck, N. J., assignors to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 22, 1924. Serial No. 701,162. 14 Claims. (Cl. 123—174.)

1. A cooling system of the character described comprising a combustion engine having a cooling space and a fuel-suction inlet, a condenser, a passage connecting the cooling space with the condenser and discharging into the latter, a return passage from the condenser to the cooling space, a suction connection between the condenser and said fuel suction inlet, and pressure controlled means responsive to pressure in said suction



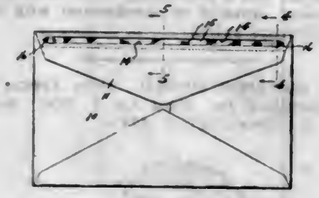
connection to regulate the suction exerted by the said suction connection to thereby maintain a determined pressure in the cooling system regardless of variations of pressure in said fuel suction inlet.

1,640,682. PLOWSHARE. HINRICH FRIEDRICH WILHELM WEGNER, Lubeck, Germany. Filed May 21, 1926. Serial No. 110,607, and in Germany Sept. 30, 1925. 2 Claims. (Cl. 97—125.)



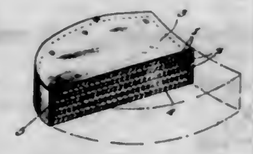
1. A plowshare comprising a body member having a lower portion of reduced thickness extending from heel to point thereof, one side of said portion being provided with a longitudinal groove extending from the point of said portion and terminating adjacent to the heel thereof, and a cutting member having a grooved portion slidably mounted on said reduced portion of the body member in the direction of the line of draft, said cutting member being provided with a rib engaging the groove in the reduced portion of the body member.

1,640,683. TYPE-FRAME LIFTER. ALBERT WILSON, Chicago, Ill. Filed June 14, 1926. Serial No. 115,719. 20 Claims. (Cl. 101—404.)



2. A type frame lifter comprising a supporting piece; rocking levers mounted upon the supporting piece and carrying lifting shoes; and means associated with said levers by which to operate the same, substantially as described.

1,640,684. INDENTURE. PHILIP ZALKIND, New York, N. Y. Filed Apr. 23, 1918. Serial No. 230,201. 8 Claims. (Cl. 281—38.)



1. An indenture comprising a sheet of separable parts having between them a series of angular scores in pairs extending obliquely from a line on which the parts are separable, the said scores on corresponding sides of the line being parallel to each other and there being a perforation between the said pairs of scores in the line on which the parts of the indenture are separable.

1,640,685. ENVELOPE. SILVIO M. AITELLI, Newark, N. J. Filed Dec. 22, 1926. Serial No. 156,489. 2 Claims. (Cl. 229—86.)

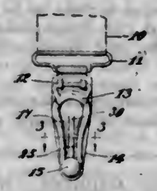
1. The combination with the body of a mail cover of an opening means, comprising the provision in said body of a slot having spaced longitudinal edges, a fabric tearing strip of greater width than said slot and exceeding the same in length, said strip being adhesively secured to the inner side of said body to normally close said slot, and an end of said strip being longitudinally incised coincident to the sides of the slot to form a gripping tongue, said tongue being exteriorly projected through the adjacent end of said slot, the longitudinal edges of said slot providing guides against which the strip may be bodily disrupted and a portion thereof removed to open up said slot.

1,640,686. SHOE HEEL. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1925. Serial No. 10,434. 2 Claims. (Cl. 36—35.)

1. A shoe heel comprising a body of vulcanized rubber, and spaced plies of veneer embedded therein prior to vulcanizing, the rubber of the body extending entirely about and between the plies of veneer.

1,640,687. COMBINED MEDICINAL PENCIL AND INHALER. WILLIAM C. BELMONTE, New York, N. Y. Filed July 18, 1924. Serial No. 726,690. 2 Claims. (Cl. 128—200.)

1. A holder for sticks of medicinal and other preparations, comprising a base having an interior recess, a shoulder in the recess, an anchor member having a loop

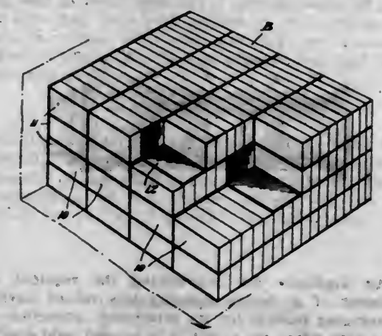


embedded in the stick, resilient projections from the loop seating under the shoulder, a casing detachably secured to the base, and means for providing for a circulation of air through the holder.

1,640,688. EXHAUST-STEAM INJECTOR FOR LOCOMOTIVES AND THE LIKE. EMANUEL BLAUHORN, Vienna, Austria. Filed Apr. 24, 1925, Serial No. 25,704, and in Austria May 20, 1924. 4 Claims. (Cl. 103—265.)

2. An injector of the character described comprising a live steam cone and an exhaust steam cone, a combining cone and a delivery cone, and separable casing parts respectively containing the exhaust steam cone and the combining cone.

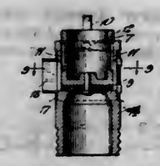
1,640,689. HOSE-SUPPORTER CLASP. JENNIE M. BODENSIEK, New York, N. Y. Filed Aug. 8, 1925. Serial No. 48,919. 6 Claims. (Cl. 24—245.)



3. A clasp comprising a base having an outstanding rib and a headed part, a yoke movably associated with the base and having a wedge slot receivable about said rib and headed part, and yieldable means carried by said yoke and movable relatively to the yoke and positioned for engagement with the sides of the rib.

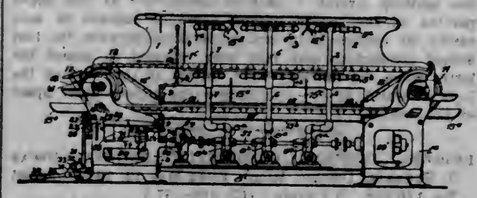
1,640,690. TREATMENT OF INTERNAL-COMBUSTION-MOTOR CYLINDERS FOR CARBON DEPOSIT. JOHN F. CANNING, Richmond Hill, N. Y. Filed June 16, 1923. Serial No. 645,916. 2 Claims. (Cl. 44—9.)

1. A petroleum fuel additioned by a relatively small quantity of a carbon removing agent, consisting of coal tar distillates, from which the tar acids have been substantially removed, a relatively large portion of said distillates boiling between 130–225° C., and an oxidizing agent comprising a nitrated cyclic hydrocarbon soluble in said distillates and said fuel.



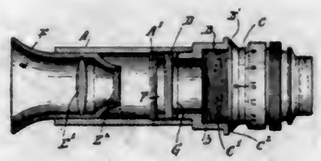
1,640,691. SEPARATOR FOR BRICKS AND METHOD OF PILING THE SAME. EDGAR C. CLARK, Pittsburgh, Pa. Filed Jan. 20, 1926. Serial No. 82,626. 3 Claims. (Cl. 206—46.)

1. A spacer for use in stacking bricks comprising a strip of sheet material bent longitudinally to form an upstanding portion adapted to be interposed between two horizontal rows of bricks arranged in parallel vertical planes, and a portion extending at substantially a right



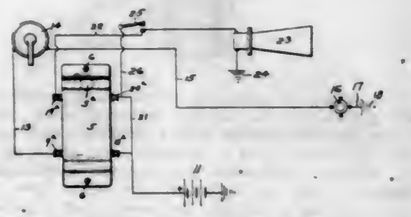
angle to said upstanding portion to be positioned between two superposed rows, said strip being of sufficient length to face a plurality of bricks.

1,640,692. FAUCET. GEORGE W. COOKE, Jamaica, N. Y., assignor to George W. Cooke Co., Inc., a Corporation of New York. Filed Sept. 17, 1925. Serial No. 56,824. 2 Claims. (Cl. 251—135.)



1. A faucet comprising a tubular body including an inlet portion and an enlarged cylindrical valve chamber joining the inlet portion with a shoulder constituting a valve seat and having a circumferential series of openings in front of the valve seat, a spout sleeve angularly adjustable about the perforated part of the valve chamber and having a laterally open spout, and a cylindrical valve plug fitting within the valve chamber throughout and beyond the perforated portion and axially slidable therein to open and close the faucet.

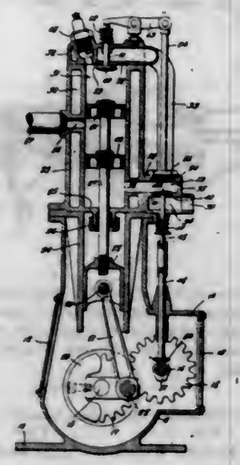
1,640,693. MACHINE FOR WASHING DISHES AND OTHER ARTICLES. ELBERT L. COUCH, Mamaroneck, N. Y., assignor to Colt's Patent Fire Arms Manufacturing Company, Hartford, Conn. Filed Aug. 1, 1921, Serial No. 488,919. Renewed Dec. 9, 1926. 27 Claims. (Cl. 141—9.)



1. In a washing machine, a conveyor for carrying the articles being washed through the machine, means for driving the conveyor, a shelf for receiving the washed articles from the conveyor and movable relatively thereto, and means controlled by the movement of said shelf for rendering said driving means inoperative.

1,640,694. CAMERA-LENS-FOCUSING APPLIANCE. LUCIUS F. DEMING, Philadelphia, Pa. Filed Aug. 28, 1925. Serial No. 53,009. 6 Claims. (Cl. 88—1.)

1. An appliance for determining the required focal adjustment of a camera focusing lens mount having a seat engaging portion for its detachable connection to a camera with which the mount is to be used, said appliance comprising a chambered body provided at one end with a seat for the seat engaging portion of the mount and at the opposite end with an inspection opening, and means within said body providing an image receiving surface at a fixed distance from said seat on which the image of an object to be photographed may be seen through said inspection opening when a focusing lens mount seated in the appliance is focused on said object.



1,640,695. AUTOMATIC SAFETY SWITCH. BERNARD B. DOLLY, Superior, Ariz. Filed June 22, 1926. Serial No. 117,756. 1 Claim. (Cl. 177—311.)

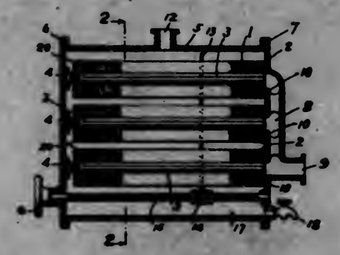
The combination with a motor vehicle and its ignition circuit, of a switch, comprising a body rigdly affixed to the motor vehicle to be bodily inverted therewith in the event of an upset of said vehicle, said body having a cavity therein containing a movable conductive body, spaced conductors the ends of which are exposed in said cavity adjacent the lower end thereof and which conductors are connected with the ignition circuit of the motor vehicle, said conductive body normally completing the ignition circuit, a pair of conductors at the upper portion of the cavity having portions exposed in said cavity, an electric horn and connections between the last named conductors and said horn adapted to sound the latter when the movable body travels to that end of the body occupied by the last named conductors upon upset of the vehicle.

1,640,696. INTERNAL-COMBUSTION ENGINE. OSCAR J. ECKLAND, Owosso, Mich. Filed May 19, 1926. Serial No. 110,228. 3 Claims. (Cl. 123—57.)

1. In an internal combustion engine, a crank case, a crank shaft journaled therethrough and having a crank portion, a cam shaft journaled through the crank case and operatively connected with the crank shaft for being driven thereby, a cylinder block mounted upon the crank case and having a cylinder therein, a cylinder head at the upper end of the block, a cross head guide extending down into the crank case, a piston slidable axially of the cylinder and cross head guide and carrying a cross head slidably mounted along the guide, a connecting rod connected with the cross head and with the crank portion of the crank shaft, a pair of spaced pistons carried by the piston rod and one constituting a power piston and the other a charge compressing piston, valve means for

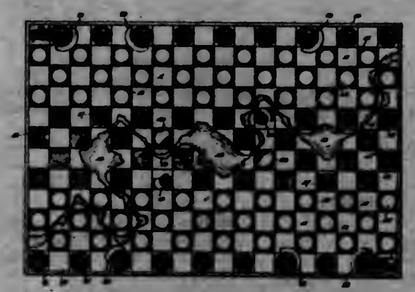
permitting an explosive mixture to be introduced within the cylinder beneath the compression piston, transfer means for conducting said compressed charge into the cylinder head, valve means for permitting the compressed charge to enter the upper end of the cylinder and the side of the cylinder being provided with an exhaust port controlled by movement of the power piston.

1,640,697. LASTING MACHINE. WILLIAM F. FLICKINGER, Endicott, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 1, 1922. Serial No. 598,411. 8 Claims. (Cl. 12—2.)



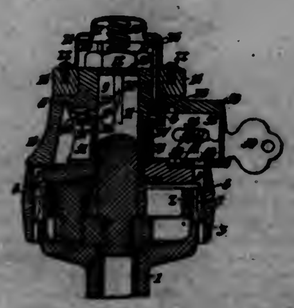
1. A shoe bottom rest comprising a supporting portion and a plate having its edge toothed to engage the shoe bottom, said plate being pivoted between its ends to the supporting portion and freely movable by the shoe on its pivot, the edge of said plate providing a second axis about which the shoe may be tipped.

1,640,698. EDGE FILTER. ERIK AUGUST FORSBERG, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 4, 1924, Serial No. 735,768, and in Great Britain Sept. 18, 1923. 5 Claims. (Cl. 210—184.)



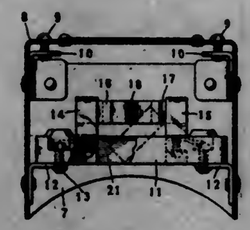
1. An edge filter comprising a casing having two opposite end walls one of which is removable, a filter unit comprising a column of thin elements, a longitudinally

extending member engaging said elements and provided with a plurality of flow channels extending therethrough,



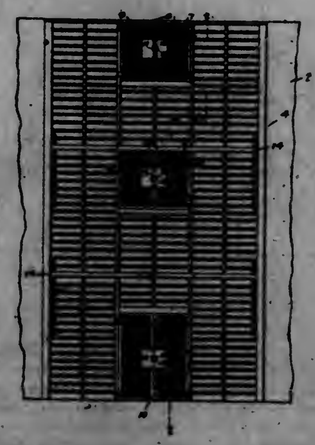
end plates at opposite ends of the columns, and means, operable in the placement of the removable end wall, to press the unit against the opposite end wall.

1,640,699. GOLF-GAME APPARATUS. WILLIAM GASTON, New York, N. Y. Filed July 26, 1926. Serial No. 125,041. 2 Claims. (Cl. 273—131.)



1. In a game device, a board having delineated thereon the following, to wit: two series of rows of spaces to accommodate pieces for the playing of the game, and a playing field between said rows of spaces, and divided into corresponding spaces alining obliquely with the first mentioned spaces, certain spaces in said playing field having hazards indicated adjacent thereto, said hazards including sand traps, bunkers, ponds and out of bounds.

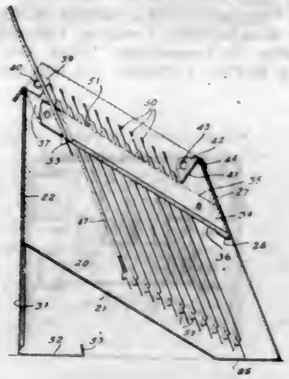
1,640,700. VEHICLE SIGNALING DEVICE. CLARENCE A. GODSHALK, Ardmore, Pa., assignor to A. H. Fox Gun Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 3, 1923. Serial No. 678,182. 6 Claims. (Cl. 200—59.)



1. An electric device including the combination with a pair of relatively immovable annular terminals; of means arranged to electrically connect said terminals, including an annular push ring overlying said terminals; a member having a circular series of sockets in registry with said push ring; a manually operative plunger overlying said socketed member; a circular series of plunger rods extending from said plunger in said sockets, in cooperative relation with said push ring; and a spring arranged to normally hold said plunger rods and ring in inoperative position.

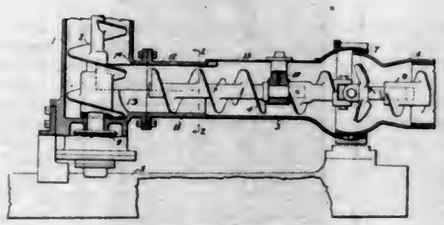
1,640,701. ELECTRIC SAFETY DEVICE. CHARLES E. HANNI, Unionville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Oct. 19, 1925. Serial No. 63,274. 7 Claims. (Cl. 200—142.)

1. A thermostatic element comprising a flat zig-zag bent center strip and flat contact blades having substantially the same carrying capacity as the center strip, soldered to the ends of the said center strip and adapted to fit into ordinary fuse clips, the contact blade on one end being soldered on the side of said strip opposite to the blade on the other end, the amount of solder being only sufficient to hold the parts together.



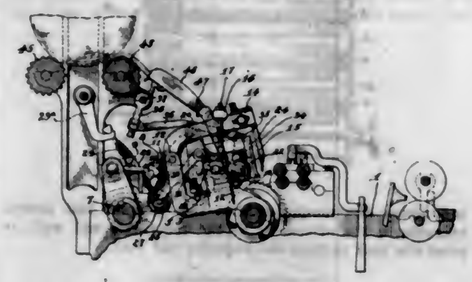
1,640,702. PORCH FIRE ESCAPE. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed May 6, 1926. Serial No. 107,000. 1 Claim. (Cl. 227—5.)

A fire-escape comprising a series of enclosures on the outside of a building having internal passageways permitting persons to pass downward from one enclosure to another, and trap-doors for said passageways with latches adapted to be readily opened from above but not from below, the fire-escape also having external ladder means,



and openings in its sides enabling persons to gain said external means, with closures for said openings and latches for said closures adapted to be readily opened from the inside but not from the outside.

1,640,703. TABULAR CALCULATOR. ALFRED W. HOFFMAN, New York, N. Y. Filed Sept. 22, 1925. Serial No. 57,906. 2 Claims. (Cl. 45—2.)

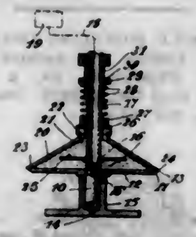


1. In a calculator, a support, an inclined plate carried thereby, said plate having a series of spaced slots formed therein, a plurality of metal blanks slidably disposed through said slots, and coacting means on said plate and blanks, for retaining said blanks in elevated or retracted position relative to said plate.

1,640,704. CONVEYER FOR STOKERS. ANDREW M. HUNT, New York, N. Y., assignor to Standard Stoker Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed May 25, 1923. Serial No. 641,339. 17 Claims. (Cl. 198—213.)

1. In a stoker the combination with an upwardly extending elevating conduit, of a laterally extending feed conduit therefor comprising a lower surface raised at its discharge end and upper surface lowered at its discharge end so as to restrict said conduit vertically at said end, a feed screw of substantially constant diameter extending along said conduit and having its discharge end rotatably supported on the said raised end of said lower surface and within said vertically restricted portion of said conduit, and means for supporting the other end of said feed screw spaced from the walls of said conduit so that said conduit and feed screw have substantially parallel axes.

1,640,705. COMBING MACHINE. JAMES JOLLY, Bolton, England, assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Nov. 14, 1925. Serial No. 68,969. 23 Claims. (Cl. 19—120.)



1. In a comber, the combination of an oscillating bearing frame, means for oscillating said frame, a nipper frame pivoted on said bearing frame, a top comb carried on said frame and normally supported in fixed relation thereto, and nipper knife levers adapted to rock the nipper frame with relation to said bearing frame.

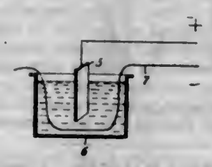
1,640,706. TREATING OF LEATHER. MORRIS CHARLES LAMB, Bermondsey, London, England, assignor to Rohm & Haas Company, Inc., Philadelphia, Pa. Original application filed June 9, 1925, Serial No. 36,052, and in Great Britain Apr. 27, 1925. Divided and this application filed Mar. 6, 1926. Serial No. 92,940. 2 Claims. (Cl. 149—6.)

1. A process for treating leather for the purpose of lubricating its fibres, which consists in treating the leather with a non-acid emulsion of hydrogenated naphthalene in association with an oily substance.

1,640,707. MACHINE FOR SEPARATING SOLIDS FROM LIQUIDS OR LIQUIDS FROM LIQUIDS. WILLIAM C. LAUGHLIN, Glendale, Calif., assignor to Laughlin Filter Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 29, 1923. Serial No. 665,622. 20 Claims. (Cl. 233—20.)

1. In a machine for separating solids from liquids or liquids from liquids, the combination of rotary plates facing each other having their peripheral surfaces smooth and unobstructed both radially and circumferentially, and contacting smoothly and circumferentially, one of said plates having a flat interior surface and the other of said plates having an inclined interior surface in respect to the axis of rotation, means for uninterruptedly feeding to the space between the plates, material to be separated and discharging certain of the material between the plates substantially at or near the axis of rotation thereof, a plate rotatable with the rotary plates and rotating at the same speed thereof and arranged parallel with the flat surface of the flat plate, and a spring centrally disposed in

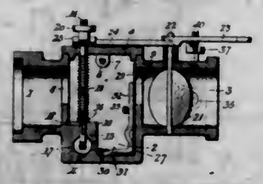
respect to one of the plates for causing the smooth peripheral portion of one plate to exert a uniform pressure upon the smooth peripheral portion of the other plate around the peripheral circumference thereof.



1,640,708. METHOD OF PRODUCING ZINC CARBONATE. NAPOLEON ARTHUR LAURY, Rockville Center, N. Y. Filed Dec. 23, 1925. Serial No. 77,285. 4 Claims. (Cl. 23—61.)

1. A method for the precipitation of an insoluble zinc compound which consists in cooling an aqueous solution of ammonium sulphate containing zinc in solution and treating the solution with carbon dioxide.

1,640,709. MEDICINAL AGENT ADAPTED FOR GLANDULAR THERAPY. GUSTAVE P. METZ, Brooklyn, N. Y. Filed Aug. 28, 1925. Serial No. 53,078. 3 Claims. (Cl. 167—7.)

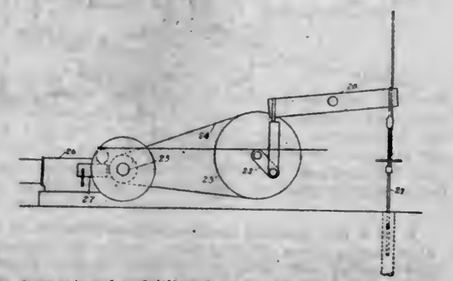


3. A medicinal agent comprising a water-soluble insulin powder, wholly free from germs or bacterial products and in a state capable of being absorbable in the tissues of the human body, said substance being incorporated in a vehicle substantially free from water and wholly free from germs or bacterial products, but acting as a retardant to delay for an extended period of time the absorption of the insulin substance by the blood stream, the said medicinal agent being adapted, upon intramuscular or subcutaneous injection, to exercise a functional effect in the human body via the nerves prior to directly effective chemically active contact with the blood stream.

1,640,710. ELECTRON EMITTING CATHODE AND PROCESS OF PREPARING THE SAME. HENRY MILLER, Newark, N. J., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Mar. 1, 1926. Serial No. 91,455. 9 Claims. (Cl. 250—27.5.)

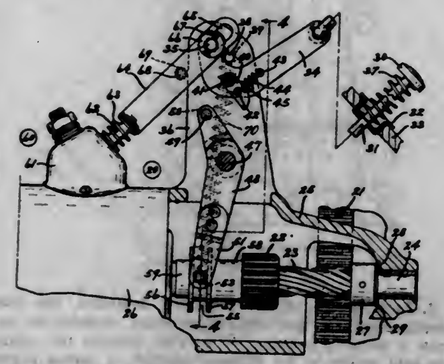
1. The process of manufacturing an electron emitting cathode which comprises electrically depositing a compound of a metal of the alkali-earth group on a conductor from a colloidal solution, and subsequently subjecting the coating to heat.

1,640,711. CARBURETOR. JOHN J. A. MILLER, Denver, Colo. Filed May 21, 1926. Serial No. 110,617. 2 Claims. (Cl. 261—105.)



1. The combination with a carburetor having a mixing chamber provided with air inlet and outlet openings, of a fuel valve and means for operating the same to admit fuel to said chamber, said openings being above the level of the fuel inlet, a removable plate in said chamber having an opening and adapted to register with the outlet opening and a wire screen over the opening in said plate, a fuel absorbing wick adapted to extend partially over said screened opening, whereby air drawn through said openings mingles with the fuel in said wick to form an explosive mixture, and means for adjusting said wick with respect to the screened opening.

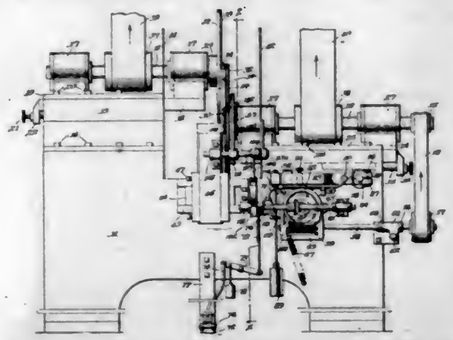
1,640,712. ACCELERATION OF GELATINIZATION OF CELLULOSE NITRATE. ROBERT C. MORAN, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 19, 1924. Serial No. 721,004. 21 Claims. (Cl. 52—20.)



1. The process of accelerating the gelatinization of cellulose nitrate with a liquid nitric ester which comprises mixing said substances in the presence of an aliphatic alcohol that has a greater solubility in said liquid nitric ester than has glycerol, the quantity of said alcohol being sufficiently small so as to produce substantially no effect upon the sensitiveness of the mixture as an explosive.

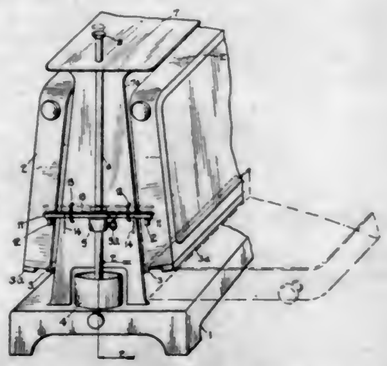
1,640,713. GOVERNOR. FRANK B. MORRISON, Marion, Ohio, assignor to The Power Manufacturing Company, Marion, Ohio, a Corporation of Ohio. Filed Mar. 18, 1926. Serial No. 95,661. 1 Claim. (Cl. 255—1.)

In apparatus for drilling bores in the earth the combination of a vertically swinging walking beam, a tool hung from the walking beam at one end and an internal combustion engine operatively engaging the beam at its other end, said engine being provided with a fuel control and with a centrifugal governor controlling such fuel control, and means for opposing the centrifugal swing of the governor, such means presenting to the governor when in the course of its swing an abrupt increase of resistance.



1,640,714. ENGINE-STARTING APPARATUS. JOE W. MORRISON, Washington, D. C., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 13, 1924. Serial No. 755,649. 6 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a motor; means for connecting the motor with the engine including a pinion adapted to mesh with a gear

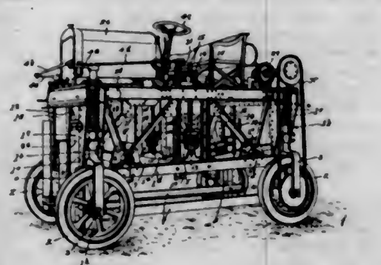


connected with the engine, and devices whereby the pinion will be automatically demeshed from the engine gear when the engine starts and whereby operation of the motor will move the pinion into complete engagement with the engine gear after the pinion has been brought into contact or partial engagement with the engine gear; a spring normally set to urge the pinion away from the gear a pinion shifting device; a motor switch and means for operating the pinion shifting device to move the pinion toward the gear and to set the spring for urging the pinion into contact with the gear, and for closing the motor switch.

1,640,715. FACE-GRINDING MACHINE. ALLEN W. MORTON, Baltimore, Md. Filed Nov. 28, 1925. Serial No. 72,006. 8 Claims. (Cl. 51—134.)

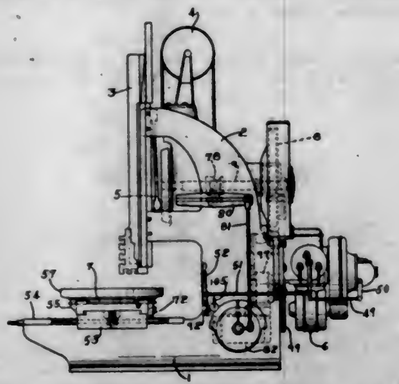
1. In a face grinding machine, the combination of two discs having plane grinding faces; means for supporting and rotating said discs in the same angular direction about offset parallel axes, with portions of said discs opposed to and parallel with each other; and a work carrier arranged to support a work piece for rotation about an axis parallel with the axes of said discs and to guide the same in a path between said discs which is oblique to the line connecting the axes of said discs and which approximately bisects said line.

1,640,716. TIMING DEVICE. JENTJE MULDER, Detroit, Mich. Filed Sept. 14, 1925. Serial No. 56,175. 7 Claims. (Cl. 161—16.)



1. In a device of the charactéd described, the combination with a toast holder pivotally movable to and from a working position, of a latch member for retaining said holder in its working position, a spring urging said latch member to its release position, and a dashpot retarding said spring in its action upon said latch member.

1,640,717. MANUFACTURE OF LARGE-GRAINED DEXTROSE. WILLIAM B. NEWKIRK, Riverside, Ill., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Original application filed Sept. 10, 1924, Serial No. 736,945. Divided and this application filed Oct. 23, 1924. Serial No. 745,375. 7 Claims. (Cl. 127—60.)

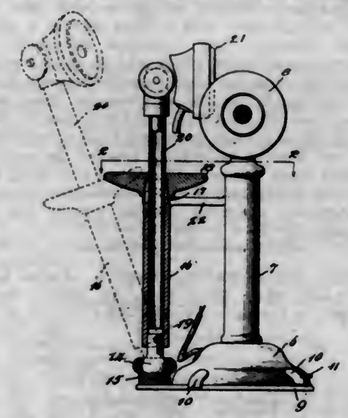


1. Method of making large grained crystalline dextrose from a starch converted solution which consists in maintaining a relatively large quantity of dextrose crystals uniformly dispersed through a solution and gradually cooling the solution to maintain a supersaturation so slight that most of the dextrose crystallizing out of the solution goes to build up the size of the crystals originally introduced.

1,640,718. LUMBER CARRIER. ERNEST A. OETZEN, Everett, Wash., assignor to Sumner Iron Works, Everett, Wash., a Corporation of Washington. Filed Apr. 3, 1926. Serial No. 99,588. 11 Claims. (Cl. 212—141.)

1. A lumber carrier of the character described, comprising a load straddling frame, vertically slidable load engaging elements carried by the corners of said frame, fulcrumed levers engaged at one end to said load carrying elements respectively, vertically movable, centrally located power transmitting element with which the other ends of said levers are connected, a motor and connections therefor to said power transmitting element, including a yielding element for the purpose described.

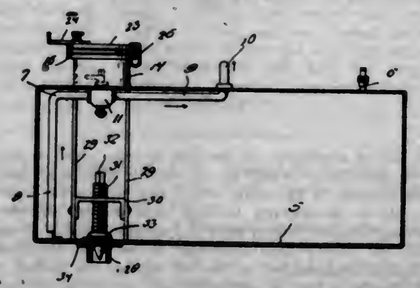
1,640,719. SLOTTING MACHINE. ALBERT W. PARKES, Dundas, Ontario, Canada, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 16, 1924. Serial No. 686,559. 10 Claims. (Cl. 90—44.)



1. In a slotter, the combination of a base, a work support and a tool slide on the base, power operated means for reciprocating the tool slide, mechanism for intermittently feeding the work support synchronously with the said reciprocation, a clutch for disengaging the feeding

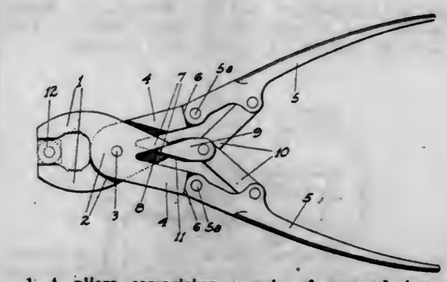
means, power operated means including a pair of bevel gears and a clutch therebetween for continuously traversing the work support in either direction, and interlocking means preventing the simultaneous engagement of the clutches.

1,640,720. PROCESS OF PURIFYING HYDROCARBONS. LEON W. PARSONS, Cambridge, Mass., and STEWART P. COLEMAN, Corpus Christi, Tex., assignors to Standard Development Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 10, 1922. Serial No. 599,966. 7 Claims. (Cl. 196—35.)



6. The improvement in the art of purifying hydrocarbons, which comprises adding a mineral oxid having oxidising properties to the hydrocarbon stock and heating to a temperature at all times short of vaporization, then introducing the hydrocarbon stock into a still containing a charge of caustic soda, and distilling the hydrocarbons.

1,640,721. TELEPHONE APPARATUS. WALTER EDWARD PERRY, Sacramento, Calif. Filed Oct. 18, 1924. Serial No. 744,354. 4 Claims. (Cl. 179—150.)

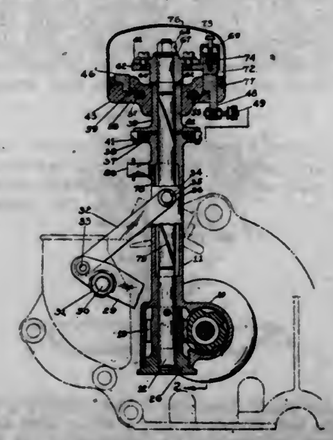


1. An attachment for a telephone, comprising an extensibly adjustable arm for supporting the telephone receiver, said arm being supported in connection with the telephone and being movable relative thereto, and clamp means on said arm for securing the latter in adjusted position, said clamp means being engageable, upon movement of said arm, with the telephone switch lever to actuate same.

1,640,722. MOTOR-VEHICLE FUEL TANK. JAMES T. ROATEN and ROY BEDFORD, Sheridan, Wyo. Filed Mar. 29, 1927. Serial No. 179,369. 4 Claims. (Cl. 158—46.)

1. In a closure for a gasoline tank filler opening, wherein the tank is provided with a drain opening in opposed relation to the filler opening, a neck constructed for engagement within the filler opening, a locking cap associated with the neck, depending legs carried by the neck and extending downwardly to the bottom of the tank at opposite sides of the drain opening, a strip extending transversely between the legs directly over the drain opening and provided with a threaded opening, and a valve pin threaded through the threaded opening in the cross strip for engagement at its lower end in the drain opening, said valve being accessible only from the interior of the tank.

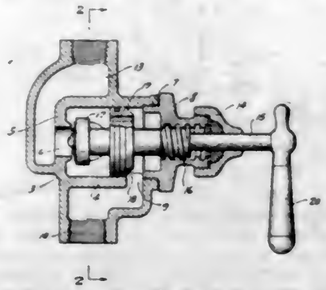
1,640,723. PLIERS. JOHN W. RYAN, French Camp, Calif. Filed Dec. 1, 1926. Serial No. 151,899. 7 Claims. (Cl. 294—38.)



1. A pliers comprising a pair of opposed jaw and handle members pivoted together intermediate their ends and arranged to cause a contracting movement of the handles to normally impart a closing movement to the jaws, and means between the handle members and jaws for increasing the force tending to close the jaws when the handles are contracted.

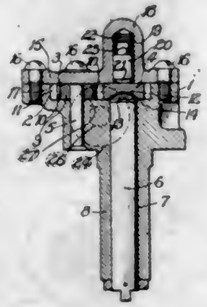
1,640,724. N-DIHYDRO-DIANTHRAQUINONE-AZINE COMPOUNDS AND PROCESS OF MAKING SAME. JOHN H. SACHS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 23, 1925. Serial No. 4,164. 6 Claims. (Cl. 260—31.)

1. The process of producing an N-dihydro-dianthraquinone-azine compound which comprises heating a water suspension of the leuco derivative of said azine compound in the presence of an oxygen-containing gas at a temperature of about 100° C. until the leuco derivative is oxidized.



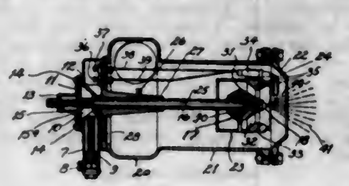
1,640,725. IGNITION TIMER. GUSTAV SCHADEE, New York, N. Y. Filed Nov. 28, 1925. Serial No. 71,884. 8 Claims. (Cl. 200—24.)

2. In an ignition timer, a timer shaft, an insulating base, a plurality of closed distributor rings spaced in



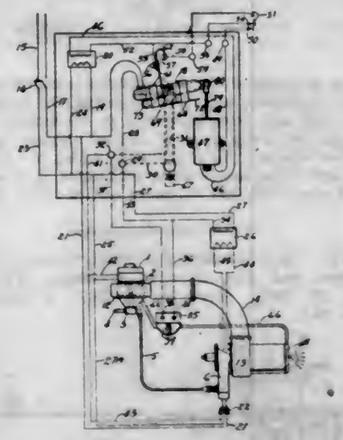
the said base, a set of stationary contacts connected with each ring with each contact extending transversely of the base and terminating in a contact face in an outer surface of the base, one of the contacts in each set being extended in the opposite direction through the said base to form a terminal, a distributor head adjustably mounted on the timer shaft, and a group of brushes carried by the distributor head and adapted to engage the contact face of the base, the number of the said brushes corresponding with the number of fixed contacts connected to each ring and the spacing of the brushes being such that they bear simultaneously on all the contacts connected with any one ring.

1,640,726. DIVERSION VALVE. WILLIAM F. SCHULTHEISS, Los Angeles, Calif. Filed Sept. 7, 1926. Serial No. 133,954. 5 Claims. (Cl. 251—22.)



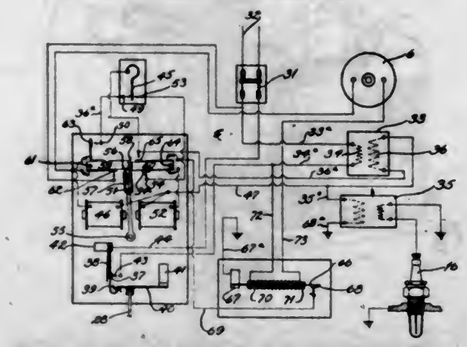
1. A valve structure of the character described comprising a casing having a first outlet chamber and a second outlet chamber separated by an intermediate inlet chamber defined by a wall forming a plunger barrel having a valve port at one end communicating with the first outlet chamber, said inlet chamber communicating at the other end with the second outlet chamber, a stem extending into said inlet chamber and being provided with a valve for said valve port, a plunger on said stem separating said inlet chamber and the second outlet chamber, there being a passage for placing said inlet chamber in communication with the second outlet chamber controlled by travel of said plunger whereby when said valve is seated to close the first outlet chamber, said inlet chamber will be in communication with the second outlet chamber and when said valve is moved to its opposite extreme position to open the first outlet chamber, said inlet chamber will be closed from the second outlet chamber.

1,640,727. GEAR PUMP. LEWIS L. SCOTT, St. Louis, Mo., assignor to Electrol, Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 16, 1923. Serial No. 675,149. 11 Claims. (Cl. 103—126.)



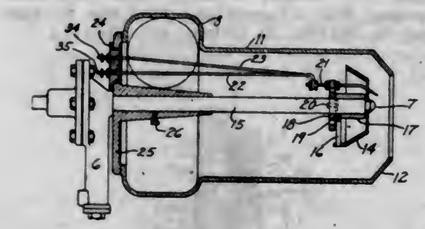
1. A gear pump comprising a casing having a chamber affording a seat, a driving and a driven gear housed in said casing, the driving gear having one of its sides forming a sealing engagement with said seat, means for maintaining said driving gear in such engagement, and a pump shaft having a bearing in said casing and a loose connection at one end with said driving gear.

1,640,728. DOMESTIC OIL BURNER. LEWIS L. SCOTT, St. Louis, Mo., assignor to Electrol, Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 24, 1925. Serial No. 51,979. 1 Claim. (Cl. 158—73.)



A burner for an oil burning device of the class described comprising an air directing duct, a fuel spray nozzle mounted centrally within the same near one end thereof and provided with a head having a portion of enlarged diameter, and a hollow cylindrical casting mounted concentrically within and in spaced relation to said air directing duct and surrounding said head, said casting having at its end adjacent the spray nozzle an annular inwardly-extending projection having its inner wall tapered to provide, with said head, a converging outlet for air directed toward the zone of the spray issuing from said spray nozzle, said casting also being provided at the end having said inwardly-extending projection with circumferential apertures directed toward the zone of said spray.

1,640,729. OIL-BURNING SYSTEM. LEWIS L. SCOTT, St. Louis, Mo. Filed Sept. 21, 1925. Serial No. 57,706. 2 Claims. (Cl. 158—73.)



1. In an automatic oil burning system, which is adapted to burn an oil which is not readily sprayed at normal temperatures, a spraying device and means for causing the oil to be sprayed through said device, an electric heating element located near the spraying device so as to heat the oil in said spraying device and maintain a spraying temperature on the oil during the period that the system is not in operation and an automatic switch for cutting in an additional electric heating unit which is adapted to supply an extra amount of heat to the oil during the period that the system is in operation.

1,640,730. OIL BURNER. LEWIS L. SCOTT, St. Louis, Mo., assignor to Electrol, Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Original application filed Feb. 23, 1922, Serial No. 538,559. Divided and this application filed Feb. 3, 1926. Serial No. 85,661. 8 Claims. (Cl. 158—28.)

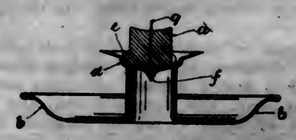
1. In an oil burning system, a spray nozzle for spraying oil, means for furnishing air to promote combustion, an electrically-controlled device for supplying fuel to the burner, an electrically-controlled device for igniting the fuel, an electrically-heated thermostat for controlling the time of operation of the ignition device.

1,640,731. OIL BURNER. LEWIS L. SCOTT, St. Louis, Mo. Filed Apr. 3, 1926. Serial No. 99,539. 2 Claims. (Cl. 158—76.)

1. In an oil burning device of the class described, in combination with a spray nozzle and means for supplying fuel thereto, means for igniting the fuel, means for furnishing air to the fuel spray to promote combustion, a mixing cone for causing the air to be mixed with the fuel spray, a disc located back of the fuel nozzle in the path of the air going to the fuel spray, an air receiver which receives air from an air supply means and which causes said air to rapidly rotate, said air receiver having a projecting casting in which is enclosed said fuel nozzle, ignition means, mixing cone and disc, said fuel nozzle, ignition means, mixing cone and disc being located eccentric from the air receiver casting.

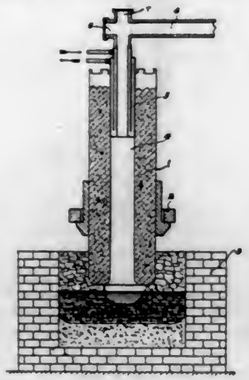
1,640,732. WEED PULLER. GEORGE R. SIMPSON, Portland, Oreg. Filed July 12, 1926. Serial No. 121,877. 2 Claims. (Cl. 55—148.)

1. In combination in a new and improved weed puller of a cylindrical handle member terminating on its lower end in a metallic jaw, said jaw carrying a pivotal pin, and terminating on its upper end with an elbow, and a horizontal hand engaging member secured to the oppositely disposed end of the elbow, a second jaw in engaging relationship with the first and journaled about the journal pin, and a foot lever formed on one side of the second jaw and at substantially right angles thereto and a weed disengaging member maintained in slidable relationship with the main handle and having a foot formed upon the lower end thereof, and spring means adapted to maintain the said member in normally raised position.



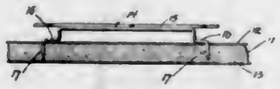
1,640,733. PITCHER FOR STERILIZED WATER. MARY LEE SLOCUMB, Shelby, Miss. Filed Jan. 13, 1927. Serial No. 160,936. 2 Claims. (Cl. 65—31.)

1. A pitcher of the character described comprising a body, a lid closing the body, the body having a spout below the lid and integrally connected to the body and a relatively short shield approximately concentric to the spout but spaced therefrom and integrally connected to the body, and a cover fitting over the spout but not touching the same and engaging with the shield.



1,640,734. CANDLE HOLDER AND CANDLE. ROBERT WILLIAM SMITH, Filey, England. Filed Jan. 7, 1927, Serial No. 159,661, and in Great Britain Jan. 13, 1926. 2 Claims. (Cl. 67—23.)

1. The combination of a candle holder having a candle receiving socket, three equally spaced lugs projecting inwardly above said socket, a candle having three equally

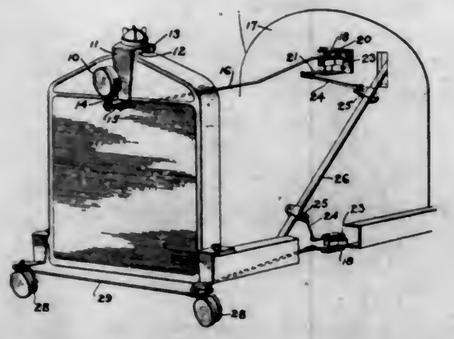


spaced outwardly projecting lugs adapted to pass between and be turned beneath said holder lugs, and wick receiving means in the bottom wall of the socket to receive and maintain the candle wick in upright position.

1,640,735. PROCESS OF MAKING CHANNELED CONTINUOUS ELECTRODES. CARL WILHELM SÖDERBERG, Christiania, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industrie, Christiania, Norway. Filed May 10, 1924, Serial No. 712,423, and in Norway May 16, 1923. 7 Claims. (Cl. 204—64.)

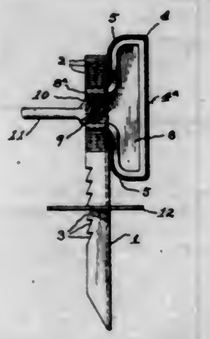
1. The process of making continuous self-baking channeled electrodes for electric furnaces comprising the introduction of a body in the unbaked part of the electrode protecting the surrounding raw electrode mass against the heat from the channel and thus preventing the baking of said raw electrode mass.

1,640,736. PLASTER BOARD. JOSEPH STRAND, Los Angeles, Calif. Filed June 18, 1925. Serial No. 37,926. 4 Claims. (Cl. 72—124.)



4. As an article of manufacture, wall board for building purposes, comprising means forming the body of the board of suitable or requisite thickness, and staple-like wire devices inserted through said board and formed and clinched to hold them rigidly therein preventing said devices from pushing in or pulling out with the head of each staple-like device spaced a distance from the face of the board which is to receive the plaster or other coating.

1,640,737. NITRATION PROCESS AND NITRATING MIXTURE THEREFOR. GUY B. TAYLOR, Wilmington, Del., and ALBERT S. RICHARDSON, Cincinnati, Ohio, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 15, 1922. Serial No. 575,328. 13 Claims. (Cl. 260—142.)

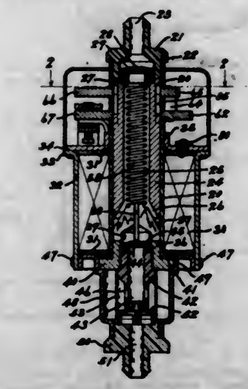


1. The process of producing an organic nitro compound which comprises absorbing nitrogen peroxide in sulphuric acid to form a mixture containing substantial proportions of nitric acid, sulphuric acid, and nitrososulphuric acid, subjecting an organic compound to be nitrated to the action of said mixture until reaction with the nitric acid of the mixture is substantially complete, and then separating from the spent acid the nitro-compound formed.

1,640,738. DIRIGIBLE HEADLIGHT. THOMAS F. TAYLOR, San Francisco, Calif. Filed Oct. 21, 1925. Serial No. 63,807. 6 Claims. (Cl. 240—62.)

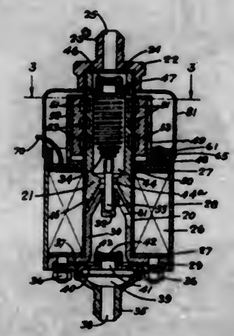
1. The combination with a vehicle steering mechanism and a swiveled lamp, of an operating connection between the lamp and steering mechanism, comprising a pair of crank arms pivoted upon the frame of the vehicle and having a projecting portion near their pivoted ends, a spring acting against the projecting portion for maintaining the crank arms in central position, a loose connection between the steering mechanism and one of said crank arms, and a rigid connection between the other crank and the lamp.

1,640,739. ROAD FORM. HERAULT A. TRESTER, Milwaukee, Wis., assignor to Metal Forms Corporation, Milwaukee, Wis., a Corporation. Filed May 20, 1920. Serial No. 382,808. 21 Claims. (Cl. 25—118.)



1. A form of the character described, including a stake, a hanger detachably applied to the stake, a lever controlled manually operable clamp member permanently carried by one of the members for obtaining a quickly detachable connection between the hanger and stake, and a rail carried by the hanger.

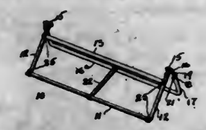
1,640,740. DRY POWDERED CLEANING COMPOSITION. JOSEPH TRUMAN, Hanover, N. H. Filed Nov. 20, 1922. Serial No. 602,233. 1 Claim. (Cl. 87—5.)



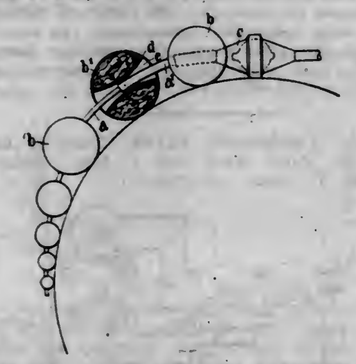
A cleaning composition consisting of a dry powdered mixture of soap 5.2%, soda ash 23.9%, silica 66.6%, and a moisture content of 4.3%.

1,640,741. PUMP. HUGH WALLACE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 9, 1924. Serial No. 712,165. 7 Claims. (Cl. 172—126.)

1. An electromagnetic motor comprising, in combination, a guide; a reciprocative member in the guide; an electromagnet coil for operating the reciprocative member; a second electromagnet including a winding and a plurality of pole pieces providing a divided magnetic circuit; a movable armature associated with the second electromagnet and adapted to be moved from one to the other of said pole pieces; a circuit interrupter in circuit with the reciprocative member operating coil, and operable by the movement of the said armature to control the energization of the said coil; and means provided on the said member to vary the magnetic circuit from one to the other of said pole pieces whereby to operate the interrupter operating armature.



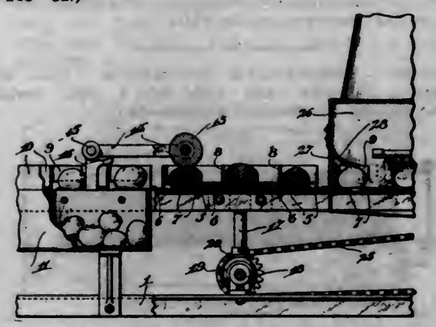
1,640,742. PUMP. HUGH WALLACE and JOHN H. HUNT, Dayton, Ohio, assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 21, 1924. Serial No. 714,821. 7 Claims. (Cl. 172—126.)



1. An electromagnetic motor comprising in combination a cylinder; a magnetic reciprocative member within said cylinder; a magnet winding for operating said member; means for controlling the energization of the magnet winding; and an armature exterior of the cylinder and operable by the magnetic drag of the moving reciprocative member to effect the operation of the magnet winding controlling means.

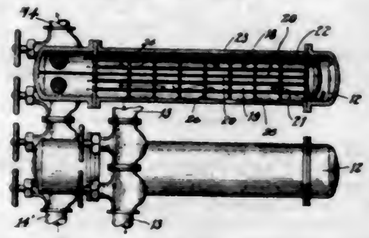
1,640,743. EMERGENCY BED. ANDREW F. YUHASZ, Cleveland, Ohio. Filed June 28, 1924. Serial No. 722,987. 2 Claims. (Cl. 5—71.)

1. A detachable headrest construction for emergency beds comprising a headrest frame having a resilient top bar and a supporting portion pivotally attached to said frame and adapted to fold flat thereagainst when collapsed, said support comprising two rods pivotally mounted in said frame and a tubular member having its ends bent to receive said rods, and means for adjustably securing said rods in said tubular ends.



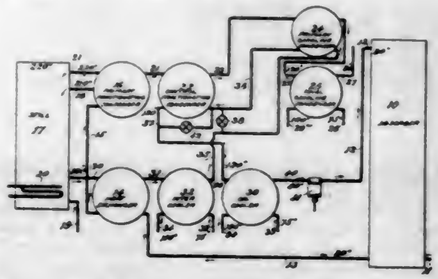
1,640,744. MEANS FOR PROTECTING CABLES FROM KINKING AT THE POINT WHERE THEY EMERGE FROM JUNCTION BOXES OR CASINGS. GEORG ZAPF, Cologne-Mulheim, Germany, assignor to Felten & Guilleaume Carlswerk Actiengesellschaft, Cologne-Mulheim, Germany. Filed Feb. 5, 1926, Serial No. 86,303, and in Germany Apr. 17, 1925. 4 Claims. (Cl. 173—322.)

1. Means for protecting cables against kinking, where they emerge from a junction box during the laying of the cable when they run over leading sheaves and paying drums, comprising in combination with a cable a series of spherical bodies strung on the cable and capable of coming in direct contact with the leading sheaves and paying drums, the diameters of which spherical bodies decrease the further they are from the junction box, as set forth.



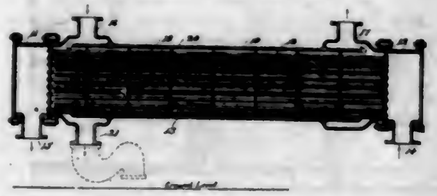
1,640,745. MACHINE FOR PREPARING FRUITS FOR CANNING. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Dec. 31, 1925. Serial No. 78,560. 5 Claims. (Cl. 146—81.)

1. A machine for preparing fruits for canning including an endless conveyor provided with spaced seats for the fruit; a rotary cutting disk adapted to sever the



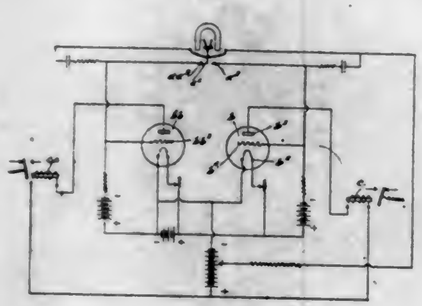
butts; means for holding the fruit against displacement, and means for imparting motion to the conveyor and the cutting disk.

1,640,746. HEAT EXCHANGER. CARL F. BRAUN, San Francisco, Calif. Filed Mar. 14, 1922. Serial No. 543,585. 4 Claims. (Cl. 257—239.)



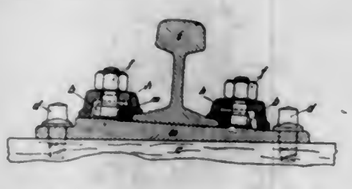
1. In a heat exchanger, a shell, a longitudinally extending tube nest unit comprising a plurality of parallel tubes, means for separating the tubes into groups extending along longitudinal passageways, and means for creating a tight joint between the separating means and the shell, while permitting the tube nest unit to be removably secured within said shell.

1,640,747. ABSORPTION PLANT. CARL F. BRAUN, Pasadena, Calif. Filed Feb. 7, 1923. Serial No. 617,494. 11 Claims. (Cl. 196—8.)



10. A method of absorption in which gasoline is recovered from natural gases, which consists in saturating a denuded menstruum in an absorber, thereafter carrying the saturated menstruum to a still where its vapors are given off at a relatively high temperature, and then condensing said vapors using water as a final cooling agent and employing the absorbing menstruum as an intermediate cooling agent between the still and the final vapor cooling water condenser at a temperature below the scaling temperature of the water.

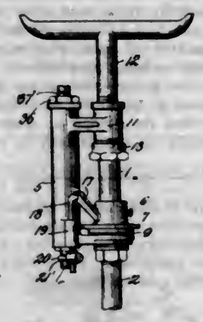
1,640,748. PROGRESSIVE CONDENSER. CARL F. BRAUN, Pasadena, Calif. Filed Feb. 7, 1923. Serial No. 617,492. 4 Claims. (Cl. 196—94.)



1. A method of condensation which consists in passing vapors longitudinally over and around cooling and dephlegmating surfaces of substantially equal surface areas.

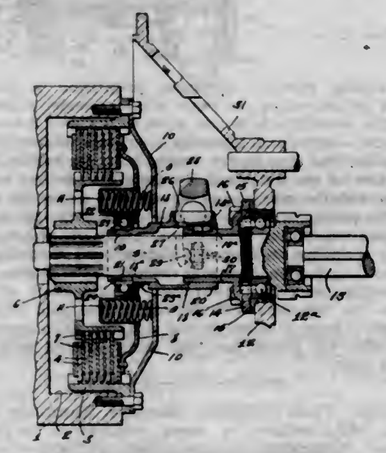
1,640,749. ELECTRIC-TRANSLATING DEVICE. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed Apr. 6, 1923. Serial No. 630,294. 2 Claims. (Cl. 178—88.)

1. In a thermionic repeater, vacuum tubes, a receiver adapted to move in one direction in response to impulses of one polarity and in the opposite direction in response to impulses of opposite polarity, contacting devices operated by the movement of said receiver in either direction, each of said contacting devices being in circuit with the grid of a vacuum tube, and separate controlling devices in the plate circuits of said vacuum tubes whereby a current impulse of one polarity will be repeated by one of said controlling devices when the receiver moves in one direction and a current impulse of opposite polarity will be translated by the other translating device when the receiver is moved in the opposite direction, each of said translating devices being controlled by change of potential in the grids of the respective tubes.



1,640,750. RAIL FASTENING. THEODOR BUCHHOLZ, Berlin-Zehlendorf-West, Germany. Filed Jan. 15, 1926. Serial No. 81,562, and in Germany Apr. 24, 1925. 20 Claims. (Cl. 238—304.)

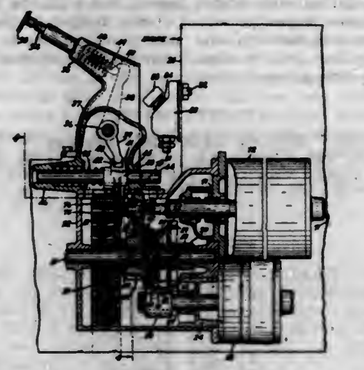
1. A rail fastening, comprising a rail seat in combination with rib-like members, clips capable of bridging the said members, bolts for holding down the said clips and a recess in each rib-like member, into which the bolts can be inserted from the side, the bolts lying between the clip and the base of the rail, whereby they are held in position in the said recesses, as set forth.



1,640,751. SPRINKLER. GUADALUPE BURLNA, Santa Barbara, Calif. Filed Mar. 6, 1926. Serial No. 92,669. 10 Claims. (Cl. 299—66.)

1. A sprinkling device comprising a stand pipe, a ratchet secured thereto, a cylindrical chamber mounted on said stand pipe to rotate relatively thereto, a water sprinkling member connected with said chamber to move therewith, and having communication with said stand pipe, means to control the passage of water from said standpipe to said chamber, a piston operable by water pressure within said chamber, means associated with said piston and engaging said ratchet continuously to rotate said chamber relatively to said stand pipe with

an intermittent motion, and means to exhaust the water from said chamber after each intermittent motion thereof.

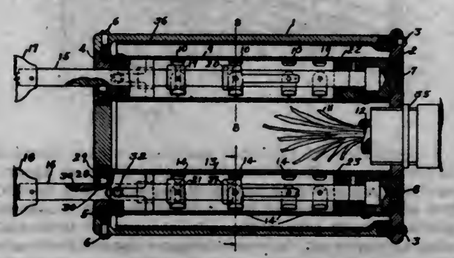


1,640,752. CLUTCH CONSTRUCTION. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Nov. 7, 1923. Serial No. 673,247. 6 Claims. (Cl. 192—110.)

1. The combination of a clutch including a shaft, a member shiftable axially of the shaft and means for shifting said member and a transmission gear case having a bearing for the rear end of the shaft and a bearing cap mounted on the case and including a tubular portion encircling the shaft, the shifting means comprising a sleeve slidable axially on the shaft and on the tubular portion of the cap, the sleeve inclosing the tubular portion of the cap.

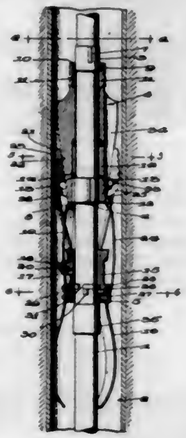
1,640,753. ENGINE-STARTING APPARATUS. WILLIAM A. CHRYST, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 18, 1925. Serial No. 24,065. 12 Claims. (Cl. 290—37.)

1. Engine starting apparatus comprising, in combination, an electric motor, a gear driven by the motor, means for moving the motor gear into mesh with a gear connected with the engine to be started and for causing the motor to operate, and means including a member rotatable independently of said first means and the motor for imparting rotation to the motor gear as it is advanced into mesh with the engine gear.



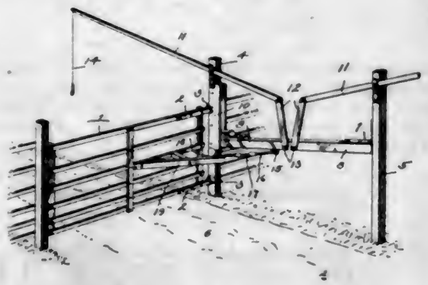
1,640,754. BEDSTEAD. MARK H. COVEY, Blue Mountain, Miss. Filed Nov. 27, 1926. Serial No. 151,229. 1 Claim. (Cl. 5—183.)

An extensible bedstead comprising two bedstead sections each having a longitudinal rail, supporting legs therefor and end walls, the end walls of one bedstead section being provided upon their upper edges with inwardly turned tubular guides, the end walls of the other bedstead section slidingly contacting with the inner faces of the end walls of the first named section and being provided with beads on their upper edges engaged in the respective guides, the lower edges of the walls of the latter bedstead section being provided with outwardly projecting longitudinally extending channels to receive the lower edges of the walls of the first bedstead section, and additional supporting legs fixed to the walls of the first named section and having guide seats to receive the guide channels of the lower edges of the walls of the second named bedstead section.



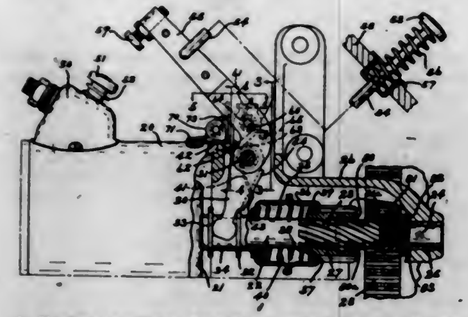
1,640,755. ELECTRIC SWITCH. ROBERT C. DEALE, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 25, 1923. Serial No. 659,339. 2 Claims. (Cl. 200—5.)

1. In a portable switch, the combination with a casing, a plurality of contact fingers located in said casing, and two plug members located in openings formed in said



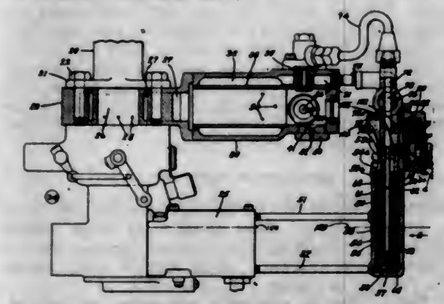
casing, of two contact rods projecting through said plug members into said casing, contact segments on said rods for engaging said contact fingers, and a pin on each of said rods projecting into a T-slot formed in the associated plug member, said slots permitting each rod to assume one position when lowered and to assume one of two positions when raised.

1,640,756. TUBING CATCHER. STEPHEN V. DILLON, Tulsa, Okla. Filed Jan. 19, 1927. Serial No. 162,043. 20 Claims. (Cl. 103—219.)



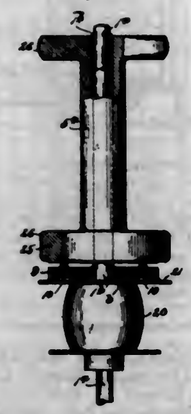
1. The combination with a well casing and tubing therein, of a tubing catcher including a slidable wedge block, a slip assembly, and friction means between the slip assembly and casing, said friction means supporting the slip assembly in the casing at all times, and the wedge block forcing the slip assembly down the casing as the tubing descends, said wedge block functioning to expand the slips of the slip assembly into locking engagement with the casing.

1,640,757. GATE. CHARLES M. EDWARDS, Washington Court House, Ohio, assignor of one-half to Melvin A. Harsh, Columbus, Ohio. Filed Aug. 15, 1924. Serial No. 732,164. 1 Claim. (Cl. 39—59.)



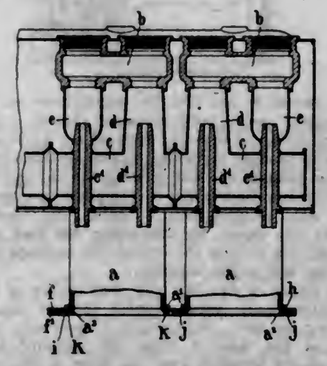
A mechanism of the class described, a gate mounted for swinging movement in a horizontal plane, an operating beam for said gate arranged perpendicularly to said gate when the latter occupies a closed position, a support upon which said gate is pivotally mounted for horizontal swinging movement, a second support spaced from said first named support and on which said beam is pivotally mounted for vertically swinging movement, a guide carried by said first named support for the reception of the free swinging end of said beam and serving to guide and limit the oscillatory travel of said beam in a vertical plane, pivoted operating devices carried by said supports and connected with said beam, a rigid offset structure extending horizontally from said gate contiguous to its inner or hinged end, and a flexible connection between the extreme outer portion of said offset structure and said beam, said connection being proportioned to pass beneath said beam when the latter assumes an elevated position, whereby the weight of the beam is utilized to retain the gate locked in either its opened or closed positions, said connection providing an adjustment to vary its effective length.

1,640,758. ENGINE-STARTING APPARATUS. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 25, 1924. Serial No. 739,954. 10 Claims. (Cl. 74—7.)



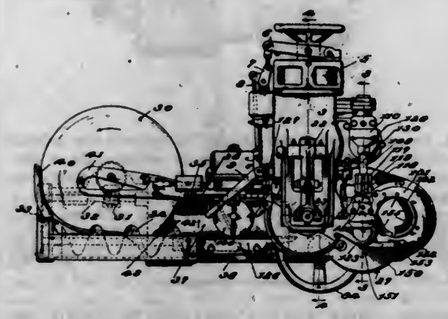
1. Engine starting apparatus comprising a motor; means for connecting the motor with the engine including a pinion movable axially into mesh with a gear connected with the engine, and including provisions whereby after the pinion has been partly meshed with the engine gear, operation of the motor will complete the meshing of the pinion with the gear; manually operable means for causing the pinion to be moved into mesh with the engine gear and for causing the motor to rotate the pinion, said means including an operating element and a spring for transmitting motion from said element to the pinion; and cushioning means for retarding the movement of the pinion into full mesh with the engine gear, said cushioning means being constructed and arranged to be operative only after the pinion has been partly meshed with the engine gear.

1,640,759. FUEL BURNER. GEORGE F. EMBSHOFF, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 24, 1923. Serial No. 641,253. 7 Claims. (Cl. 123—122.)



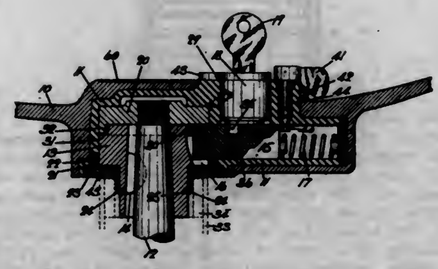
1. Apparatus for heating the intake of an internal-combustion engine comprising, in combination, a fuel burner having a combustion chamber communicating with the engine intake, and a fuel nozzle extending within the combustion chamber; a carburetor including a metering well, a fuel nozzle extending from the well, and a valve frame attached to the well and providing a secondary mixing chamber, receiving said fuel nozzle and having a passage for connecting the secondary mixing chamber with the burner fuel nozzle, and another passage for connecting the burner combustion chamber with atmosphere; and a device responsive to engine suction for controlling the admission of air directly to said passages.

1,640,760. FRICTION CONNECTION FOR SPINDLES AND BOBBINS OR SPOOLS. ELIAS J. EMERY, Lynn, Mass. Filed Nov. 1, 1922. Serial No. 598,412. 12 Claims. (Cl. 242—156.)



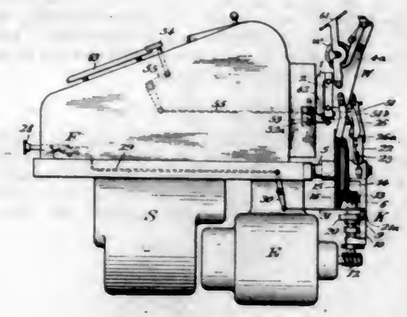
1. A friction device comprising a perforate tension disk adapted to be interposed between surfaces of a spindle and of a bobbin or spool respectively for the purpose of acting as a brake against relative rotation between said surfaces, and having one or more resiliently supported plugs adapted to engage with one of said surfaces and to be displaced against its resilient support by pressure in the direction of the axis of the spindle.

1,640,761. CYLINDER BLOCK FOR INTERNAL-COMBUSTION ENGINES. JENÖ FEJÉS, Budapest, Hungary. Filed June 17, 1926. Serial No. 116,693. 3 Claims. (Cl. 123—173.)



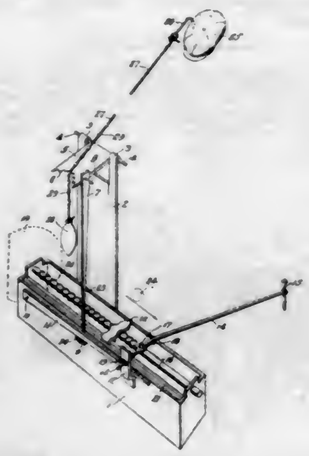
1. A cylinder block of pressed steel for internal combustion engines comprising in combination a cylinder, a cylinder head, induction piping, a bed plate, a recess in the bed plate for the reception of the cylinder and means for securing the cylinder to the bed plate, said means comprising an external shoulder near the lower end of the cylinder, a flange forming integral part with the bed plate and constituted by an inward projection and a downward projection whereby an annular recess is formed between the latter projection and the remainder of the bed plate, the inner surface of the downward projection being tapered, whereby after the cylinder end has been inserted into the recess formed in the bed plate with the shoulder resting on the top of the bed plate and the cylinder end has been pressed out against the tapered surface the cylinder is locked in position, and an outer metal weld along the edges of the downward projection and end of the cylinder, for the purposes set forth.

1,640,762. MACHINE FOR CLOSING FILLED CANS. HENRY A. FINK, Oak Park, Ill., and GEORGE FLOOK, Syracuse, N. Y., assignors to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 17, 1925. Serial No. 63,103. 48 Claims. (Cl. 113—14.)



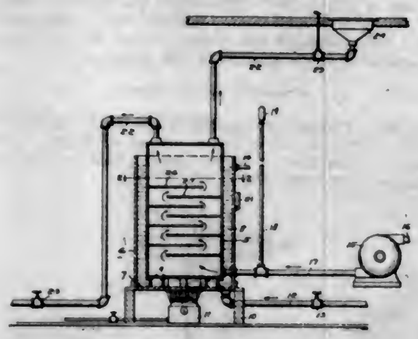
1. A filled can closing machine comprising a seaming head operating in a fixed position, mechanism for moving a filled can horizontally in a direction beneath the head, then in a curved path, upwardly toward the head, and finally in a vertical path into cooperative engagement with the head.

1,640,763. LOCKING STEERING WHEEL. HARVEY D. GEYER and ALVA W. SCOTT, Dayton, Ohio, assignors to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed May 22, 1923. Serial No. 640,783. 11 Claims. (Cl. 70—129.)



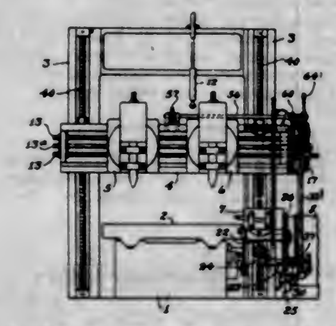
1. In a vehicle having a steering shaft, in combination, a steering wheel rotatably mounted upon said shaft, locking means for locking the wheel non-rotatably upon said shaft, a key lock for moving said locking means, a safety means independent of said key lock to positively hold said locking means in locked position, and means for automatically moving said safety means into safety position when the wheel is locked upon the shaft.

1,640,764. CARRIAGE-MOVING MECHANISM FOR TYPEWRITERS AND ADDING MACHINES. FERDINAND GLEIM, Schaffhausen, Switzerland, assignor to the Firm Wales Adding Machine Company, Schaffhausen, Switzerland. Filed Mar. 19, 1927, Serial No. 176,694, and in Germany Apr. 20, 1925. 4 Claims. (Cl. 197—65.)



1. Carriage moving mechanism for typewriters, adding machines and the like, comprising in combination, a continuously rotating electric-motor and driving connections between said motor and the carriage including a clutch, a bipartite cord and a spring interposed in said two parts of the cord and adapted to tension said cord drive and to cushion shocks in the starting movement of the carriage.

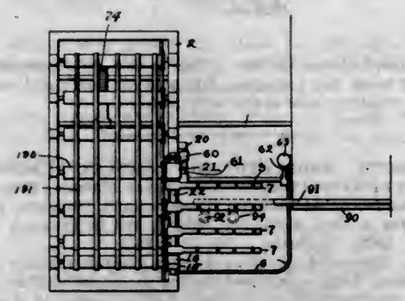
1,640,765. GOLF PRACTICING AND TRAINING DEVICE. WILLIAM J. GOLDSWORTHY, San Francisco, Calif. Filed Mar. 22, 1926. Serial No. 96,543. 5 Claims. (Cl. 273—35.)



5. In a golf practicing and training device in combination, an elongated blow receiving means secured by one end, a spindle freely revolving in a support, an offset from the spindle in separable connection with the elongated blow receiving means, a worm on the spindle, a traveler actuated by the form and a distance scale for the traveler.

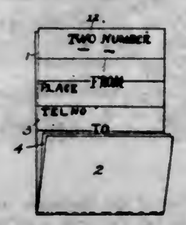
1,640,766. HEATING SYSTEM. LEWIS GRAFFLIN, Ocean View, Va., assignor, by direct and mesne assignments, to Two-Season Process, Incorporated, Norfolk, Va., a Corporation of Virginia. Filed Jan. 17, 1927. Serial No. 161,611. 5 Claims. (Cl. 126—110.)

1. In a hot air heating system, an air pressure storage tank, a water jacket surrounding the storage tank, means for applying heat to the exterior of the water jacket, means to withdraw heated air from the air pressure storage tank, and means for supplying air under pressure to the tank and maintaining the pressure substantially constant during the discharge of the air through the withdrawing means.



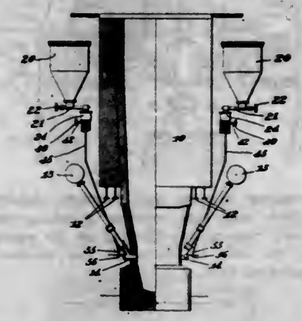
1,640,767. TOOL-OPERATING MECHANISM. GEORGE E. GREENLEAF, Plainfield, HAROLD L. BLOOD, North Plainfield, and Roswell H. Rausch, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed June 7, 1923. Serial No. 643,945. 9 Claims. (Cl. 90—49.)

1. In a planer or the like, the combination of a base, a reciprocating work table mounted thereon, two uprights respectively at opposite sides of the table, a cross rail mounted to slide vertically on the uprights over the table, a tool support movably mounted on the rail, means for intermittently feeding the tool support synchronously with the table reciprocation, a motor, and mechanism operated by the motor for traversing the tool support continuously, for moving the rail on the uprights and for clamping the rail to the uprights.



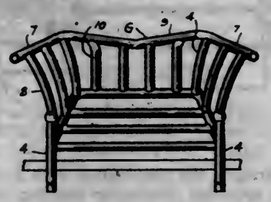
5. In a planer or the like, the combination of a base, a reciprocating work table mounted thereon, means for reciprocating the table, two uprights respectively at opposite sides of the table, a cross rail mounted to slide vertically on the uprights over the table, a tool support movably mounted on the rail, a screw operatively connected to the support, two coaxial gears on the rail rearwardly of the screw, means adapted to operatively connect either gear with the screw, mechanism for intermittently rotating one gear from the table reciprocating means, a motor on the rail operatively connected with the other gear, the said one gear being adapted to intermittently feed the tool support synchronously with the table reciprocation and the said other gear being adapted to traverse the tool support continuously, and mechanism operated from the motor operated gear for moving the rail on the uprights.

1,640,768. CARRY OFF. CHARLES J. GUTBERLET, Philadelphia, Pa. Filed Dec. 31, 1923. Serial No. 683,832. 8 Claims. (Cl. 271—83.)



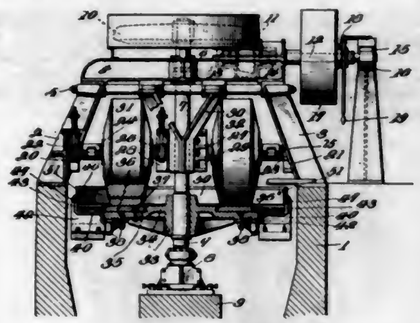
1. In a carry off for plate presses, the combination with a horizontally moving carriage and a moving bed having a step by step movement on which bed printed material is deposited by a fly, of a fly receiving the printed material from the carriage and depositing it upon the bed the sticks of which fly are provided with suction devices actively operating when the fly is turning and released when it is positioned above the bed.

1,640,769. TELEPHONE-RECORD TICKET PACK. CHARLES J. GUTBERLET, Philadelphia, Pa. Filed Dec. 17, 1925. Serial No. 76,046. 1 Claim. (Cl. 129—16.7.)



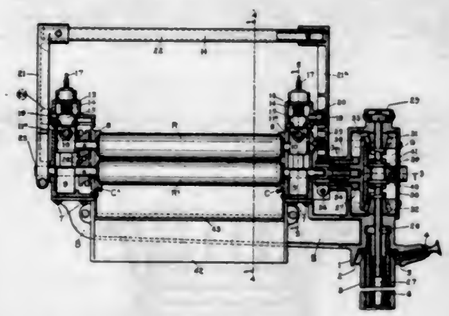
A ticket pack consisting of a pair of tickets of substantially the same shape and size, each folded at substantially the same distance from the top into a body portion and a flap, the flap of each ticket folding over a portion only of the body of each ticket and covering and hiding the face of the lower portion of said body, the lower portion of each of these tickets where the said face would be covered by the flap, containing appropriately designated spaces for confidential information, each of said pair of tickets containing different printed matter from the other, and the said tickets being packed in pairs, each pair consisting of one ticket of each kind, both folding the same way, and the flaps lying in the same direction one inside the other with the body and flap of one enclosing the body and flap of the other, the inner ticket having on the upper part of its face an appropriately designated space for the telephone number of the sender and upon the part covered by the flaps an approximately designated space for the number of the receiving telephone, and covering and concealing all matter on the face of the enclosing ticket and all matter on the enclosed ticket above the turned up flaps being concealed thereby, said bodies of said tickets being pinned together.

1,640,770. FEEDING APPARATUS FOR PULVERIZED MATERIAL. EDWARD H. HAMILTON and LEOTIS W. KIRK, Midvale, Utah, assignors to United States Smelting, Refining & Mining Company, Boston, Mass., a Corporation of Maine. Filed Feb. 4, 1920. Serial No. 356,339. 3 Claims. (Cl. 110—104.)



1. The combination with a blast furnace having a plurality of tuyères through which pulverized fuel is delivered to the furnace, of means for delivering pulverized fuel to each tuyère, a conduit for each delivery means through which the fuel flows, a trough from the bottom of which the conduits lead, and means for delivering pulverized fuel into the trough in an uncaked mobile condition and for maintaining it at a uniform depth above the mouths of the conduits.

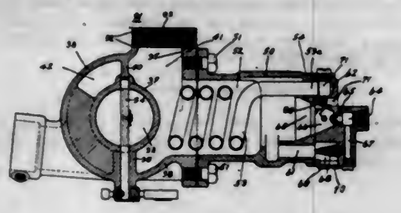
1,640,771. GRATE. WILLIAM A. HANNUM, Grand Lake, Colo. Filed Dec. 4, 1926. Serial No. 152,628. 1 Claim. (Cl. 126—121.)



A grate structure comprising vertical tubular front corner post sections adapted to receive air currents through their lower ends and closed at their upper ends to provide air retaining pockets, horizontal tubular side sections joined at their forward ends with the corner sections at points below the upper ends thereof, bottom tubular sections joined with the said tubular side sections and bridging the space between them, upwardly disposed back and side wall tubular sections joined at their lower ends with the horizontal side and one of the bottom sections and a substantially U-shaped upper edge tubular section joined at points between its ends with the upper ends of all of the upwardly disposed back and side wall sections, said upper edge section being open at both of its ends to form air current outlets, said outlets being spaced and located substantially vertically above said corner post sections and the air retaining pockets thereof.

1,640,772. GRINDING PAN FOR GRINDING MACHINES FOR GRINDING CLAYS, SHALES, AND OTHER DRY AND SEMIDRY MATERIALS. THOMAS A. HIBBINS, Wellsville, Ohio, assignor to Stevenson Company, Wellsville, Ohio. Filed Mar. 20, 1925. Serial No. 16,993. 18 Claims. (Cl. 83—45.)

1. A grinding pan of the character described, comprising a flat horizontal rotating grinding surface, and an adjustable rim carried thereby on its outer edge for controlling the size of the spill way between the rim and the grinding face.

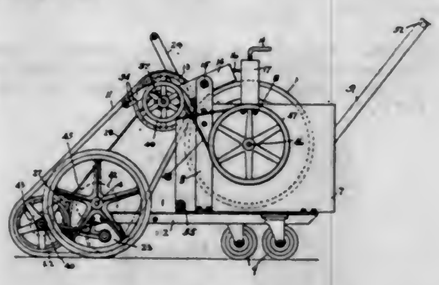


1,640,773. CLOTHES WRINGER FOR WASHING MACHINES. WINTHROP K. HOWE, Rochester, N. Y., assignor, by mesne assignments, to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 18, 1921. Serial No. 445,984. 15 Claims. (Cl. 68—32.)

4. In a wringer, the combination with a pair of rolls, of a single operating handle for starting, stopping and reversing the rolls and for applying and releasing the pressure between the rolls, and means biasing the handle to a neutral position in which the rolls are stopped and the pressure therebetween removed.

1,640,774. HAND-PUMP PRESSURE BURNER. JOHN H. HUNT and HUGH WALLACE, Dayton, Ohio, assignors, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 23, 1923. Serial No. 640,990. 5 Claims. (Cl. 123—122.)

1. In a fuel burner for heating the fuel charge of an internal-combustion engine, the combination with a member attached to the engine intake and having a fuel passage 33 and a heating chamber 41 for the passage: of a burner body 50 providing a combustion chamber 52 attached to said member and communicating with the heating chamber 41; a nozzle block detachably secured to the burner body and having an air duct 71; an engine fuel duct 53 connected with said air duct and extending through said chambers and connected with said

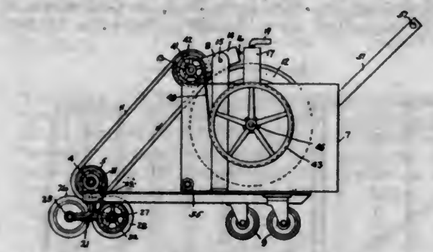


engine fuel passage 33; a fuel nozzle 80 supported by said block and projecting into said air duct; and means for supplying said nozzle with fuel.

1,640,775. PRODUCTION OF COMPLEX AUROTHIOSULPHATE COMPOUNDS. EINAR KEIDING, Birkerod, and JOHANNES KEIDING, Charlottenlund, Denmark. Filed May 3, 1926, Serial No. 106,545, and in Denmark Nov. 7, 1925. 3 Claims. (Cl. 23—115.)

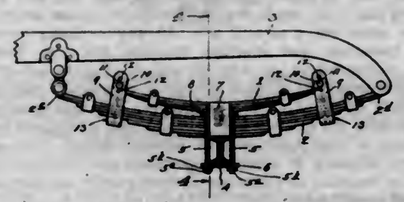
1. Process of producing complex aurothio-sulphate compounds, which comprises reacting on an auro-halide with the thio-sulphate of an alkali forming metal in a solution containing some alcohol and precipitating the salt from the solution with alcohol.

1,640,776. PAINTING MACHINE. HENRY O. KUHLHOFF, Euclid, Ohio, assignor to The Continental Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 9, 1925. Serial No. 61,455. 20 Claims. (Cl. 91—54.)



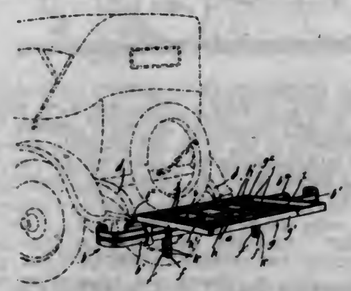
14. An apparatus of the character described having in combination a wheeled structure, a paint reservoir mounted thereon, a wheel supported adjacent to the upper forward portion of said reservoir, an applicator belt engaged over said upper wheel, means for supporting said applicator belt in contact with the surface to be marked, means within said reservoir for applying paint to the outer surface of said applicator belt, a belt lifter bar disposed beneath said applicator belt, pivotal supports for said bar having a plurality of adjustment apertures for the same, and means to move said bar and its supports to lift said belt away from the upper belt supporting wheel.

1,640,777. ROAD MARKER. HENRY O. KUHLHOFF, Euclid, Ohio, assignor to The Continental Products Company, Euclid, Ohio, a Corporation of Ohio. Filed Oct. 15, 1925. Serial No. 62,549. 8 Claims. (Cl. 91—48.)



8. A paint conveying and distributing device for a painting machine, comprising a paint conveying belt,

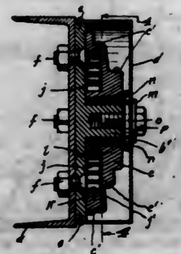
means for supplying paint solely to the outer surface thereof, means for transferring paint from the belt to



the surface to be coated and means for controlling the thickness of the coat of paint applied to said belt.

1,640,778. VEHICLE SPRING. FRANK J. LAHER, Portland, Oreg. Filed Oct. 2, 1924. Serial No. 741,164. 8 Claims. (Cl. 267—45.)

1. In a vehicle, the combination with a load carrying spring of an auxiliary spring, a pendent member at each side of said auxiliary spring adapted to hold said auxiliary spring against shifting longitudinally upon said load carrying spring, devices connecting the auxiliary spring with the load carrying spring at each side of the middle thereof, such connections being adapted to permit the normal flexure of the load carrying spring under a load less than a predetermined maximum, and to distribute the excess load between said auxiliary spring and said load carrying spring.

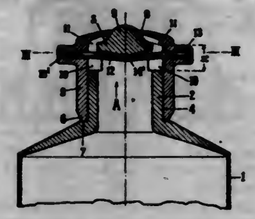


1,640,779. LUGGAGE CARRIER FOR AUTOMOBILES. FRANK J. LAHER, Portland, Oreg. Filed Feb. 26, 1925. Serial No. 11,763. 2 Claims. (Cl. 224—29.)

1. A luggage carrier attachment, of the character described, for vehicles comprising a rack provided at its lateral sides with spaced contiguous members extending parallel with said lateral sides and supporting brackets inserted between said members.

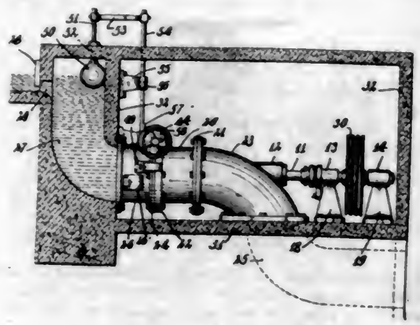
1,640,780. SHOCK ABSORBER. FRANK J. LAHER, Portland, Oreg. Filed May 21, 1925. Serial No. 31,820. 3 Claims. (Cl. 267—10.)

1. In a shock absorber of the character described, a base, a rotatable drum mounted thereon, a spiral spring controlling the rotation thereof, a flexible connection member wound about the periphery of said drum in a direction opposite to that in which said spring tends to rotate said drum, the mounting for said drum on said



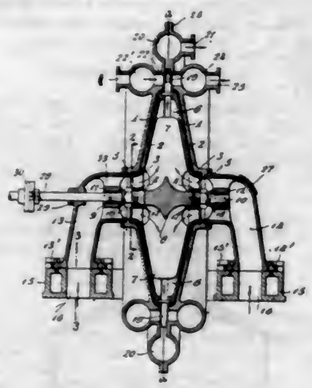
base having a face of relatively flexible material having relatively large co-efficient of friction, and means adjustable to vary the resistance of said face to the rotation of said drum.

1,640,781. ART OF MURAL DECORATION. CHARLES R. LAMB, New York, N. Y. Filed Nov. 3, 1924. Serial No. 747,682. 5 Claims. (Cl. 41—34.)



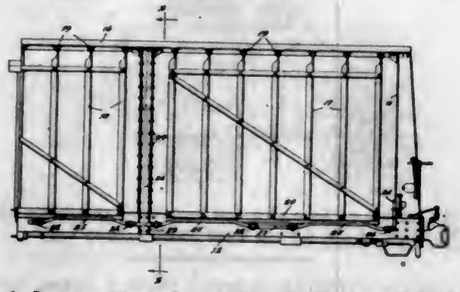
1. A method of mural decoration, which consists in forming separate plastic masses of cement mixed with different dry colors, and applying portions of such differently colored masses directly to different portions of a flexible fabric, according to an artistic decorative design, in such manner that the entire surface of the fabric will be covered and the contiguous marginal portions of plastic masses of different colors will unite while in moist condition, to form an integral sheet.

1,640,782. AUTOMATIC CLOSURE FOR COLLAPSIBLE TUBES OR THE LIKE. HUGO LENTZ, Berlin, Germany. Filed May 18, 1925. Serial No. 30,920. 6 Claims. (Cl. 221—60.)



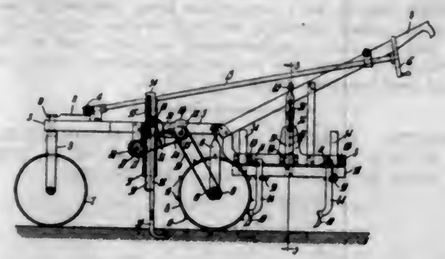
1. A closure for collapsible tubes and the like comprising in combination with the collapsible tube, a neck having an outlet passage, a cap reciprocably mounted on said neck and normally closing said passage, and a resilient member extending diametrically through apertures in the walls of said neck and across said passage, and being secured to said cap to yieldingly retain the cap in its normal position.

1,640,783. WATER TURBINE. JOSEPH LEOPOLD, New York, N. Y. Filed Jan. 22, 1926. Serial No. 82,981. 2 Claims. (Cl. 137—158.)



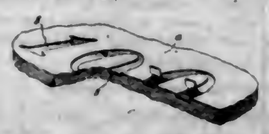
2. In a device of the class described, a reservoir casing, a valve operating mechanism for turbines comprising a float disposed in said casing, a rod rigidly attached to said float and slidably mounted in the upper wall of said casing, a vertical shaft slidably mounted exterior of said casing on the side wall thereof, rack teeth on the lower end portion of said shaft, a cross rod rigidly attached at one end to said vertical shaft and at the other end to the vertical rod of said float, and a pinion positioned to engage said rack teeth and adapted to be rotated by upward and downward movements of said shaft to regulate automatically the flow of water to said turbine for decreasing such flow when the float is raised by water in said reservoir and for increasing such flow when the float is lowered.

1,640,784. TURBINE AND ROTARY COMPRESSOR. CHRISTIAN LORENZEN, Berlin, Germany, assignor to Lorenzen-Turbinen Aktiengesellschaft, Bern, Switzerland, a Corporation of Switzerland. Filed Jan. 11, 1926. Serial No. 80,424, and in Germany Jan. 27, 1925. 5 Claims. (Cl. 230—128.)



1. In a rotary compressor, a rotor having a substantially axial inlet for the fluid to be compressed and a peripheral outlet for the compressed fluid, a normally stationary pipe communicating with said inlet and provided with a bearing for said rotor, and a base provided with a guide, parallel to the rotor axis, along which said pipe may be adjusted.

1,640,785. PARTITIONLESS CANE CAR. ROBERT J. MAGOR, Montreal, Quebec, Canada, assignor to Magor Car Corporation, New York, N. Y., a Corporation of Delaware. Filed June 19, 1926. Serial No. 117,046. 10 Claims. (Cl. 105—355.)

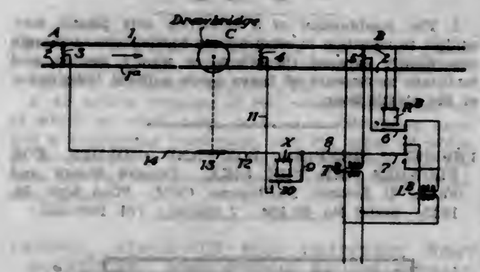


1. In a partitionless cane car, the combination of an underframe including a side sill, and a cross bearer, of a belt rail extending parallel to the side sill and positioned above the same, a plurality of side gates hinged at their upper edges to said belt rail and normally depending therefrom and abutting the side sill, two locking rods journalled to the side sill and coacting to constitute all the means for locking the gates in position engaging the side sill, a partition post between adjacent doors and connecting the side sill and belt rail, and a buttress brace in rear of the partition post secured thereto and operatively disposed to brace the partition post and belt rail and to transmit strains thereon downwardly and inwardly to the cross bearer.

1,640,786. AGRICULTURAL CULTIVATOR AND WEED CUTTER. COSTAS J. MAHERAS, Boston, Mass. Filed Oct. 13, 1924. Serial No. 743,193. 8 Claims. (Cl. 97—18.)

1. In combination with a wheeled frame, a vertically slidable shaft carrying a cutter, means for locking said shaft in lowered position, a member slidable vertically with relation to the frame and the shaft, a compression spring between said member and shaft, and means driven from a ground wheel for lifting said member and then releasing the locking means.

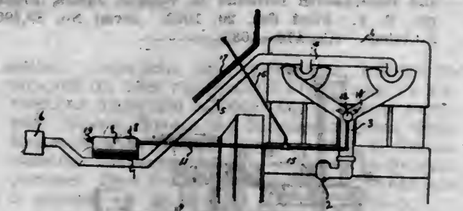
1,640,787. PROCESS OF COLORING LETTERS OR FIGURES IMPRESSED IN METAL TAGS, BADGES, ETC. OTIS M. MARTIN and CHARLES M. WEBSTER, Detroit, Mich. Filed May 25, 1925. Serial No. 32,618. 2 Claims. (Cl. 41—35.)



1. The method of applying a pigment to depressions in a metal article, which consists in providing a die for forming the depressions and placing over the metal blank a fibrous sheet carrying the pigment and then forcing the die toward the blank to sever portions of the sheet therefrom and force the severed portions carrying a pigment into the metal at the bottom of the depressions in the metal blank.

1,640,788. VIBRATION DAMPENER. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Original application filed Apr. 23, 1926, Serial No. 104,242. Divided and this application filed Nov. 12, 1926. Serial No. 148,024. 5 Claims. (Cl. 74—6.)

1. A vibration damping device comprising a rotating member, a plurality of radially opposed seats on said member, inertia means, and yielding means mounting said inertia means between said seats.

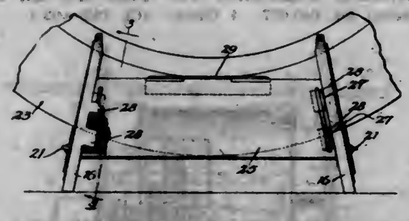


1,640,789. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 29, 1926. Serial No. 125,704. 2 Claims. (Cl. 246—34.)

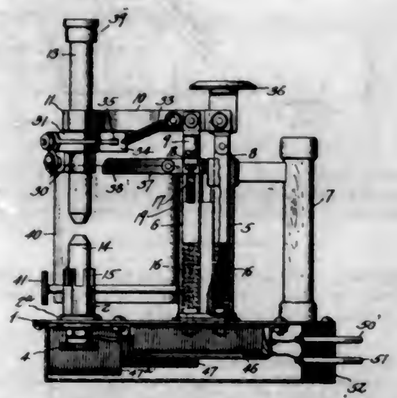
1. In combination, a section of railway track, a drawbridge located at an intermediate point in said section, a main train governing circuit for said section including the rails of the section from end to end as well as the winding of a relay and a contact operated by said drawbridge, and an auxiliary train governing circuit for said section including the rails from said intermediate point to the exit end of said section and a back contact of said relay.

1,640,790. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JAMES C. MCCLAIN, Falls City, Nebr. Filed Nov. 1, 1923. Serial No. 672,235. 1 Claim. (Cl. 123—119.)

The combination with an internal combustion engine, an exhaust pipe connected thereto, and a muffler connected to said pipe, of a pressure tank arranged at a remote point from said engine and adjacent but above said exhaust pipe between the engine and the muffler and in proximity to said muffler, an inlet pipe connected between the exhaust pipe and said tank whereby the latter receives gases under pressure, a pressure relief valve arranged in said pressure tank, baffles arranged within said tank to cause the gases to flow therethrough in a tortuous path, and an outlet pipe connected at one end to said tank, said outlet pipe having an end projecting into the intake manifold and having an outlet opening of smaller diameter than said inlet pipe whereby the gas will be maintained under relatively high pressure in said tank.

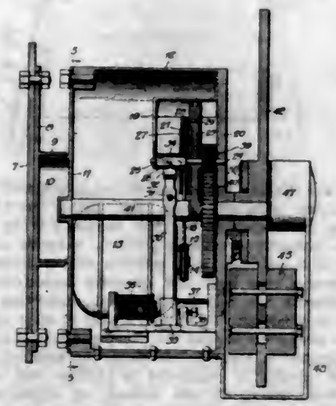


1,640,791. RAILROAD-RAIL JOINT. PETER MCGINLEY, Newark, Ohio. Filed May 14, 1926. Serial No. 109,052. 3 Claims. (Cl. 238—225.)



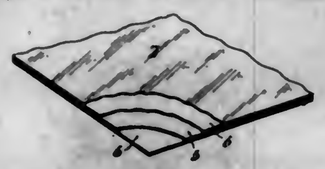
1. A rail joint comprising in combination with the adjacent ends of two rails substantially correspondingly cut away respectively at opposite sides to define inclined walls and shoulders, a block having its opposite sides straight, the block being interposed between the ends of the rails and having inclined surfaces and shoulders coacting with and coformingly engaging the inclined surfaces and shoulders of the rails, said block having its middle portion formed the full width of the adjacent rails and having a tread, base and web to conform to the rails.

1,640,792. TIRE-DISPLAY HOLDER. MYER METZGER, Chicago, Ill. Filed Oct. 1, 1923. Serial No. 665,872. 3 Claims. (Cl. 211—24.)



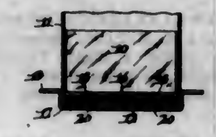
1. A tire display holder embodying a plurality of pairs of clamping members, each pair being provided with clamping jaws, each of the jaw members being provided with an inwardly extending portion, a single pivot connecting each pair of the respective said portions of the jaw members, the said jaw members embodying formations whereby the points of pivotal connection between the jaw members may be varied, a part of each of the said portions projecting beyond the pivot and to the side of the pivot opposite to the side on which the member to which the said portion is connected is located and shaped to form, when the jaws are opened, an abutment to be engaged by the tire when placed between the jaws to operate the jaws to clamp the tire, side members for the holder, and tongue and aperture connections between the ends of the side members and the respective clamping members for detachably connecting them.

1,640,793. HAND ARC LAMP. SVEND M. MEYER, Brooklyn N. Y., assignor, by mesne assignments, of thirteen-fortieths to Svend M. Meyer, Woodhaven, N. Y., and twenty-seven fortieths to William James, Brooklyn, N. Y. Filed Feb. 20, 1926. Serial No. 89,696. 2 Claims. (Cl. 176—103.)



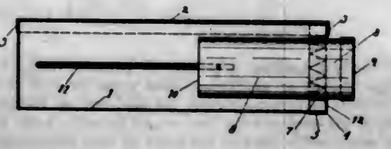
1. A hand arc lamp having two pairs of vertically disposed carbons mounted side by side and being electrically connected in series with each other, a sectionary holder for the lower carbon of each pair and a hand controlled vertically movable bracket and holder for the upper carbons mounted on said bracket, a guide for said bracket and a spring supporting said bracket and tending to hold it in raised position, a spring pressed shackle for each upper carbon holder normally engaging the carbon contained therein to prevent it from freely sliding, a tripping arm for each shackle disposed to lift it from its carbon when the bracket is depressed beyond a predetermined amount to permit the upper carbon to freely slide into contact with its lower carbon and an adjustable stop for controlling the upward movement of said bracket and steadying resistances disposed in the lower portion of said lamp and being electrically connected in circuit with said carbons.

1,640,794. AUTOMOBILE SIGNAL. GEORGE W. MICHAEL, Wilkes-Barre, Pa. Filed May 22, 1923. Serial No. 640,677. 1 Claim. (Cl. 192—.02.)



The combination of a rock shaft, an electric motor, a gear on the rock shaft, a counter shaft, a pulley and a pinion attached to each other and loose on the counter shaft, driving means between the motor and the pulley, a friction clutch member slidable on the counter shaft to engage the side of the pulley and permit slip when the movement of the rock shaft is obstructed, and an electromagnet in the motor circuit, controlling the action of the said clutch member.

1,640,795. WATERPROOF FABRIC AND ITS MANUFACTURE. JOHN STROTHER MILLER, Jr., Rahway, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Apr. 29, 1925. Serial No. 26,603. 6 Claims. (Cl. 91—68.)



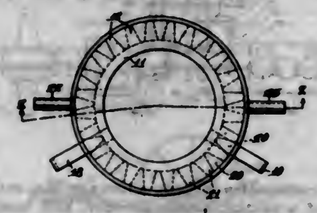
1. A waterproof fabric of the character described, comprising a bitumen-saturated-coated textile fabric varnished with a flexible leather-simulative varnish.

1,640,796. PLASTIC FLOOR AND BEARING THEREFOR. JOHN STROTHER MILLER, Jr., Rahway, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Apr. 29, 1925. Serial No. 26,604. 4 Claims. (Cl. 94—3.)

1. The combination of a relatively soft plastic floor subject to vibration in service with bearing means therein superficially exposed theresbove to wholly sustain and facilitate movements of heavy loads without indentation of the plastic floor.

1,640,797. SHIPPING BOX AND HOLDER FOR FLOWERS AND THE LIKE. PHYENS MORIN and FRANK D. LORENZ, Burlingame, Calif. Filed Sept. 30, 1925. Serial No. 59,460. 7 Claims. (Cl. 206—65.)

1. A shipping box and holder for flowers and the like comprising a box having a removable outer wall and an open top, a cover for closing the open top of the box and for holding the removable outer wall thereto, and a holder carried by the removable outer wall and extending into the box said holder removable from the box with said removable outer wall.

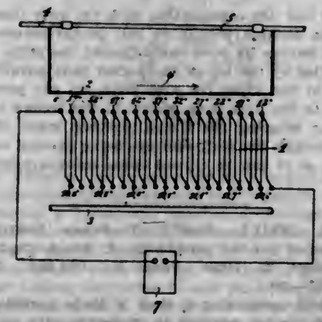


1,640,798. METHOD OF ELECTRIC WELDING. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Aug. 19, 1922. Serial No. 582,866. 2 Claims. (Cl. 219—10.)

1. The method of electrically welding two parts together which consists in providing a joint member with a web wider than the thickness of said parts and with a pair of flanges, both at one edge of the web, placing each of the two parts with one of its faces against one of said flanges and an edge against said web, pressing said parts against the flanges and passing a welding current across the contacting faces of said parts with said flanges so as to form welded joints between such faces and, after said

welded joints are formed, upsetting and spreading the projecting portion of said web to overlap it on the edges of said parts.

1,640,799. AIR-COOLED INDUCTOR COIL. EDWIN F. NORTHRUP, near Princeton, N. J., assignor to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Field Aug. 1, 1925. Serial No. 47,595. 12 Claims. (Cl. 204—64.)



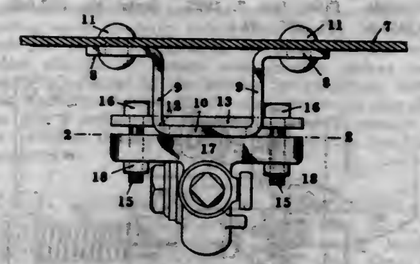
1. In an inductor furnace, an inductor of spiral form having projections in heat conductive relation therewith and spaces between the projections, in combination with a casing about the inductor and fluid supply for passing fluid through the spaces between the projections.

1,640,800. LAMINATED RUBBER. LESTER C. PETERSON, Akron, Ohio. Filed Jan. 3, 1927. Serial No. 158,826. 6 Claims. (Cl. 18—53.)

1. An article composed of two rubber compounds, one of which as compounded, contains a vulcanizing agent and a vulcanising accelerator, and the other of which, as compounded, is free from vulcanising agents and contains material which neutralises the effect of such vulcanising agents.

1,640,801. APPARATUS FOR MEASURING HEAT QUANTITIES. VIGGO STEPHAN KELLNER PETERSEN, Gjentofte, near Copenhagen, Denmark. Filed July 15, 1919, Serial No. 311,113, and in Denmark Dec. 21, 1918. 3 Claims. (Cl. 73—184.)

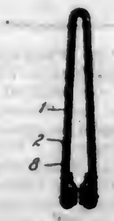
1. In an apparatus for measuring heat consumption, comprising a thermopile composed of a plurality of elements having hot and cold junctions of different temperatures, a conduit for the passage of the heating medium to be measured provided near the hot junctions, and a conduit for the passage of the cooling medium provided near the cool junctions.



1,640,802. PROCESS OF PRODUCING COMBINED SHADES ON THE VEGETABLE FIBER AND IN MATERIALS TREATED ACCORDING TO SUCH PROCESS. GUSTAV PETZOLD and HEINRICH RITTNER, Offenbach-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Dec. 15, 1924, Serial No. 756,049, and in Germany Jan. 29, 1924. 4 Claims. (Cl. 8—5.)

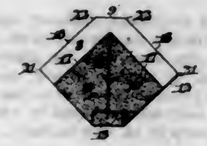
1. A process of producing combined shades of azodyestuffs and vat dyestuffs on the vegetable fiber consisting in producing an azodyestuff on the fiber, an ester-salt of the leuco-compound of a vat dyestuff being present simultaneously, and in treating the fibers with oxidising agents in an acid medium.

1,640,803. PROCESS OF PRODUCING COMBINED SHADES OF AZODYESTUFFS AND VAT DYESTUFFS ON THE VEGETABLE FIBER AND IN MATERIALS DYED OR PRINTED ACCORDING TO SUCH PROCESS. GUSTAV PETZOLD and HEINRICH RITTNER, Offenbach-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort, Germany. Original application filed Dec. 15, 1924, Serial No. 756,049, and in Germany Feb. 1, 1924. Divided and this application filed June 24, 1925. Serial No. 39,377. 2 Claims. (Cl. 8—5.)



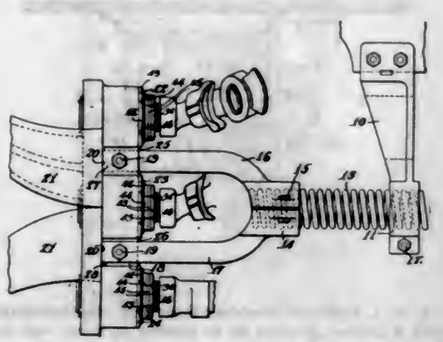
1. A process of producing combined shades of azodyestuffs and vat dyestuffs on the vegetable fiber consisting in impregnating the fiber with an alkaline solution of an azo-component, developing with a diazo-solution, an ester-salt of the leucocompound of a vat dyestuff being added to one of said solutions and in treating the fiber with oxidising agents in an acid medium.

1,640,804. RETAINING-VALVE BRACKET. FRANK H. PIETZSCH, St. Louis, Mo., assignor to Western Railway Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 28, 1927. Serial No. 171,675. 7 Claims. (Cl. 303—1.)



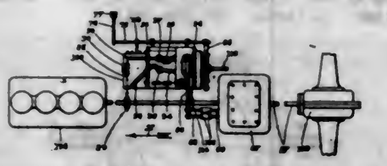
3. In a device of the class described, the combination with a bracket adapted to be secured to a car and having a part spaced therefrom, of an auxiliary member movable relatively to said bracket and projecting beyond said spaced part, said auxiliary member being provided with bends preventing its removal from the bracket, and bolts extending through the projecting parts of said auxiliary member and engaging a retaining valve.

1,640,805. COLLAR. WILLIAM H. RABELL, Pelham Manor, N. Y. Filed Oct. 25, 1924. Serial No. 745,762. 4 Claims. (Cl. 2—131.)



2. A semi-soft collar, comprising an interior, upstanding neck-band integral with a down-turning exterior face-piece, and button holes for attaching said collar to the neck-band of a shirt, said collar being constructed of a composite material comprising a layer of ordinary soft-collar fabric joined to a layer of soft rubber, said layer being vulcanized along the upper turned-down edge of said face-piece to form a permanent fold-line.

1,640,806. SHINGLE. GEORGE RITTER, Woodbridge, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Sept. 21, 1925. Serial No. 57,485. 9 Claims. (Cl. 108—7.)



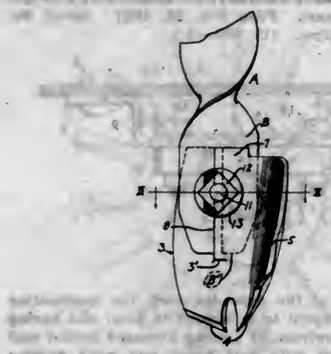
1. A shingle having a butt-tab and flanking foldable portions which, when retroverted, substantially convert said shingle to double-ply thickness.

1,640,807. TERMINAL SLEEVE FOR TRAIN PIPES IN CONNECTER HEADS. EDWARD A. ROBINSON, Montreal, Quebec, Canada, assignor of one-half to himself and one-half to Ellison Edward Workman, Montreal, Canada. Filed Jan. 7, 1922. Serial No. 527,568. 8 Claims. (Cl. 285—24.)

1. In an automatic train pipe connecter, a connecter head having an opening therethrough, a metallic train pipe terminal adapted to move within the opening and to be removed rearwardly therefrom, a gasket carried by the terminal and normally projected from said head, a spring surrounding said terminal, a collar threaded into said head, spaced radially at its forward end from said terminal and surrounding the spring, the removal of the collar permitting removal of the terminal, shoulders upon the terminal and collar respectively engaging opposite ends of the spring, a nut threaded upon the exterior of the collar to lock it in adjusted position, threads upon the rear end of the terminal, and lock nut devices for limiting the forward movement of the terminal with respect to the collar and head.

1,640,808. GEAR-CHANGING APPARATUS. RICHARD MATTHEWS RUCK, London, England. Filed Dec. 12, 1925, Serial No. 74,939, and in Great Britain Dec. 12, 1924. 9 Claims. (Cl. 74—58.)

1. The combination with an automatic gear-shifting apparatus, of a control handle therefor, said handle being displaceable in either of two directions from a normal position to cause the gears to be shifted, and means actuated by said apparatus for restoring said handle to its normal position.

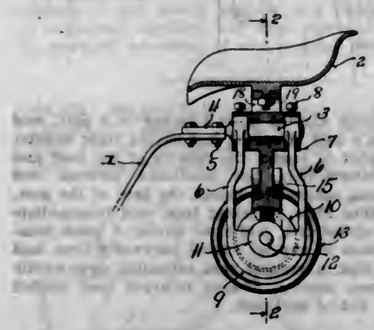


1,640,809. GOLF BAG. JOHN EDWARD SCHANK, Chicago, Ill., assignor to R. H. Buhrke Co., Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 17, 1922, Serial No. 595,044, and in Canada Nov. 2, 1922. Divided and this application filed Nov. 14, 1924. Serial No. 749,828. 2 Claims. (Cl. 150—1.5.)

1. In a bag, the combination with the body thereof, of a rigid strip secured thereto, a ball pocket secured to the body and having its open end adjacent the strip, a second strip carried by the top of the pocket body parallel to and movable to and from the first strip, an eye permanently attached to the first strip, a slot in the second strip, and means for securing the strips together when the eye is passed through the slot, said eye being pivoted relative to the strip so it can be turned down substantially parallel thereto.

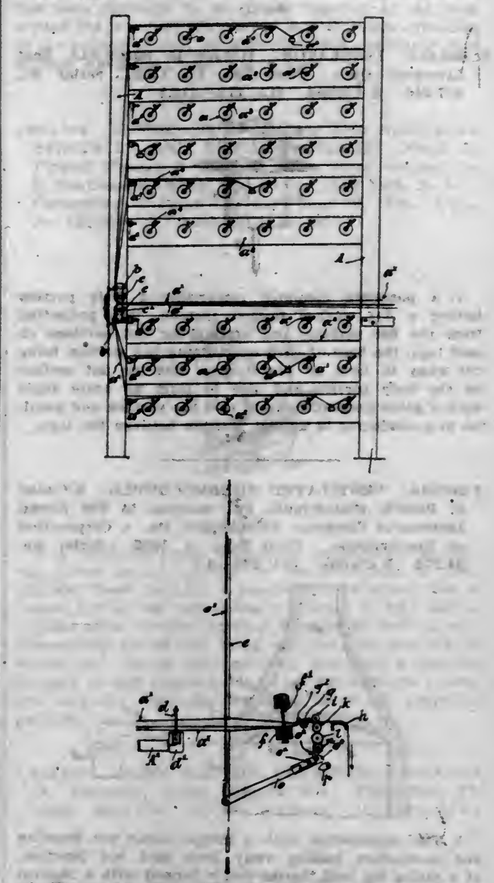
1,640,810. DRILL. SAMUEL T. SKEEN, Centralia, Ill., assignor of one-half to Charles E. Stead, Centralia, Ill. Filed Sept. 25, 1923. Serial No. 664,606. 5 Claims. (Cl. 255—69.)

1. A drill comprising a stem, a blade provided with a bifurcated portion adapted to cooperate with an end portion of said stem whereby said blade may be detachably attached to said stem, the oppositely disposed leg portions of said bifurcated portion of said blade being out of alignment with each other and flat side faces of said leg portions being in contact with the opposite side faces of said



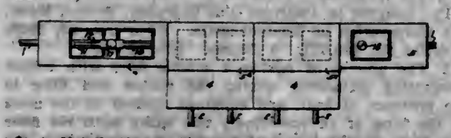
end portion of said stem, and means whereby said blade is securely held in place on said stem.

1,640,811. GRUBBER OR CULTIVATOR. GEORG KARL SPITZENBERG, Zackerick, Germany. Filed Feb. 24, 1925, Serial No. 10,998, and in Germany Feb. 29, 1924. 8 Claims. (Cl. 97—215.)



1. A rotary grubbing member provided with grubbing blades each of which has two shanks connected at their outer ends by an outwardly tapering flat portion and spaced at their body portions, the body portions of said two shanks being located laterally of each other so that they will rotate in different paths.

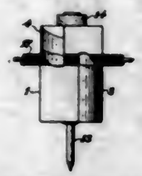
1,640,812. SEAT ADJUSTER. FRED AMMON, Waukegan, Ill. Filed Oct. 9, 1925. Serial No. 61,484. 1 Claim. (Cl. 155—121.)



A seat adjuster for vehicles having a supporting, rearwardly extending spring bar, said seat adjuster comprising a pin having a cylindrical portion projecting from the end of said bar and having a flattened portion secured to said bar, a U-shaped frame carried by said cylindrical pin and having spaced arms through which said pin projects, means for locking said arms to said pin, a segmental gear revolubly mounted upon said pin, a worm meshing with said gear, a hand wheel operatively coupled with said worm, a seat mounted above said segmental gear, and means for securing said seat to said gear.

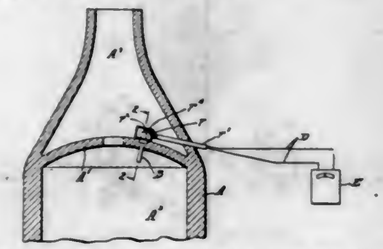
1,640,813. LOOM. STEPHEN BARNWELL, Manchester, and REGINALD HARRINGTON BARNWELL, Potter Heigham, England. Filed Feb. 25, 1925, Serial No. 11,430, and in Great Britain Feb. 27, 1924. 2 Claims. (Cl. 139—305.)

1. The combination with a loom having a harness, of a series of independent pairs of rotatable feed rollers extending across the loom, independent gearing for rotating each pair of rollers, normally inoperative ratchet mechanism adapted to engage said gearing, means automatically actuated by the harness for selectively setting said ratchet mechanism in operative relation to said gearing, and a rocking cam member adapted to actuate the set ratchets thereby to rotate the gearing associated therewith.



1,640,814. DISTRIBUTION UNIT FOR ELECTRIC CIRCUITS. WILLIAM C. BLACKWOOD, Elmhurst, N. Y., assignor, by mesne assignments, to Thomas E. Murray, jr., Brooklyn, N. Y. Filed Feb. 21, 1922, Serial No. 538,212. Renewed Mar. 31, 1926. 8 Claims. (Cl. 247—1.)

8. A distributing unit comprising a casing, a main bus held in position on the bottom of the casing, a branch ex-



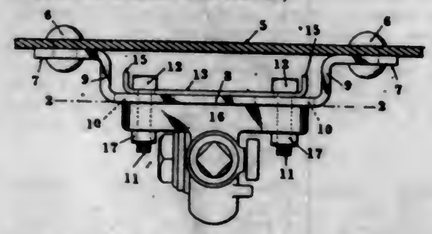
tending through a side wall of the casing and overlying said bus, an insulating member carried on said bus between the bus and the branch and a removable connector passing through the branch and the insulating member and engaging the bus.

1,640,815. INSULATOR. HORACE D. BROOKMAN, East Liverpool, Ohio. Filed Feb. 17, 1922. Serial No. 537,246. 3 Claims. (Cl. 173—316.)

1. A porcelain insulator comprising a body portion having a flat surface formed thereon, lugs projecting from the flat surface, and overlapping end portions on said lugs, the base of each overlapping end portion being cut away to form an acute angle with the flat surface on the body portion and also to form an acute angle with a plane perpendicular to said flat surface and parallel to a conductor in normal position between the lugs.

1,640,816. VENTILATED THERMOCOUPLE. RICHARD P. BROWN, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 3, 1925. Serial No. 54,272. 5 Claims. (Cl. 136—4.)

1. The combination with a thermo-couple hot junction and conductors leading away from said hot junction, of a casing for said thermo-couple formed with a channel for conductor cooling air having an inlet and outlet at greater and less distances, respectively, from said hot junction.



1,640,817. ART OF MAKING RECLAIMED RUBBER. CHARLES H. CAMPBELL, Pittsburgh, Pa., assignor to American Glue Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1926. Serial No. 143,520. 6 Claims. (Cl. 18—52.)

1. The process of reclaiming rubber which comprises the addition to the mass to be reclaimed of albuminate of a metal prior to devulcanization and then devulcanizing.

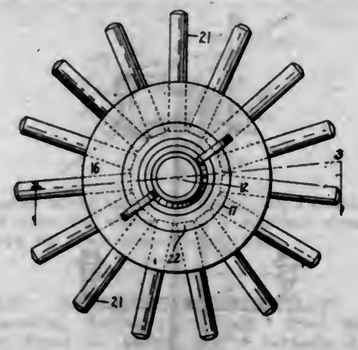
1,640,818. PROCESS OF MIXING A SOLUBLE FILLER WITH RUBBER. CHARLES H. CAMPBELL, Pittsburgh, Pa., assignor to American Glue Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1926. Serial No. 143,521. 5 Claims. (Cl. 18—50.)

1. The process of mixing a soluble filler with rubber comprising intimately mixing the rubber and filler in the presence of heat, and moisture applied to the mass in the form of an exceedingly fine spray until the filler has been dissolved and thoroughly incorporated in the mass and afterward expelling moisture from the mass.

1,640,819. RETAINING-VALVE BRACKET. STERLING H. CAMPBELL, St. Louis, Mo., assignor to Western Railway Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 23, 1927. Serial No. 170,184. 6 Claims. (Cl. 303—1.)

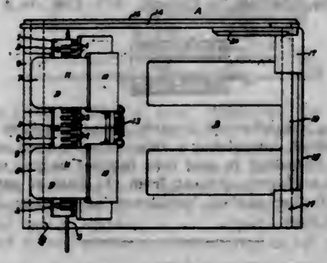
6. In a device of the class described, the combination with a bracket adapted to be secured to a car and having a part spaced therefrom, of a strap arranged behind said part and provided with bolt holes, and bolts passing through said holes and adapted to secure a retaining valve in position, said strap being out of contact with the bracket adjacent to said bolts whereby the spring of the strap provides a resilient fastening for the valve.

1,640,820. TOWEL HOLDER. WALTER CHOINSKI, Milwaukee, Wis. Filed Feb. 5, 1926. Serial No. 86,252. 1 Claim. (Cl. 45—32.)



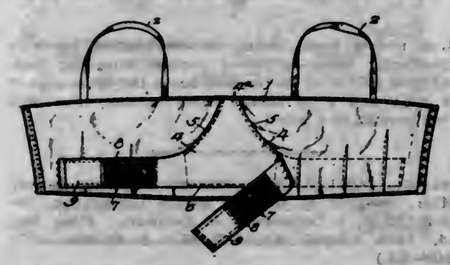
A towel holder adapted to be attached to a post, said holder having a pair of spaced feet having right angular portions adapted to engage the corners of the post and having an intermediate foot positioned between said spaced feet and adapted to engage the face of the post, a pair of arched arms extending from said intermediate foot to said spaced feet, said arms having a brace member joining them at a point spaced outwardly from said intermediate foot, a vertical post extending downwardly from said brace member, and an enlarged head carried by the lower end of said post.

1,640,821. COIL-WINDING FORM. HARRY J. COCKS, Des Moines, Iowa, assignor to Metal Products Company, Des Moines, Iowa, a Corporation of Iowa. Filed Sept. 7, 1926. Serial No. 133,835. 2 Claims. (Cl. 242—1.)



1. In a form for winding coils, an annular disc having a central opening to receive a shaft and having a series of holes extending radially inwardly from the periphery of the disc, said disc having in one side an annular recess, a locking plate adapted to be projected

into said recess having a central hole to receive a spindle, a plurality of pins having their inner ends received in said holes and projecting into said recess for portions

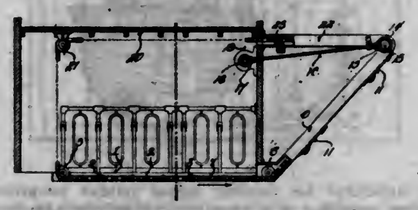


of their lengths and portions of their diameters, and means for locking said plate in said recess for gripping and holding said pins.

1,640,822. BELT-LACING DEVICE. WILLIAM CRAMER, St. Louis, Mo., assignor, by mesne assignments, to Isidor M. Jacobs. Filed Oct. 30, 1924. Serial No. 746,763. 4 Claims. (Cl. 1—49.4.)

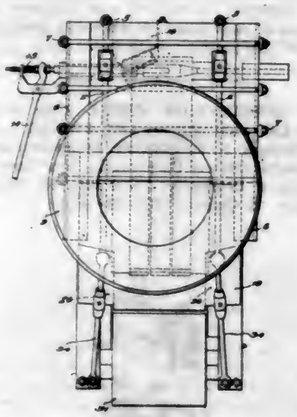
4. A belt lacing device comprising an anvil, staple holding mechanism, and a pivoted hammer, said hammer comprising a pair of independently movable hammer members, a coil spring whereby said hammer members are connected together, and stop members for limiting the rearward movement of said hammer members.

1,640,823. BRASSIÈRE. KATHERINE E. CUNNINGHAM, Chicago, Ill., assignor to The H. W. Gossard Co., Chicago, Ill., a Corporation of Illinois. Filed June 28, 1922. Serial No. 571,470. 3 Claims. (Cl. 2—42.)



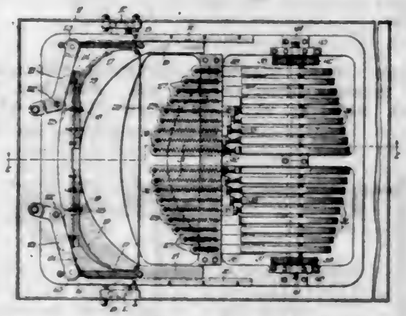
2. A garment of the character described and comprising a complete brassière proper, an inner member of firm material having a central relatively narrow upward extension extending to a point adjacent the top of the brassière and secured along its upper portion to the brassière and having opposite broad lateral attaching portions at its base, the central portion of the base of said inner member being marginally secured to the brassière and said attaching portions being free, and free elastic belt sections secured to said attaching portions and having their free ends arranged to be clasped together at the back around the waist of the wearer, said brassière extending to the bottom of said inner member and concealing such member when the garment is in use.

1,640,824. COMBINATION METAL AND NONMETAL SPECTACLE AND EYEGLASS FRAME. EDGAR R. DURGIN, Newark, N. J., assignor, by mesne assignments, to Continental Optical Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 16, 1924. Serial No. 732,404. 7 Claims. (Cl. 88—47.)



5. A spectacle frame comprising co-operating metallic end pieces having opposed cut away portions in their adjacent faces to form a temple butt receiving slot, a temple having its butt pivotally secured in said slot, a zylonite shell covering exterior surfaces of each of said co-operating pieces and being cut away at one end to expose said temple butt receiving slot, and a zylonite covering on said temple having a portion arranged to conceal said slot when the temple is in normal operating position.

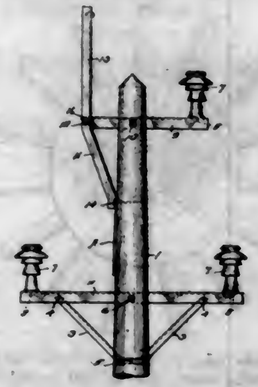
1,640,825. BARN MANURE CONVEYER. BENJAMIN W. FLINTROP, Hales Corners, Wis. Filed Mar. 17, 1926. Serial No. 95,231. 2 Claims. (Cl. 198—172.)



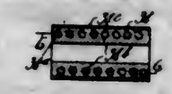
1. The combination of a barn having a floor and having a channel inset below the floor line, said channel having inwardly directed overhanging marginal flanges, an endless power-driven conveyer consisting of a pair of spaced chains mounted below said flanges, and scrapers positioned between said chains and having ears projecting below said flanges, guiding members for leading said conveyer into and out of said channel, an upwardly and outwardly projecting chute through which said conveyer is led, said chute having discharge doors, guiding means located adjacent the upper portion of said barn and over which said conveyer is passed, said last guiding means being located approximately directly over the rear end of said channel.

1,640,826. ELECTRIC FURNACE. CHARLES B. FOLEY, Pottstown, Pa., assignor to Charles B. Foley, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 23, 1922. Serial No. 545,984. Renewed Oct. 30, 1925. 12 Claims. (Cl. 204—64.)

1. An electric induction furnace comprising a crucible consisting of a strong inflexible shell, a relatively thin refractory lining and a layer of tubes between said shell and lining for carrying a refrigerant.



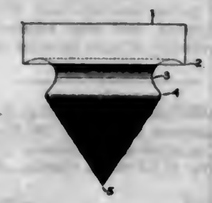
1,640,827. ADJUSTABLE FORM FOR SHAPING ARTICLES. WILLIAM H. FRATER, Detroit, Mich., assignor to American Autoparts Company, Detroit, Mich., a Corporation. Filed July 18, 1923. Serial No. 652,264. 6 Claims. (Cl. 153—51.)



1. Apparatus for forming curved articles comprising a form consisting of a plurality of relatively adjustable elements, rotary cams engaging the elements, a shaft carrying the cams whereby they may be rotated to simultaneously adjust the elements, and means for forcing the article against the adjusted form elements.

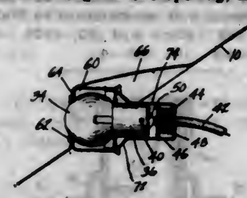
1,640,828. METAL CROSS ARM FOR SUPPORTING ELECTRIC CONDUCTORS. LEWIS HAMILTON HARDIN, Charlotte, N. C., assignor to Southern Electrical Equipment Co., a Corporation of North Carolina. Filed Mar. 10, 1925. Serial No. 14,562. 5 Claims. (Cl. 189—33.)

1. A horizontal upper cross arm adapted to be fastened to a pole, said arm being adapted to carry an insulator, and having the end distant from the insulator bent laterally beyond the point where the arm is bolted to the pole, a bayonet to an intermediate portion of which the bent end of the cross arm is bolted, said bayonet having the portion below the cross arm bent inwardly toward the pole, the end being adapted to be fastened to the pole.



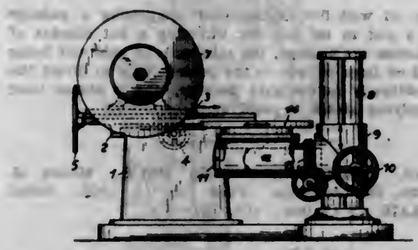
1,640,829. INCANDESCENT ELECTRIC LAMP. JOHN ALLEN HEANY, New Haven, Conn. Filed May 15, 1918. Serial No. 234,756. 9 Claims. (Cl. 176—16.)

9. In an incandescent electric lamp, a glower of the type described, comprising a tube of refractory material, a resistor embedded in said tube interior having elements positioned uniformly distant from the axis of said tube, and a radiating surface positioned at another distance from said tube.



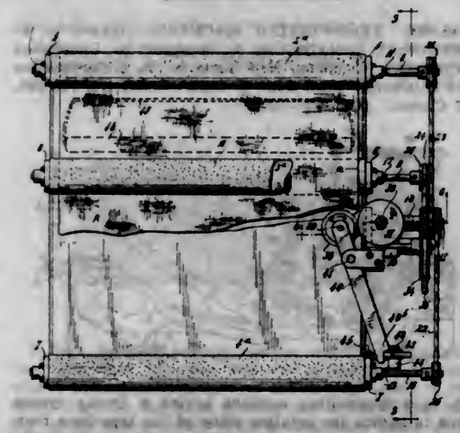
1,640,830. TRAFFIC MARKER. ALEX R. HUNT, San Francisco, Calif. Filed Oct. 18, 1924. Serial No. 744,365. 3 Claims. (Cl. 94—1.5.)

1. A paving block having an overhanging top with perpendicular sides; a curved portion extending backward from said sides and upward above the lower edge of said top; and a pyramidal base tapering from said curved portion to a point.



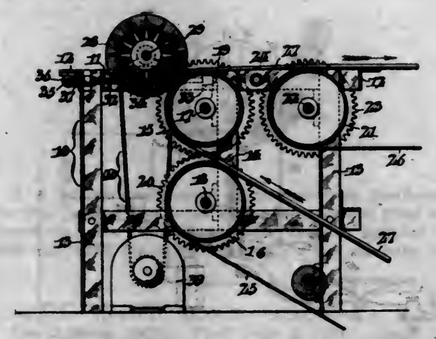
1,640,831. COWL LIGHT. ORMOND E. HUNT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 14, 1924. Serial No. 732,095. 9 Claims. (Cl. 240—8.2.)

1. A cowl light comprising, in combination, a casing in two parts having interengaging portions, means to secure one of said parts to a cowl, said part having an opening, an electric bulb having a substantially spherical glass front, means to hold the bulb in said casing with the spherical front projecting outwardly through the opening and with the bulb held at its front end by engagement with the edge of the opening, means to ground



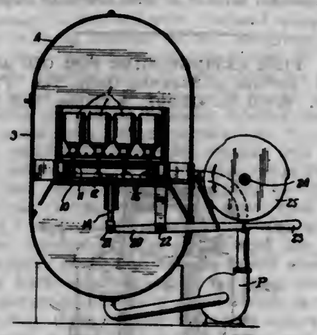
one contact of the bulb to the casing, and a conductor insulated from the casing and in electrical communication with the other contact of the bulb.

1,640,832. HIGH-SPEED FRICTION SAW. ADOLF JACOBOWITZ, Nuremberg, Germany. Filed Mar. 10, 1926, Serial No. 93,716, and in Germany Jan. 20, 1926. 3 Claims. (Cl. 29—69.)



1. A high-speed friction saw, comprising, in combination, an electromotor and its shaft, a toothless cutting disk located upon said shaft, a base and on it two slides arranged at right angles with respect to each other, the upper slide carrying said motor with said shaft and disk, a table adapted to receive and hold fast the workpiece and being adapted to be adjusted relatively to said slides in any position, substantially as set forth.

1,640,833. FABRIC-CUTTING MACHINE. OSCAR I. JUDELSHON, Park Ridge, N. J. Filed Oct. 22, 1925. Serial No. 64,116. 12 Claims. (Cl. 164—61.)

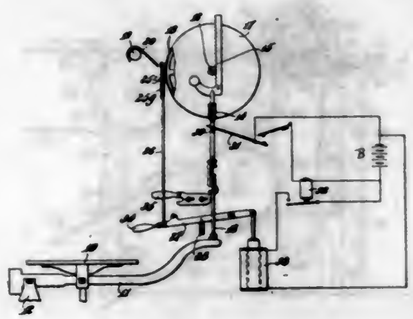


1. A fabric cutting machine comprising means to feed tubular or folded fabric, a cutter mounted to operate against the folded edge portion of the fabric, and means supporting the cutter between webs of fabric.

1,640,834. MACHINE FOR TREATING RUBBER. JOHN KEARNS, Conshohocken, Pa., assignor to The Lee Tire & Rubber Co., Conshohocken, Pa., a Corporation of Pennsylvania. Filed May 16, 1922, Serial No. 561,549. Renewed Jan. 27, 1927. 3 Claims. (Cl. 15—40.)

1. A machine for treating the surface of rubber stock in the form of a strip of indefinite length comprising a rotary abrasive element, a conveyor to bring the strip to the abrasive element, a roller around which the strip is trained to present succeeding portions of its surface to the action of the abrasive element, a conveying means to carry away the treated portions of the strip, and independent means for operating the abrasive element and the roller and conveying elements.

1,640,835. JET WASHING MACHINE. IRA H. KENDALL, Potsdam, N. Y., assignor to Manning Manufacturing Company, Rutland, Vt. Filed Jan. 28, 1927. Serial No. 164,187. 4 Claims. (Cl. 141—7.)

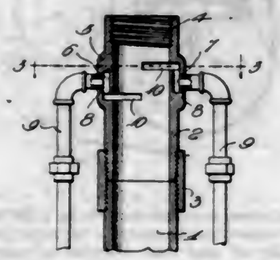


1. A jet washing machine comprising a jet box having jet openings associated therewith, a movable member having a plurality of pins and mounted in said box, the said pins being respectively aligned with the said jet openings, and means adapted to actuate the said movable member to cause the said pins to clear the said jet openings.

1,640,836. SCALE. GEORGE W. KEPLER, Dayton, Ohio, assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Apr. 27, 1920. Serial No. 376,914. 20 Claims. (Cl. 265—57.)

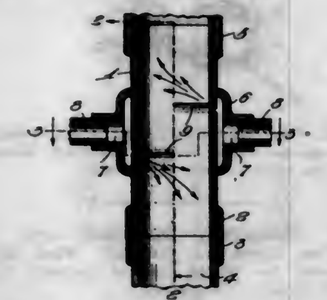
1. In a scale having a support for the goods to be weighed, an automatic counter-balance therefor, a relatively displaceable weight indicator and index means, a

plurality of sets of weight-indicating numerals upon said weight indicator, said sets each having predetermined coacting numerals registering concurrently with said index means in the various relative positions of the indicator



and index means, and means called into action upon a predetermined load being placed upon the platform for changing the visibility of the display of said coacting numerals at the index position from one set to the other.

1,640,837. METHOD OF CONTROLLING EVOLUTIONS OF ELEMENTAL SULPHUR. GUSTAF NEWTON KIRSEBOM, Salt Lake City, Utah, assignor to United States Smelting, Refining & Mining Company, Portland, Me., a Corporation of Maine. Filed Nov. 16, 1925. Serial No. 69,506. 5 Claims. (Cl. 75—60.)

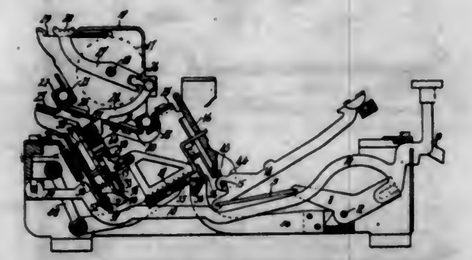


1. The method of controlling the evolution of elemental sulphur from ores containing sulphide in sintering machines which consists in providing arsenic to combine with the elemental sulphur to form arsenious sulphide.

1,640,838. FIRE EXTINGUISHER FOR OIL AND GAS WELLS. EDWARD A. KLIEWER, Olden, Tex. Filed Jan. 17, 1921. Serial No. 437,907. 8 Claims. (Cl. 169—4.)

1. A fire extinguisher attachment for oil and gas wells comprising a nozzle adapted for connection with the upper end of a well casing, the walls of the nozzle being thickened at a point intermediate its length to provide a collar, the collar being provided upon opposite sides with vertically disposed pockets and ports extending through the outer face of the collar, one pocket having its upper end communicating with an annular groove formed in the inner face of the nozzle and the second pocket having its lower end communicating with an annular groove formed in the inner face of the nozzle.

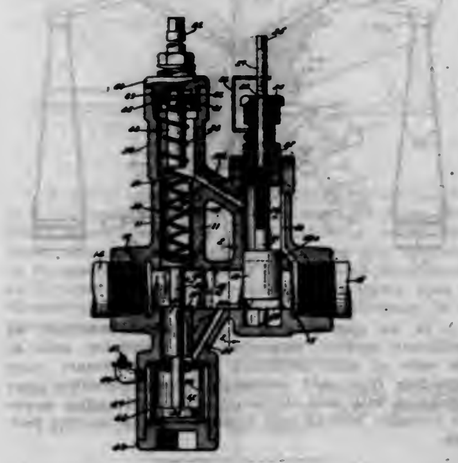
1,640,839. FIRE EXTINGUISHER FOR OIL WELLS. EDWARD ALBERT KLIEWER, Tulsa, Okla., assignor of twenty-four per cent to F. G. Lippitt, one thirty-second to J. W. Castleman, and one-sixteenth to Walter David, Breckenridge, Tex. Filed Apr. 12, 1923. Serial No. 631,643. 6 Claims. (Cl. 169—4.)



1. An oil well fire extinguisher comprising a passage having a slot in its side for directing a flat blanket of steam across the passage, the side walls of said slot being disposed on lines oblique to the passage axis to direct the steam obliquely across said passage, and a steam inlet for supplying steam to said slot.

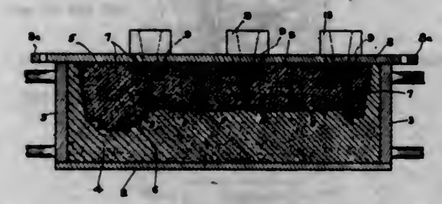
1,640,840. THEFT-PREVENTING BOLT. MOSES G. KOTLER, Boston, Mass. Filed Feb. 16, 1925. Serial No. 9,479. 7 Claims. (Cl. 151—8.)

1. The combination with a threaded bolt provided with a keyway longitudinally of the bolt in the threaded portion thereof, of a key movable in the keyway longitudinally of the bolt, a nut on the threaded bolt held from rotation by said key, and a key-operated locking member cooperating with the nut-locking key to prevent removal thereof from said keyway.



1,640,841. TYPEWRITING MACHINE. ALFRED G. F. KUBOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 7, 1924. Serial No. 718,468. 7 Claims. (Cl. 197—82.)

1. In a typewriting machine having a typing system tilted to incline the printing plane of the type-faces rearwardly, a carriage, carriage-feeding mechanism including an escapement-wheel and a coaxial pinion rigid therewith journaled on an axis perpendicular to said printing plane, a track-bar supported by the carriage to engage the

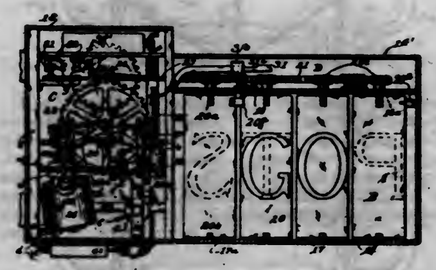


pinion, a stepping dog co-operating with the escapement-wheel, a stop to define the checking position of the dog, and a spring to maintain the dog in equipoise at its stepping position by the alignment of the spring and its point of connection to the dog to a straight line that bisects the axis of the dog.

1,640,842. VOLUME CONTROL. WALTER A. LOOMIS, Los Angeles, Calif. Filed Mar. 11, 1925. Serial No. 14,765. 1 Claim. (Cl. 50—10.)

A flow-control device comprising a body provided with an inlet and with an outlet, there being a communicating orifice between said inlet and said outlet, provided with means for predetermining the extent of an opening therethrough; a pressure-controlled valve to vary the flow of a fluid through said orifice; and means, dependent upon the difference in pressure on opposite sides of said opening, for so moving said valve as to maintain a substantially constant pressure differential across said orifice, said valve moving means being provided.

1,640,843. MOLD FOR CASTING METALS. CHARLES E. MAGILL, Cleveland, Ohio, assignor to The Aluminum Company of America, Cleveland, Ohio, a Corporation. Filed Nov. 22, 1924. Serial No. 751,657. 15 Claims. (Cl. 22—126.)

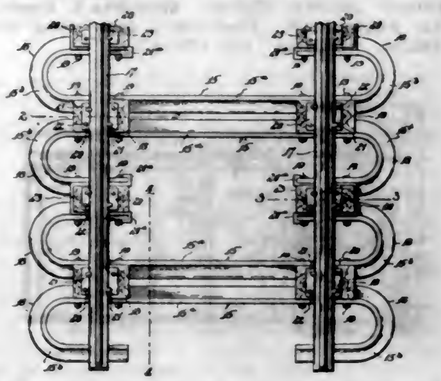


8. In a mold for casting metallic articles, the combination of a flask, granular material in the flask provided with a casting cavity, cores in the casting cavity, a thin metal cope on the flask forming top walls of the casting cavity and provided with perforations, liners of refractory material in the said perforations having close fitting contact with the sides of the perforations; the said perforations in the cope being larger than the greatest cross sectional dimensions of metal solidifying therein.

1,640,844. PNEUMATIC TIRE. FRANK LE ROI MAIN, Birmingham, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 10, 1926. Serial No. 87,358. 2 Claims. (Cl. 152—20.)

2. A cushion tire formed of comparatively inextensible material having side walls with a compressible ridge narrower than and extending around the inner periphery of said side walls for engagement with a tire receiving rim.

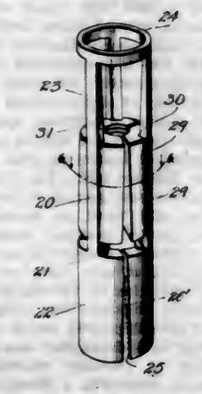
1,640,845. TRAFFIC SIGNAL. ALEXANDER J. MASSEY, Los Angeles, Calif. Filed July 2, 1921. Serial No. 482,137. 24 Claims. (Cy. 171—327.)



1. A signal of the character disclosed comprising: a plurality of vanes adapted for the presentation of like faces in joint signaling action and each of which is mounted for rotation about an axis, means for so mounting said vanes, remotely controllable means comprising a local motor and gearing means for rotating the vanes to present divers faces thereof alternatively to view, and remotely controllable means for holding said vanes at will in a neutral position; said signal comprising means whereby said vane-rotating means may be effective to interrupt the current to said local motor upon the completion of a half rotation of said vanes, moving the same to display positions, and means whereby the operation of said holding means also interrupts said current.

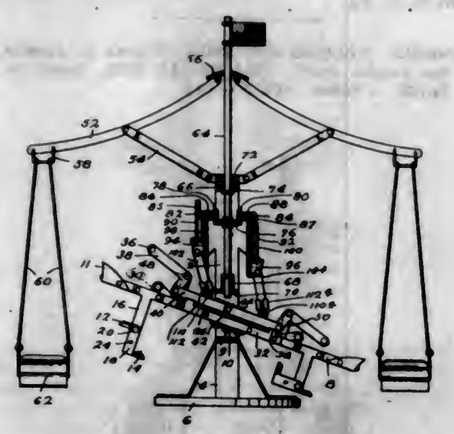
8. In a traffic signaling system for street intersections and like places; a plurality of signal devices each adapted for indicating three distinct conditions appertaining to a traffic route on which the same is located and each comprising a display face for indicating that traffic is to proceed and a display face for indicating that that traffic is to stop, a local motor and gearing in each signal for alternately displaying said faces by moving the same through a non-display neutral position; means subject to remote control and comprising a latch in each signal, for neutrally positioning both of said faces, to indicate the suspension of traffic regulation by the signal devices, and time-controlled electrical impulse controlling means for controlling the signal face displaying means of a plurality of said signal devices, said displaying means being subject to neutralization by centrally controllable means which include a manual switch in a circuit containing a latch-operating electromagnet in each signal device, and subject to remote restoration by means comprising an additional local electromagnet disposed for an opposite effect,—each of said last-mentioned electromagnets being provided with an armature which is secured to a pivoted

member which is movable thereby for an unlatching effect.



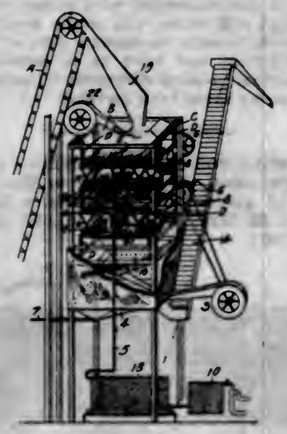
21. A traffic signal operating mechanism, for signals having movable vanes carrying oppositely disposed signal faces, comprising: an intermittently rotatable device making a one-half revolution in each signal face-actuating movement,—to bring said faces to a display position; a rod for connecting the same with a signal face-moving member; a motor, in a circuit for rotating said device; means of operative connection between said device and said motor; and biased switch means, in said circuit, for controlling the supply of energy to said motive means and acting to cut off, at the end of each one-half revolution of said signal face-actuating device, the energy supplied to said motor,—said means of operative connection comprising a shaft rotated by said motive means and carrying a means for opening said switch at the completion of each half revolution thereof.

1,640,846. METAL RAILROAD TIE. WILLIAM W. MECHLING, Butler, Pa. Filed Dec. 22, 1926. Serial No. 156,371. 3 Claims. (Cl. 238—43.)



1. A metal railroad tie comprising a pair of angle-bars arranged side by side and having end portions bent in opposite directions, and means connecting the angle-bars together to form the tie.

1,640,847. MULTIPLE SUCKER-ROD SOCKET. ALBERT H. NEILSON, Tulsa, Okla. Filed Aug. 31, 1925. Serial No. 53,510. 15 Claims. (Cl. 294—102.)



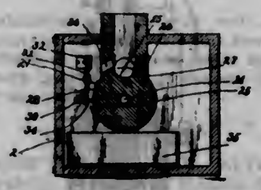
1. In a socket of the character described, an interiorly-tapered barrel, an expansible set of exteriorly-tapered primary slips within the barrel, having interiorly tapered extensions, and an expansible set of externally-tapered, secondary slips within the extensions of the primary slips.

1,640,848. COMBINATION TEETER-TOTTER AND MERRY-GO-ROUND. WILLIAM F. NORRIS, Kansas City, Mo. Filed July 19, 1926. Serial No. 123,563. 7 Claims. (Cl. 272—30.)

1. In an apparatus of the character described, an oscillatory member, supporting means therefor, seats at the ends of said oscillatory member, stationary steps depending from said oscillatory member, foldable steps associated with said stationary steps, and spring means for normally holding said foldable steps in inactive position.

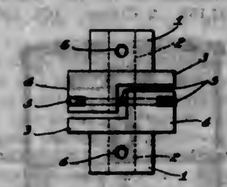
1,640,849. PROCESS AND APPARATUS FOR BLEACHING PEANUTS. ARTHUR C. NORSWORTHY, Jr., Newport News, Va. Filed Mar. 21, 1927. Serial No. 176,976. 7 Claims. (Cl. 99—1.)

1. In combination in apparatus for bleaching and purifying raw peanuts in hull and the like, a housing enclosing a gas chamber having an inlet at its upper end and an outlet at its lower end, shaking means mounted in said gas chamber comprising an upper set of screen shakes and a lower set of screen shakes, said sets of shakes being aligned vertically, each set comprising upper and lower horizontally disposed screen shakes rigidly connected together, and gas diffusing means disposed between said upper and lower sets.



7. The method of bleaching raw peanuts in the hull, which consists in agitating the peanuts in a series of successive stages and continuously treating the peanuts with hypochloric acid gas introduced intermediate the said stages.

1,640,850. BOOKBINDER. EDGAR W. OTTO, Los Angeles, Calif. Filed Aug. 19, 1926. Serial No. 130,263. 2 Claims. (Cl. 281—23.)

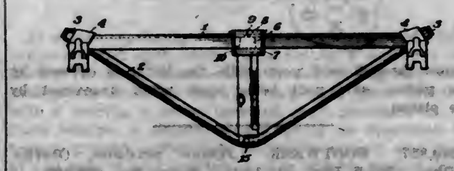


1. A binder consisting of cover portions interconnected by a comparatively flexible back portion, and a glue-strip firmly secured with one of its flat sides within said binder over said back portion and having glue surfacing on its opposite side adapted to securely bind insert-leaves at the back and adjacent edges of such leaves upon a dampening of said glue surfacing when the binder is so placed over such leaves.

1,640,851. VENDING MACHINE. DOMINGO OXARART, Los Angeles, Calif. Filed Dec. 23, 1925. Serial No. 77,215. 2 Claims. (Cl. 194—63.)

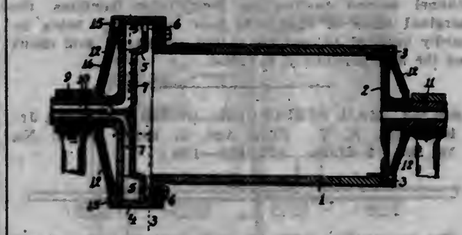
1. In a vending machine, a rock shaft, a disc mounted thereon having a coin pocket, a radial abutment on said disc, a spring pressed latch having a hook end, the hook end being positioned to engage the said abutment on a slight rocking of the disc, there being a notch in the hook end, the latch being engaged by a coin in the coin pocket on partial rotation of the disc, such coin pressing the latch and disengaging the hook end from the abutment, the coin falling through the notch allowing rotation of the disc.

1,640,852. FLEXIBLE COUPLING. CHARLES RAISIG, Pittsburgh, Pa. Filed May 8, 1926. Serial No. 107,599. 4 Claims. (Cl. 64—96.)



1. A flexible coupling comprising a pair of coaxially aligned complementary coupling members provided with cooperating offset portions having slotted openings therein, and a substantially V-shaped flexible element disposed in said openings and adapted to cooperate therewith.

1,640,853. PROCESS OF PRODUCING PULP HAVING A HIGH PERCENTAGE OF RESISTANT CELLULOSE. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 27, 1924. Serial No. 716,155. 5 Claims. (Cl. 92—11.)

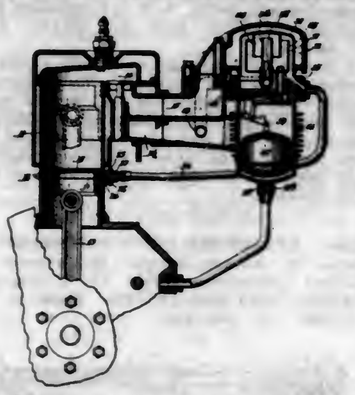


2. A process of producing wood pulp having a high percentage of resistant cellulose, which comprises first digesting wood in a sulphurous acid solution containing sodium sulphite under heat and pressure, adding to the heated mass of wood and acid liquor sufficient alkaline sodium compounds to render the liquor alkaline, and further digesting the wood under pressure in said hot alkaline liquor.

1,640,854. REVERSIBLE STRUT FOR BRAKE BEAMS. THOMAS E. RODMAN, Glencoe, Ill., assignor to The Bradford Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 13, 1926. Serial No. 135,175. 3 Claims. (Cl. 188—232.)

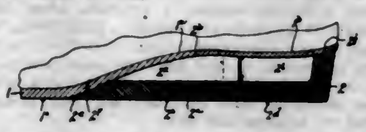
1. A brake beam comprising a channelled compression member, a tension member, a reversible strut extending between said members, and having a head fitting into the channel of the compression member and of non-circular section to provide for and limit the axial rotation of the strut, a shoulder on the strut adjacent said head, and means embracing said shoulder and said compression member for securing said strut.

1,640,855. DRYING CYLINDER. LEO SHLICK, Boston, Mass. Filed Sept. 28, 1926. Serial No. 137,337. 11 Claims. (Cl. 34—4.)



1. A drying cylinder comprising a shell having a cylindrical drying surface, and heads provided with supporting trunnions, one of said trunnions being tubular and the head connected therewith enclosing a space between itself and the adjacent end of said shell whose radial extent is in excess of that of the outer surface of said shell, the inner surface of the latter opening into said space, and means for supplying the cylinder with steam, and for expelling the water of condensation from said space out through said tubular trunnion.

1,640,856. INTERNAL-COMBUSTION-ENGINE LUBRICATION SYSTEM. RALPH L. SKINNER, Detroit, Mich., assignor to Skinner Automotive Device Co., Inc., Detroit, Mich., a Corporation of California. Filed Aug. 7, 1926. Serial No. 127,818. 12 Claims. (Cl. 123—196.)



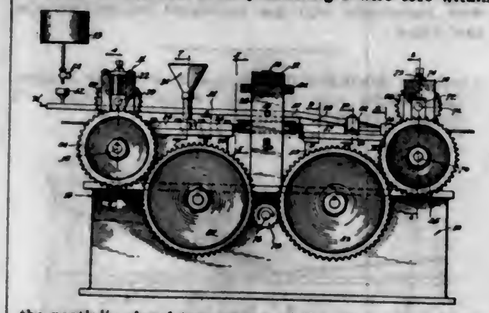
1. In an internal-combustion engine, the combination of an engine-cylinder, a reciprocatory piston in said cyl-

inder covering and uncovering a port during its sliding movements, means to lubricate said cylinder and piston, and means to remove fluids from around said

piston through said port while the latter is covered by the piston, said port being open when uncovered by the piston.

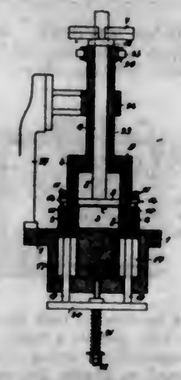
1,640,857. FOOTWEAR. JULIUS SOLOMON, Oberlin, Ohio. Filed Dec. 30, 1922. Serial No. 609,803. 1 Claim. (Cl. 36—76.)

In combination with the shank portion of a shoe, a shoe heel having an integral extension forming an arch supporting bridge extending beneath said shank portion of the shoe, said shoe heel and arch supporting bridge having their tread surfaces extending flush with each other and being respectively provided with heel and channel shaped cavities on their upper surfaces, the marginal edges of said shoe heel and bridge being inwardly bevelled to conform to the contour of said shank and the heel portions of the shoe.



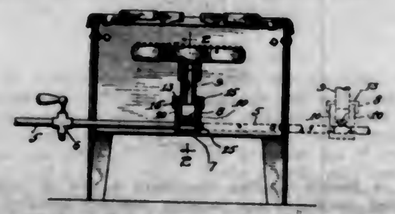
1,640,858. RAIL STRUCTURE. GEORGE STANDFEST, Jr., Rochester, N. Y. Filed Apr. 5, 1927. Serial No. 181,180. 1 Claim. (Cl. 238—138.)

The combination with two rail sections arranged end to end to provide a joint between them, and a plurality of ties supporting said rail sections, of a shoe on which the two rail sections rest bridging the joint and supported on a plurality of ties, said shoe having a longitudinally extending groove in which the bases of the rail sections are received the sides of the grooves extending above the outer edges of the bases of the rail sections and being provided with spike openings on the opposite sides of the groove with enlarged upper ends, and spikes passing through said openings, overhanging the bases of the rail sections, anchored in the ties and having their heads received in the enlarged portions at the upper ends of the openings.



1,640,859. MACHINE FOR MAKING WELDING RODS. WINSTON F. STOODY, Whittier, Calif. Filed Aug. 7, 1925. Serial No. 48,752. 14 Claims. (Cl. 205—17.)

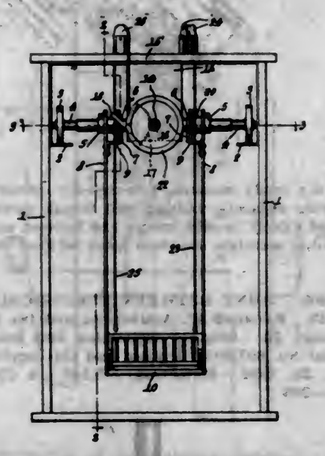
1. A machine for forming welding rods comprising rolls for turning up the sides of a steel tape so as to form a trough, means for depositing an alloy in the trough so formed, rolls for partially closing the tape about the alloy, means for positioning a wire core within



the partially closed tape on top of the alloy, and rolls for compressing the tape about the alloy and wire core so as to form a closed welding rod containing the alloy.

1,640,860. METHOD OF PACKING AND PRESERVING FOOD PRODUCTS AND THE PACKAGE OBTAINED THEREBY. ERNST SUTTER, Burgdorf, Switzerland, assignor to Alpina Käse A.-G., Burgdorf, Bern, Switzerland, a Corporation of Switzerland. Filed Apr. 30, 1923, Serial No. 635,638, and in Switzerland May 19, 1922. 3 Claims. (Cl. 225—73.)

1. The method of packing food products, which consists in completely filling an open receptacle with the material in a plastic state, placing a thin-non-elastic sheet of metal over the material with its edges extending beyond the brim of the receptacle, subjecting to pressure the entire surface of the sheet above the material to expel air and then bending the edges of the sheet down and tightly against the sides of the receptacle.

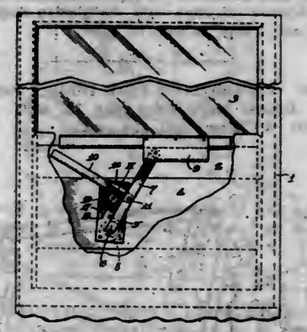


1,640,861. GAS-BURNER COOKSTOVE. AUGUSTUS F. THOMPSON, Huntington, W. Va. Filed Dec. 2, 1926. Serial No. 152,152. 2 Claims. (Cl. 126—40.)

1. A stove of the character set forth consisting of a casing, a bar adjustably mounted therein and provided with depending flanges at its edges, a base-plate attached

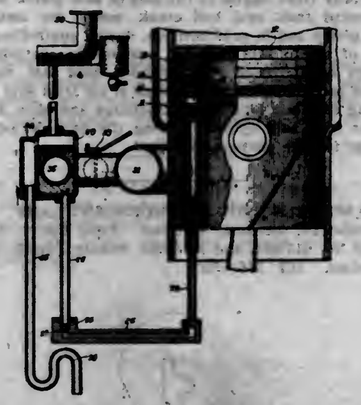
to the bottom of said bar, within said flanges, this base-plate being provided with a pair of depending separated arms carrying at their lower ends a gas-jetting tube, a gas-supply tube connected to said gas-jetting tube, a mixer-tube screwed down into said base-plate, and a removable burner mounted on the upper end of said mixer-tube.

1,640,862. SWING. WILLIAM H. TIERNEY, Washington, D. C. Filed Mar. 10, 1926. Serial No. 93,710. 6 Claims. (Cl. 155—65.)



1. The combination with an axle and anti-friction means for supporting the same for bodily movement, of a swing suspended from the axle, and means for imparting a back and forth motion bodily to the axle to start the oscillation of the swing.

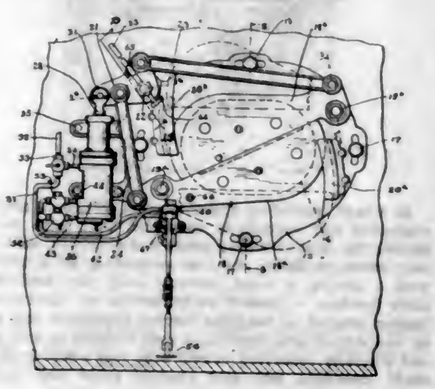
1,640,863. DUST CAP FOR TIRE VALVES. JAMES ELMORE TURRELL, Noxen, and WILLIAM G. THOMAS, West Pittston, Pa. Filed June 21, 1926. Serial No. 117,472. 1 Claim. (Cl. 152—12.)



A dust cap for tire valves or the like comprising a tube closed at one end and open at the other to receive a valve stem, a sleeve slidably mounted on said tube, said tube at its open end being longitudinally slotted to form individual spring sections integral with the tube which tend to spring outwardly, said spring sections being of uniform thickness throughout, the lower end of each spring section being bent to form an outwardly projecting bead which terminates in an inwardly extending edge extremity which projects inwardly beyond the inner face of the section to engage the threads of the valve stem, upon downward movement of said sleeve over the spring sections, forcing them inwardly, said edge extremities of the spring sections all being disposed in the same plane at right angles to the axis of the dust cap.

1,640,864. SASH REGULATOR. CARL UNGERMAN, Detroit, Mich. Filed Oct. 19, 1925. Serial No. 63,320. 1 Claim. (Cl. 268—126.)

In a sash regulating device wherein an arm is pivotally supported and operatively connected to a sash for adjusting the sash;—means adapted for moving said arm, said means including an arm supporting plate provided with a bearing, a crank operated shaft journaled in the plate bearing, a channel guide having an apertured extension pivoted on the plate bearing to support said guide at one side of said bearing, a rack slidable in said guide and pivotally connected to said arm, and a pinion on said shaft extending into said channel guide and meshing with said crank.

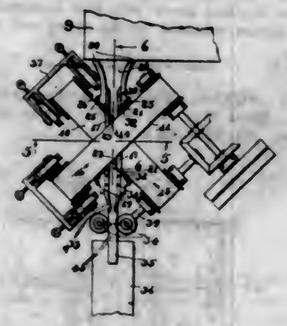


1,640,865. OIL AND FUEL SAVER. IRA A. WEAVER, Springfield, Ill., assignor, by mesne assignments, to Skinner Automotive Device Co., Inc., Sacramento, Calif., a Corporation of California. Filed July 12, 1922. Serial No. 574,584. 21 Claims. (Cl. 123—196.)

1. In a construction of the character described, the combination of an internal-combustion engine including a cylinder, a reciprocatory piston therein having an external fluid-collecting groove at least partially extending spirally to the lower margin of the piston skirt, means to supply lubricating oil to said cylinder and piston, and a carburetor, a tube carried by said piston with its interior in communication with said piston groove, a stationary hollow plunger telescopically associated with said tube, a check-valve between the interior of said tube and said piston groove, said tube having an air-inlet port through its side wall adapted to be opened and closed by said stationary plunger, a distillation-chamber having an overflow port, means to heat said distillation-chamber by exhaust gases from said engine, a conduit connecting the in-

terior of said plunger with the bottom of said distillation-chamber, a check-valve in said conduit, means to deliver the gases and vapors in said distillation-chamber to the intake of said carburetor, a pipe to conduct the overflowing lubricating oil from said distillation-chamber to the engine, and a trap in said oil pipe.

1,640,866. LOCOMOTIVE FIRE DOOR. PETER J. WEIRICH, Adams, Wis. Filed May 12, 1921. Serial No. 468,826. 3 Claims. (Cl. 121—44.)

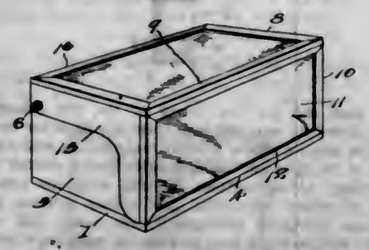


1. Apparatus of the class described comprising a fire door consisting of a pair of relatively movable pivoted sections, a bell crank, links connecting said bell crank to the respective sections, a cylinder, a piston in said cylinder, a piston rod pivotally connected to said piston and readily detachably connected to said bell crank, said piston rod being arranged to be moved to a position at substantially right angles to the axis of said piston when disconnected from said bell crank, means for maintaining said piston rod in said position, means controlling admission of air to said cylinder, and means controlling discharge of air from said cylinder, said last mentioned means permitting rapid discharge of air from said cylinder during the initial period of discharge and slow discharge of air from said cylinder during the final period of discharge for the purpose described.

1,640,867. ELECTRIC INCANDESCENT LAMP. HAROLD WORKMAN, Glasgow, Scotland. Filed Feb. 7, 1923, Serial No. 617,631, and in Great Britain July 5, 1922. 4 Claims. (Cl. 176—32.)

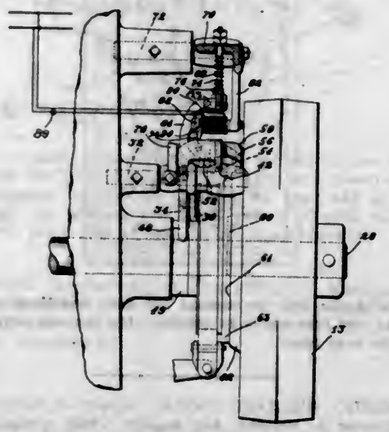
1. An electric incandescent lamp comprising in combination a bulb, a filament mounted therein, a lamp cap of usual construction with a metallic casing secured to said bulb, a lamp contact carried in said lamp cap and a sleeve shaped fitting piece formed to fit within a lamp holder and having a part making annular contact with the outside of said lamp cap, said part having such narrow axial width that the lamp cap is capable of rocking therein and means for securing said fitting piece to said lamp cap in a pre-determined position both axially and laterally with respect to said filament.

1,640,868. AUTOMATIC HARD-CANDY MACHINE. FRED E. ZAISS, Los Angeles, Calif. Filed July 1, 1926. Serial No. 119,877. 9 Claims. (Cl. 107—10.)



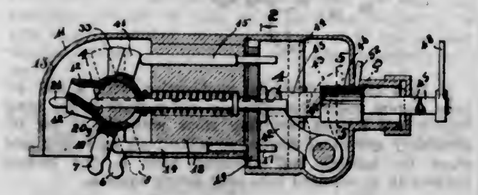
1. In a candy machine, a trough for conveying matter, conveying members crossing said trough movably, guides disposed axially in said trough and between said members adapted to maintain a certain space between the members.

1,640,869. JOINT BETWEEN ELECTRICAL CONDUCTORS. RAYMOND W. ARMSTRONG and IRA E. MCCABE, Chicago, Ill. Original application filed Dec. 16, 1922, Serial No. 607,303. Divided and this application filed Oct. 22, 1924. Serial No. 745,149. 4 Claims. (Cl. 173—263.)



1. A flexible connection to lead in wires of hermetically sealed glass containers such as mercury switches comprising an electrical conductor composed of a plurality of fine wires braided together to form a flexible tube with one end expanded and telescoped over the protruding lead in wire and soldered thereto.

1,640,870. DISPLAY BOX. ERICK E. ASPLUND, St. Paul, Minn. Filed Feb. 3, 1927. Serial No. 165,562. 1 Claim. (Cl. 217—58.)



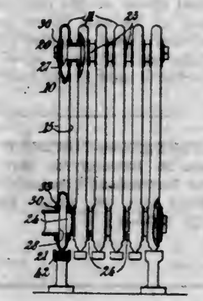
The combination in a display box having closed ends and open at its front and top and having a projecting bottom forming a front ledge, of a lid having a front frame adapted to seat on said ledge and a transparent panel in said frame, a top frame and transparent panel therein, angular end plates attached to said lid-frames and located at the exterior faces of the box ends, and hinge joints between said end plates and box ends and located below the top of the box whereby when the lid is opened the rear bar of the top frame of the lid contacts with the back wall of the box, to form a stop for the frame.

1,640,871. STARTING AND STOPPING MECHANISM. MILTON H. BALLARD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 25, 1923. Serial No. 614,905. 25 Claims. (Cl. 192—40.)

1. In a mechanism of the character described, a shaft, a power pulley, means for clutching the shaft to the power pulley comprising means for causing the power pulley to actuate the clutching means, and means automatically operative for preventing the power pulley from repeating the clutching operation.

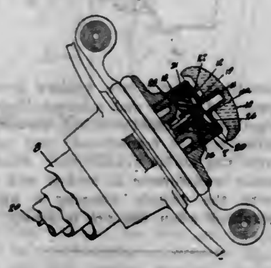
1,640,872. SPEED-SELECTING DEVICE. VERNON W. BALZER and JOHN MCK. BALLOU, Los Angeles, Calif. Filed July 16, 1923. Serial No. 651,852. 10 Claims. (Cl. 74—58.)

1. In a speed selecting device, shifting levers swingably mounted, operating rods shiftably mounted for shifting movements in the direction of and in alignment with the shifting levers, and a selecting mechanism including a selecting disc having perforations, to allow the several operating rods to pass through the disc to remain unaffected by a forward moving of the disc and adapted to cause one of the operating rods at a time to abut against an unperforated portion of the disc for actuating one of the said levers.



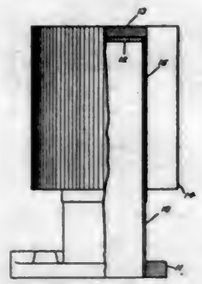
1,640,873. COLLECTION CAR. VERNON W. BALZER and JOHN MCK. BALLOU, Los Angeles, Calif., assignors to Charles W. Burke, Los Angeles, Calif. Filed June 10, 1926. Serial No. 115,003. 3 Claims. (Cl. 89—36.)

1. A collection car of comparatively small self-propelling type like a light automobile including safe-like containers, a turret-covered receptacle having gun and vision openings by which a guard may protect said containers for the depositing and collecting of valuables and



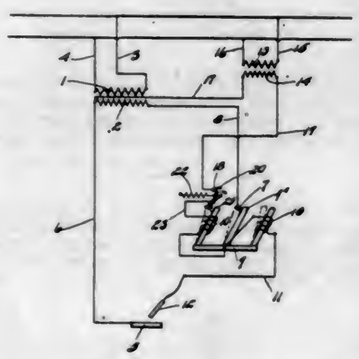
a seat having a back brace attached to and suspended from the turret of the receptacle forming the controlling means of the turret.

1,640,874. RADIATOR. OTTO S. BEYER, Brooklyn, N. Y., assignor, by mesne assignments, to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Aug. 7, 1924. Serial No. 730,632. 4 Claims. (Cl. 257—139.)



2. A metal radiator comprising longitudinally flattened shells of light gauge, said shells being closed at one end and seamless throughout, said flattened sides being constricted longitudinally for providing channels for circulation.

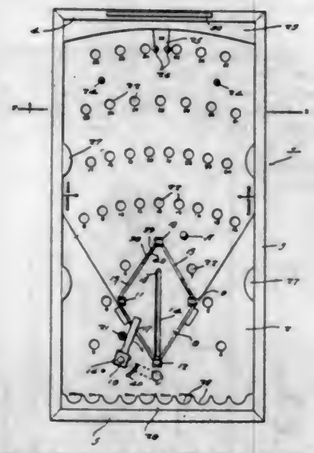
1,640,875. HORN BUTTON. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 30, 1926. Serial No. 84,903. 11 Claims. (Cl. 200—159.)



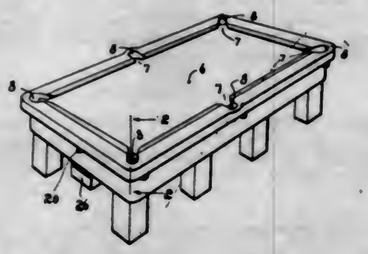
1. In a switch, a base of insulating material having a central contact member, a flat spring extending across the top of said base, a bridge piece over said spring and secured to said base and having an orifice therethrough and a headed button having a shank extending through the orifice in said bridge piece and spread to form a retaining head between said bridge piece and said spring.

1,640,876. INTERNAL-COMBUSTION-ENGINE CYLINDER AND PROCESS OF MAKING SAME. ALFRED L. BORGEHOLD, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 14, 1922. Serial No. 606,797. 4 Claims. (Cl. 123—171.)

1. An internal combustion engine cylinder comprising a thin steel barrel closed at one end, cooling fins extending longitudinally of the said barrel and radially therefrom, and a metallic jacket supplied to said cylinder in a molten condition and filling a space initially present between the exterior of said barrel and the inner ends of said fins.



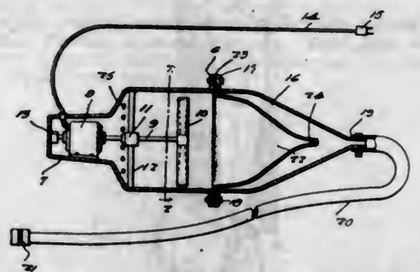
1,640,877. ALTERNATING-CURRENT WELDING SYSTEM. JULIUS R. BAUECKNER, Bay City, Mich., assignor to Gibb Instrument Company, a Corporation of Michigan. Filed Mar. 26, 1924. Serial No. 701,932. 2 Claims. (Cl. 219—8.)



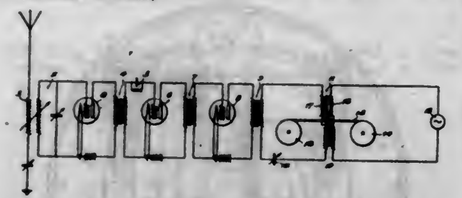
1. An alternating current arc welding system comprising transformers of major and minor voltage electrically connected together, a magnetic switch normally connected with the minor voltage transformer and adapted to be connected with the major transformer when connection with the minor transformer is broken and an electrode connected with the switch, whereby a high operating voltage is obtained when the arc is struck.

1,640,878. BASEBALL-GAME APPARATUS. STEPHEN J. BRUTOFSKI and JOHN ARMSTRONG, Scranton, Pa. Filed Feb. 28, 1927. Serial No. 171,527. 5 Claims. (Cl. 273—88.)

1. In a game apparatus, the combination of a board having a representation of a base ball diamond thereon, a ball, a manually actuated bat for striking and projecting the ball on the playing field, base runner simulating means arranged in the base paths adjacent the respective bases of the diamond, and additional means controlled by the actuation of the bat prior to the same striking the ball for moving the first mentioned means along the base paths to simulate the runners advancing to the next base.



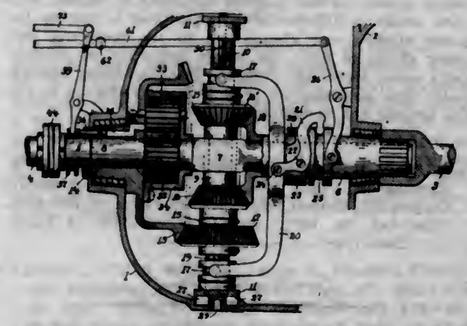
1,640,879. BILLIARD TABLE. HARRY C. BURKE and AUGUST A. FRIBERG, Los Angeles, Calif., assignors of one-third to S. D. Murdock, Los Angeles, Calif. Filed Dec. 1, 1926. Serial No. 151,944. 4 Claims. (Cl. 273—11.)



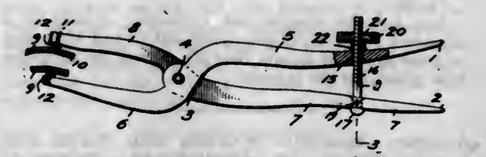
1. In a billiard table in combination with a ball return system under the table top and pockets in the table top, a ball control including stops with means for individually and other means for collectively operating said stops for holding and releasing balls in the several pockets to be released into said return system.

1,640,880. TIRE PUMP. ROBERT C. BUSHNELL, Philadelphia, Pa. Filed Feb. 3, 1927. Serial No. 165,592. 1 Claim. (Cl. 230—128.)

In a pump of the class described, an air chamber open at one end, the opposite end being reduced to provide a motor housing, said chamber being formed with a series of air inlet openings at the juncture of the chamber with the reduced portion thereof, a motor arranged within the housing, the drive shaft of the motor extending into the air chamber, a bearding arranged within the chamber for the shaft, a fan secured on the forward end of the shaft for generating air within the chamber, a conical shaped head open at its inner end and having a restricted discharge nipple formed at its smaller end, laterally extending flanges formed on the open ends of the chamber and head respectively, a substantially conical shaped body of rubber material open at its larger end, the open end of the rubber conical shaped body being flanged for disposition between the aforementioned flanges, fastening means extending through the flanges and the laterally disposed portion of the rubber body, said rubber body being disposed within the conical shaped head and being formed at its smaller end with a greatly restricted discharge nipple to permit the air generated in the chamber by the fan to enter the head and be discharged out through the nipple formed thereon but to prevent the return of the air into the chamber.

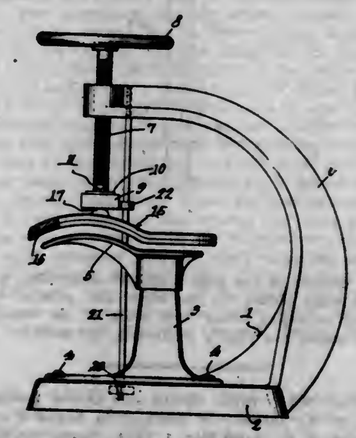


1,640,881. RADIO TELEGRAPH SYSTEM. WENDELL L. CARLSON and GLENN W. CARPENTER, Washington, D. C. Filed Mar. 26, 1921. Serial No. 456,020. 2 Claims. (Cl. 179—100.2.)



1. A telegraphic receiving system comprising in combination a signal receiving circuit, a generator of high frequency current, a movable wire recording element, a pair of magnetic core members located on opposite sides of said movable wire recording element, sets of independent windings each set comprising a pair of sections with one section disposed on each of said core members, one set of said windings being connected in said signal receiving circuit and the other set of said windings being connected with said high frequency generator.

1,640,882. SPEED-CHANGE GEAR. ALBERT BURDETT CLARK, Boston, Mass. Filed May 11, 1925. Serial No. 29,880. 6 Claims. (Cl. 74—34.)



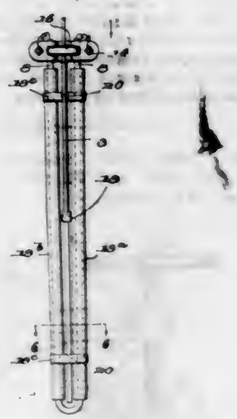
1. In a speed change gear, a driving shaft, a shaft in alinement therewith, a cross shaft at right angles to the second named shaft and revolving therewith in a plane transverse thereto but rotatable on its own axis, means for transmitting rotary motion from said driving shaft to said cross shaft, a gear supported to revolve with the second-named shaft and rotated by said cross shaft, an annulus terminally supporting said cross shaft and, with the latter, adapted to rotate about the axis of said driving shaft, means controlling said rotation, and means providing a resistance variable at will between the rotation of said annulus and that of said gear.

1,640,883. HAND CLAMP. STEPHEN N. COLEMAN, Sylacauga, Ala. Filed Aug. 0, 1926. Serial No. 128,282. 2 Claims. (Cl. 81—5.1.)

2. In a device for holding cemented patches on shoes whilst the cement is setting, a pair of levers crossed upon each other and pivotally connected to form jaws and handles, the handles having openings, the opening in one handle being flared toward its ends, a screw in the openings, and provided with a head shaped to rock on the outer surface of said handle, a nut on the screw and engaging the other handle, a securing element in the first-specified handle, the screw having an elongated opening which receives the securing element loosely to permit the strain to be carried by the head, and cooperating shoe-patch presser-feet on the jaws.

1,640,884. SHOE JACK. STEPHEN N. COLEMAN, Sylacauga, Ala. Filed Aug. 12, 1926. Serial No. 128,812. 1 Claim. (Cl. 12—33.)

In a device of the class described, a base, an arm connected at its lower end to the base and having its upper end disposed in over-hanging relation to the base, lasts supported on the base, presser members cooperating with the lasts, a yoke carrying the presser members, means mounted on the upper end of the arm and connected to the yoke for forcing the presser members toward the lasts, and a guide rod whereon the yoke is mounted slidably in transversely spaced relation to said means, the guide rod joining the upper end of the arm to the base and reinforcing the arm to withstand the thrust of said means.

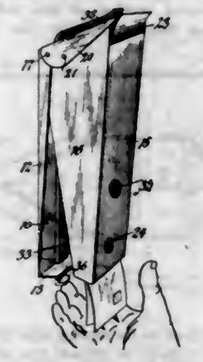


1,640,885. GRINDING BALL AND PROCESS OF MAKING. THOMAS S. CURTIS, Los Angeles, Calif., assignor, by mesne assignments, to Pacific-Southwest Trust & Savings Bank, trustee, Los Angeles, Calif., a Corporation of California. Filed Sept. 5, 1925. Serial No. 54,824. 17 Claims. (Cl. 25—156.)

1. A grinding ball comprising pyrophyllite baked at high temperature.

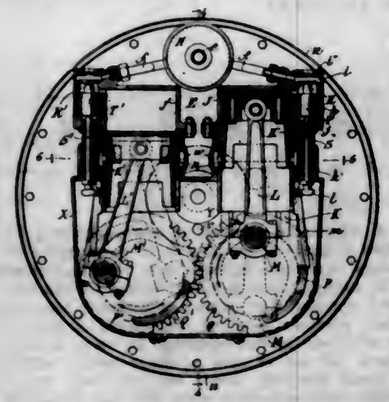
1,640,886. NONSLIP FLOOR TILE. THOMAS S. CURTIS, Los Angeles, Calif., assignor, by mesne assignments, to Pacific-Southwest Trust & Savings Bank, trustee, Los Angeles, Calif., a Corporation of California. Filed Sept. 5, 1925. Serial No. 54,825. 4 Claims. (Cl. 72—96.)

1. A non-slip ceramic tile, comprising a body of a substance homogeneous throughout but formed with spots or zones of higher density than the body of the substance from which the tile is made.



1,640,887. ELECTRIC WARMER AND WIPER FOR WINDSHIELDS OF AUTOMOBILES. CHARLES V. DAVIS, Morganton, N. C. Filed Mar. 26, 1927. Serial No. 178,626. 6 Claims. (Cl. 15—255.)

1. A cleaner of the type described comprising a wiper strip, a rigid holder for the same, and parallel heating members extending along both sides of the wiper strip and its holder and rigidly secured to the holder.



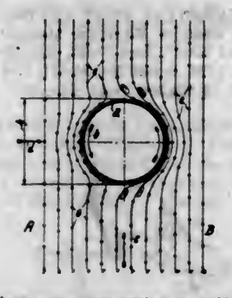
1,640,888. MAIL BOX. ELIAS VAN OCTON DAVIS, Hornell, N. Y., assignor of one-half to James T. Foody, Hornell, N. Y. Filed Mar. 1, 1924. Serial No. 696,347. 4 Claims. (Cl. 232—28.)

1. A mail box comprising front and rear sections, said rear section having an upright rear wall, upright side walls projecting forwardly from the side edges of said rear wall, a top projecting forwardly from the upper edge of said rear wall and a bottom projecting forwardly from the lower edge of said rear wall, and said front section being of hollow form and pivotally mounted on said rear section and having a mail inlet in its upper part and adapted to have its lower part move toward and from the lower part of said rear section for closing and opening the outlet for the mail at the lower end of the box, and means for manually moving the lower part of said front section away from the lower part of said rear section comprising a vertically movable shifting bar

guided in the rear wall of said rear section and operating at its upper end on the upper part of said front section.

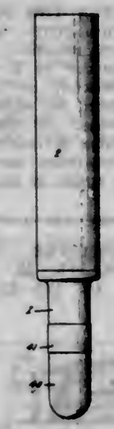
1,640,889. AUTOMOBILE TORPEDO. WILLIAM DIETER, Newark, N. J. Filed Nov. 3, 1922. Serial No. 598,878. 15 Claims. (Cl. 114—20.)

1. In an automobile torpedo, in combination with a source of fluid pressure and with oppositely-revolving propeller shafts, a propulsive twin engine comprising cylinders and pistons with independent valves admitting pressure to the cylinders, and two piston-driven crank shafts geared together to turn oppositely in unison, with their cranks in different angular positions to overlap the power strokes, and also geared to the respective propeller shafts to drive the latter oppositely at substantially equal speed, the propeller reactions being substantially equal and opposite so that their tendencies to roll the torpedo are neutralized.



1,640,890. WHEEL-SHIPPING STRAP. EDWARD T. ESTERBROOK, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 10, 1921. Serial No. 506,793. 1 Claim. (Cl. 280—179.)

A method for shipping vehicle wheels consisting in placing them flatwise engaging throughout their circumference upon a flat supporting surface, attaching tie



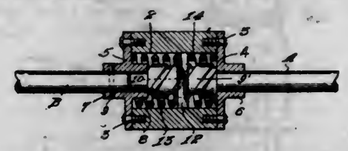
members by their inner ends to the rim bolts on said wheel, extending said tie members outwardly, securing the outer ends of said tie members to said support and tensioning said tie members by distorting the intermediate portion of one of said members.

1,640,891. GUIDE BODY FOR REACTION ROTORS. HUGO FRITZEL, Hamburg, Germany. Filed Sept. 23, 1925, Serial No. 58,120, and in Germany Dec. 12, 1924. 3 Claims. (Cl. 170—14.)

1. A reaction rotor comprising a guide body mounted on the outer surface of the rotor parallel to the axis of the same having guide faces of biconcave shape and joining in a knife edge in order to avoid damming up and formation of eddies.

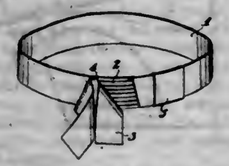
1,640,892. PYROTECHNIC SIGNAL. HARRY C. GAMMETER, Cleveland Heights, Ohio. Filed Apr. 8, 1926. Serial No. 100,750. 21 Claims. (Cl. 102—24.)

1. A pyrotechnic signal comprising a container, an aerial projectile and its impelling charge sustained within the outer end of said container, a body of flare producing material occupying the container inwardly of said charge, a fuse extending through and insulated from said body and having its outer end in igniting relation to both the impelling charge and said body of flare producing material, a percussion cap supported in position to ignite said fuse, and a firing pin arranged in operative relation to the percussion cap.



1,640,893. HAIR CURLER. JOHN A. HARTVIG, Chicago, and ARTHUR A. MCLAURIN, Forest Park, Ill. Filed Nov. 17, 1925. Serial No. 69,647. 1 Claim. (Cl. 132—41.)

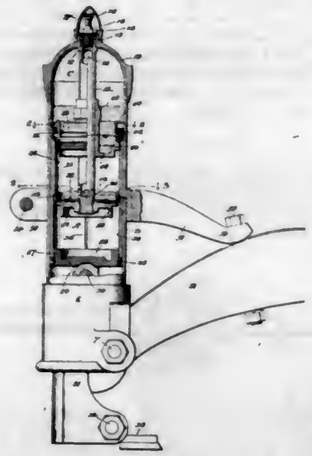
A hair curler comprising an elongated body on which the hair is wrapped, a retaining loop pivoted at one end to one end of the body and having side arms that diverge from the pivoted end to the opposite end and are adapted to lie alongside opposite sides of the body and extended beyond the same, a cross bar of materially greater length than the thickness of the body connecting the free ends of said side arms at a point beyond the free end of the body and holding them permanently in divergent relation and spaced from the body, and a keeper loop surrounding and



frictionally sliding on the side arms, said keeper loop being movable on the side arms between a position beyond the free end of the body and capable of unobstructed movement along said body, and said loop having portions inwardly crimped to prevent its detachment from the side arms and forming a socket between the side arms that slidably receive the body.

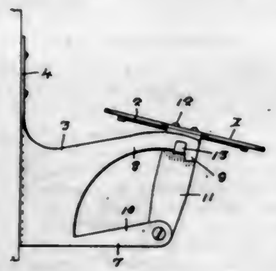
1,640,894. SHOCK ABSORBER. HENRI HEBERT and JOSEPH ALCIME LAMBERT, Montreal, Quebec, Canada. Filed Apr. 5, 1924. Serial No. 704,538. 1 Claim. (Cl. 64—96.)

The herein described shock absorbing shaft coupling consisting essentially of a housing exteriorly of circular cross section and having a longitudinal central bore of square cross section extending throughout its length, a cap for one end of the housing, a cap for the other end of the housing, an exterior and an interior flange formed on the first mentioned cap, an exterior annular flange former on the second cap, a driven shaft fixedly connected in the exterior annular flange of the first mentioned cap, a drive shaft journaled in the flange of the second cap and having a terminal portion disposed in the interior flange of the first named cap and also having a diametrically enlarged screw member arranged in said housing and interposed between and abutting against the inner side of the second cap and the inner end of the interior flange of the first named cap, a square in cross section driving block snugly fitting and moving rectilinearly in the square bore of the housing and being provided with an opening surrounding the threaded portion of the drive shaft, obliquely disposed studs extending inwardly from diametrically opposite sides of the opening for cooperation with the threads of the screw member, and coiled springs surrounding the drive shaft and interposed between said caps and the said driving block.



1,640,895. HATBAND. OLIVE HILLS, Windsor, England. Filed Aug. 12, 1924, Serial No. 731,625, and in Great Britain Sept. 24, 1923. 1 Claim. (Cl. 2—179.)

A hat band comprising a strip of relatively inelastic material adapted to encircle a hat crown and having parallel longitudinal edges, one of which is longer than



the other, an insert of elastic material substantially trapezoidal in shape with the longer edge thereof alined with the shorter edges of the strip and at the bottom of the said strip, the end portions of the strip and the insert being joined with each other by seams disposed along oblique lines, said seams diverging from the longer edge of the strip towards the shorter edge, a bow attached to said strip, and a loop slidable on said strip towards and away from said bow.

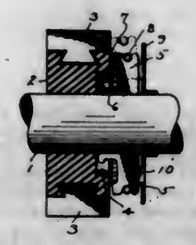
1,640,896. AIR SPRING. BRADFORD B. HOLMES, New York, N. Y. Filed Nov. 23, 1922. Serial No. 602,824. 16 Claims. (Cl. 267—64.)

1. A pneumatic cushioning device having in combination, a cylinder closed at one end, a piston having a tubular extension arranged to slide in the open end of the cylinder to form a variable volume chamber adapted to contain air under pressure, a reservoir for holding a supply of liquid, a partition supported by the cylinder across the interior of the piston and adapted to form a compression dash pot with the piston and an extension dash pot with the reservoir to check extreme movement of the parts of the device in either direction, and means operable by movements of the piston for transferring liquid from the reservoir to fill the dash pots and for returning surplus liquid to the reservoir.

✓1,640,897. GLARE SHIELD. HENRY H. IRWIN, Greenville, S. C. Filed Aug. 26, 1926. Serial No. 131,760. 1 Claim. (Cl. 296—97.)

An anti-glare device for a vehicle comprising a frame, a transparent member carried thereby, a bracket adapted to be attached to a part of a vehicle, said bracket having a lower straight arm and an upper arc-shaped arm, the upper arm having its extremity extending outwardly beyond the extremity of the lower arm, a stop on the upper arm at the end thereof, a lever or arm pivoted at its lower end to the end of the lower arm and having a guide formed thereon for engaging the lower curved edge of the upper arm, said guide engaging the stop for limiting the outward movement of the lever and means for attaching the upper end of the lever or arm to the frame.

1,640,898. ORNAMENTAL FOOT COVERING. HILDEGARD MARTHA GERLIND KÖNICKE, Hamburg, Germany, assignor to Emil Karl Albert Voigt, Hamburg, Germany. Filed Mar. 18, 1926, Serial No. 95,657, and in Germany June 29, 1925. 3 Claims. (Cl. 41—10.)

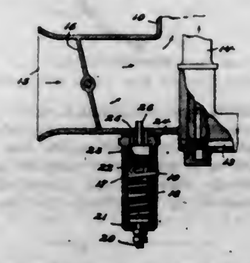


1. An openwork ornamental element formed for wear upon a portion of the leg beneath thin hosiery so as to show through the hosiery and give the appearance of being an ornamental constituent of the hosiery, and means for holding said element in position relative to such portion of the leg and to the hosiery.

1,640,899. PROCESS FOR THE MANUFACTURE OF CONDENSATION PRODUCTS OF CROTONALDEHYDE. WALTER KROPF, Elberfeld, near Cologne-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Mar. 5, 1926, Serial No. 92,622, and in Germany May 14, 1925. 3 Claims. (Cl. 260—141.)

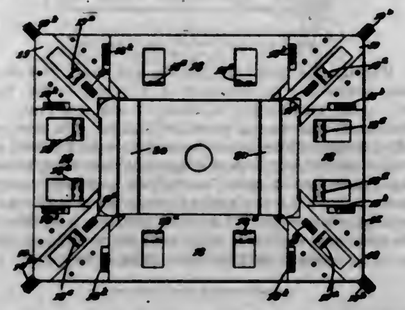
1. A method of making a condensation product of crotonaldehyde which comprises condensing crotonaldehyde with an aromatic amine in the absence of a condensing agent.

1,640,900. SHORT CIRCUITER. EVERETT P. LARSH, Dayton, Ohio. Filed Feb. 15, 1924. Serial No. 693,019. 11 Claims. (Cl. 172—279.)



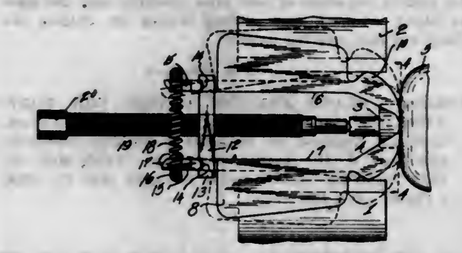
11. In a short circuiting device for commutators, an annular series of contact members located in juxtaposition to the lateral face of the commutator and capable of both oscillatory and radial movements under centrifugal influence, control means therefor, by which said movements are initiated one in advance of the other, and an annular contractile band common to all the weights of the series yieldingly resisting both the oscillatory and the radial movements of said weights.

1,640,901. DISINFECTING AGENT. RUDOLF LIEBKE, Leverkusen, near Cologne, WERNER SCHULEMANN, Vohwinkel, near Elberfeld, and WILHELM BONRATH, Leverkusen, near Cologne, Germany, assignors, by mesne assignments, to Winthrop Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1925. Serial No. 5,340. 6 Claims. (Cl. 167—3.)



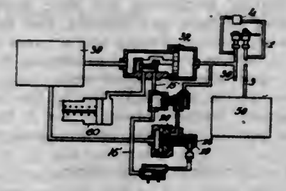
3. The herein described new disinfecting, bactericidal, insecticidal and fungicidal preparations formed by mixing an organic mercury compound with a phenol and an alkali, said organic mercury compound, phenol, and alkali being capable of interacting in the presence of water to form a compound having superior disinfecting, bactericidal, insecticidal and fungicidal properties, substantially as described.

1,640,902. HYDROCARBON VAPORIZING DEVICE FOR STARTING MOTORS. THOMAS J. LITLE, Jr., Detroit, Mich., assignor, by mesne assignments, to Lincoln Motor Company, a Corporation of Delaware. Filed July 23, 1920. Serial No. 398,338. 7 Claims. (Cl. 123—122.)



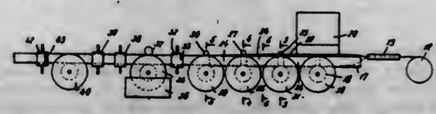
1. In a hydrocarbon motor, the combination with the intake pipe having an air inlet and a fuel nozzle opening thereinto between the air inlet and the engine, of a receptacle positioned intermediate the air inlet and the mouth of the fuel nozzle for receiving liquid fuel collecting in the intake pipe, and means enclosed within said receptable so as to be out of contact with the gaseous current passing to the engine, for vaporizing the liquid fuel received therein.

1,640,903. COVERING MACHINE. REGINALD ALVIN MCCAULEY, Dorchester, Mass., assignor to Samuel Ward Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed June 10, 1924. Serial No. 719,226. 11 Claims. (Cl. 154—41.)



11. In a machine for applying fabric and the like to covers, a mold having inwardly slidable side walls and inwardly movable corner slides, means for actuating said side walls and corner slides in timed relation to each other, a bottom plate movable vertically in said mold and supports for adjustably limiting the descent of said plate whereby to position said plate slightly below the plane of said side walls and corner slides.

1,640,904. BEARING PULLER. RONALD B. NOBLE, Spokane, Wash. Filed Nov. 1, 1926. Serial No. 145,569. 3 Claims. (Cl. 29—85.)

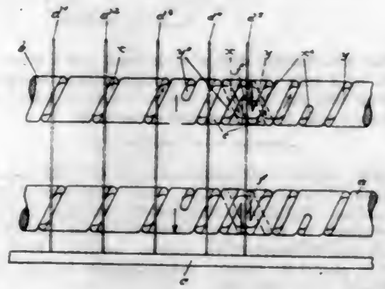


1. The combination with a cross head and a screw bar therein, of a pair of side plates each having a supporting flange and an end jaw, and a separable hinge joint between the side plates and said cross head.

1,640,905. SINGLE-CHAMBER AIR-PRESSURE BRAKE. JOHANN RIHOSEK, Vienna, and RICHARD LUDWIG LEUCHTER, Weidlingau-Hadersdorf, Austria, assignors of one-half to the Firm Gebrüder Hardy, Maschinenfabrik und Giesserei A. G., Vienna, Austria. Filed Apr. 5, 1926, Serial No. 99,964, and in Austria Dec. 15, 1925. 5 Claims. (Cl. 303—60.)

1. In a single chamber air pressure brake a combination of a main reservoir, a train pipe, an engineer's valve connected to the train pipe, a connecting pipe connecting the said main reservoir with the train pipe, a pressure governing device included in the said connecting pipe such pressure controlling device being adapted to establish communication between the main reservoir and the train pipe until a predetermined pressure is reached in the train pipe, and means adapted to locally increase and reduce the free passage area of such connecting pipe and responding to an increase and reduction respectively of the pressure in the train pipe.

1,640,906. PROCESS AND APPARATUS FOR MAKING ROOFING ELEMENTS. THOMAS ROBINSON, New York, N. Y. Filed June 11, 1925. Serial No. 36,812. 12 Claims. (Cl. 154—1.)

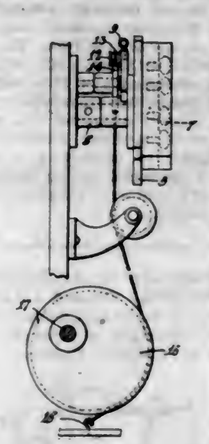


1. A method of making building material, which comprises moving a web of sheet material lengthwise and, while the web is in motion, folding it longitudinally along a line and supporting the plies of the web in opposed relation and relatively close together to provide a narrow trough, introducing a plastic filling material into the said trough, applying pressure on the filling material within the trough to compact it, and cutting the filled web into selected lengths.

12. Apparatus for making roofing which comprises means for drawing sheet material continuously from a supply, folding means for folding the sheet material

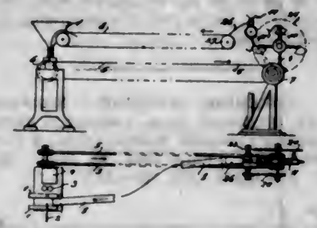
lengthwise along a line, means for supporting the plies of the sheet substantially vertical, means for introducing a filling material between the plies of the sheet, rollers for folding the edges of both plies inwardly over the mass of filling material, and cutting devices for cutting the filled web into selected lengths.

1,640,907. BLANK-FEEDING DEVICE FOR WIRE-WORKING MACHINES. JACOB RODERBURG, Aachen, Germany, assignor to Aachener Maschinen-bau-Gesellschaft m. b. H., Aachen, Germany. Filed Mar. 13, 1925, Serial No. 15,375, and in Germany Mar. 31, 1924. 1 Claim. (Cl. 198—213.)



A blank feeding mechanism for wire working machines, including at least one rotating feed screw, this feed screw having several threads and a recess extending transversely to the screw axis and connecting the several threads with each other, the said recess being adapted to temporarily receive the blanks fed by the screw and hold them against further movement for a time corresponding to a partial revolution of the screw.

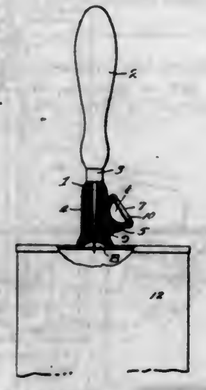
1,640,908. HEARING SHELL. KARL ALBERT SCHUCKER, Pforzheim, Germany. Filed Sept. 27, 1926, Serial No. 138,025, and in Germany Jan. 22, 1926. 2 Claims. (Cl. 181—23.)



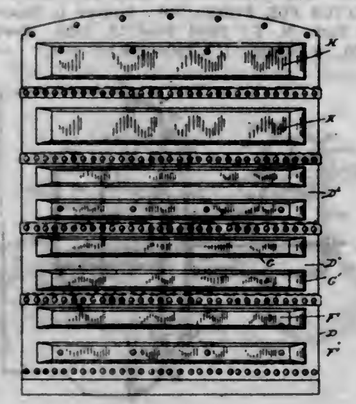
1. A hearing shell comprising in combination a shell approximately of the shape of the external ear, a fixing bow on the back of said shell, a handle composed of several tubular telescoped part elements, a hinge connecting the top end of said handle to said bow so that the telescoped handle can be folded over to lay on the front side of said shell, a spring controlled lever on the back of said shell, and a pin on the hinge of said handle designed to engage with said spring controlled lever and to securely hold said shell in the position of use.

1,640,909. ADVERTISING DEVICE. HARRY MAX SCHUTZ, Paris, France. Filed Sept. 24, 1925, Serial No. 58,408, and in France Oct. 2, 1924. 2 Claims. (Cl. 40—139.)

1. An advertising sign comprising a support, a plurality of shafts mounted thereupon, a plate rotatably supported upon each shaft, a plurality of cables, one end of each being connected to a plate, the opposite ends of said cables being fixedly received and means engaging said cables for transmitting oscillatory movement to said plates.



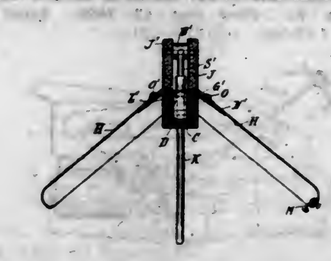
1,640,910. MACHINE FOR POLISHING PENCILS AND OTHER ROD-SHAPED BODIES. HERBERT SCHWANHÄUSSER, Nuremberg, and WALDEMAR SCHWANHÄUSSER, Munich, Germany. Filed June 8, 1926, Serial No. 114,523, and in Germany Aug. 21, 1925. 3 Claims. (Cl. 91—49.)



1. Machine for polishing pencils and other rod-shaped bodies, comprising in combination a reservoir for liquid polish, a charging-hopper in front of said reservoir, conveying bands for drying arranged behind said reservoir, a gripping- and elevating-mechanism arranged behind said conveyor bands, and a delivering conveyor band between said gripping- and elevating mechanism and said charging-hopper so that, at the end of the drying path one or several pencils are gripped by said gripping- and elevating mechanism and deposited upon said delivering conveying band to be brought back to said charging-hopper.

1,640,911. CAN TESTER. HARRY E. SKOOG, Cleveland, Ohio. Filed Aug. 20, 1924, Serial No. 733,127. Renewed Feb. 16, 1927. 9 Claims. (Cl. 73—51.)

1. A can tester comprising a body, a penetrating device carried thereby, the body having a passageway within one end of which said device is situated, the body surrounding said end of the passageway being of pliable material so that when the penerating device is inserted through the wall of a can the passageway is sealed thereabout and communication is established between the interior of the can and the passageway, and a diaphragm extending across the other end of said passageway.



1,640,912. CAR END. WILLIAM D. THOMPSON, Detroit, Mich., assignor, by mesne assignments, to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 27, 1922, Serial No. 603,687. Renewed Oct. 1, 1925. 13 Claims. (Cl. 105—410.)

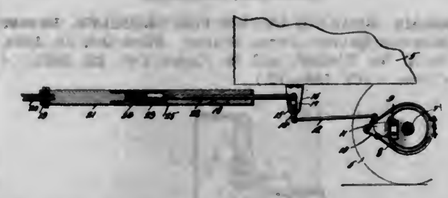
1. In a car body construction, a composite metallic plate formed of a series of overlapping pressed sheet metal sections rigidly secured to each other, the adjacent sections forming a portion of said plate being formed with a single panel pressed therein and the adjacent sections forming another portion of said plate and subjected to greater stresses than the first-mentioned sections being formed with a plurality of panels.

1,640,913. ELECTRIC ARC LAMP FOR PHOTOGRAPHING. HEINRICH TRAUT, Munich, Germany. Filed Dec. 24, 1926, Serial No. 156,956, and in Germany Dec. 28, 1925. 4 Claims. (Cl. 176—115.)

1. An electric arc lamp for photographing purposes, comprising in combination, a case consisting of two covers, the inner surfaces of which serve as reflectors, a carbon carrier composed of two elements of insulating material spaced the one from the other and on which said covers are pivotally mounted, carbons in said carrier, contacts

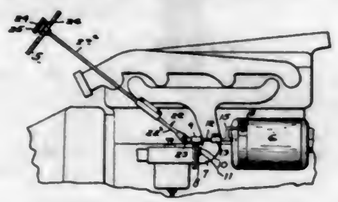
for said carbons, and means for connecting said contacts with any existing light contact.

1,640,914. LEATHER MANUFACTURE. JOHN K. TULLIS, New York, N. Y., assignor, by mesne assignments, to Geltan Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1923. Serial No. 622,642. 9 Claims. (Cl. 149—6.)



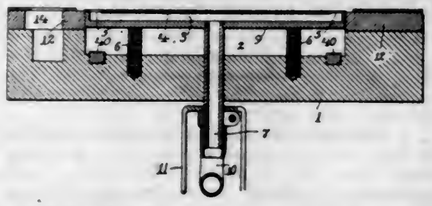
8. Leather having gelatine distributed therein.

1,640,915. TELEPHONE DIAPHRAGM. CHARLES G. WIELAND, New York, N. Y. Filed June 22, 1925. Serial No. 38,621. 2 Claims. (Cl. 179—181.)



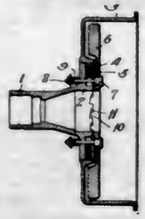
1. A diaphragm for telephone receivers comprising a disc, having an aperture and a projection at diametrically opposite points adjacent the periphery thereof, for adapting said disc to be secured to a receiver, and spaced apart bosses made integral with said disc and extending in spaced relation to each other, and longitudinally parallel to the diameter of said disc determined by said aperture and projection.

1,640,916. AUTOMATIC BRAKE MECHANISM. ANDREW A. ALLEN, Maricopa, Calif. Filed Nov. 19, 1925. Serial No. 70,195. 2 Claims. (Cl. 188—3.)



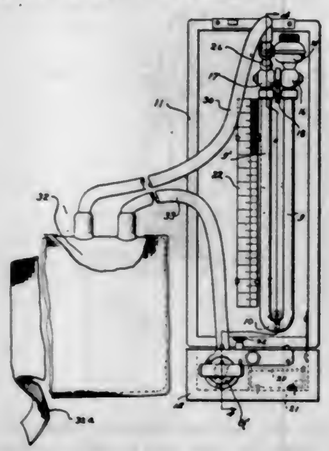
2. In combination, a vehicle brake structure, reciprocable operating rods therefor, an oscillatory bar arranged transversely of said rod and connected thereto to cause reciprocation of the same, a connecting arm carried by said oscillatory bar, a draft bar comprising a main body portion, longitudinally bored through a portion of its length, a rod member slidably positioned in the bore of said bar and having the outer end connected with the arm of said oscillatory bar, means to prevent the inner end of said rod from being withdrawn from said bore, and a cushion element housed within said bar at the inner end of and designed to be acted upon by said rod upon retardation of the forward movement of the draft bar to effect the oscillation and reciprocation of said oscillatory bar and brake operating rod respectively and the application of said brakes.

1,640,917. BRUSH-ADJUSTING MEANS FOR GENERATORS OF AUTOMOBILES. HARRY L. ARNEST, Virginia Highlands, Va. Filed Sept. 27, 1926. Serial No. 138,069. 7 Claims. (Cl. 171—221.)



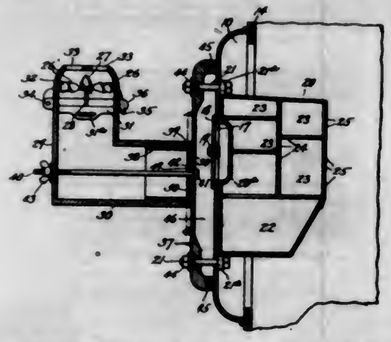
1. A device for use upon an automobile having a dash and a generator having a movable brush, comprising a rod having an end shaped to have a bearing in an opening formed in the end of the generator casing, a crank arm carried by said rod and overlying said casing and a link pivotally connected to said crank arm and having connection with the movable brush of the generator.

1,640,918. BOOKBINDING MACHINE. GEORGE H. AUSTIN, Reading, Mass., assignor, by mesne assignments, to Samuel Ward Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed May 27, 1924. Serial No. 716,145. 2 Claims. (Cl. 154—41.)



1. In a machine for applying fabric and the like to book covers, an air tight chamber having a flat top plate provided with a series of closely disposed holes adjacent its edges, and means for temporarily creating a vacuum in said chamber and thereby tightly holding the fabric and cover upon said plate while the edges of the fabric are folded over upon the cover.

1,640,919. BRAKING DEVICE FOR VEHICLES. ERNEST MAURICE BALLOT, Paris, France. Filed Oct. 18, 1924, Serial No. 744,360, and in France Oct. 22, 1923. 4 Claims. (Cl. 188—72.)

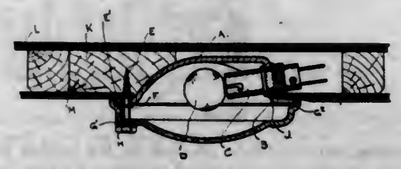


1. A vehicle brake comprising a brake drum, a vehicle wheel having a hub, an annular flange formed near the inner end of said hub, a clutch for connecting at times said flange and said brake drum, a flywheel arranged in proximity to the inner end of said hub, and having projecting portions thereon adapted to coact with portions of the hub, and means connecting said flywheel with said clutch, whereby limited rotary motion of said flywheel in respect to said hub will cause disengagement of said clutch.

1,640,920. SPHYGMOMANOMETER. GEORGE F. BEACHLER, Cleveland, Ohio. Filed Oct. 27, 1924. Serial No. 745,999. 7 Claims. (Cl. 73—44.)

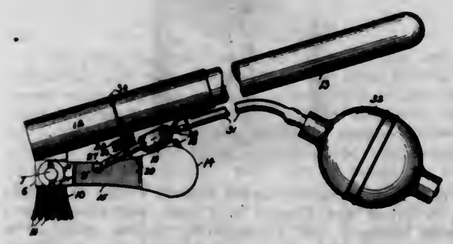
1. In a sphygmomanometer, the combination or a U-shaped tube, a single valve member controlling both legs of the tube, an openable casing containing the tube and valve, means whereby the closing of the casing operates the valve and a tourniquet bag connected with one of the legs through said valve.

1,640,921. AIR INDICATING AND REGULATING APPARATUS FOR FURNACES. ROBERT L. BLANCHARD, New York, N. Y. Filed June 13, 1925. Serial No. 36,926. 8 Claims. (Cl. 110—175.)



1. A draft indicating device for furnaces, which shows the direction of flow of air thru the furnace door into the furnace, comprising in combination with a furnace door having a main air draft opening thru which substantially all the air is supplied to the portion of the furnace behind the door, a pipe projecting from the furnace door, an air vane mounted in the projecting portion of said pipe, thereby bringing said air vane into air draft relation with said opening in the furnace door.

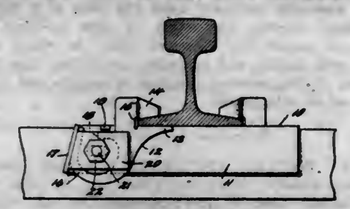
1,640,922. PROCESS OF PREPARING POSITIVE ELECTRODES OF STORAGE BATTERIES. ATTILIO CELLINO, Buenos Aires, Argentina, assignor to Central Battery Corporation, a Corporation of New York. Filed June 15, 1916, Serial No. 103,858. Renewed Jan. 8, 1927. 4 Claims. (Cl. 136—27.)



1. The process of preparing positive electrodes of storage batteries which consists in forming a mixture of an oxide of lead, peroxide of manganese and sulfate of ammonia, mounting the same in shape for use as an electrode and then subjecting the electrode to the action of sulfuric acid so as to dehydrate the active material of the electrode.

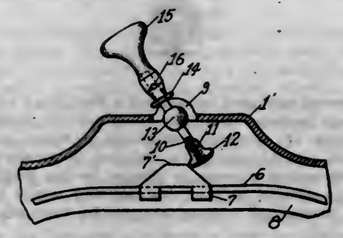
1,640,923. VEHICLE-LAMP MOUNTING. EVERETT J. COOK, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 19, 1923. Serial No. 626,210. 2 Claims. (Cl. 240—7.35.)

2. In a lamp mounting, the combination with a reflector having a marginal flange, of a globe member having a shoulder portion adjacent to said marginal flange and at the side thereof, and a skirt portion surrounding said marginal flange, said globe member coacting with said reflector to form a container, a lamp within said container, a yieldable gasket between said marginal flange and shoulder portion and surrounded by said skirt portion and securing members for said globe member and reflector and including a screw having a shoulder engaging said marginal flange and a nut threaded upon said screw and engaging said globe member.



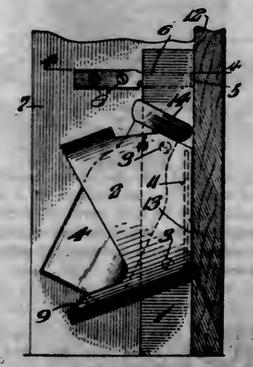
1,640,924. WINDOW CLEANER. JOHN H. COOK, Salt Lake City, Utah. Filed Apr. 11, 1923. Serial No. 631,449. 2 Claims. (Cl. 15—131.)

1. A window cleaner comprising a handle and a cleaning member rigidly mounted on one end of the same and disposed transversely thereto, a pivotally mounted reservoir for a cleansing agent located behind the cleaning member and beneath the handle, means interposed between the reservoir and handle and detachably connected to the reservoir for ejecting the cleansing agent from the reservoir and delivering it to a position to be acted on by the cleaning member, and means for supporting the reservoir from the over-extending handle, and permitting its movement away from the same.



1,640,925. RAIL-HOLDING DEVICE AND ANTI-CREEPER. WILLIAM G. COUGHLIN, Philadelphia, Pa. Filed Oct. 14, 1926. Serial No. 141,586. 8 Claims. (Cl. 238—304.)

1. A device of the character described, comprising in combination, a tie, a rail supported thereon, a clip mounted on the tie having a face engaging the base of the rail adapted to resist longitudinal movement of the



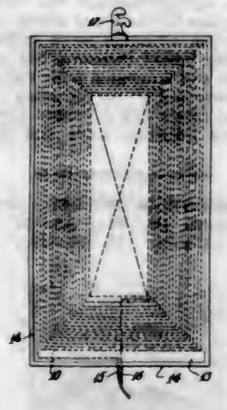
rail, said clip also having a resilient appendage to resist lifting of the rail from the tie.

1,640,926. CLOTHES WRINGER. HARRY J. CRINER, Clarinda, Iowa, assignor to L. V. Kokes and E. L. Vogeltanz, Ord, Nebr. Filed July 17, 1925. Serial No. 44,299. 8 Claims. (Cl. 68—32.)

1. An adjusting and releasing mechanism for clothes wringers comprising a channeled frame with wringer rolls mounted therein, bearing blocks and movable tension blocks adjacent the shafts of the rolls, a spring pressure bar bearing upon the movable tension blocks, a saddle, a flat top and sharply sloping sides adjacent thereto, secured to the pressure bar intermediate the ends thereof, a slotted socket formed in the upper middle portion of the channeled frame, an adjusting screw slidingly mounted in the slot having united thereto a ball adapted to fit within the socket and forming a joint therewith, a head united to the lower end of the adjusting screw adapted to seat upon the saddle and a handle formed upon the upper end of the adjusting screw and rigidly secured thereto.

1,640,927. MILK-BOTTLE HOLDER. LEWIS DANGERFIELD, Philadelphia, Pa. Filed Aug. 17, 1926. Serial No. 129,692. 2 Claims. (Cl. 282—42.)

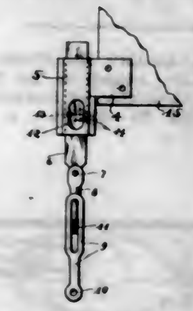
1. In a device of the character stated, a generally tubular housing of resilient sheet metal, adapted to be secured to a door jamb, with the rear end thereof abut-



ting the door when the latter is in a closed position, said housing being inclined rearwardly and having an upper opening normally narrower than the neck of a bottle to be confined therein, the edges of said opening being adapted to engage and interlock with the flange of the neck of said bottle, and inwardly projecting lugs in the front end of the housing adapted to engage and support the bottom of said bottle.

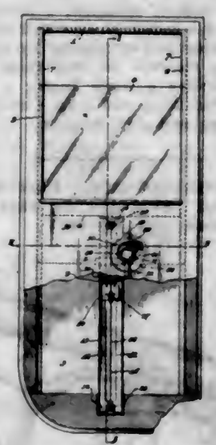
1,640,928. RECTAL APPLIANCE. ALFRED DONOVAN, Barking, London, England. Filed Dec. 9, 1926, Serial No. 153,692, and in Great Britain Dec. 14, 1925. 2 Claims. (Cl. 128—271.)

1. A rectal appliance comprising a stem of an elongated pear shape having a relatively small central passage and a plurality of outwardly extending passages radiating from said central passage, a chamber in communication with said central passage, a plunger having longitudinal movement relative to said chamber, and means external to said chamber for causing said relative movement.



1,640,929. PORTABLE RADIOANTENNA. HENRY FARKOUH, Brooklyn, N. Y. Filed Nov. 24, 1925. Serial No. 71,079. 2 Claims. (Cl. 250—33.)

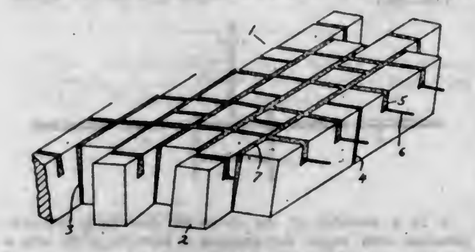
2. In a loop antenna of the class described, having certain turns of wire, the combination of a sheet, stitchings securing said sheet to said turns of wire, a sheet on each side of said sheet with attached wiring, a binding strip along the edges of said sheets, and stitchings securing said sheets together.



1,640,930. VEHICLE LOAD SCALE. GUSTAV W. GARTNER, Maywood, Calif. Filed Mar. 25, 1926. Serial No. 97,299. 2 Claims. (Cl. 265—40.)

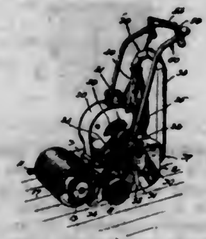
1. In a vehicle-load scale, a clamping member adapted to be attached to the axle of a vehicle, a telescopic connecting rod inserted between the chassis of the vehicle and the said clamping member and embodying adjusting means by which the length of the rod can be adjusted, and weight-indicating means at certain points of the

telescoping rod in certain relations to the loading positions of the chassis and adapted to indicate added loads by the adjustability of the said rod.



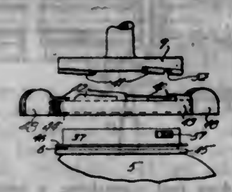
1,640,931. SASH-REGULATING DEVICE. KARL H. GETTNER, Detroit, Mich. Filed Nov. 19, 1923. Serial No. 675,708. 1 Claim. (Cl. 268—129.)

In a sash regulating device wherein a sash is adapted to be raised and lowered in a sash well formed by a frame having a sill, a supporting member mounted in the sash well with its lower end attached to the frame and its upper end attached to the sill, angular extensions on said supporting member, sheaves carried by the angular extensions of said supporting member and removable with said supporting member, a flexible member trained over said sheaves and adapted for raising and lowering the sash relative to said sill, a winding arbor supported from said supporting member, a drum on said arbor and to which drum the flexible member is attached and wound thereon, said sheaves having the axes thereof in a plane at a right angle to the axis of said winding arbor and drum, and means supported from said supporting member adapted to prevent free rotation of said winding arbor.



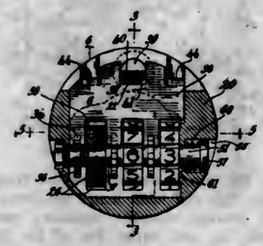
1,640,932. ARCH. JAMES C. GORDON, Detroit, Mich., assignor to Gordon Pagel Company, Detroit, Mich., a Corporation of Michigan. Filed May 26, 1924. Serial No. 716,037. 6 Claims. (Cl. 72—68.)

5. An arch comprising a plurality of fire bricks arranged end to end in rows with the joints between the bricks in adjacent rows relatively staggered, one face of each brick being provided with a transversely extending slot, each slot being restricted at the longitudinal edges thereof, and said slots being in alignment and forming a continuous channel extending transversely of



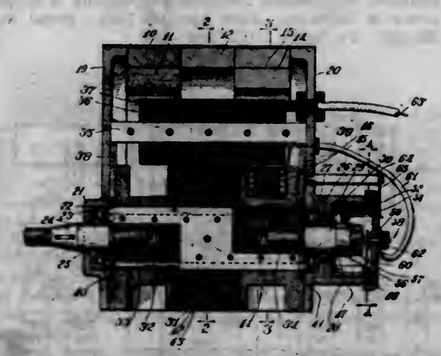
said rows, a reinforcing member extending transversely of said rows and lying within said channel, and a filling in the channel formed by the slots and cooperating with the restricted portions of said slots to prevent accidental displacement of said reinforcing member from said slots.

1,640,933. FLOOR-SURFACING MACHINE. LESTER M. GRIES, Detroit, Mich., assignor, by direct and mesne assignments, of one-half to United Tool and Manufacturing Co., Detroit, Mich., a Corporation of Michigan, and one-half to Master Woodworker Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed Nov. 10, 1925. Serial No. 68,093. 1 Claim. (Cl. 51—176.)



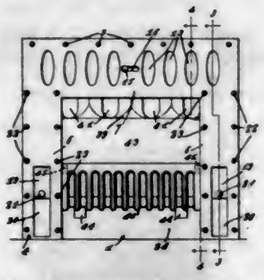
A surfacing machine comprising a body, side wheels supporting said body intermediate the ends thereof, a caster supporting the rear end of said body, a surfacing drum supported at the forward end of said body, and of a length materially less than the distance between said side wheels, said drum being shiftable from one side of said body to the other side, driving means for said drum, and means on said body adapted to facilitate raising and lowering the rear end of said body relative to said caster, said means being effective in throwing the weight of said body on said caster, said drum and one of said side wheels, the particular wheel depending on the position of said drum relative to said body.

1,640,934. RECEPTACLE COVER. ALBERT C. GRUNWALD, River Forest, Ill., assignor to Precision Metal Workers, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1924. Serial No. 718,712. 5 Claims. (Cl. 220—40.)



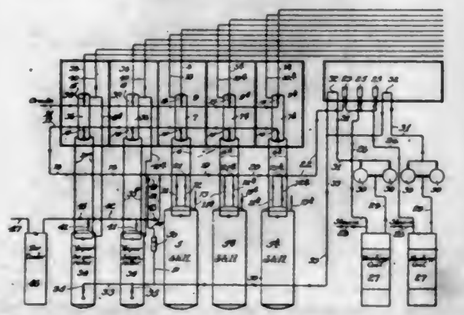
1. In combination, an oil can or the like, a cover for said can, inclined locking surfaces on said cover, a locking ring, inclined locking surfaces on said ring for engagement with the inclined surfaces on said cover and a lug for compelling seating of said cover in definite position on said can.

1,640,935. LOCK. ALEXANDER G. HATCH, Farmington, Conn., assignor to The Sesamee Company, Hartford, Conn., a Corporation of Connecticut. Filed May 4, 1926. Serial No. 106,614. 17 Claims. (Cl. 70—53.)



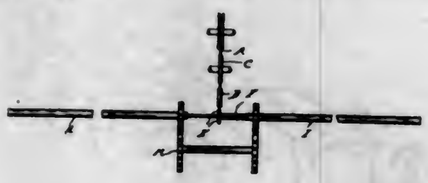
1. A permutation lock comprising a bolt independently settable rotary bolt-controlling tumblers each having a rotatable lock-controlling element, a concentrically mounted, directly accessible setting element therefor, and a coupling normally preventing relative rotary movement between said elements, said tumbler elements being relatively movable axially to disengage their coupling elements and thereby render them ineffective, a coupling disabling device, accessible from the exterior of the assembled lock and movable independently of said bolt, whereby a relative axial coupling disabling movement between the elements of a tumbler may be effected, thereby permitting one of its elements to be rotated by direct manipulation independently of the other, and motive means to restore said coupling to its normal effective relation and maintain it so.

1,640,936. IGNITION MAGNETO. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 25, 1922. Serial No. 546,678. 3 Claims. (Cl. 171—209.)



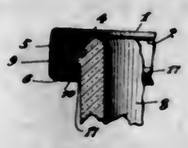
1. In a magneto, a permanent magnet having two pairs of separated pole pieces, there being one of each polarity in each pair, a rotor positioned between said pairs of pole pieces, a unitary inductor extending longitudinally of said rotor having its opposite ends offset, one of said offset ends being arranged to pass in proximity to two of said pole pieces of opposite polarity, and the other offset end being arranged to pass in proximity to the other two pole pieces, a primary and a secondary coil, a core for said coils having end projections adjacent said pole pieces and the path of said inductor, and a generator coil about said inductor element, said generator coil being connected in parallel with said primary coil.

1,640,937. FIREPLACE. HUBERT G. HEINISH, Huntington, W. Va. Filed Sept. 16, 1926. Serial No. 135,886. 4 Claims. (Cl. 126—121.)



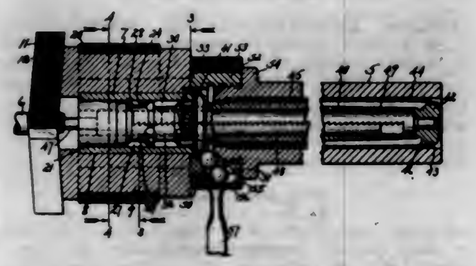
1. In open fire places an attachment therefor including front, side, top and back walls providing an air circulating and heating chamber opposing and closed to the sides, back, top and outlet flue of the fire-place and provided at the lower portion of the front thereof with controllable air inlet means and across the top of the front thereof with controllable heated air outlet means, that portion of the chamber arranged at the top of the fire-place having extending therethrough a series of upstanding, spaced outlet conduits inclining from front to rear and closed to such portion and providing means for the passage of the products of combustion from the fire box, superposed air deflectors arranged in spaced relation, progressively increasing in length upwardly, extending at an upward inclination from front to rear, positioned in each portion of said chamber which opposes a side wall of the fire box, of the same width as the width of such portion, having the rear ends thereof positioned at the rear end of such portions and with the lower of said deflectors having their forward ends spaced from the forward end of such portion, and superposed, spaced air deflectors of equal length arranged in that portion of the chamber which opposes the back of the fire box and of less width than the width of such portion.

1,640,938. ART OF DISTILLING OILS. FRANK A. HOWARD and NATHANIEL E. LOOMIS, Elizabeth, N. J., assignors to Standard Development Company, a Corporation of Delaware. Filed Apr. 10, 1922. Serial No. 551,354. 11 Claims. (Cl. 196—49.)



2. The method of distilling and converting hydrocarbon oils which comprises continuously performing the following steps in succession: passing the oil through a heated zone not substantially above atmospheric pressure, removing vaporized constituents therefrom during said passage, heating the residues to a conversion temperature while under pressure, reducing the pressure on the products of conversion, separating vapor from liquid products and commingling separated liquid products of conversion with fresh oil entering the process.

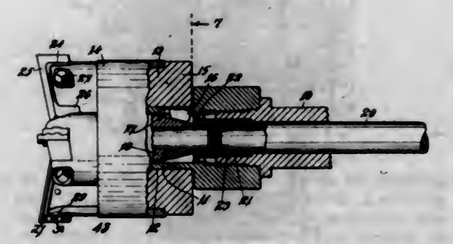
1,640,939. MACHINE FOR FORMING ARMORED INSULATED CONDUCTORS. JOSEPH H. HUNTER, Detroit, Mich., assignor to Detroit Insulated Wire Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 20, 1925. Serial No. 24,636. 5 Claims. (Cl. 113—35.)



1. In a machine of the character described, the combination with means for forming a metallic strip into a spirally wound flexible rotating and advancing armored conduit, of means for rotating a conductor throughout its length about its own axis and for delivering the same axially into said armored conduit, both axial rotation and longitudinal advancement corresponding in speed to that of said conduit.

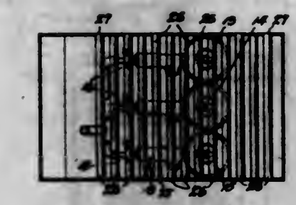
1,640,940. HERMETIC SEAL AND METHOD OF MAKING SAME. MAX JAEGER, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed May 3, 1924. Serial No. 710,722. 10 Claims. (Cl. 215—40.)

1. A closed package comprising a closure cap having a cover portion, a skirt depending from said cover portion, a ring shaped gasket supported by said skirt, in combination with a suitable container having a sharp edged locking shoulder adjacent the mouth of the container and with the external diameter of said locking shoulder being greater than the internal diameter of said gasket ring before the cap is applied, and means on said closure cap supporting said gasket ring adjacent said shoulder and maintaining a portion of said gasket ring under said shoulder without necessitating deformation of said closure, thereby interlocking said cap without deformation thereof with said container and forming a hermetic seal.



1,640,941. THREADING TOOL. CHARLES A. JOHNSON, Unionville, Conn. Filed Jan. 9, 1922. Serial No. 527,916. 20 Claims. (Cl. 10—100.)

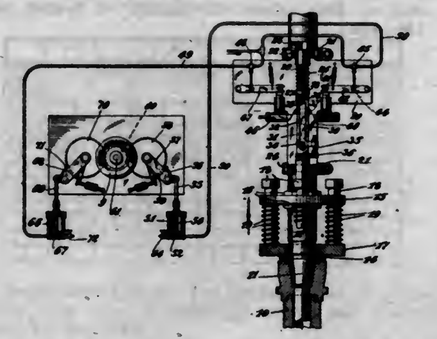
12. A threading tool comprising a body, die holders movably mounted in the body, an actuator movable lengthwise within the body and operatively connected



with said holders, an actuator stem rigidly connected with the actuator and having a groove, spring actuated retaining members located within the body and having fingers to engage said groove to retain the actuator in one position, and means for moving the actuator to disengage it from said fingers.

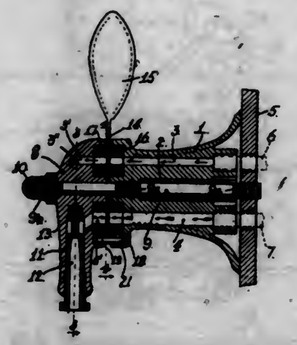
1,640,942. THREADING TOOL. CHARLES A. JOHNSON, Unionville, Conn. Filed Jan. 9, 1922. Serial No. 527,917. 12 Claims. (Cl. 10—100.)

9. A plurality of threading devices arranged in sets, the members of each set each comprising a plurality of threading members of different shapes, each threading member in each set being arranged to cut a groove and form the bottom on an angle intersecting the angular formation of the bottom created by a corresponding threading member in another set.



1,640,943. IMMERSIBLE WATER HEATER. SAMUEL M. KASS, Philadelphia, Pa. Filed Sept. 2, 1920. Serial No. 407,625. 2 Claims. (Cl. 126—360.)

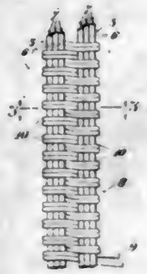
1. A portable water heater adapted for immersion in water to be heated, comprising a heating element and a heat distributor having a chamber for the heat element and, over it, so as to be heated by it, a container for water ballast adapted to submerge the heater, the heating element and the ballast being so distributed that the heater partially floats.



1,640,944. METHOD AND APPARATUS FOR REGULATING GLASS MACHINES. PETER KUCERA, Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a Corporation of Delaware. Filed Mar. 3, 1922. Serial No. 540,790. 23 Claims. (Cl. 49—5.)

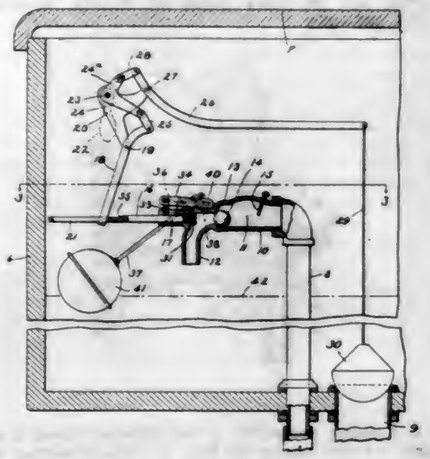
16. The method of maintaining uniformity in the volumes of glass charges fed to molds, which method comprises measuring the volume of a charge and causing the variation of said measurement from a predetermined

standard to regulate the volume of each of a series of consecutive charges in accordance with said standard charge.



1,640,945. DISPENSING FAUCET. WILLIAM E. LEIBING, Oakland, Calif., assignor to Magnus Fruit Products Co., San Francisco, Calif., a Corporation of California. Filed Apr. 28, 1926. Serial No. 105,049. 4 Claims. (Cl. 225—26.)

1. A faucet, comprising a body member having a passage; a nozzle member having a passage registering with the passage of the body member; means for clamping the two members together; a ported valve member mounted for oscillation between the adjacent faces of the body member and the nozzle member, to control the registering passages thereof; and packing washers seated in the adjacent faces of said members surrounding the ends of the passages and adapted under the pressure of the clamping means to be compressed upon the opposite faces of the valve member, the surfaces of said packing members projecting beyond the wall of said body and nozzle members.

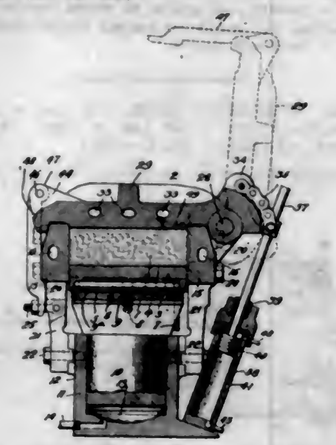


4. A faucet, comprising a body member having a passage, a nozzle member having a passage registering with the passage of the body member; a bolt passing through said members with its opposite ends threaded and projecting beyond the body member, a ported valve member between the adjacent faces of the body member and nozzle member for oscillation upon said bolt to control said registering passages, said nozzle provided with a bolt receiving opening through which one threaded end of the bolt extends, a nut for reception on the bolt end for clamping said members together, the other threaded bolt end adapted for jointly securing said members to a fixed support.

1,640,946. REED BRAID. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed July 14, 1924. Serial No. 725,872. 3 Claims. (Cl. 139—420.)

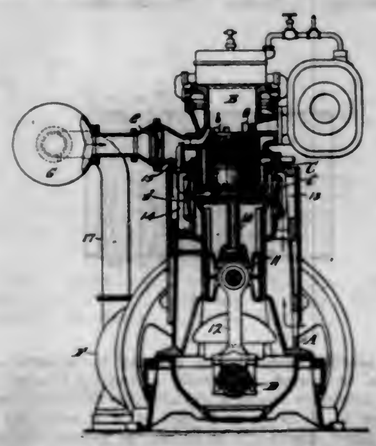
1. A reed braid comprising two spaced groups of multiple warps and a filler strand member passing alternately around and over each group of multiple warps.

1,640,947. AUTOMATIC SHUT-OFF. JAMES A. LOCKHART, Revere, Mass. Filed Feb. 12, 1926. Serial No. 87,821. 5 Claims. (Cl. 4—41.)



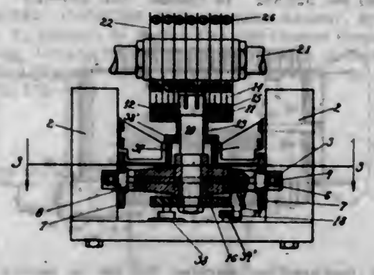
1. A supply valve for liquids comprising a casing having a restricted opening constituting a valve seat, a ball valve loose within the casing normally closing said valve seat by pressure of the liquid thereon, a rod slidable longitudinally through said opening in the direction of the path of motion of the ball valve, means for moving the rod to force the ball valve off seat, a pawl carried by the casing adapted automatically to engage the rod to hold the valve open, and means for releasing the pawl whereby the ball valve suddenly closes by pressure of the liquid.

1,640,948. FOOTWEAR. CHAUNCEY C. LOOMIS, Yonkers, N. Y., and HENRY W. BANKS, 3d, Noroton, Conn., assignors to The Hevea Corporation, New York, N. Y. Filed May 10, 1924. Serial No. 712,436. 11 Claims. (Cl. 12—142.)



9. The method of outsoling a shoe which comprises applying to the sole of the shoe a layer of a composition that includes a rubber emulsion, a filler, and a protective colloid, all intimately mixed, and allowing coagulation of the emulsion to take place in situ, with consequent adhesion of the layer to the sole.

1,640,949. BLOCK PRESS. EVARTS G. LOOMIS, Newark, N. J. Filed Dec. 9, 1925. Serial No. 74,281. 15 Claims. (Cl. 18—16.)

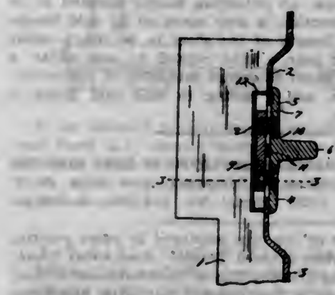


1. In a press of the class described, a cylinder base, a chase fixed to said cylinder base, a cover hinged to said chase, means on said cover for holding the sides together at the top when under high pressure, links pivotally connected to said cover and means for securing said links so that they will secure the cover to prevent leakage under high pressure.

1,640,950. INTERNAL-COMBUSTION ENGINE. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed May 24, 1923. Serial No. 641,043. 7 Claims. (Cl. 123—74.)

6. The combination with the pistons and cylinders of a multicylinder internal combustion engine having scavenging ports in the side walls of the cylinders opened and closed by the pistons, of a displacement compressor for each cylinder, suction and discharge valves arranged close to said compressing chambers, short passages from the discharge valves to the scavenging ports, a header having a connection to each cylinder, an automatic check valve between the header and each cylinder, said check valves opening toward the cylinders, and a blower for supplying air to said header to augment the supply of air furnished by the displacement compressors.

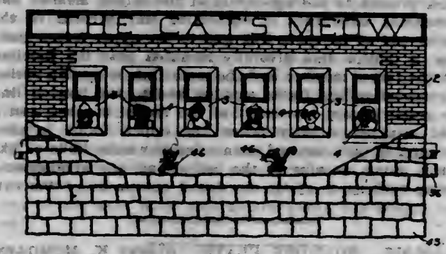
1,640,951. APPARATUS FOR CUBING SLICED MATERIAL. WILLIAM E. LEIBING, Oakland, Calif., assignor to Magnus Fruit Products Co., San Francisco, Calif., a Corporation of California. Filed Oct. 26, 1925. Serial No. 64,622. 4 Claims. (Cl. 146—98.)



4. In combination with a movable turret for receiving and supporting on its surface a slice to be cut, a plurality of spaced rotary cutters for cutting the supported slice into a plurality of polygonal pieces, endless flexible devices between the cutters for acting on the slice to hold the same to the turret surface during its cutting.

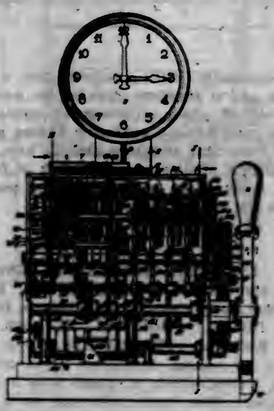
1,640,952. METHOD OF TRANSFORMING TITANIUM-DIOXIDE OR RUTILE AND A PRODUCT THEREOF. SIMON J. LUBOWSKY, Brooklyn, N. Y., assignor to Metal & Thermit Corporation, Carteret, N. J., a Corporation of New Jersey. Filed Dec. 5, 1925. Serial No. 73,532. 6 Claims. (Cl. 23—117.)

1. In transforming titanium-dioxide or rutile into a soluble compound, the process which comprises calcining the same with magnesium oxide to approximately Seger cone 18.



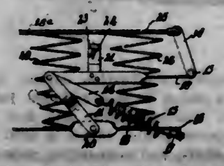
1,640,953. ADJUSTABLE DOVETAIL CONSTRUCTION. EVERETT E. LUNDBERG, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 2, 1925. Serial No. 66,328. 5 Claims. (Cl. 16—1.)

1. The combination with a door pillar having a depressed portion, in a wall thereof, of a dovetail member in said depressed portion and an adjustable connection between said member and pillar permitting said member to be adjusted lengthwise of said pillar without being removed therefrom.



1,640,954. MOVING-TARGET GAME. CHARLES J. MACH, Millin Township, Allegheny County, Pa. Filed Dec. 8, 1926. Serial No. 153,285. 6 Claims. (Cl. 124—16.)

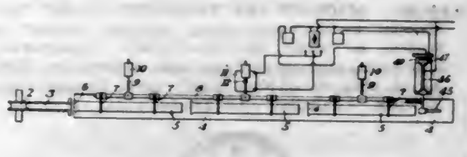
6. In a game device, a screen, a guide, a target movable in the guide, means for imparting a substantially continuous reciprocating movement of the target regardless of whether or not it is struck by a missile, the target being movable in substantial parallelism with the screen,



the target being adapted to be displaced from its normal setting upon being struck by a missile, and resetting means for the target.

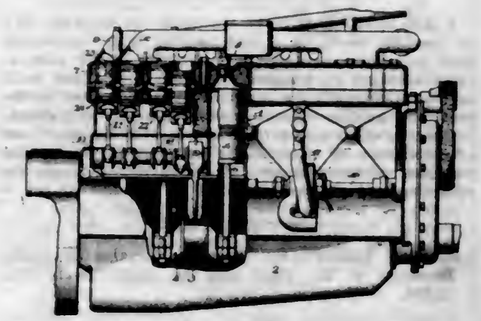
1,640,955. MACHINE FOR RECORDING TIME. PAUL MANKEL, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed July 5, 1924, Serial No. 724,477, and in Germany June 29, 1923. 12 Claims. (Cl. 234—41.)

1. The combination in an apparatus for checking time by marking cards, of a card adapted to be introduced into the said apparatus, two parallel rows of perforations arranged in staggered relation in the said card, means for stamping the entry and exit time values on the said card, guiding elements connected to the said stamping means and adapted to cooperate with the said rows of perforations by alternatingly rendering one of the said stamping devices operative, and actuating elements for operating said stamping devices.



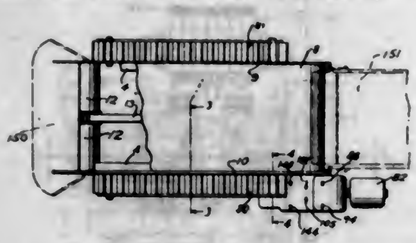
1,640,956. BEDSPRING BRACE. CHARLES MARCONI, Brooklyn, N. Y. Filed Aug. 26, 1925. Serial No. 52,555. 3 Claims. (Cl. 5—262.)

1. A reinforcing device for the edges of bed springs provided with coiled springs acting between flat straps secured to a frame member and an upper frame mem-



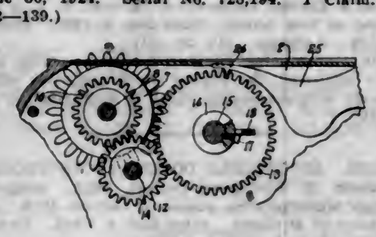
ber, comprising edge units, each consisting of a forked member pivoted to certain of the flat straps of the frame member, and extending upwardly and inwardly, a main link pivoted to the upper end of the forked member and extending outwardly, a connecting link pivoted to the outer end of the main link and to the upper frame member, a tension link pivotally mounted near the junction of the forked member and the main link, a tension spring connected to the frame member and to the tension link to resist inward movement of the forked member, and a bar situated slightly below the upper frame member inward of the edge and connecting the main links of like units along an edge of the bed spring, the arrangement being such as to resist downward movement of the bar.

1,640,957. ROLL-OFF PLATE. ALBERT K. MCMILLEN, Pittsburgh, Pa., assignor to Central Tube Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1926. Serial No. 143,202. 4 Claims. (Cl. 80—42.)



4. The combination with a roll-off plate, a roll-off plate cover guide and a member actuated by material resting upon the roll-off plate, of a control apparatus for the cover guide comprising a contactor having a plurality of stationary contacting members and an arm that is movable to engage a predetermined number of the stationary contacting members in response to the position of the material on the roll-off plate.

1,640,958. INTERNAL-COMBUSTION ENGINE. OTTO NELSON and PETER LIGNELL, Chicago, Ill., assignors to Hercules Motor Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1925. Serial No. 58,960. 9 Claims. (Cl. 123—188.)



1. In an internal combustion engine, the combination of a cylinder, a piston in said cylinder, inlet and exhaust valve cylinders connected with said first mentioned cylinder through ports, piston valves in said valve cylinders, a valve crank shaft, and connecting rods operatively connecting said crank shaft with said pistons, said crank shaft being offset laterally from the axis of at least one of said valve cylinders.

1,640,959. CONVEYER. RICHARD PEALE, St. Benedict, Pa., assignor, by mesne assignments, to Rembrandt Peale, W. Sanders Davies, and William S. Wallace, trustees. Original application filed Mar. 12, 1920, Serial No. 365,208, Patent No. 1,433,900, dated Oct. 31, 1922. Divided and this application filed Dec. 30, 1921. Serial No. 525,832. 18 Claims. (Cl. 198—7.)

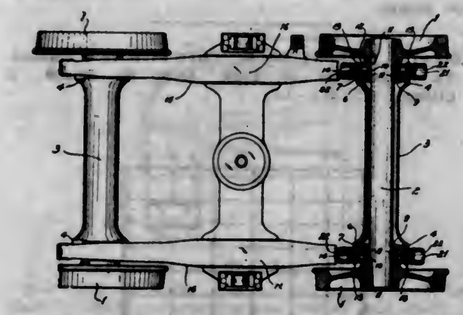
1. A coal-handling machine for use in narrow coal seams, including in combination, a low flat frame, an endless conveyer passing over and under the frame, endless traction treads alongside the frame and substantially coextensive longitudinally with the said endless conveyer, and means for driving the endless traction treads independently.

1,640,960. AUTOGRAPHIC REGISTER. FRANK E. PFEIFFER, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed June 30, 1924. Serial No. 723,194. 1 Claim. (Cl. 192—139.)

In an autographic register having a plurality of sheets to be fed therefrom, an actuating handle adapted to be rotated in one direction, a gear operated by said handle to determine the length of the sheet to be fed, a collar rotated with said gear, a stud carried by said collar, a laterally movable finger to engage said stud on one revolution of said gear, and a spring to hold said finger in engaging position.

1,640,961. SUPERDURABLE PHOTO PLATES FOR INK PRINTING. ALBERT J. PINCKNEY, New York, N. Y. Filed Dec. 10, 1926. Serial No. 154,039. 6 Claims. (Cl. 41—41.5.)

1. A photoplate of the type employed in offset printing comprising a surface-grained flexible sheet-metal plate; an image imparting printing film of light-hardened albuminous matter which is over-exposed but with highlights, whereby the finished plate is of markedly increased durability for the production of offset impressions.

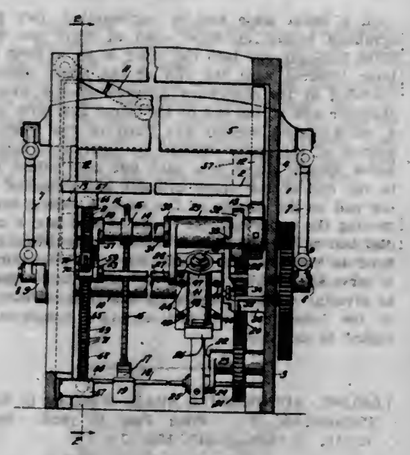


4. The process of forming photo-plates of the type employed in offset printing comprising coating the grain surface of a sheet metal plate with a water solution of albumen and a light sensitive salt of the type capable of hardening albumen on exposure to light; exposing the said coated surface to image strained light; spreading an ink mixture of pulverulent black substance and oil over said surface; subjecting said inked surface to the solvent action of water and gentle abrasion; then exposing said entire surface for some five to ten minutes to the direct action of strong actinic light; and subsequently edging and finishing said plate in accordance with any usual procedure here allowable whereby because of the said exposure of the incomplete printing surface to strong actinic light between the time it is edged and the time it is exposed to image strained light, a toughening of the image carrying film is effected.

1,640,962. CLOSURE CAP. GEORGE RAMSEY, Brooklyn, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Mar. 25, 1924. Serial No. 701,668. 16 Claims. (Cl. 215—39.)

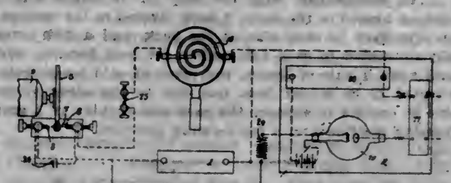
1. A closure comprising a cover portion, and a skirt depending from said cover portion, said skirt being corrugated to permit circumferential expansion, and said cover portion being provided with an annular expansion zone to permit the top of the skirt to move radially as a whole with respect to said cover portion when the closure is applied to a suitable container.

1,640,963. RAILWAY-CAR TRUCK. WALTER C. SANDERS, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 30, 1926. Serial No. 158,108. 4 Claims. (Cl. 105—182.)



1. An inboard railway truck comprising axle housings and truck side frames having yokes that straddle said housings, said yokes having vertical channels in their inner surfaces and said housings having ribs engaging said channels.

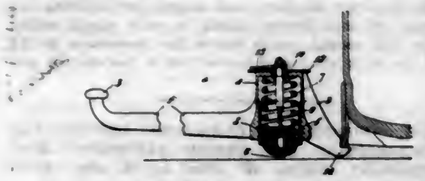
1,640,964. ROLL-MAKING MACHINE. OSWALD SCHLAUPITZ and WILLIAM SCHUM, Canton, Ohio, assignors to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Oct. 26, 1923. Serial No. 671,043. 1 Claim. (Cl. 78—61.)



A roll making machine comprising a die having a conical, horizontally disposed seat, a knockout member forming the central end portion of said die and having a conical end adapted to form a depression in the end of the work, a hollow punch holder movable toward said die, said punch holder having an annular end flange adapted to fit over the end of said die, a hollow punch slidably mounted in the bore of said punch holder, said punch having a central concave depression adapted to engage the end of the work and center it in the die and shape said end of the work, a second punch fixed in said punch holder and disposed in the bore of said hollow punch and having a conical end adapted to form a depression in the end of the work in alinement with the depression formed by said knockout member, and means for limiting the movement of said hollow punch in said punch holder whereby said second punch forms the depression in the end of the work after said hollow punch has shaped said end.

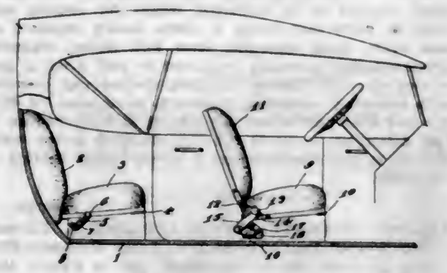
1,640,965. AUTOMATIC CLAMPING DEVICE FOR PAPER-CUTTING AND OTHER MACHINES. JOHN F. SCHROETER, Atlanta, Ga. Filed Apr. 8, 1926. Serial No. 100,542. 10 Claims. (Cl. 164—54.)

2. In an apparatus of the class described, a clamp, a shaft adapted to be oscillated, means for causing said shaft to drive said clamp, a sleeve loosely mounted on said shaft, arms extending from said sleeve, clamping friction devices pivotally connected to said arms, a gear carried by said friction clamping devices and provided with a ratchet connection therewith, mechanism for driving said gear and means for driving said mechanism in two directions so as to cause a clamping action when driving in one direction and a release when driving in the other.



1,640,966. FLASH-PRODUCING APPARATUS. LAURENT SEGUIN and AUGUSTIN SEGUIN, Paris, France. Filed Feb. 23, 1926, Serial No. 90,067, and in France Mar. 5, 1925. 13 Claims. (Cl. 176—124.)

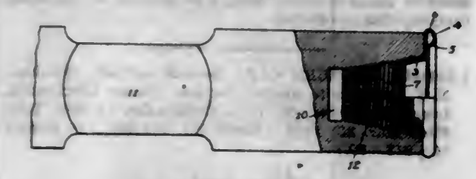
1. Flash producing apparatus comprising a luminescent silent discharge tube, a condenser, means for charging said condenser in a continuous manner, a noninductive circuit connecting said condenser to said silent discharge



tube and means adapted to close directly said circuit in an intermittent manner and independently of the charging operation for said condenser, for producing instantaneous discharges in said tube.

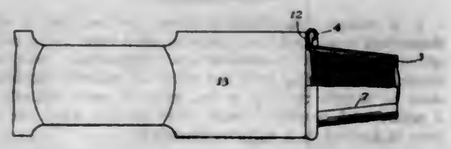
1,640,967. BEAM SCALE. DANIEL SIEBENMANN, Bern, Switzerland. Filed Mar. 9, 1927, Serial No. 173,881, and in Switzerland Mar. 10, 1926. 1 Claim. (Cl. 265—68.)

In a beam scale and in combination, two vertically arranged hollow cylinders open at their one ends and fitted slidingly one into the other so as to form a box, a lever integral with the end of the upper cylinder and provided at its downward directed shorter arm with a shoulder and at the end of its longer arm with a treadle, a quick-pitched central nut fixed to the inside of the bottom of the lower cylinder, a correspondingly pitched screw spindle fitted into said nut and lodged rotatably in the end of the upper cylinder and extended with its top end to the outside of the same, a helical spring supporting the upper cylinder inside of said box, a graduated dial fast to the end outside of the upper cylinder, a hand fixed to the top end of the screw spindle and adapted to serve as indicator on said dial and a knife-edge serving as pivoting means of the scale and integral with the end of the lower cylinder and arranged transversely with regard to said lever.



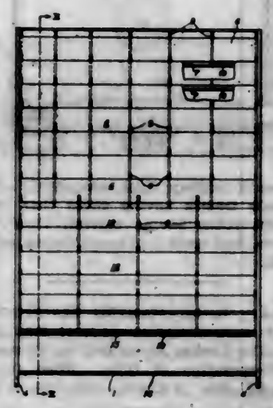
1,640,968. AUTOMOBILE SEAT. WILLIAM B. SOUTHERN, Philadelphia, Pa. Filed July 8, 1925. Serial No. 42,115. 4 Claims. (Cl. 155—7.)

1. In combination with the body of an automobile, a cushion hinged to the body; a back pivoted to the cushion; an arm fixed to each side of the back, and a link pivotally connected to each arm and to the body forming with said arms a pair of levers, the pivot of said levers being adapted to be moved from one side to the other of the line of centers to support the back and cushion in a seat-forming position and a bed-forming position.



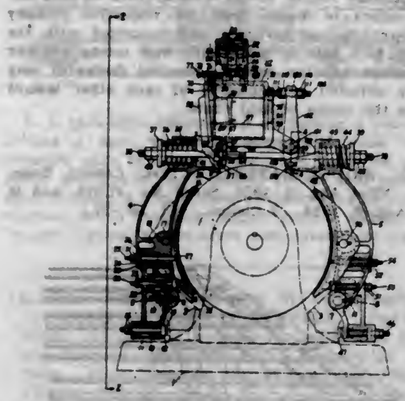
1,640,969. THREAD GUARD. WILLIAM H. WESTERMAN, Marietta, Ohio. Filed May 18, 1927. Serial No. 192,498. 12 Claims. (Cl. 137—91.)

1. A thread protector comprising an annular body having a threaded exterior portion, said body having an integral outwardly turned lip for contact with the end of the article to be protected, and an inwardly turned



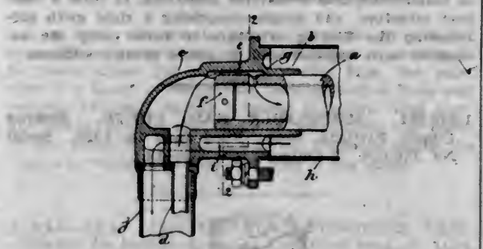
flange on the lip spaced out of contact therewith, said flange providing a yieldable guard at the end of the protector.

1,640,970. THREAD PROTECTOR. WILLIAM H. WESTERMAN, Marietta, Ohio. Filed May 18, 1927. Serial No. 192,499. 5 Claims. (Cl. 137—91.)



3. A thread protector comprising an annular body portion open at both ends with an outwardly extending double walled flange at one end and inwardly extending prongs at the other end and a ring of relatively soft metal cast in place within the body portion and engaging said prongs.

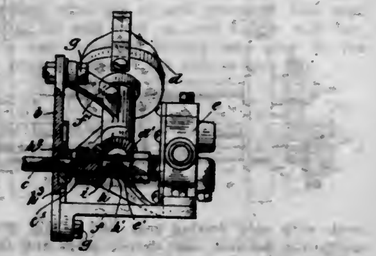
1,640,971. DISPLAY RACK. CHARLES WIDEN, Trafford, Pa. Filed Sept. 29, 1925. Serial No. 59,969. 2 Claims. (Cl. 211—14.)



1. In a unitary upright display rack, an upper section comprising a plurality of parallel shelves of equal length defining a series of parallel extending pigeonholes, and a lower section comprising a plurality of shelves whose angular relations to the shelves of the upper section and to one another varies, the depth of the shelves of the lower section varying but being greater than those for the upper section whereby the pigeonholes of the lower section extend at different angles to those of the upper section.

1,640,972. BRAKE. JOHN N. ANDERSON, Hoboken, N. J., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 14, 1927. Serial No. 161,096. 13 Claims. (Cl. 188—171.)

9. In a brake having a pair of brake arms, a releasing mechanism, said releasing mechanism comprising an armature supported on one brake arm, and a magnet supported at one end on said armature and at its other end to the other brake arm.

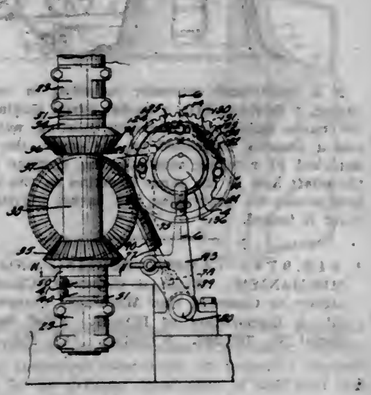


1,640,973. LUBRICATING ARRANGEMENT FOR INTERNAL-COMBUSTION OR LIKE ENGINES. MARIUS JEAN BAPTISTE BARBAROU, Paris, France. Filed Feb. 28, 1925, Serial No. 12,526, and in France Apr. 22, 1924. 2 Claims. (Cl. 184—7.)

1. In combination with the lubricating system of an engine with oil under pressure and having a hollow shaft: a bearing supporting one end of said shaft, a chamber formed in said bearing beyond said end of said shaft, and in communication with the oil supply, a longitudinal groove formed partly in the inner surface of said bearing and along said shaft and partly in the wall of said chamber, and an aperture through the wall of said shaft, the length of the arc through which said groove extends upon the hollow shaft, and the diameter of said aperture being so determined as to limit the quantity of lubricant to the amount strictly necessary for the lubrication, whereby all excess of pressure as well as leakage will be obviated, said aperture having besides a sufficient diameter to prevent all obstruction of the same.

1,640,974. MARINE ENGINE. MERRILL G. BARKER, Norwalk, Conn., assignor to The Barker Factory, Inc., Norwalk, Conn., a Corporation of Connecticut. Filed Oct. 23, 1924. Serial No. 745,881. 1 Claim. (Cl. 123—195.)

In combination with an internal-combustion engine having a protruding shaft driven from the engine, a water pump mounted with its rotor aligned with the shaft, a driving sleeve connection pinned to the rotor operatively and to the shaft, a distributor mounted at one side of

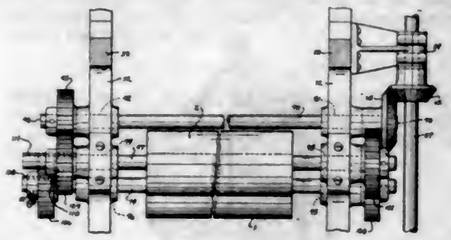


the shaft, and a driving gear for the distributor mounted on the said sleeve and secured to the shaft by the said pinning means.

1,640,975. PROCESS OF RECOVERING STYRENE. RALPH L. BROWN, Pittsburgh, Pa. Filed Nov. 10, 1922. Serial No. 600,027. 5 Claims. (Cl. 260—168.)

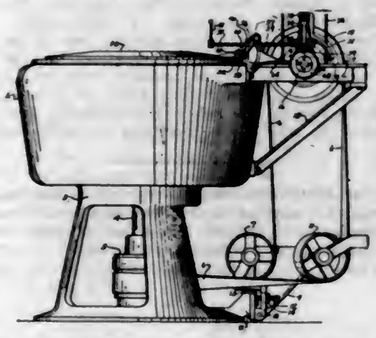
1. The process of recovering styrene from carburetted water gas drip oil, comprising fractionating the drip oil to separate the styrene together with oils having boiling points near the boiling point of styrene, converting the styrene into relatively non-volatile form, and separating the volatile oils therefrom by distillation.

1,640,976. PRINTING PRESS. MARTIN W. BRUESHABER, Chicago, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Filed Jan. 16, 1923. Serial No. 612,947. 22 Claims. (Cl. 270—5.)



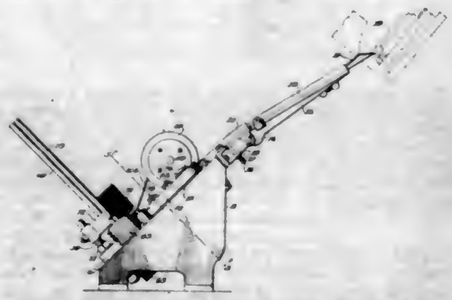
1. A printing press including in combination a printing couple comprising a form cylinder and an impression cylinder, a reversible driving mechanism on the impression cylinder including spacing means for locking said driving mechanism in forward, reversing and neutral positions, and means for moving the form cylinder away from impression.

1,640,977. PRINTING PRESS. MARTIN W. BRUESHABER, Chicago, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Filed Aug. 20, 1924. Serial No. 733,115. 24 Claims. (Cl. 270—5.)



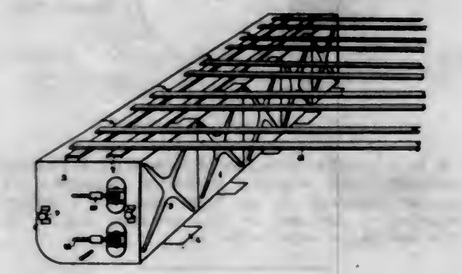
1. A printing press including in combination a plurality of printing couples, a common driving shaft there-

for, a driving gear wheel on the driving shaft for each printing couple, a driven gear wheel continuously in



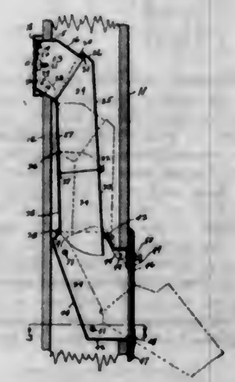
mesh with said driving gear and a slip gear reversing mechanism between said driven gears and their printing couples.

1,640,978. CENTRIFUGAL EXTRACTOR. TANDY A. BRYSON and FRANK I. WILLIAMS, Troy, N. Y., assignors to Tolhurst Machine Works, a Corporation of New York. Filed May 15, 1924. Serial No. 713,468. 22 Claims. (Cl. 192—136.)



2. A centrifugal extractor including in combination a basket, a driving shaft, a basket cover, locking means for the cover including a member rotating with the shaft and a member controlled by the cover, the cover being unlocked by rotating said rotating member relatively to the shaft and in the same direction as the shaft drives, and means for preventing the basket starting until the cover is locked.

1,640,979. CAN-END CURLING AND STACKING MECHANISM. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1924. Serial No. 735,287. 8 Claims. (Cl. 153—59.)



1. In a machine for curling flanged can ends, the combination of a bed presenting an inclined upper face, a chute mounted upon said face along which can ends travel, a primary flanging roller mounted at each side of chute, a secondary flanging roller mounted at each side of said chute, all the said rollers being disposed in the plane of a can end in said chute, means for driving each of said primary rollers, means whereby each of said secondary rollers is driven from its respective primary roller, gear housings enclosing and connected with the rollers at each side of said chute, and means whereby said housings and the rollers connected therewith may be bodily adjusted independently of each other toward and from the center of said chute.

1,640,980. BRIDGE MATERIAL. ITALO CARONI, Rome, Italy. Filed Aug. 3, 1925, Serial No. 47,910, and in Italy Aug. 6, 1924. 3 Claims. (Cl. 14—27.)

1. In a floating structure, the combination with a plurality of floating units each comprising a completely closed, water tight hollow metal body of rectangular prismatic shape, of means connecting adjacent units both in longitudinal and transverse directions, to form a compact structure, and means comprising a rigid girth surrounding the floating structure to better keep the assembled units together and to secure greater stiffness.

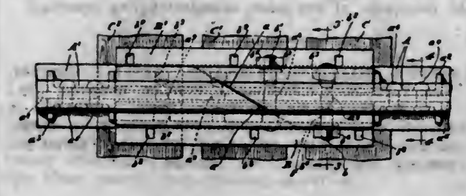
1,640,981. ADJUSTABLE MAIL CHUTE. NEWTON COHAN, Portland, Oreg. Filed June 14, 1926. Serial No. 116,058. 3 Claims. (Cl. 232—19.)

2. An adjustable mail chute for hollow walls having an inlet box provided with a closure at one end; a bendable chute connected to the opposite end of said inlet box and adapted to extend downwardly in a wall space; an outlet box hinged to the lower end of said chute; and closure means for the rearward end of said outlet box.

1,640,982. TURNTABLE. ANTHONY L. CRESCI, Vineland, N. J. Filed June 10, 1924, Serial No. 719,031. Renewed July 2, 1927. 8 Claims. (Cl. 104—38.)

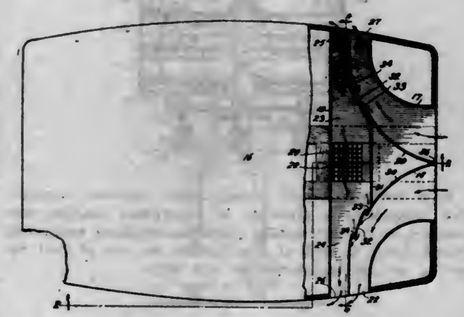
1. A turn-table adapted for supporting a vehicle comprising a base, a central supporting frame rotatably mounted upon said base, track units supported upon opposite portions of said central frame, said track units each forming a rigid truss structure having low track sections and a relatively higher central section adapted to give rigidity to the track unit throughout its length.

1,640,983. DEVICE FOR USE IN AND PROCESS OF INCASING STRUCTURAL MEMBERS. JOHN MAURICE CAOM, Chicago, Ill., assignor to Cement Gun Contracting Company, Allentown, Pa., a Corporation of Delaware. Filed June 15, 1926. Serial No. 116,245. 7 Claims. (Cl. 25—131.5.)



1. A device for use in incasing a girder by shooting cementitious material in place, comprising a member to be placed along but spaced outwardly from the outer edge of a flange of said girder, clips projecting from said member and each having a recess to receive said edge, and means engaging said girder at the opposite side thereof and connected with said clips for yieldably urging the clips into engagement with said edge of the flange.

1,640,984. CONVERTIBLE AUTOMOBILE SEAT. GIANNI DE PETRIS, Kewanee, Ill. Filed Sept. 17, 1926. Serial No. 136,022. 3 Claims. (Cl. 155—7.)

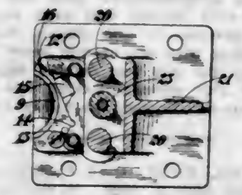


1. In a device of the class described, having a hollow rack bar with a gear on one end, said rack bar being operatively connected to lower the back of a chassis front seat, and a shaft with a gear extending through said rack bar gear, said shaft being operatively connected to move the rear seat, and incline the back of said rear seat of a chassis, the combination of a stub shaft rotatively mounted in said chassis, a hand wheel on the outer end of said shaft, two gears on the inner end of said shaft, a crank member rotatively and slidably mounted in said chassis, a crank portion formed on the inner end of said crank member, an idler gear rotatively mounted on said crank portion, a pair of collars on each side of said gear, an inner end portion depending perpendicularly from said crank member, a side arm depending perpendicularly from said crank member, an outer end portion depending perpendicularly from said crank member, a pin slidable through said outer end portion engageable in apertures in said chassis, said idler gear normally meshing with one of said gears on said stub shaft and with the said gear on said hollow rack bar, and said side arm normally locking said gear on the shaft which extends through the hollow rack bar.

1,640,985. RAIL JOINT CARL EICKEMEYER, Brooklyn, N. Y. Filed June 8, 1926. Serial No. 114,392. 4 Claims. (Cl. 238—243.)

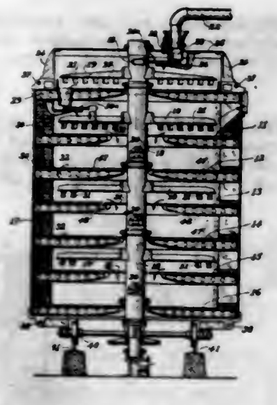
1. In combination with a rail joint, a bracket attached to the rail web to abut against the ends of the rail joint splice bar, for the purpose described.

1,640,986. VENTILATING APPARATUS. MATHER GARLAND, Chicago, Ill., assignor to Garland Ventilator Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1923. Serial No. 667,096. 9 Claims. (Cl. 98—2.)



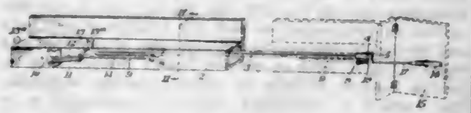
1. A closed automobile passenger-body having embodied in its roof structure and substantially concealed therein, a ventilating apparatus comprising an induction conduit which opens in the extreme front edge of said roof and discharges through the side edge thereof and an eduction conduit in communication with the interior of said body and having its discharge in the side edge of said roof and exposed to the force of the air flowing through said induction conduit, whereby an exhaust through said eduction conduit is maintained while the automobile is in forward travel.

1,640,987. MANUFACTURE OF HOLLOW ARTICLES OF RUBBER. CHRISTIAN HAMILTON GRAY, London, England. Filed Sept. 9, 1924, Serial No. 736,740, and in Great Britain Nov. 15, 1923. 10 Claims. (Cl. 18—56.)



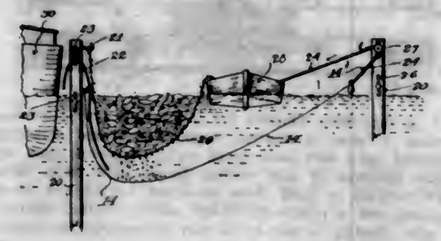
1. As an article of manufacture, a hollow blank for use in the making of hollow rubber articles, said blank having the form of a substantially regular tetrahedron com-

prising a base and three sides meeting at an apex, the width of the adherent faces of each joint at the apex be-



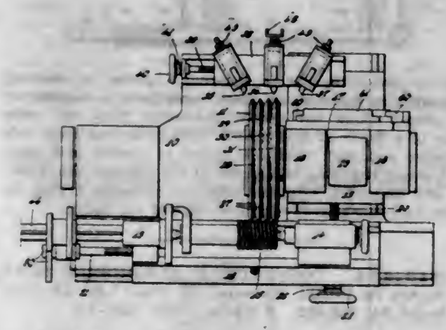
ing greater than the width of the adherent faces along the remainder of the joint, substantially as described.

1,640,988. ROASTING FURNACE. Henry J. Hartley, New York, N. Y.; Edward J. Fowler, Redwood City; and Dudley Baird, Berkeley, Calif., assignors to Nichols Copper Company, New York, N. Y., a Corporation of New York. Filed July 21, 1926. Serial No. 123,864. 18 Claims. (Cl. 263—26.)



5. A multiple hearth rotary shaft furnace construction comprising a plurality of superposed hearths surrounded by a substantially cylindrical furnace wall, each hearth being formed of demountable sectors of heat resisting material supported by said wall.

1,640,989. DOOR CONTROL. Charles A. Hennicke, Buffalo, N. Y., assignor to The Eberhard Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 6, 1925. Serial No. 28,528. 6 Claims. (Cl. 268—3.)

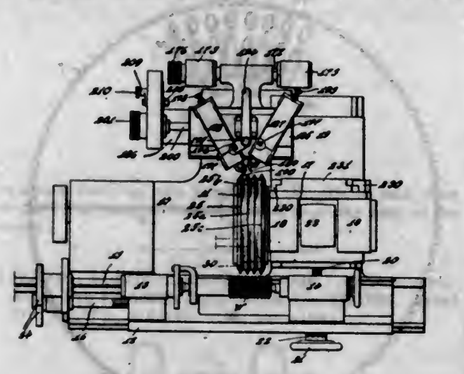


1. A door control, comprising a slide rod adapted to be mounted for reciprocation upon a portion of a vehicle or other body, anti-friction means associated with said slide rod, an operating lever adapted to be connected to said body, a link connecting one end of said slide rod with said lever, and a connecting rod connected to the other end of said slide rod and adapted to be connected to a door, said link and said connecting rod being movable in the same plane as the door and the lever, substantially as described.

1,640,990. METHOD OF REMOVING AND CATCHING THE SCALES OF FISH AT TRAPS. George H. Hinton and Thomas W. Marsh, Reedville, Va. Filed July 29, 1926. Serial No. 125,617. 3 Claims. (Cl. 43—100.)

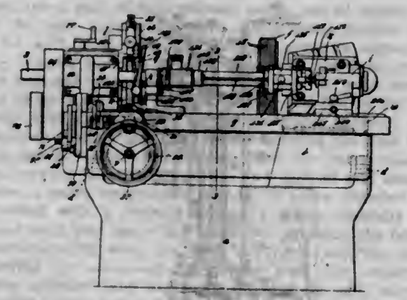
1. The method of collecting scales from live fish consisting in trapping the fish in a net having a mesh that will permit the tides to wash therethrough, drawing the trap-net containing the live fish so as to gather the live fish in a confined space and cause them to frictionally rub each other to remove their scales while held in the original trap-net and employing a finer mesh net beneath the gathered together trap-net to catch the scales thus removed at the trap.

1,640,991. GRINDING WHEEL. Bengt M. W. Hanson, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney executors of said Bengt M. W. Hanson, deceased. Original application filed May 21, 1923, Serial No. 640,351. Divided and this application filed Jan 22, 1925. Serial No. 4,107. 5 Claims. (Cl. 51—206.)



1. A wheel for grinding convoluted members comprising a wheel circular in cross section and provided with circumferential serrations on its periphery conforming generally in cross section to a screw thread, adjacent ones of said serrations being spaced a distance equal to a multiple of the distance between successive convolutions on the work thereby providing channels between the wheel and the work operated upon for the passage of a cooling fluid.

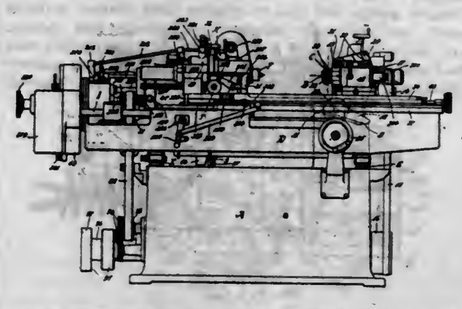
1,640,992. METHOD OF AND APPARATUS FOR GRINDING THREADED MEMBERS AND THE LIKE. Bengt M. W. Hanson, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney executors of said Bengt M. W. Hanson, deceased. Filed Mar. 27, 1925. Serial No. 18,835. 11 Claims. (Cl. 51—95.)



1. In a machine for grinding on metal work pieces convolutions corresponding in cross section to a screw thread and in combination, means for rotatably supporting a piece of work, a grinding wheel of abrasive material having a plurality of spaced concentric grinding serrations adapted to simultaneously operate upon a plurality of convolutions on the work and spaced apart a distance

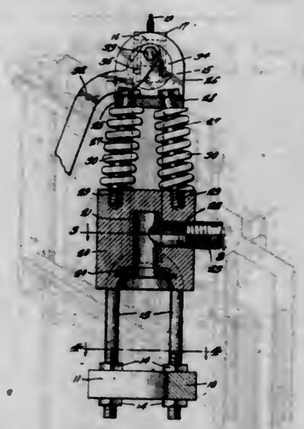
which is a multiple of the distance between adjacent convolutions on the work so as to allow for passing of a cooling fluid between the grinding wheel and the part of each convolution on the work during the grinding

operation means for rotatably supporting the grinding wheel with its serrations in engagement with the convolutions on the work, and means for moving the work longitudinally.



1,640,993. METAL-WORKING MACHINE. Bengt M. W. Hanson, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney executors of said Bengt M. W. Hanson, deceased. Filed May 26, 1925. Serial No. 33,023. 45 Claims. (Cl. 51—95.)

1. In a machine of the character described, a fixed bed, a rocking bed fulcrumed thereon, a tool on said fixed bed, a work holder slidably mounted on said rocking bed and having means for rotatably supporting a piece of work, and feeding means for rocking said rocking bed to feed the work relative to the tool and including a lever, a member on said fixed bed supporting one end of said lever, a member on said rocking bed supporting the other end of said lever, said rocking bed being supported by said lever, and means on said rocking bed for vertically moving said last mentioned member to thereby rock the lever and the rocking bed therethrough.

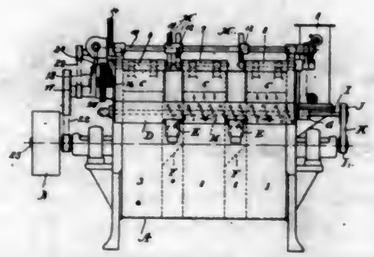


1,640,994. METAL-WORKING MACHINE. Bengt M. W. Hanson, deceased, Hartford, Conn., by Einar A. Hanson and Clarence E. Whitney, executors. Hartford, Conn. Filed Mar. 18, 1926. Serial No. 95,765. 47 Claims. (Cl. 51—52.)

1. In a machine of the character described, means for rotatably supporting the work, a grinding wheel, automatic means for effecting a relative indexing movement between the work and wheel longitudinally of the work, automatically operated means for effecting a relative movement between the work and wheel away from each other preliminary to each indexing movement and then

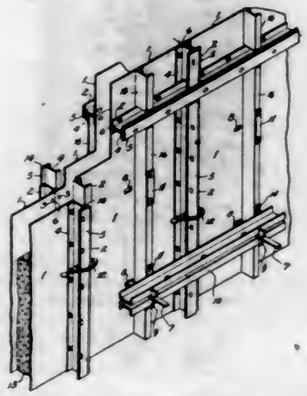
towards each other after each indexing movement, and automatically operated means for continuously and uniformly effecting a feeding movement between the work and wheel during each grinding operation.

1,640,995. TESTER. John K. Hartline, Albuquerque, N. Mex. Filed Nov. 9, 1925, Serial No. 67,991. Renewed Apr. 4, 1927. 2 Claims. (Cl. 137—77.)



1. A device of the character described comprising a base having a slot opening at one side thereof, spaced standards rising from the base, a member supported by the standards for sliding movement there between, a head arranged between said standards and suspended from said member, a yieldable connection between the member and said head, a lever associated with said member for controlling the movements of the latter between said standards, said head having a fluid passage arranged axially thereof, and a fluid supply pipe communicating with said passage.

1,640,996. MACHINE FOR SHELLING AND POLISHING GRAIN AND THE LIKE. Martin Hoff, Frankfort-on-the-Main, Germany, assignor to Kaspar Getreideschälmaschine G. m. b. H., Offenbach-on-the-Main, Germany, a Corporation of Germany. Filed June 12, 1924, Serial No. 719,519, and in Germany July 17, 1923. 7 Claims. (Cl. 88—44.)

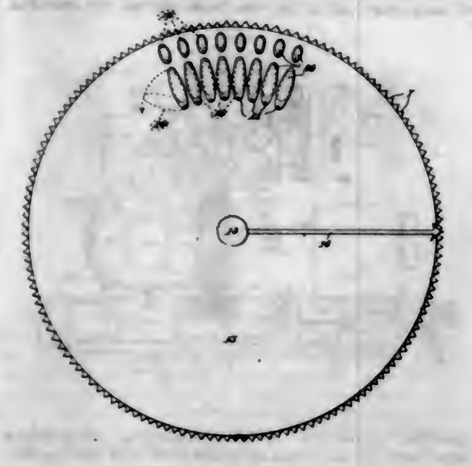


1. The method of treating grain and the like, which consists in simultaneously treating a plurality of inde-

pendent charges of material in a plurality of steps for a given period of time, discharging the fully treated charge at the end of said period of time, then succes-

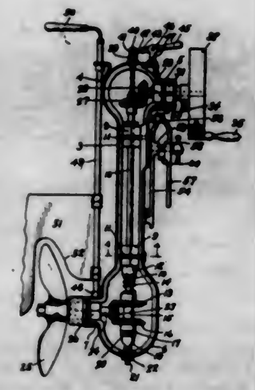
sively transferring the other charges for successive treatments and subsequently to this transfer introducing a new charge of material.

1,640,997. FORM WORK FOR CASTING WALLS AND THE LIKE. SOLOMON C. HOLLISTER, Swarthmore, Pa., assignor to John H. McClatchy, Philadelphia, Pa. Filed Apr. 8, 1926. Serial No. 100,627. 8 Claims. (Cl. 25—131.)



1. A form unit for casting plastic material comprising a plate and stiffening members on opposite margins of said plate arranged with their outer edges spaced sidewise from the outer edges of said plate suitably for cooperation with counterpart plates, said unit having an inclined surface adapted to guide such counterpart unit into register therewith.

1,640,998. COVERED INDICATING CHANCE DISK GAME. SYLVANUS O. JACKS, Sacramento, Calif. Filed Nov. 12, 1925. Serial No. 68,621. 2 Claims. (Cl. 273—142.)



1. In a game apparatus of the character described, a base plate having concentric circles of score changing indications thereon, each indication of one circle being radially aligned with an indication of the other circle, a cover plate rotatably mounted on said base plate and having two concentric arcuate series of openings there-

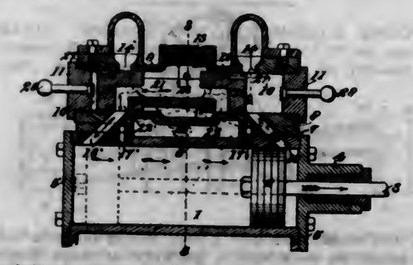
through, each series of openings being located above one of the circles of indications on the base plate, means

for facilitating spinning of the cover plate relative to the base plate, and a displaceable cover for each of said openings.

1,640,999. ROWBOAT MOTOR. FRANK K. JOHNSON, Chicago, Ill. Filed Feb. 14, 1927. Serial No. 168,223. 4 Claims. (Cl. 115—24.)

1. In a hand operated motor propelled device for small water craft, the combination, a propeller blade having a shaft and a pinion on said shaft, a pair of facing gears arranged on each side of the pinion, a sleeve connecting said gears, a hollow operating shaft passing freely through the sleeve, bearings for the hollow shaft, spring means influencing the connected facing gears to bring one of the same into mesh with the pinion, a rod received through the hollow shaft, and a pin connection between the rod and sleeve that passes freely through the hollow shaft.

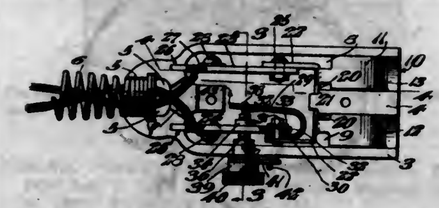
1,641,000. ERASER CLEANER. LYDIA E. JOSLIN, Los Angeles, Calif. Filed June 9, 1926. Serial No. 114,772. 5 Claims. (Cl. 120—36.)



1. In a device of the character described, the combination with a disk-shaped eraser, a pivot element engaging through the center thereof, and a radially ex-

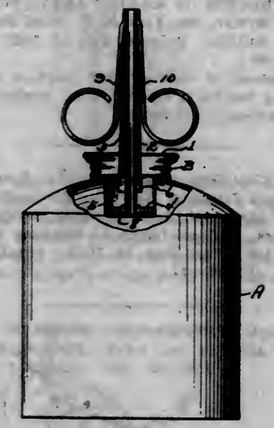
tending member engaging said pivot element, of an abrasive holding member pivoted to the first-named member

to swing about an axis parallel to the axis of said pivot element and adapted to be forced against the edge of the eraser.



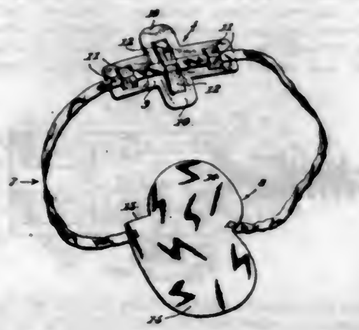
1,641,001. FLUID-OPERATED MOTOR. JOHN A. KALLBECK, San Francisco, Calif. Filed Apr. 12, 1927. Serial No. 183,072. 1 Claim. (Cl. 121—150.)

A fluid motor comprising a cylinder, a piston reciprocable therein, a valve chamber provided with a fluid inlet port and a pair of fluid exhaust ports, one at either side of the inlet port, said valve casing being further provided with fluid inlet and exhaust channels connecting the cylinder near its opposite ends with the valve chamber adjacent corresponding ends, a pair of valve operating by-pass channels one connecting one end of the cylinder with the opposite end of the valve chamber, said channels opening into the cylinder between the fluid inlet and exhaust ports and opening into the valve chamber one between the fluid inlet port and each of said exhaust ports, a valve reciprocable within the valve chamber and provided with a channel having a single centrally disposed inlet port and a pair of discharge ports, the former communicating with the fluid inlet port and the latter adapted for alternate registering with the respective valve chamber inlet and exhaust channels, said valve at opposite ends being further provided with longitudinal bores, each opening at one end at the valve end and at their opposite end through the valve side wall for registering with one of said valve operating by-pass channels on the reciprocation of the valve in either direction, said valve being further provided with compression relief bores extending longitudinally inwardly from opposite ends thereof and opening through the valve side wall to alternately register with the respective fluid exhaust ports, said valve being of a length when reciprocating its full stroke in either direction within its chamber to afford a fluid pressure inlet to one side of the piston and a pressure exhaust from the other side.



1,641,002. THERMOSTATIC-CONTROL ELECTRICAL HEATER PLUG. LOUIS M. KAPLAN, Philadelphia, Pa. Filed Oct. 27, 1926. Serial No. 144,445. 2 Claims. (Cl. 200—138.)

1. In a device of the character stated, a longitudinally divided two part housing of insulating material, having a pair of parallel longitudinal recesses therein, open at one end of said housing, pin receiving spring contact members disposed within said recesses each comprising a pair of resilient coacting spring prongs, a terminal contact plate, secured to one of said spring contact members in electrical contact therewith, a thermo-sensitive element secured to the other of said spring contact members and in electrical and mechanical contact therewith, a second terminal contact plate secured to said last spring contact member and electrically insulated therefrom and from said thermo-sensitive element, an adjustment screw extending through the wall of said insulating housing and through said second terminal contact plate, threadedly

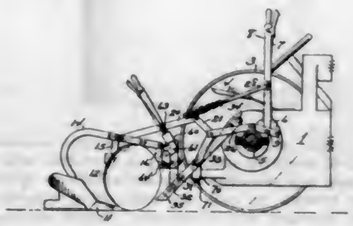


engaging the latter, a contact point carried by the inner end thereof, a second contact point carried by the thermo-sensitive element in operative alignment with and normally in contact with said first contact point, said thermo-sensitive element being adapted to deflect upon a predetermined rise in temperature, thereby breaking the contact between said two contact points, said adjustment screw being adapted to be turned manually from without the plug, thereby to vary the temperature at which said contact points are separated.

1,641,003. CAN SPOUT. GEORGE W. LANG, Litchfield, Nebr. Filed Oct. 9, 1926. Serial No. 140,593. 1 Claim. (Cl. 221—50.)

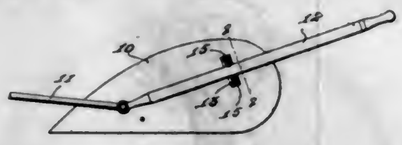
In a device of the class described, the combination with a fluid receiving can having a threaded neck, of a cap for said can and adapted to be secured to said neck, a casing secured to said cap and rising therefrom, a receptacle provided with rectangular shaped openings arranged in the side walls adjacent its upper end, an annular flange secured to and extending outwardly at right angles from the top of said receptacle and securing the same in a depending relation to the bottom of said cap, a pipe mounted for reciprocation in said casing and having its upper end projecting above the same, a plunger secured to the lower end of said pipe and mounted for movement in said receptacle, and handle members secured to and depending from the projecting upper end of said pipe and terminating into ring like terminals to provide finger receiving portions whereby the pipe may be reciprocated for ejecting the contents of the receptacle.

1,641,004. SHOULDER-STRAP HOLDER FOR ARM-PIT SHIELDS. ANNA B. MAHONEY, Vacaville, Calif. Filed Oct. 1, 1925. Serial No. 59,877. 2 Claims. (Cl. 24—259.)



1. A device of the character described comprising an elongated plate having a pair of similar transverse loop elements struck upwardly from the ends thereof in aligned relation longitudinally of the plate for reception of a shoulder strap of an arm pit shield, said plate further having a larger transverse loop element struck upwardly from the intermediate portion thereof for reception of the wider shoulder strap of a body garment.

1,641,005. PROCESS OF MAKING ALKYL SULPHATES. RALPH H. MCKEE, New York, N. Y. Filed May 21, 1923, Serial No. 640,551. Renewed July 13, 1927. 4 Claims. (Cl. 260—98.)

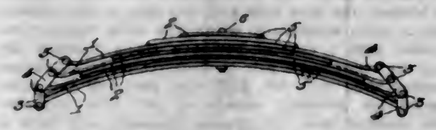


1. The process of making alkyl sulphate which comprises adding sulphuryl chlorid to an alcohol at a temperature of substantially 30° C.

1,641,006. TRACTOR ATTACHMENT. NOEL DE WITT NEWTON and JAMES A. NEWTON, Winchester, Ark., assignors of one-fourth to John Philip Harrington, Winchester, Ark., and one-fourth to Pinckney S. Seamans, McGehee, Ark. Filed Sept. 18, 1925. Serial No. 57,160. 4 Claims. (Cl. 97—47.)

1. A plow attachment of the character described comprising a body, ground working means carried by said body, spaced bars having converging portions secured to a tractor body, a transverse bar pivotally secured to the spaced bars and adapted for vertical adjustment thereon, a block fixed to the transverse bar, means securing said body to the block for a lateral rocking movement, and means for adjusting said body in vertical planes at right angles to each other.

1,641,007. SCRAPER. ISAAC NIEMI, Minneapolis, Minn. Filed July 16, 1926. Serial No. 122,938. 1 Claim. (Cl. 37—133.)

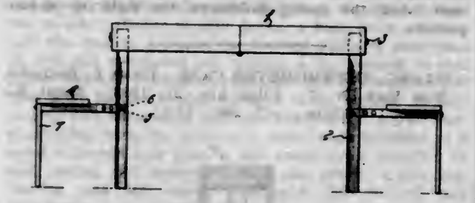


A locking means for scraper handles comprising a plate, ears carried by the plate, and roller members journaled upon the ears adapted to hold a handle member therebetween.

1,641,008. SHIRT ATTACHMENT. OCTAVIAN G. I. O'HEIR, Lowell, Mass. Filed Jan. 8, 1925. Serial No. 1,184. 4 Claims. (Cl. 2—115.)

1. The combination with a shirt having skirts in which are inside on each side a plurality of loops forming passages; of two bands each of which passes through a plurality of loops and each of which is formed of a central elastic portion which terminates at each end in an enlarged portion and a tying string which extends beyond each of said enlarged portions.

1,641,009. VEHICLE SPRING. FRANCIS D. PARKER, Viroqua, Wis. Filed Oct. 15, 1926. Serial No. 141,860. 1 Claim. (Cl. 267—49.)



A spring of the class described comprising arched leaves which vary in length and which are arranged one over the other, all of said leaves having their ends formed with eyes, the eyes on the lowermost leaf being downwardly directed and those on the remaining leaves being upwardly directed, links arranged in pairs having their ends in lapping engagement and disposed against the eyes of the leaves, pivots passing through the ends of the links and through the eyes of the leaves, spacer plates which vary in lengths arranged between the leaves and over the uppermost leaf and said spacer plates being of less length than that of the leaves between which they are arranged.

1,641,010. CONVERTIBLE TABLE. ALBERT PETERSON, Richmond, Va. Filed Aug. 27, 1923. Serial No. 659,631. Renewed July 1, 1927. 1 Claim. (Cl. 190—12.)

A collapsible and foldable campers outfit comprising in combination two hingedly connected together box-like sections adapted to provide a table top when arranged in end to end relation, and a casing when folded parallel, supporting legs for each section, said legs being pivotally mounted to fold within the section when not in use, a

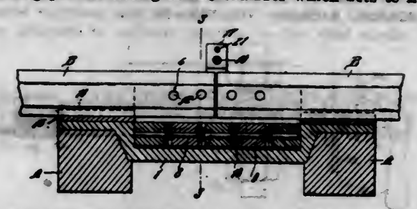
pin projecting horizontally from each leg, a seat adapted to be arranged at each side of the table, hook-like elements projecting from said seat and adapted to engage said pins for detachably connecting the seats with said legs, and

pivoted supporting legs forming part of each seat and adapted to be folded in parallelism therewith to allow said seats to be strapped at the side of the casing when detached from the legs thereof.

1,641,011. HEATER FOR AUTOMOBILE ENGINES. ALBERT HAZEN SARGENT, Bangor, Me. Filed Apr. 9, 1927. Serial No. 182,451. 5 Claims. (Cl. 126—85.)

1. A heater for maintaining the operating parts of engines on motor cars warm and easy to start in cold weather, consisting of a burner box provided with heating means, a register box, and a pipe element arranged in open communication between the burner box and register box.

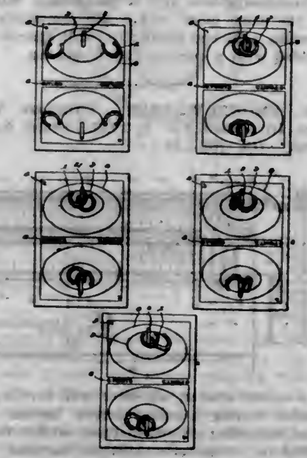
1,641,012. PAPER BOX. FRANK J. SCHLEICHER, St. Louis, Mo. Filed Aug. 10, 1925. Serial No. 49,434. 3 Claims. (Cl. 229—8.)



3. In a cardboard box, an inner bottom element with a plurality of straight side walls formed integrally therewith and bent upwardly and disposed in a general heart-shaped arrangement about the edges of said element and another bottom element having a heart-shaped curved contour circumscribing the lower edges of said walls and attached to said inner bottom element.

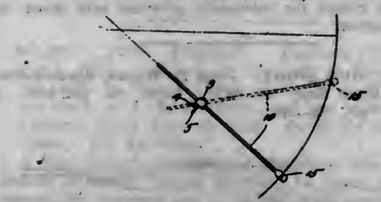
1,641,013. BAKING POWDER. HEINRICH SCHNEIDER and FRANZ RAHN, Niederingelheim-on-the-Rhine, Germany, assignors to the Firm: C. H. Boehringer Sohn, Chemische Fabrik, Niederingelheim-on-the-Rhine, Germany, a Company of Germany. Filed Sept. 1, 1925, Serial No. 53,938, and in Germany May 30, 1925. 9 Claims. (Cl. 99—10.)

7. Baking powder comprising a bicarbonate, neutral calcium tartrate and calcium lactate.



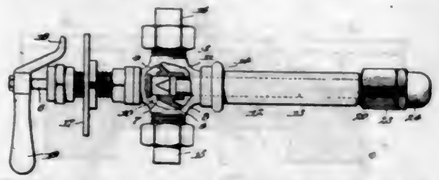
1,641,014. RAIL JOINT. WILLIAM SIPES, Shelbyville, Ind. Filed Dec. 9, 1926. Serial No. 153,648. 3 Claims. (Cl. 238—194.)

1. A rail joint comprising a supporting member having a chamber therein, a clamp for clamping together the abutting ends of a pair of rails, said clamp having a depending portion fitting in the chamber which acts to hold



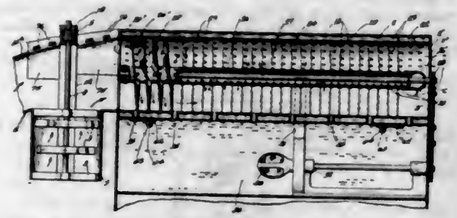
the clamp in closed position and when the rails are spiked down the clamp will be held in this chamber.

1,641,015. GAME. EDWARD H. SHORE, Hereford, Tex. Filed July 7, 1923, Serial No. 650,058. Renewed July 16, 1927. 6 Claims. (Cl. 273—152.)



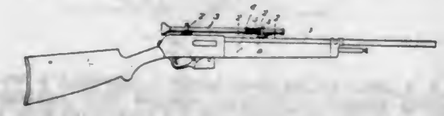
1. A card game of the class described comprising a number of cards, each having thereon a representation of a post and a pair of horse shoes, the horse shoes being arranged in different positions relative to the post on the cards so that the cards will show all the scores that it is possible to make in a real game of horse shoes.

1,641,016. DRAWING IMPLEMENT. JOHN SOLARI, Chicago Heights, Ill. Filed Apr. 14, 1924. Serial No. 706,489. 3 Claims. (Cl. 33—27.)



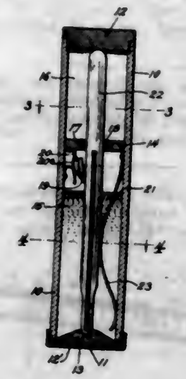
1. A device of the class described comprising a supporting member, a vertically arranged shaft rotatably mounted in the supporting member, a head on the shaft, a pencil carrying bar slidably mounted in the head, a circular rack on the supporting member concentric with the vertical shaft, a horizontal shaft arranged in the head, a toothed wheel on the horizontal shaft engaging the circular rack, a second toothed wheel on the horizontal shaft, a rack on the pencil carrying bar engaged by the second toothed wheel and means for manually rotating the vertical shaft.

1,641,017. LIQUID-FUEL BURNER. EARLE I. STAPLES, New York, N. Y. Filed Mar. 30, 1923. Serial No. 628,828. 1 Claim. (Cl. 158—78.)



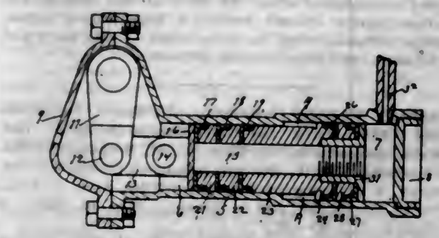
In a liquid fuel burner, a cylindrical body with a fuel nozzle arranged therein and having one end disposed adjacent to said cylindrical body, a sleeve detachably secured thereto and having a tubular nipple projecting therefrom, said nipple having a closed end, a plurality of tangentially disposed openings formed therein and projecting through the side wall of said nipple, said openings being in the same plane and a cap removably arranged on the nipple, said cap having its wall spaced therefrom and provided with a central outlet opening.

1,641,018. SMOKE WASHER. THEODORE THURCHAK, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 629,382. 6 Claims. (Cl. 261—29.)



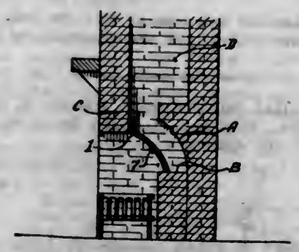
1. In a smoke washer, an outer wall forming a cleansing chamber having a spiral screen therein at its entrance and extending a short distance within the chamber, a plurality of transverse straight screens positioned within the chamber in spaced relation from the inner end of the spiral screen to the outlet of the chamber, an inner wall surrounding said screens, said outer and inner walls defining a water chamber, said inner wall provided with a plurality of perforations to permit the entrance of water in streams into the cleansing chamber, a rotary tube extending axially through said cleansing chamber and provided with a plurality of perforations, means for forcing water under pressure through said tube and out of said perforations, a water tank positioned for receiving the water from said cleansing chamber, outlet doors for said tank, and means for releasably securing said doors in closed position.

1,641,019. GUN SIGHT. JOHN D. WOODS, Steubenville, Ohio. Filed Sept. 13, 1923. Serial No. 662,465. 1 Claim. (Cl. 33—50.)



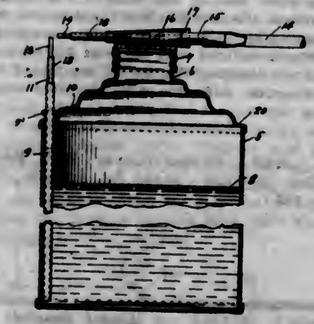
In combination with a firearm having inner and outer ring supports for a tubular sight and the outer ring support having a V-shaped notch in its outer edge, and which sight is susceptible to an outward longitudinal movement through the supports by the recoil of the firearm after its discharge, of a combined shock absorber and sight replacer for said sight, comprising a collar loose on the sight and in contact with the inner face of the outer support, a second collar fixed on the sight, a comparatively heavy coil spring arranged on the sight and bearing against the collars, and a pin on the sight designed to be received in the V-shaped notch on the outer ring support when the spring influences the sight to normal position.

1,641,020. THERMOMETER CASE. EMMA L. BELLOWS, New York, N. Y. Filed Apr. 21, 1926. Serial No. 103,590. 1 Claim. (Cl. 206—16.5.)



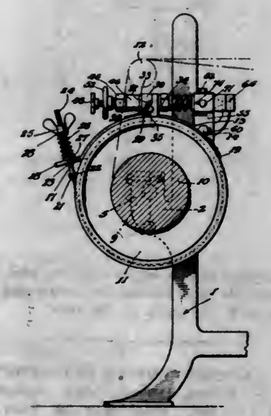
A thermometer case comprising a tubular casing open at opposite ends, caps removably associated with the ends of said casing, one of said caps provided with a seat for receiving the bulb end of a clinical thermometer, a partition within said casing intermediate the ends of the same for dividing the casing into a pair of chambers and having a yieldable disk mounted therein and provided with an opening for the passage of the theremometer, one of said chambers adapted to receive an antiseptic fluid, and a spring pressed flap valve mounted on said partition and normally closing said opening to prevent the accidental spilling of the fluid, said flap valve automatically moving to an open position upon the insertion of the thermometer through said opening, and a flat bowed spring having one of its ends fixedly connected to said casing and disposed within the fluid chamber and normally disposed in the path of the thermometer for guiding the bulb end of the thermometer to said seat.

1,641,021. SHOCK ABSORBER. HAROLD M. BENSON, Oakland, Calif. Filed Mar. 1, 1926. Serial No. 91,529. 1 Claim. (Cl. 267—65.)



In a shock absorber of the character described adapted to be attached to an automobile having a chassis and an axle, a casting having cylinders formed therein, said cylinders being of different diameter, a piston positioned within said cylinder, said piston including a head, and a piston rod, a plurality of cup washers positioned on said rod, the free edges of said cup washers extending in a direction toward the larger cylinder of said device, spacer blocks interposed between said cup washers, a filler block position on said piston rod, said filler block having a head formed integral therewith and of a diameter equal to the larger of said cylinders, a cup washer abutting said head and having its free edge extending in a direction toward the smaller cylinder of said device, a filler block abutting said cup washer, a second cup washer similarly positioned to said last mentioned cup washer, a nut secured to said piston rod and adapted to compress said cup washers and said filler blocks, a plug adapted to be secured to said casting and adapted to seal one end thereof, a pipe communicating with the interior of said larger cylinder at a point adjacent said plug, a bell crank lever mounted on said casting and connecting with said piston, a link connecting said bell crank lever and the axle of said automobile.

1,641,022. SPARK ARRESTER. CHARLES S. CALHOUN, Vidalia, Ga., assignor of one-half to Ben S. Calhoun, Glenwood, Ga. Filed Dec. 27, 1926. Serial No. 157,277. 1 Claim. (Cl. 126—288.)

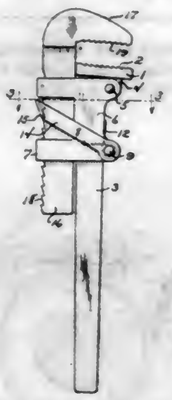


The combination with a fire place having a curved backing terminating in a platform at its lower end and the rear wall of a passage leading to the chimney at its upper end, of a spark arrester supported by the platform and following the curvature of the backing in a manner to underlie the passage for controlling the latter, said spark arrester comprising an elongated body provided with transversely disposed slots arranged therein and forming passages, projections extending from the ends of said body and being secured in the side walls of the fire place, a slotted plate mounted for slidable movement on the inner face of said body and following the curvature thereof, said plate being adapted to control the passages, and headed means carried thereby and passing through a longitudinally disposed slot formed in the body for operating said plate.

1,641,023. SPRAYER. ROBERT J. COFFEY, Oakland, Calif. Filed Apr. 19, 1926. Serial No. 103,055. 2 Claims. (Cl. 91—45.)

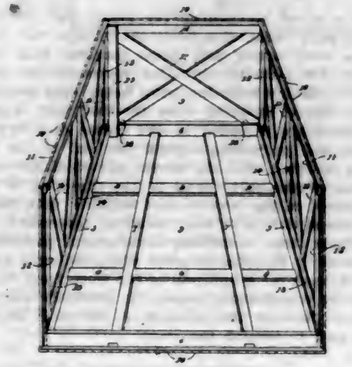
1. A sprayer comprising a liquid holding tank, a fluid outlet tube having an inlet end portion extending into the tank and adjustably mounted in said tank, a nozzle connected to the outlet end portion of the said tube, said nozzle comprising telescoping sections detachably connected together, and an air nozzle connected to the tank and disposed in angular relation to the fluid nozzle.

1,641,024. WARP-TENSION EQUALIZER FOR LOOMS. TELESPHORE C. DEMERS, Springfield, Vt. Filed Jan. 13, 1926. Serial No. 81,008. 6 Claims. (Cl. 139—100.)



1. In a let-off mechanism for looms, the combination with the warp beam, of a frictional tension unit coacting with the head thereof and means coacting with the tension unit for yieldably resisting movement of the tension unit together with the warp beam, said means comprising a barrel mounted upon the said unit, a plunger stem adjustably threaded in the barrel and having an abutment end projecting beyond one end of the barrel, a spring coacting with the barrel and yieldably resisting movement of the said barrel in the direction to permit of movement of the tension unit together with the warp beam, means for positively resisting movement of the said plunger stem comprising an abutment positioned for engagement by the plunger stem when the same has been moved through the let-off pull of the warp from the beam, said spring constituting means for reversely moving the said beam through the medium of the said barrel and tension unit to tension the warp.

1,641,025. PIPE WRENCH. BLANCHE DONNELSON, Pratt, Kans., assignor of one-tenth to Frank Goyen, one-tenth to Walter Pedigo, one-tenth to W. B. Hess, one-tenth to J. E. Hardesty, and one-tenth to A. S. Farmer. Filed Aug. 18, 1926. Serial No. 130,068. 1 Claim. (Cl. 81—134.)



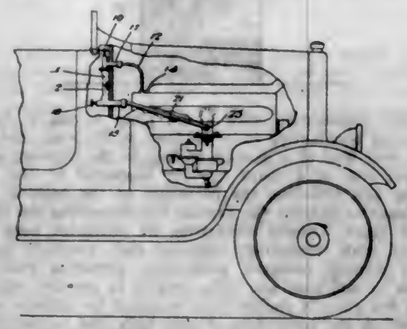
A pipe wrench, including a stationary jaw having a handle integrally formed therewith, a frame comprising spaced side members and U-shaped straps extending from the ends of the side members, said side members straddling the handle and having their outer corners pivotally secured to said handle, said side members between the straps having an inner wall and having their lower corners provided with lugs, a pivot passing through said lugs, a roller on the pivot between the lugs, a spring having coiled ends surrounding the pivot, outward of the lugs, and having a central portion which contacts with the outer edge of the handle, a substantially U-shaped yoke having its arms connected to the pivot and the coiled ends of the springs having extensions for en-

gaging the arms of the yoke, said connecting element arrange at an angle with respect to the arms and providing a tooth, a movable jaw having a shank which is slid-

able through the straps for the frame, and the shank of the said movable jaw having its outer end toothed for engagement with the tooth of the yoke.

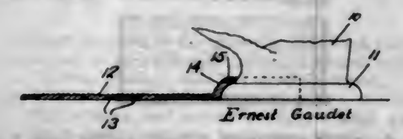
1,641,026. MOTOR-VEHICLE-TRANSPORTING BOX. EDWARD S. EVANS, Detroit, Mich., assignor to E. S. Evans & Co., Inc. Filed May 29, 1924. Serial No. 716,816. 3 Claims. (Cl. 217—43.)

1. In a transporting box for motor vehicles, a box fabricated in units consisting of completely preformed sides, a top, a bottom and ends, each unit including a series of sheathing strips, a longitudinal brace bar for each end and longitudinally extending brace bars for each of the other units to strengthen and retain the sheathing in position, each side having the longitudinal brace bars, one arranged contiguous to the upper edge and the other parallel with and spaced from the lower edge, frame bars on the bottom to receive and support the last-named brace bars and diagonal brace bars on the top to engage the brace bars on the upper ends of the sides.



1,641,027. BRACE. ALBERT J. FEASTER, Salisbury, N. C. Filed Oct. 9, 1926. Serial No. 140,616. 3 Claims. (Cl. 2—44.)

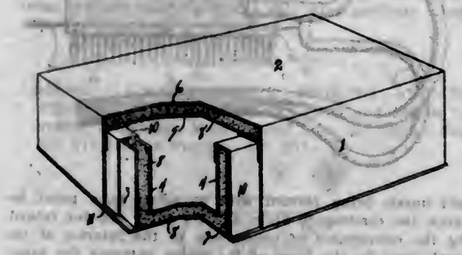
1. In a device of the character described comprising a brace having a hollow body portion, leg members carried thereby and adapted for swinging movement thereon, a connecting element for the body and legs, a spring



member connecting said element with the body, and attaching means carried upon the extremities of the body and legs.

1,641,028. GAS MOISTENER. HAROLD M. FLEUKER, Salem, Wis. Filed Apr. 17, 1922. Serial No. 553,392. 1 Claim. (Cl. 123—25.)

A humidifier adapted for connection between the water jacket and the intake manifold of an engine and including a body, a coupling connected with the upper end thereof, a tube connecting the coupling with the water jacket, a valve for regulating the amount of water entering the body and being arranged in the coupling, a tube connected with the lower end of the body and communicating therewith to receive water therefrom, a wall in said second mentioned tube and having an opening forming a valve seat at one side of the point of connection between the tube and body, said second mentioned tube having an air port therein at the other side of said wall, a valve associated with the seat for regulating the amount of air entering the second mentioned tube, and a pipe connecting said tube with the inlet manifold of the engine.



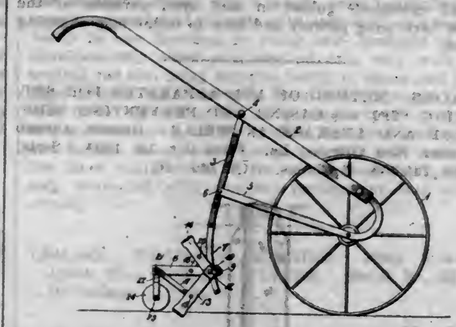
1,641,029. MAT. ERNEST GAUDET, Hyde Park, Mass. Filed Oct. 29, 1926. Serial No. 145,059. 2 Claims. (Cl. 4—185.)

1. A mat for use in connection with plumbing fixtures having a serrated upper surface, an upstanding flange

portion carried by the mat extended over the base of the fixture, and a multiplicity of suction cups carried upon the under surface of the mat.

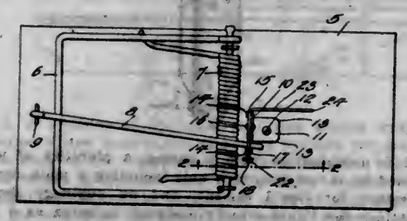
1,641,030. TRANSPORTATION CONTAINER. MOSES GROSS, Fort Worth, Tex. Filed Mar. 23, 1926. Serial No. 96,744. 2 Claims. (Cl. 229—14.)

1. A transportation container for candy and other perishable food comprising a box having double wall members spaced apart on all sides and the bottom, a lid for said box, an insulating filler filling all the spaces between said wall members, and means for sealing said filler in the side and end walls consisting of a sheet of material placed on the upper edges of the wall and lapped partly down on the inside of the wall and lapped on the entire outer wall to the bottom thereof.



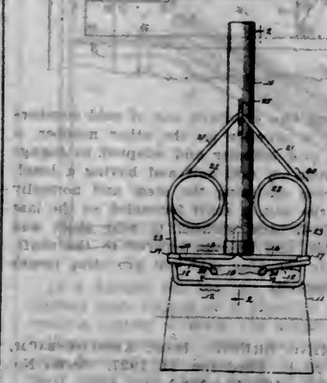
1,641,031. AUTOMATIC CHISEL HAMMER. MADISON WILSON GAILLARD, Mobile, Ala. Filed Aug. 6, 1926. Serial No. 127,711. 2 Claims. (Cl. 32—24.)

1. An instrument as described comprising a handle, a rotary shaft therein, a cam on the end of the shaft, a casing removably connected with the handle, a hammer in the casing having a lateral recess for receiving the cam, said recess having an upper cam wall for cooperating with said rotary cam, a coil spring for urging the plunger in one direction, a removable cap for the casing for adjusting the tension of said coil spring, a removable cap on the other end of said casing having a guide flange, and a tool holder having a shank sliding through said guide flange and provided with a peripherally notched enlarged head piece in said last mentioned cap for engagement by said hammer, and means carried by said last mentioned cap for engaging the notches in said head piece for adjusting the tool holder about its axis.



1,641,032. WEEDER. JOHN W. GIBBS, Charleston, Ill. Filed Nov. 13, 1924. Serial No. 749,744. 5 Claims. (Cl. 97—207.)

1. The combination of a weeder comprising a plurality of horizontal knives, a common carrying-member for said knives, said carrying-member being swingable on a horizontal axis transverse to the longitudinal direction



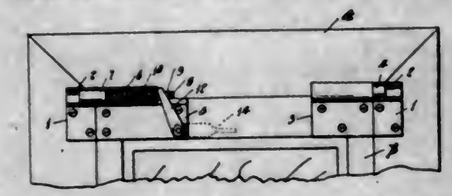
of the knives for bringing the latter selectively into working position, and a roller suspended from said frame behind said knives.

1,641,033. TRAP. GEORGE H. HAGERMANN, Muscatine, Iowa. Filed Oct. 21, 1926. Serial No. 143,199. 5 Claims. (Cl. 43—81.)

2. In a trap, animal trapping means, means for holding said trapping means in set position, including a bait-carrying trigger mounted for upward movement to release said holding means, and a support upon which the weight of the trigger and bait are sustained when the trap is set, overcoming liability of accidental springing of the trap by the action of gravity on the trigger and bait.

1,641,034. CLEANING IMPLEMENT. MARIE ELIZABETH HARBER, Richmond, Ky. Filed Oct. 11, 1926. Serial No. 140,926. 1 Claim. (Cl. 15—151.)

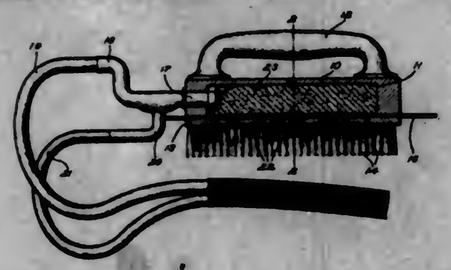
In a cleaning implement, a handle and a pair of relatively adjustable wire cross bars adapted to clamp a mop or the like between them, one of said cross bars being



rigid with the end of the handle and bent to form guiding eyes, the other cross bar including angularly disposed extensions guided in said eyes, portions of the cross bars being pointed and bent to define mop engaging spurs.

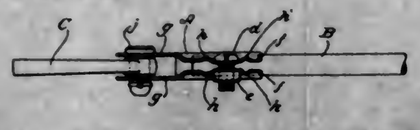
1,641,035. METHOD OF AND APPARATUS FOR SETTING PIPE OR CASING AND PREVENTING SEEPAGE AND LEAKAGE IN WELLS. GEORGE ALFRED HERO, New Orleans, La. Filed Oct. 14, 1924. Serial No. 743,599. 5 Claims. (Cl. 166—10.)

2. In combination with a casing, a plurality of units carried by the casing, each unit including a main flexible container for liquid cement, and an auxiliary flexible container for liquid cement designed to serve as a protector for the main flexible container and also having a greater capacity for distention.



1,641,036. HINGE FOR STORM SASHES. FRED JACHIMSTAL, Manitowoc, Wis. Filed Nov. 10, 1925. Serial No. 68,141. 1 Claim. (Cl. 16—176.)

A hinge comprising two members, one of said members including a socket, a cylinder on the other member, a cylindrical bolt in said cylinder and adapted to engage in said socket, a stem on said bolt and having a longitudinal slot, a spring enclosing the stem and normally tending to project the bolt, a shaft journaled on the last mentioned member, an arm secured to said shaft and engaging in the slot, and a lever secured to the shaft, said arm by directly engaging said bolt providing means to project and retract it.



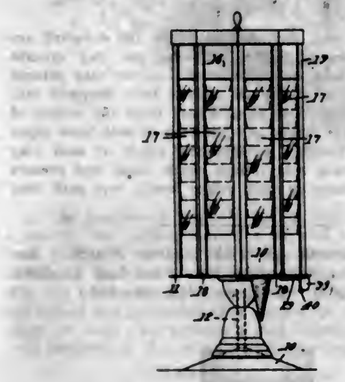
1,641,037. STEAMING BRUSH. ISAAC KIRSCHENBAUM, New Brunswick, N. J. Filed Jan. 11, 1927. Serial No. 160,439. 3 Claims. (Cl. 15—128.)

1. A steaming brush, including a hollow brush head having bristles on one of its surfaces and ports extending through the bristle-supporting surface, a nozzle extending through the wall of the brush head and communicating with the interior, a steam conduit connected with the outer end of said nozzle, and a condensate drain pipe connected with said nozzle intermediate its ends, the

said nozzle being formed with an offset at a point between the condensate drain and its outer end for retarding the conveyance of condensate to the interior of the brush head by the force of the steam entering the same.

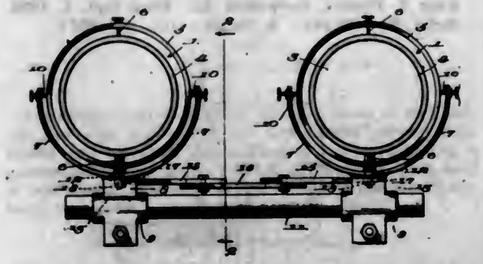
1,641,038. ROD AND CLAMP CLEVIS. ALFRED O. KOPPIN, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 30, 1923. Serial No. 615,966. 1 Claim. (Cl. 287—100.)

A unitary clamp and clevis constructed of sheet metal stamped into the desired shape, having at one end a pair of projecting members forming a clevis and at the other a pair of ears for tightening said clamp, each of said ears being provided with parallel ribs forming therebetween depressions, the spaces between said ribs being provided with aligned apertures, and a pinch bolt extending through said apertures for compressing the ears, the head of the bolt and the nut thereon being positioned in the depressions between the ribs whereby the nut will engage the ribs to prevent rotation of it relative to the bolt.



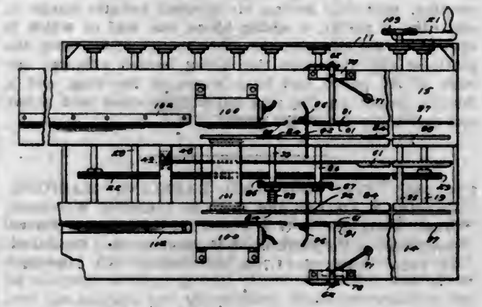
1,641,039. SHOWER SHAWL. HALLIE LA BRAUD, New York, N. Y. Filed Mar. 31, 1926. Serial No. 98,801. 3 Claims. (Cl. 2—88.)

1. A paper shower shawl folded from an approximately rectangular blank, said blank being provided with transverse fold lines defining a body-encircling element formed



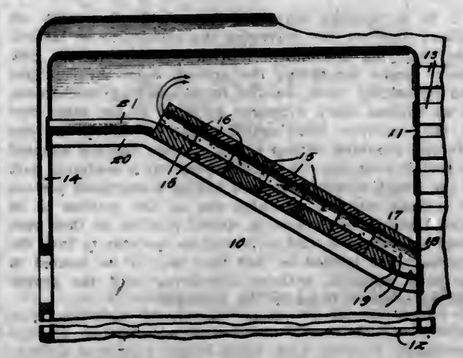
of a back section, two front sections and a series of pleats between the back section and the two front sections, the intermediate portion of the blank being formed with a transverse fold line defining a forwardly folding hood top portion integral with the top of the back section, and adapted to rest on a wearer's head, the upper portions of the front sections being folded inwardly on diagonal fold lines and connected to the forward edge of the hood top, the diagonally folded upper ends of said front sections defining flaring side wing portions integral with the hood top.

1,641,040. ICE-CREAM-CONE STORING AND DISPENSING DEVICE. ANTHONY LEON and JAMES LATTIMER, Worcester, Mass. Filed June 21, 1926. Serial No. 117,240. 6 Claims. (Cl. 211—8.)



1. In a device of the character described, the combination with a base having an opening therethrough and means for supporting a pile of conical objects above the opening in axial alignment therewith, thereby when the first named means is opened the bottom cone will drop down below said stationary base, of a pair of pivoted levers having teeth meshing with each other to cause the levers to operate simultaneously in opposite directions about their pivots, and a second pair of levers connected with the first pair having curved arms for engaging the second cone, both operated either inwardly or outwardly at the same time for preventing all but the bottom cone from falling.

1,641,041. VEHICLE LAMP. JOHN HENRY MACPHERSON, McKeesport, Pa. Filed Feb. 10, 1925. Serial No. 8,233. 1 Claim. (Cl. 240—61.)



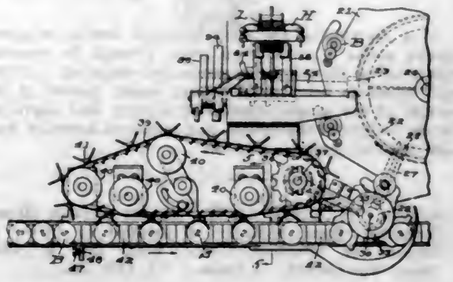
In combination, a pair of headlight casings, means supporting each headlight casing for swinging movement about a vertical axis and for swinging movement about a horizontal axis, a stud carried by each headlight casing rearwardly of a vertical plane passing through the vertical axis of swinging movement of the headlight casing and also rearwardly of a vertical plane passing through the horizontal axis of swinging movement of the headlight casing, and a single cross connecting rod loosely connected at its ends with said studs and movable bodily in one direction to swing said headlight casings simultaneously about said vertical axis, said cross connecting rod also being movable bodily to swing said headlight casings simultaneously about said horizontal axes, said cross connecting rod comprising a pair of similar end sections and a middle section, the outer ends of the end sections being loosely connected with said studs and the inner end portions of the end sections being adjustably connected with the end portions of said middle section.

1,641,042. WRAPPING MACHINE. FRED MARASSO, Joliet, Ill. Filed Mar. 11, 1926. Serial No. 93,945. 10 Claims. (Cl. 93—7.)

2. A machine of the class described having wrapping means, means to advance an article through the machine relatively to the wrapping means and including a clutch, and means to operate said clutch under control of the weight of the article, comprising a lever held depressed by the weight of the article, and means to normally urge said lever to operative position.

1,641,043. FIRE-BOX ARCH. DORSEY EUGENE MOORE, Bruceton, Tenn., assignor of one-half to Oliver A. Harker, jr., Puryear, Tenn. Filed Oct. 9, 1926. Serial No. 440,491. 1 Claim. (Cl. 110—87.)

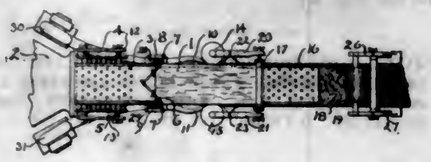
In a furnace fire box, an upwardly and forwardly extending arch formed of a plurality of longitudinally extending courses of brick, the bricks of each course being hollow and communicating with each other to thereby form flues straight from end to end and discharging at their upper ends at the crest of the arch, said arch terminating short of the rear wall of the fire box, the lower end of each flue opening upon the underface of the arch at the forward end thereof, the bricks of each course



being cut away at their lower corners and tubes extending upwardly and longitudinally through the fire box and engaging the cut away corners of the bricks to support the arch, said tubes communicating with the water space of the boiler.

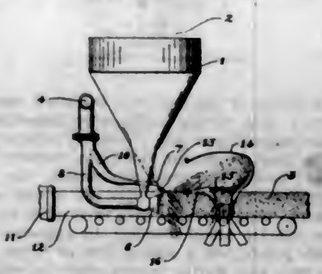
1,641,044. WINDOW PORTAL. PETER J. MURPHY, New York, N. Y. Filed May 21, 1926. Serial No. 110,727. 1 Claim. (Cl. 189—76.)

A device of the character described, comprising a grooved flexible ring adapted to engage the wall of an opening, said ring having an internal annular flange at one edge, a portal, a spring hinge, one leaf of which is secured to the ring and the other to the portal, with the pintle of the hinge and the spring located adjacent one edge of the portal and in a recess of the ring, and a flexible tongue on the ring extending across said recess and over a portion of the portal.



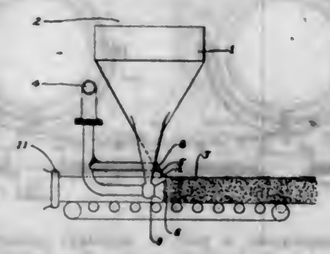
1,641,045. SPOTTING AND LABELING MACHINE. CHARLES H. OSLUND and JOHN E. JOHNSON, Worcester, Mass., assignors to O & J Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1925. Serial No. 1,700. 18 Claims. (Cl. 216—54.)

1. In a labeling machine, the combination with an endless conveyor for conveying the articles to be labeled, label applying mechanism located adjacent to the conveyor, means for taking the articles from the conveyor and depositing them on the label applying mechanism, of an endless chain arranged to move at the same rate as the conveyor and located adjacent thereto at one side and provided with a series of rests thereon adapted to project over the conveyor throughout a material part of the length thereof and each having a depressed surface in a single arc for receiving one of the articles to be labeled and holding them in spaced relation as they pass along the conveyor, and to permit an operator to turn the articles to be labeled so that they will all be located in the same position, without interfering with the proper spacing of the articles on the conveyor.



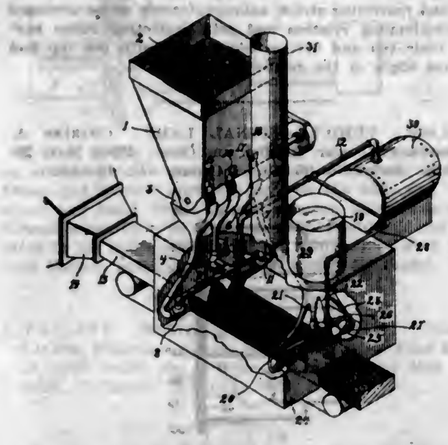
1,641,046. APPARATUS FOR AND METHOD OF SIMULTANEOUSLY TEXTURING BOTH ENDS OF BRICKS. EMMETT V. POSTON, Springfield, Ill. Filed Dec. 16, 1925. Serial No. 75,762. 3 Claims. (Cl. 25—1.)

1. A device for simultaneously texturing both ends of brick comprising in combination a surface comb for the top surface of the green clay column as the same is discharged from the forming die; a V shaped scraper operatively connected to said comb and adapted to scrape the clay crumbs off of the surface that are scratched up by said comb; a pair of oppositely disposed combs for scratching the edges of said clay column; a pair of oppositely disposed surface rollers spaced from said combs for the edge and a pair of blowers having blow pipes provided each with a hopper; said hoppers positioned slightly below the top surface of said clay column along the side thereof and registering with the outer terminals of said scraper; said hoppers each provided with a one way valve on the side next to the blower;



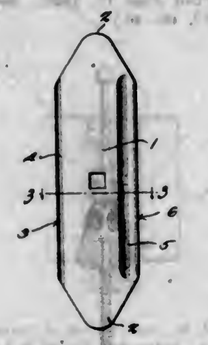
said blow pipes each terminating under the forward arc of said corresponding rollers whereby the clay crumbs scratched up by said top surface comb on the clay column may be automatically scraped off the side, dropped into the hoppers of said blow pipes where from the action of the blower they are forced out the ends of said blow pipes and discharged forcibly against the edges of said clay column just as said side rollers catch them and presses them simultaneously on both edges firmly into said clay column.

1,641,047. PROCESS OF TEXTURING BRICK. EMMETT V. POSTON, Springfield, Ill. Filed Aug. 31, 1926. Serial No. 132,800. 8 Claims. (Cl. 25—156.)



1. The method of ornamenting plastic surfaces of a clay stream in plastic state comprising projecting against the surfaces granules of material on a fluid current at such velocity whereby said granules will scarify the surface and deflect from the surface.

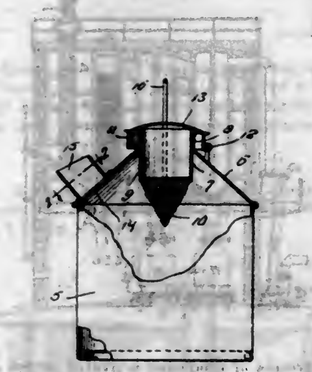
1,641,048. PROCESS OF VENEERING BRICK. EMMETT V. POSTON, Springfield, Ill. Filed Sept. 7, 1926. Serial No. 133,899. 8 Claims. (Cl. 25—156.)



1. The process of ornamenting the plastic surface of a clay column consisting in forcibly projecting granular material into the plastic surface of the column by a fluid stream.

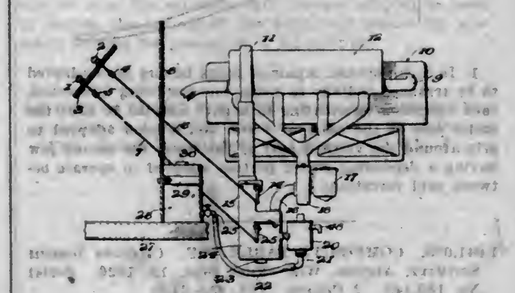
1,641,049. PROCESS OF VENEERING BRICK. EMMETT V. POSTON, Springfield, Ill. Filed Dec. 27, 1926. Serial No. 157,285. 6 Claims. (Cl. 25—156.)

1. The process of veneering brick consisting in moving a plastic clay column out of a die and moving powdered and granular particles of dry clay out of a hopper through a plurality of distributing tubes, from which said dry clay particles are forcefully ejected by steam jets, and moistened and projected onto the plastic side and top surfaces of said clay column; and subsequently spraying said surfaces of the column with coloring pigments.



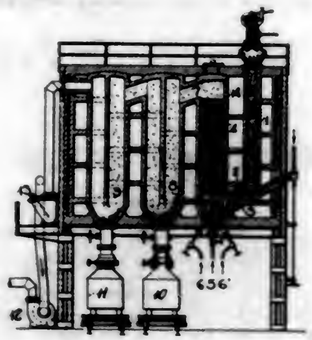
1,641,050. CULTIVATOR BLADE. MARCELLUS RAMSEY, North Girard, Pa. Filed Aug. 26, 1926. Serial No. 131,690. 1 Claim. (Cl. 97—203.)

A reversible cultivator tooth having a point at each end, one side edge portion of the tooth being curved backwardly and the other side portion of the tooth having a longitudinal recess in its front face, the outer side wall of said recess being extended forwardly to the side of the tooth to provide a longitudinal cutting edge.



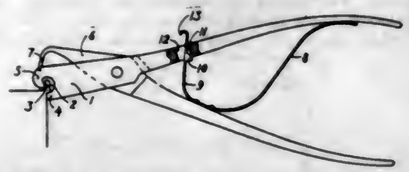
1,641,051. OIL CAN. JOHN H. RHENEY, Augusta, Ga. Filed Aug. 16, 1926. Serial No. 129,417. 1 Claim. (Cl. 221—1.)

In combination with an oil can provided with an oil discharge spout and an inlet opening in its top wall, an annular flange extending upwardly from the top wall of the can and surrounding the inlet opening, a filter unit adapted for disposition within the opening as well as within said annular flange, said filter unit including a metallic sleeve having a sliding fit in the flange, a substantially inverted conical filter screen carried by the lower end of the sleeve, a laterally extending flange formed on



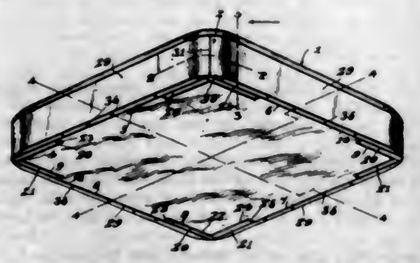
the upper end of the sleeve and adapted to engage over the upper edge of said annular flange for limiting the downward sliding movement of the sleeve, and a hinged lid mounted on the top wall of the oil can for disposition over the opening and the annular flange surrounding the same.

1,641,052. INTERNAL-COMBUSTION ENGINE APPLIANCE. LEW ROGERS, Carson City, Nev. Filed Aug. 17, 1925. Serial No. 50,620. 8 Claims. (Cl. 123—25.)



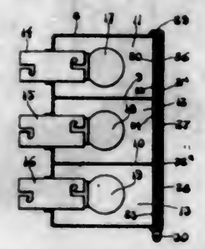
1. In an attachment for internal combustion engines, an air cleaning chamber having spaced air intake and air delivery ports adjacent to its upper end and being adapted to hold a liquid below said ports, a transverse partition extending within said chamber between said ports from the top wall of the chamber below the normal level of liquid within the chamber, said partition having an air by-pass port in the portion thereof that is located above the level of liquid within the chamber, and a valve for controlling flow of air through said by-pass port, said air delivery port being adapted for connection with the air intake port of the carburetor of an associated internal combustion engine.

1,641,053. PROCESS FOR THE MANUFACTURE OF ACTIVE CARBON. JOHN NICOLAAS ADOLF SAUER. Amsterdam, Netherlands. Filed July 29, 1924, Serial No. 728,923, and in Great Britain Aug. 9, 1923. 8 Claims. (Cl. 252—3.)



1. The process of producing activated carbon from raw or carbonized carbonaceous material, by the aid of heat and of activating gas, in which the material to be activated is maintained in a state of agitation and flotation by a blast of gas, the activated product being drawn off by the discharged reaction gases.

1,641,054. CAN OPENER. ANTON MARTIN SCHWEIGÅRD SCHÄNNING, Christiania, Norway. Filed Feb. 16, 1924, Serial No. 693,265, and in Norway Nov. 17, 1923. 3 Claims. (Cl. 30—3.)

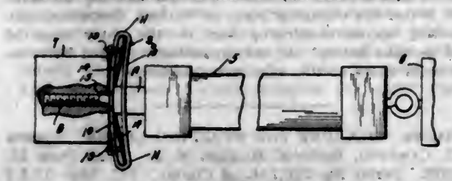


1. In a can opener, a pair of tongs having jaws adapted to be arranged radially to a can, one jaw being bifurcated, each furcation terminating in a part adapted to abut the under side of the seam of a can and a hook adapted to grip around the vertical part of the seam, the second jaw having a depending cutter portion adapted to operate between said furcations.

1,641,055. COMPOSITE TABLE TOP. CHARLES JOSEPH SCHMITT, Algoma, Wis. Filed Sept. 13, 1926. Serial No. 135,149. 2 Claims. (Cl. 45—31.)

1. A composite table top comprising a body portion having a rabbet at each end of each side edge, reinforcing strips secured at each rabbet, protecting strips, each protecting strip secured to a side edge of said body portion and opposing and secured to a pair of reinforcing strips, a cushioning element extended throughout the upper face of and secured to said body portion and opposing and secured with the upper edges of said reinforcing and protecting strips, said reinforcing strips arranged in overlapping relation and said protecting strips having their top and bottom edges flush with the top and bottom edges of the reinforcing strips.

1,641,056. VEHICLE SIGNAL LAMP. CHARLES A. SHOEMAKER, near Middletown, Ohio. Filed Mar. 20, 1926. Serial No. 96,349. 1 Claim. (Cl. 40—132.)

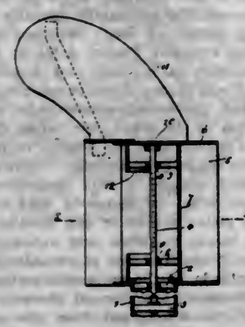


A vehicle signal lamp comprising an open ended body, a series of partitions fixed in spaced relation in the body and dividing it into compartments, a lamp in each compartment, a stenciled signal-designating plate covering the compartments and folded to form shelves on its front face with grooves in its rear face to receive the forward edges of the partitions, a portion of the stencil occupying the opening to each compartment, a glass of different color covering each stencil portion, with one of said plate shelves between adjacent glasses, and means adapted to retain the plate and glass coverings in position.

1,641,057. CANE TOY. MARIE ANNING SWEET, Highland Park, Ill. Filed June 17, 1926. Serial No. 116,662. 4 Claims. (Cl. 46—40.)

4. A toy of the character described comprising a cane, a spring coiled around the cane and held at one end against movement, and a body slidably mounted on the cane and supported by the spring, the spring in compressing or expanding acting to give the body a rotative movement around the cane.

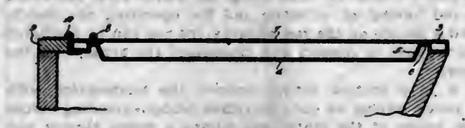
1,641,058. RING LATCH. ROBERT G. TALLEY and WALDEMAR W. TALLEY, California, Mo. Filed Sept. 1, 1923. Serial No. 660,581. 1 Claim. (Cl. 292—299.)



A latch of the character set forth, comprising a frame, an attaching screw fixed at one end to one side of the frame and located centrally between the ends and the upper and lower edges of said side, an upstanding ear formed integrally with the upper edge of said side and located in the plane of said side and centrally between the ends thereof, and rings supported within the frame.

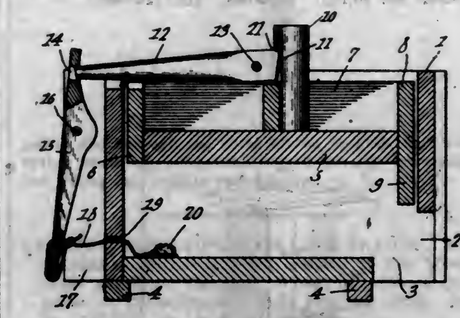
1,641,059. RESILIENT-RING ELEMENT. ERNST TAUSCH, Wilmersdorf, near Berlin, Germany. Filed May 18, 1926, Serial No. 110,008, and in Germany May 10, 1925. 7 Claims. (Cl. 151—38.)

1. In a resilient ring element, an inner ring, an outer ring and a web connecting both said rings in such a manner that by an axial pressure upon the element the said inner ring is subjected to pressure and the said outer ring to tension.



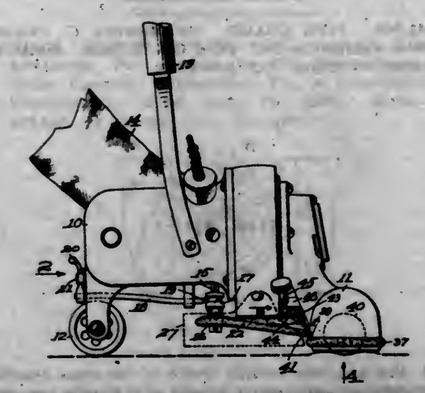
1,641,060. COWL. HENRY C. WEHRFRITZ, Jersey City, N. J. Filed June 15, 1926. Serial No. 116,195. 1 Claim. (Cl. 98—70.)

A cowl, comprising a casing open at both ends and larger at one end than at the other, a vertical tube smaller in diameter than the casing and fixedly secured in the casing, said tube having an opening in its wall adjacent the smaller end of the casing, bearings located centrally in the tube above and below the said opening, a thrust bearing in the top of the casing, a pipe receiving the tube thereon, and a vertical rod secured in the pipe and mounted in all three of said bearings.



1,641,061. KITCHEN-TUB COVER AND DRAINER. HERMAN YOUNG, New York, N. Y. Filed Mar. 23, 1927. Serial No. 177,707. 1 Claim. (Cl. 68—31.)

A drainer for kitchen tubs, comprising a single integral sheet metal structure having a hollow frame substantially rectangular in cross section, a horizontal flange extending inwardly from substantially the center of said frame whereby a depressed shoulder surrounding said frame is presented, an inclined inwardly tapering wall extending

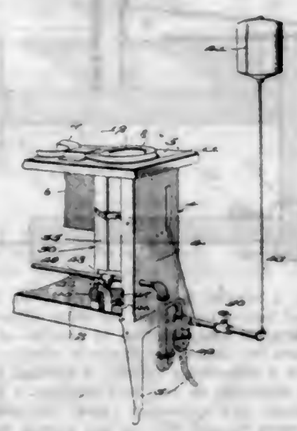


from said flange, and a flat foraminous bottom extending from the bottom of said tapering wall, and a hingedly mounted lid positioned to fit into said shoulder when in functioning position for covering said foraminous bottom.

1,641,062. RAT TRAP. ADOLPHUS ST. JOHN BACON, Fair Haven, N. Y. Filed Mar. 21, 1925. Serial No. 17,301. 1 Claim. (Cl. 43—78.)

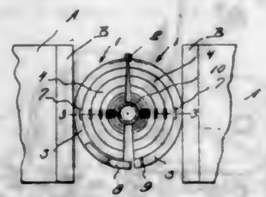
In a trap, a box-like body having its lower front wall cut away and having its bottom cut away adjacent to the first mentioned cut away portion to provide an entrance opening, cleats for supporting the body portion in spaced relation with a supporting surface, a vertical reciprocating plunger operating in the body portion, a front wall on the plunger and extending below the plunger and adapted to move through the cut out portion in the bottom to close the entrance, said plunger adapted to move to engage the bottom of the body, and means for normally holding the plunger in a set position.

1,641,063. CARPET CLEANER. SVEN MALCOLM BLANCH and FRANK J. QUIST, Worcester, Mass. Filed Dec. 1, 1922. Serial No. 604,142. 6 Claims. (Cl. 15—8.)



3. In a suction carpet cleaner, the combination with a motor casing and a suction nozzle, of a brush in the suction nozzle, a shaft extending from the motor casing

and adapted to be operated therefrom, a pulley loose on said shaft, connections from the pulley for operating the brush, a clutch for connecting the pulley with the shaft, a rod having an eccentric end for operating the clutch, and a handle on the rod whereby the rod can be oscillated on its axis to connect and disconnect the brush with the power.

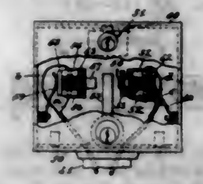


6. In a suction carpet cleaner, the combination with a nozzle having an open bottomed bridge extending across the nozzle at the center and having a recess therein and side openings, bearings fitting tightly in said openings, and a brush fitting in and supported by said bearings, of a box having an open top fitting over said recess and carrying the bearings.

1,641,064. STOVE. HARLAN M. BRITAN, Ojus, Fla. Original application filed Jan. 20, 1925, Serial No. 3,659. Divided and this application filed Feb. 23, 1926. Serial No. 90,133. 3 Claims. (Cl. 126—45.)

1. In a stove, a burner including an oil cup, a plug within the oil cup defining a wick receiving space, said plug having means thereon for supporting a wick holder and chimney, a wick in said wick holder, and means comprising oppositely disposed perforated sleeves for closely engaging and supporting said wick.

1,641,065. PIPE CLAMP. CHRISTOPHER C. CALLERY, West Coatesville, Pa. Filed Oct. 1, 1925. Serial No. 59,861. 1 Claim. (Cl. 81—39.)



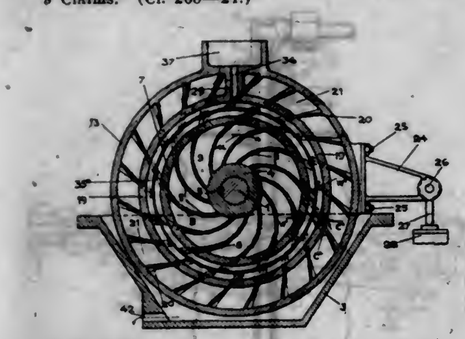
A pipe and tube holding device of the class described comprising an outer casing formed of integrally connected halves, means for connecting said halves together, and a plurality of bushings arranged in said casing, each bushing being composed of a pair of half-sections of symmetrical configuration, and co-acting means between the adjacent sections of the respective bushings for maintaining said sections in nested relation, whereby to adapt said device for clamping pipes of various diameters, said co-acting means comprising lugs on the outer faces of said sections fitting into correspondingly shaped holes on the inner faces of the cooperating sections.

1,641,066. MIXTURE FOR STOPPING LEAKS. JOSEPH D. CAMPANO, Berkeley Heights, N. J. Filed June 17, 1926. Serial No. 116,724. 4 Claims. (Cl. 134—17.5.)

1. A leak stopping mixture for automobile radiators consisting of water, sugar, flax seed and salt in substantially the following proportions—water 16 ozs., sugar 4 ozs., flaxseed 2 ozs., and salt 4½ ozs.

1,641,067. DOOR-OPERATING MEANS. CLYDE A. CONNELLY, Shelby, Ohio. Filed Mar. 31, 1926. Serial No. 98,812. 3 Claims. (Cl. 172—210.)

1. A device for operating a movable element, said device including a traveller, means to connect said traveller with the element to be moved, an electric circuit, a motor in said circuit, a pair of relay magnets in said circuit, normally open switches optionally operable to close the circuit through either of said switches, an automatic switch including shiftable blades, pairs of switch leaves appurtenant to each blade, each pair adapted to be engaged by one of said blades, wires running from the leaves of one pair and connecting respectively with the corresponding leaves of the other pair, wires connecting the blades with the windings of the respective relay magnets, wire connections adapted to complete circuits through the armatures of each magnet, a wire connecting one switch leaf of one pair with the motor, a wire to complete a circuit through either armature and another switch leaf of a pair, and means to throw said automatic switch by the movements of the traveller in opposite directions, so that when one blade of the automatic switch is engaged with the switch leaves appurtenant thereto, the other of said blades will be disengaged from the switch leaves appurtenant to the last-mentioned blade; together with a switch in said circuit, said switch including two switch assemblages, one of said assemblages being normally closed and the other normally open, and key-operated means optionally operable to close said open switch assemblage or open said closed switch assemblage.



1,641,068. INCANDESCENT ELECTRIC LAMP. FRED CZECH, Wichita Falls, Tex. Filed June 17, 1925. Serial No. 37,781. 1 Claim. (Cl. 176—26.)

An incandescent lamp comprising a base, a metallic shell surrounding the same, a glass plug carried by the base, a bulb enclosing the same, a terminal at the bottom of the base, a main lead in wire extending through the base and said plug and connected at its lower end to said terminal, a complementary lead in wire extending through the plug, a lower end thereof being in engagement with said metallic shell, a primary filament bridging the upper end of said wires, a contact carried by the base and extending through the shell at a point adjacent the upper edge thereof, and being insulated therefrom, an additional lead in wire connected at its lower end with said contact and extending upwardly through the plug, a branch wire extending upwardly from the main lead in wire, an auxiliary filament bridging the upper edge of

the branch wire and the last mentioned lead in wire, and a spring strip carried by the base and being in engagement with the terminal, the afore-mentioned contact being out of engagement with a lamp receiving socket when the primary filament is in use, said spring strip permitting the plug to be inserted in its socket so as to bring the contact into engagement with the socket when the primary filament is rendered inoperative.

1,641,069. HYDRAULIC BRAKE DYNAMOMETER. SVEN SIGURD EKMAN, Gottenborg, Sweden. Filed Jan. 28, 1925, Serial No. 5,411, and in Sweden Feb. 9, 1924. 9 Claims. (Cl. 265—24.)

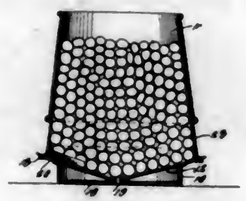
1. In hydraulic brake dynamometers, a rotatory wheel, means to temporarily connect said rotary wheel with the engine to be tested, an oscillatory suspended substantially stationary casing enclosing said rotary wheel, means to take up and counteract upon a balance the oscillating amplitudes of said casing, a series of closed channels in said rotary wheel, said channels open only at their inlet end and outlet end, a series of closed channels in said stationary casing, said channels open only at their inlet and and outlet end, said closed channels in the rotary wheel as well as in the stationary casing being curved in such a manner, that a continuous passageway is formed by the channels in the rotary wheel in cooperation with the channels in the stationary casing.

1,641,070. SCALE. PRIES A. ENGLE, Carlos, Ind. Filed Feb. 4, 1926. Serial No. 86,005. 6 Claims. (Cl. 265—48.)

1. A scale comprising a member, a pulley journaled on the member, weights movably supported by the member and provided with axial bores and terminal recesses communicating with the bores, a second member for supporting the article to be weighed and passing about the

pulley and through the bores of the weights, and weight lifting stops carried by the second member for engaging and lifting the weights successively.

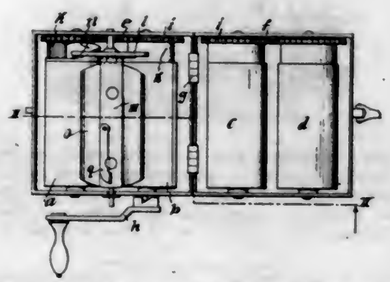
1,641,071. ELECTRIC TRAIN-LINE SWITCH. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1924. Serial No. 700,212. 3 Claims. (Cl. 200—1.)



1. The combination with an electric switch mechanism and a piston operated by fluid under pressure for actuating said mechanism, of means operated upon a reduction in fluid pressure on said piston for opening a communication through which fluid is vented from said piston.

1,641,072. PISTON PACKING RING. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1926. Serial No. 138,616. 4 Claims. (Cl. 74—109.)

3. A split piston packing ring having the inner periphery eccentric to the outer periphery and having the eccentricity at the opposite faces counterbored, leaving bearing faces having concentric peripheries.



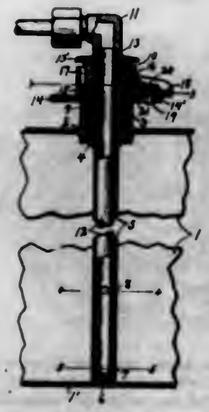
1,641,073. PACKING FORM. WILLIAM FEAN, Columbus, Ohio. Filed Feb. 13, 1926. Serial No. 88,096. 5 Claims. (Cl. 226—17.)

1. In a packing form, a base section including a cone shaped bottom plate, a vertically disposed rim upon the bottom plate adjacent its outer periphery, a positioning bar upon the bottom plate, and a co-acting body section including a tapered shell engageable with the rim of the base section.

5. In a packing form, a base section and a body section, the said body section comprising a frusto-conical shell formed with diametrically opposed slots to facilitate removal of the shell.

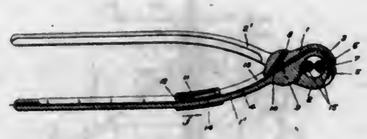
1,641,074. BLADE SHARPENER. EUGEN FEIST, Berlin-Schoneberg, Germany, assignor to Roth-Buchner Aktiengesellschaft, Berlin-Tempelhof, Germany, a Corporation of Germany. Filed Aug. 9, 1921, Serial No. 490,846, and in Germany May 19, 1920. 5 Claims. (Cl. 51—85.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

5. In a blade sharpener the combination, of a casing with a lower member and an upper member hinged thereto, a pair of shafts journaled in the lower member, a sharpening roll fastened to each of said shafts, a blade holder having arms extending therefrom slidably pivoted in the casing adjacent to said rolls, a can on each shaft coacting with said arms to reciprocate the blade holder, means coaxial with said shafts to swing said holder simultaneously with its reciprocations, a pair of shafts journaled in the upper member, a sharpening roll fastened to each of the latter shafts and means to simultaneously turn all the rolls when the members of the casing are locked to each other.



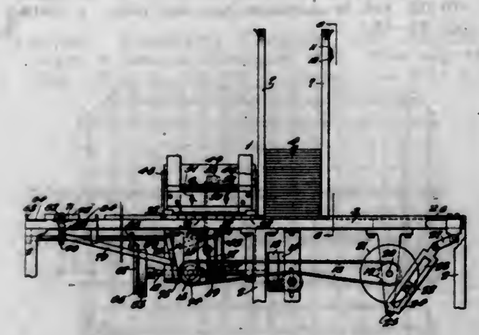
1,641,075. DOUBLE-POINTED-PIN FASTENER. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 4, 1927. Serial No. 188,756. 3 Claims. (Cl. 24—150.)

1. A double-pointed pin fastener of snap-fastener type, having a cap provided with a flanged rim and a substantially central opening, and a double-pointed pin having a substantially triangular bent-over and humped head engaged at four points by the flanged cap, the base of



the head crossing the lower portion of the opening in the cap and adapted to engage the head of a stud which forms the complemental member of the snap-fastener.

1,641,076. VACUUM-TANK FEEDER. CARL J. FERGUSON, Geneva, N. Y., assignor to William S. Johnson, Syracuse, N. Y. Filed Jan. 19, 1926. Serial No. 82,336. 6 Claims. (Cl. 158—46.5.)

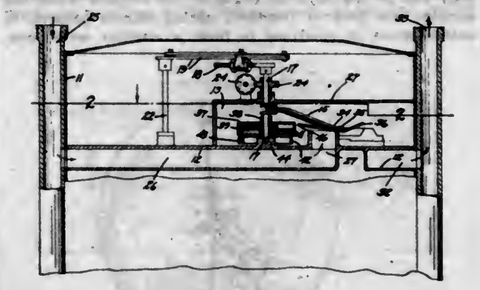


1. In a vacuum tank feeder, a bushing having means for securement to the top wall of a liquid container and provided with a tube adapted to extend into the container to a level near the bottom thereof and open at the bottom, an additional tube extending through the first-named tube to the level of the lower end thereof and having its lower end closed and its upper end extended some distance beyond the top of the first-named tube, a nipple loosely fitted over and upon the upper end of the inner tube to permit said inner tube to be rotated relatively to the outer tube and nipple, said tubes being provided with separate sets of apertures at different levels, those of each set being adapted to register with each other and to deregister those of the other set when the inner tube is adjusted rotarily to different positions, and means operatively connected to the inner tube between the bushing and nipple for rotating the inner tube.

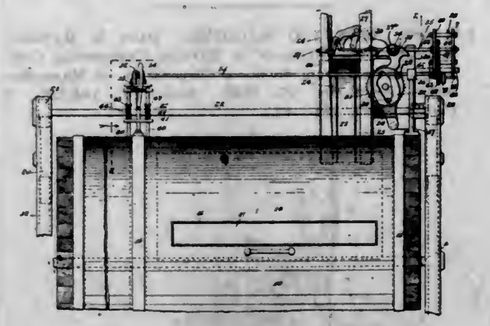
1,641,077. BINDING AND CUTTING PLIERS. EUGÈNE FOUQUET, Bois-Colombes, France. Filed Nov. 9, 1925, Serial No. 67,978, and in France Nov. 21, 1924. 6 Claims. (Cl. 140—121.)

1. In a wire working tool the combination of a channelled wire receiving jaw, the channel in the said jaw having a diameter very slightly superior to that of the wire, of a stem bearing the channelled jaw and provided with a longitudinal narrow wire receiving channel continuing that of the said channelled jaw of a second jaw recessed at its outer end and cooperating with the channelled jaw by closing over the parts to bind, of a box communicating with the rear of the channel in the stem, for receiving a roll of wire, of a device adapted to cut the wire at the end of the first named jaw, of a blocking device preventing any undesirable rearward motion of the wire and of means whereby the forward motion of the box causes the wire to advance.

1,641,078. LEAD-LAYING MACHINE FOR PENCILS. JOHN S. FURST, Philadelphia, Pa. Filed Jan. 18, 1926. Serial No. 82,096. 18 Claims. (Cl. 226—2.)



1. In a lead laying machine slats having a plurality of grooves, and lead laying mechanism effective to simultaneously lay lead in said grooves by a rolling action.

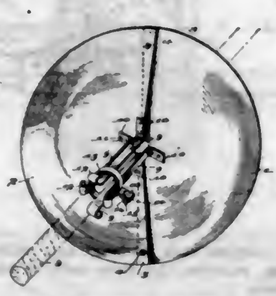


18. In a lead laying machine, a stack holder for the grooved slats, a slotted grid, means to progressively feed slats from the stack beneath said grid, means to position a slat beneath said grid to bring its grooves into registry with said slots and out of registry with the grooves of the next slat to be fed so that its front wall will contact with the rear ends of the leads of a lead containing slat, and means to feed leads to the slots of said grid.

1,641,079. GAS-METER ATTACHMENT. CHARLES B. GAMBLE, Minneapolis, Minn., assignor of one-half to John T. Lucas, Minneapolis, Minn. Filed July 24, 1924. Serial No. 727,940. 5 Claims. (Cl. 73—1.)

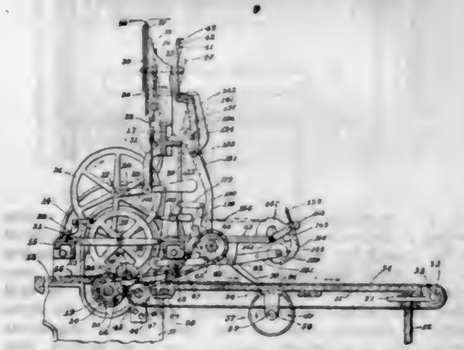
1. A fluid meter having a fluid measuring mechanism including a fluid passage, a normally open valve therein and a rotary element actuated when the meter is operated, in combination with means tending to close said valve and hold it closed, means controlled by said element for resisting such tendency only while said element is rotating, whereby the valve will be closed when rotation ceases.

1,641,080. SAFETY ATTACHMENT FOR WASHING MACHINES. JOSEPH E. GARIGLIO, Brooklyn, N. Y. Filed Aug. 15, 1925. Serial No. 50,423. 3 Claims. (Cl. 192—135.)



1. In a washing machine including a stationary casing having a doorway, a closure therefor, a drum mounted in the casing for rotation, a reverse driving mechanism for the drum including a drive shaft operatively connected with the drum, a tight pulley secured to said drive shaft, a pair of loose pulleys mounted on the drive shaft at opposite sides of the tight pulley, oppositely driven belts respectively engaging the loose pulleys, slidable belt-shifting means for shifting the belts from the loose pulleys into engagement with the tight pulley to drive the shaft in opposite directions, a rock arm driven by one of the loose pulleys, a coupling device for connecting and disconnecting the rock arm with the belt-shifting means for actuating the same, a safety attachment for said machine, comprising an apertured portion in the casing closure, constituting a keeper, a locking bolt mounted on the casing, means for normally effecting the retraction and disengagement of the bolt from the keeper, and a common manipulating lever movable in one direction for simultaneously engaging the bolt with the keeper for locking the closure in closed relation to the doorway and for throwing the coupling device in engagement with the rock arm for rendering the driving mechanism active.

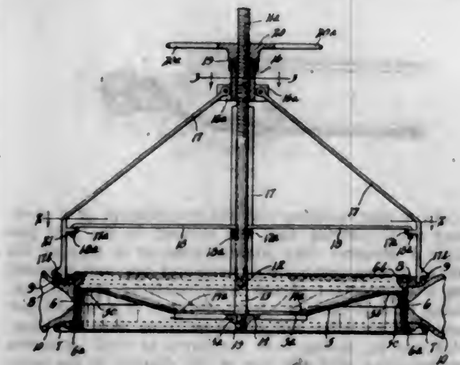
1,641,081. RAT GUARD. NATHAN HEYMANN, New Orleans, La. Filed May 9, 1925, Serial No. 29,181. Renewed May 18, 1927. 2 Claims. (Cl. 114—221.)



1. A rat guard comprising a body consisting of two cooperative plate sections having lapped portions at their adjacent edges, means for releasably securing the lapped

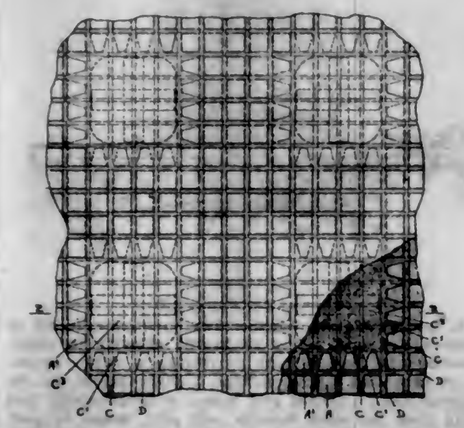
portions of the two sections together, said sections being cooperatively formed to provide a central opening in the body and at the adjacent edges of the sections when the sections are secured together, spring fingers secured to said sections in positions to form a circular series con-

centric with said central opening, and an adjustable binding ring encircling said spring fingers, said spring fingers having stops at the outer ends thereof for preventing said binding rings from slipping from the outer ends of the spring fingers.



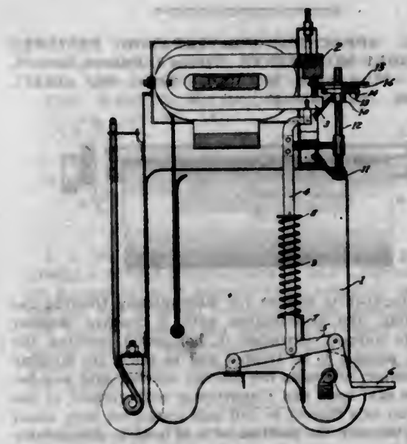
1,641,082. MARKING MACHINE. DANA E. HARDING, Melrose, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1926. Serial No. 144,523. 7 Claims. (Cl. 101—43.)

4. In a machine of the class described, the combination of a measuring machine, a marking device associated therewith, a plurality of independently operable character bearing mechanisms on the marking device and means for controlling the operation of the mechanisms with the measuring machine whereby a setting of the independently operable character bearing devices is permitted only after a predetermined time in the passage of material to be measured through the machine.



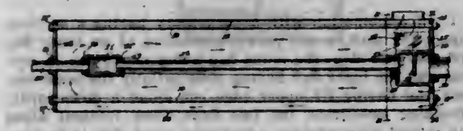
1,641,083. TIRE TOOL. FRANK D. HITE, Minneapolis, Minn. Filed Apr. 11, 1927. Serial No. 182,756. 4 Claims. (Cl. 157—6.)

1. A device for removing the detachable flanges and tire from the rim of a wheel having in combination, a central member having means at its lower end to engage one side of said wheel, a sleeve adjacent the other end of said member through which it passes, a plurality of circumferentially spaced bars pivoted to said sleeve and extending outwardly and downwardly therefrom having substantially vertical lower portions constructed and arranged to engage the side ring, means for holding said bars in proper position and a nut member having means



for turning the same threaded on said stem above said sleeve and adapted to engage the same and exert pressure on said detachable flanges when rotated.

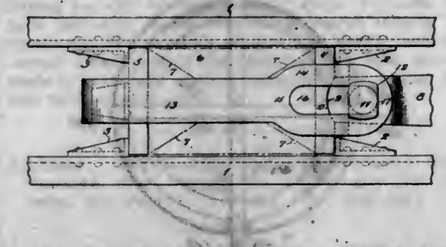
1,641,084. CONSTRUCTION OF REENFORCED CONCRETE FLOORS. WILLIAM ROBERT DRAYTON INNES, Melbourne, Victoria, Australia, and MALCOLM SHORE STANLEY, Adelaide, South Australia, Australia, assignors to James Dell & Co. Proprietary Limited, Melbourne, Victoria, Australia, a Company registered under the laws of Victoria. Filed Oct. 26, 1923, Serial No. 670,975, and in Australia Apr. 24, 1923. 1 Claim. (Cl. 72—15.)



A monolithic reenforced concrete floor composed of a number of solid concrete slab portions positioned over the tops of the columns which support the floor, a number of concrete ribs extending across the spaces between such slab portions and crossing one another approximately at right angles, whereby to surround the slabs, the ends of said surrounding ribs gradually thickened toward the slabs or ribs and merging into said slabs, light tiles positioned between such ribs, suitable reenforcements embedded in the slab portions and ribs, and a lightly reenforced layer of concrete covering and connecting the tops of the ribs and slabs and forming the floor surface, the whole forming an integral floor structure.

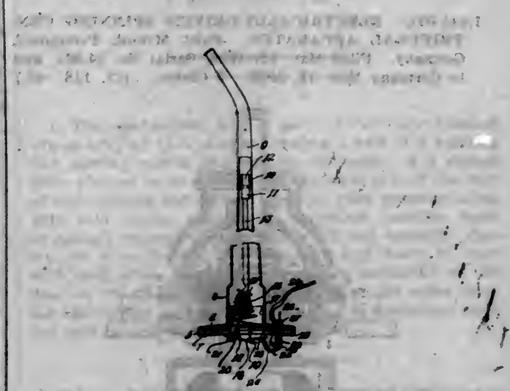
1,641,085. RIVET HEATER. WILLIAM E. IRISH, Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 2, 1921. Serial No. 474,404. 1 Claim. (Cl. 219—11.)

A rivet heater comprising a pair of clamping electrodes, one of said electrodes being movable toward and from the other, a treadle connected to said movable electrode and a rivet feeder operably connected to said treadle.



1,641,086. COMBINED MUFFLER AND HEATER. JAMES W. KEENAN, Farmington, Mich. Filed Aug. 12, 1926. Serial No. 128,774. 4 Claims. (Cl. 257—16.)

1. A combined heater and muffler including a casing having an air inlet at one end and in the lower part thereof and a hot air outlet at the same end and in the upper part thereof, a muffling device in said casing extending horizontally across the same from side to side thereof and from one end to adjacent the opposite end, said muffling device including a conduit for hot gases extending longitudinally of the casing and constructed to permit expansion of hot gases passing therethrough, the walls of said conduit being of thin metal and having an extended heat radiating area.

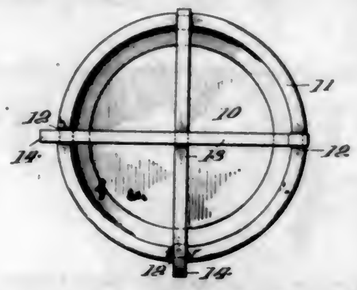


1,641,087. DRAFT RIGGING. RALMON T. KNAPP, Rochester, N. Y., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Jan. 19, 1924. Serial No. 687,189. 5 Claims. (Cl. 213—72.)

1. In a draft rigging, the combination with a slotted yoke, of a coupler, lugs formed thereon and adapted to extend through the said yoke slots, heads on said lugs, said heads being equal in width to the said yoke slots, the forward ends of the yoke being thickened to extend substantially the full height of the cooperating lugs, said thickened portions being discontinued rearwardly of the

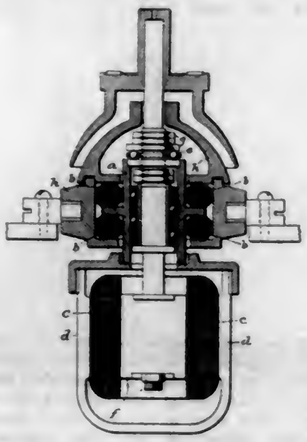
forward ends of the slots to permit the separation of said yoke and coupler by a plurality of rotations without spreading of said yoke arms.

1,641,088. OIL CAN. GUSTAVE LIDSEEN, Chicago, Ill. Filed Oct. 9, 1926. Serial No. 140,444. 3 Claims. (Cl. 221—46.)



1. An oil can comprising an oil container, a spout thereon having a flange for attachment to the container top, a passaged valve seated in said spout, a valve stem in said spout, a valve head on one end thereof, a cup secured in said spout a disk secured on said valve stem, a coiled spring engaged around the valve stem between said cup and said disk adapted to normally hold the valve head seated in closed position against the valve seat, an inner lever pivotally supported on said cup, and an outer lever pivotally supported on the spout flange and having one end thereof engaged against the inner lever and the other end projecting from the spout flange to afford a means for opening the valve head against the action of said spring.

1,641,089. SEALING MATERIAL FOR GASOMETERS. ROBERT MEZGER, Stuttgart, Germany, assignor to Paul Lechler, Stuttgart, Germany, a Firm. Filed Nov. 21, 1925, Serial No. 70,710, and in Germany Dec. 8, 1924. 4 Claims. (Cl. 196—149.)



4. A sealing liquid for dry gasometers of the movable disc type comprising a mineral bituminous material and an oil vehicle therefor, said oil vehicle being an oil consisting largely of aliphatic hydrocarbons, containing no substantial fractions boiling below 300° C., said oil having a flash point not substantially below 158° C., having a freezing point substantially below that of water, and being substantially unaffected by illuminating gases.

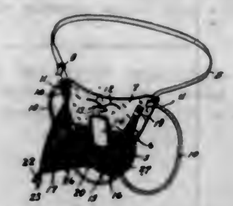
1,641,090. SUPPORT FOR BAKING CRUSTS. MARY A. MILLER, Lancaster, Pa. Filed May 20, 1926. Serial No. 110,452. 3 Claims. (Cl. 53—6.)

2. A support for baking crust, comprising a receptacle and supporting bars independent of each other extending across the receptacle and removably supported thereby, for forming a support for a dough covering and adapted to be withdrawn from beneath the baked crust.

1,641,091. ELECTRICALLY-DRIVEN SPINNING CENTRIFUGAL APPARATUS. PAUL MINCK, Petersdorf, Germany. Filed Mar. 12, 1926, Serial No. 94,361, and in Germany Mar. 12, 1925. 5 Claims. (Cl. 118—43.)

1. In a spinning head, a shaft, means in which said shaft is antifrictionally mounted, an electric motor pendently mounted below and on one end of said means and arranged to drive said shaft and a rubber support for said means.

1,641,092. BRAKE FOR RAILWAY TRAINS. ERNEST ALBERT MOUTIER, Paris, France. Filed June 22, 1925. Serial No. 38,764, and in Austria July 18, 1924. 9 Claims. (Cl. 303—4.)



1. In an air-brake system, the combination with automatic brake actuating means operating at intermediate air pressures; of an infra-brake operating at pressures below atmospheric pressure, said infra-brake comprising for each railway car a cylinder and a piston to produce an action substantially as strong as that of said automatic brake, means for connecting the cylinder of said infra brake to the air line of the train and also controlling the automatic brake to permit the infra-brake to be operated on vacuum in the air line of the train.

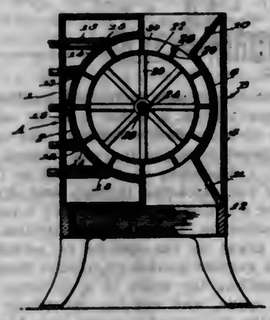
1,641,093. APPARATUS FOR TREATING PATIENTS BY BODILY MOVEMENTS. VIVIAN J. PEARSE, Everett, Wash. Filed Sept. 29, 1920. Serial No. 413,517. 4 Claims. (Cl. 128—33.)

1. In therapeutic devices for mechanically treating the human body, the combination with a concave member adapted to support extended in horizontal position the body of a patient to be treated and to resist its slipping on the member, of means for forcibly moving said member relative to said body and transversely with respect to the longitudinal axis thereof to roll said supported body about said axis, whereby the position of said body is successively reversed.

1,641,094. SUSPENSORY. GUY SHEARMAN PETERKIN, Seattle, Wash. Filed Mar. 8, 1922. Serial No. 541,893. 2 Claims. (Cl. 128—158.)

1. In combination with a suspensory having a scrotum supporting sack, a slit pocket consisting of an inner flap and an outer flap, the outer flap being triangular in contour and the inner flap having substantially the same contour and having its upper edge cut along a downwardly extending semicircle, the two flaps being integral along one lateral edge whereby when said outer flap is in open position, corners in said pocket are eliminated, and means disposed along the other lateral edge to releasably secure said flaps.

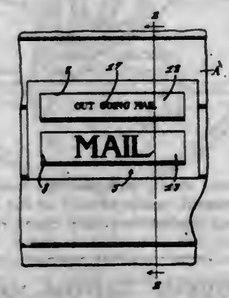
1,641,095. DIATHERMIC APPARATUS. JEAN PERNET, Zurich, Switzerland. Filed Aug. 23, 1926, Serial No. 131,056, and in Switzerland Sept. 30, 1925. 6 Claims. (Cl. 174—89.)



1. An apparatus of the type described, comprising a non-conductor having a cavity the shape of which corresponds to the shape of the afflicted one half of the scrotum with which it has to contact while supporting the latter, an electrode arranged in said cavity and shaped to form with the walls of said cavity, a smooth surface, and means adapted to detachably fix the non-conductor to the body of the patient.

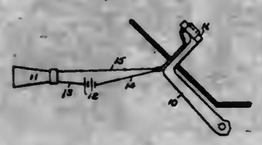
1,641,096. CLIP OR FASTENER. ROBERT T. POLLOCK, Boston, Mass., assignor to Pollock Pen Company, Boston, Mass., a Corporation of Delaware. Filed Aug. 5, 1921, Serial No. 490,150. Renewed Jan. 26, 1927. 2 Claims. (Cl. 24—11.)

1. A clip fastener for a fountain pen or pencil, comprising a hooked gripping member and a button connected by a support, said support being mounted internally of the pen cap or pencil barrel, a spring positioned between the hooked member and button for holding the hook in spring contact with the outer surface of the pen or pencil and operable to be raised by pressure imposed upon the bottom.



1,641,097. MEANS FOR STERILIZING COTTON AND OTHER SEEDS. PARRISH HENDRICKS RYLANDER, Austin, Tex., assignor to William P. Rylander, James B. Rylander, and Parrish H. Rylander, constituting the Firm of The Rylander Company, Austin, Tex. Filed Apr. 15, 1925. Serial No. 23,437. 6 Claims. (Cl. 67—3.)

4. A sterilizer comprising a housing having two spaced concavely curved inner walls both lying in arcs of a circle struck by the radius moving in a vertical plane, one of said concavely curved inner walls being relatively large and extending through approximately 180°, a cylindrical carrier supported in said housing to rotate about an axis concentric with the aforesaid circle, said housing having an inlet opening for seeds between two adjacent ends of the concavely curved inner walls of the housing and having an outlet opening for seeds between the other two adjacent ends of said concavely curved inner walls, said housing having spaced rows of spaced discharge orifices opening through said relatively large concavely curved inner wall of the housing through which live steam may be discharged toward said carrier, and a circumferential series of shallow troughs on the periphery of said carrier, said troughs being open only at their outer sides and being movable with the carrier in proximity to said concavely curved inner walls of the housing and in the path of steam jets from said discharge orifices, the space within each of said troughs being unobstructed and the edges of the walls of the trough moving close to the inner walls of said housing.

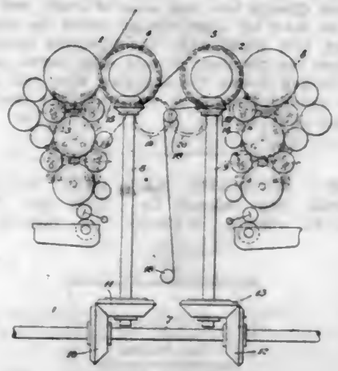


6. A machine for sterilizing cotton and other seeds comprising a housing, a seed carrier mounted to rotate in the housing, said seed carrier and said housing cooperating to confine a shallow mass of seeds between the periphery of the carrier and the adjacent wall of the housing, means carried by said housing for discharging live steam directly into said mass of seeds, said housing having an inlet for seeds and an outlet for seeds, said inlet and said outlet both being located radially outward from the periphery of said seed carrier, said seed carrier having means for engaging with said mass of seeds to cause said seeds to move with the carrier from said inlet to said outlet.

1,641,098. AUTOMATIC MAIL BOX. LOUIS HENRY SCHÄFER, New Orleans, La. Filed Dec. 17, 1926. Serial No. 155,479. 5 Claims. (Cl. 232—20.)

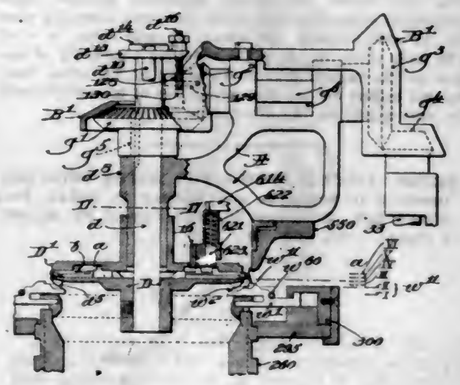
1. The combination with a pair of reversely disposed chutes adapted to be confined within a wall of a building and opening within and without the same, of a slotted plate adapted to be mounted on the outer face of the wall of said building and having a pair of slots communicating with said chutes, superposed, oppositely movable doors swingingly supported upon said plate and normally closing the slots therein, and means on said doors to coact with each other to effect the swinging outwardly of one door on the inward manual swinging of the other door, the said means on one door being free of connection with the said means on the other door.

1,641,099. CIRCUIT CLOSER FOR MOTOR VEHICLES. DIEDRICH O. SCHUSTER and HERMAN H. GERKE, Fort Wayne, Ind. Filed Dec. 16, 1920. Serial No. 431,051. 2 Claims. (Cl. 200—59.)



1. In combination with a controlling foot pedal of a motor vehicle, a pair of contacts supported on and insulated from the pedal, a casing secured to the pedal having a resilient portion thereof above the contacts and adapted to be depressed by the foot to engage the contacts for closing an electrical circuit at said contacts.

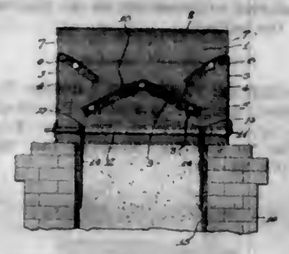
1,641,100. PRINTING MACHINE. DAVID J. SCOTT, Plainfield, N. J., assignor to Isabella Scott and David J. Scott, executors of the estate of Walter Scott, deceased, doing business under the name of Walter Scott & Company, Plainfield, N. J. Filed Feb. 4, 1926. Serial No. 85,819. 1 Claim. (Cl. 101—220.)



A printing mechanism including: two printing couples, one for printing and the other for perfecting a web, a horizontally disposed drive shaft, two vertically extend-

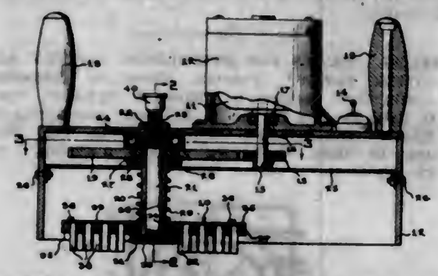
ing shafts, independent gearing connecting the drive shaft with each vertical shaft, gearing for driving one couple from one vertical shaft and the other couple from

the other vertical shaft, and gearing directly connecting the couples aforesaid, independently of the vertical shafts, to maintain their circumferentially timed relation.



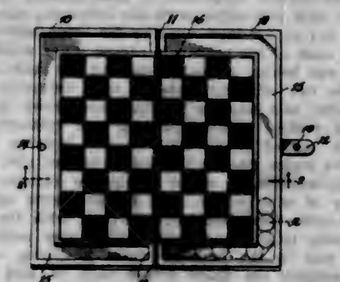
1,641,101. AUTOMATIC KNITTING MACHINE. ROBERT W. SCOTT, Babylon, N. Y., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Apr. 14, 1921. Serial No. 461,195. 88 Claims. (Cl. 66—13.)

1. A knitting machine having series of needles and means for knitting on one of said series plain-fabric single-layer portions of articles of hosiery, such as leg or foot portions of a stocking, in combination with means for beginning knitting upon the bare needles articles of hosiery partly of ribbed and partly of said plain-fabric single-layer portions, by first making a setting-up course and welt, means acting thereafter to knit the remainder of the stocking, and means for pressing off the completed fabric.



1,641,102. SPARK-ARRESTING DEVICE. JAMES SLOCUM, Detroit, Mich. Filed May 21, 1925. Serial No. 31,793. 3 Claims. (Cl. 183—70.)

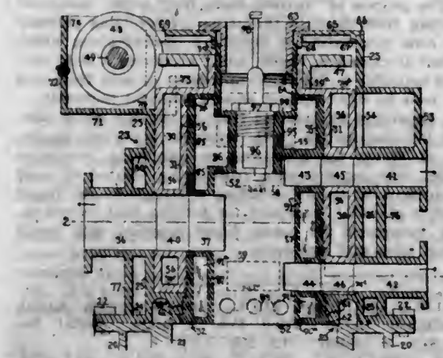
1. A spark arresting device adapted to be held relative to the upper end of a chimney, said device comprising a foraminous body, foraminous side baffle members in said body, and a foraminous center baffle member in said body, cooperating with said side baffle members in providing



a tortuous passage for sparks through said device, said central baffle member being inverted V-shaped with its edges extending under said baffle members.

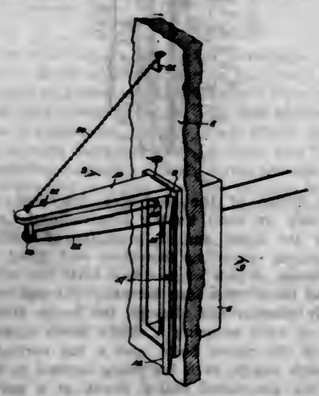
1,641,103. MEAT-BLOCK CLEANER. JOHN E. SMALL, Connellsville, Pa. Filed Aug. 25, 1925. Serial No. 52,363. 1 Claim. (Cl. 15—93.)

A device for the purpose indicated comprising a casing having an open bottom, a motor mounted on the top of the casing, a division plate secured to and spanning the casing and spaced from the top wall thereof to define a compartment, a depending shaft secured to the top wall of the casing and extending through said division plate, a brush having a hollow spindle rotatably mounted on said shaft and extending through said division plate, the brush being keyed to the spindle to permit axial but preclude from angular movement relative therto, a spring yieldingly impelling the brush in a direction away from said division plate, and gearing operatively connecting the motor with the brush spindle and housed in the compartment defined by said division plate.



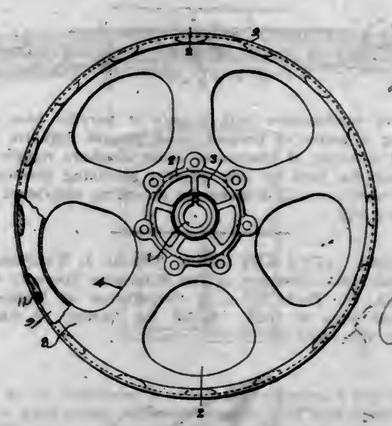
1,641,104. CHECKERBOARD. WILLIAM P. SOLOD, New York, N. Y. Filed Mar. 25, 1927. Serial No. 178,272. 1 Claim. (Cl. 273—136.)

A checkerboard formed of two hinged sections each having a playing field divided into a plurality of rows of spaces to receive men and intervening spaces, each of said



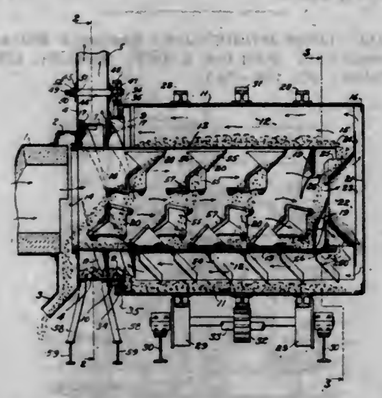
sections on three sides of the playing field of said section having a channel extending continuously about said three sides for receiving checkers pertaining to the field of the section, the channel of one section being opposite the channel of the other and corresponding therewith, the two channels when the sections are folded one upon the other jointly forming a storage chamber, the channel of the each section partly accommodating the checkers and the two jointly accommodating all the checkers of the two fields in the single storage chamber.

1,641,105. GAS ENGINE. BURNHAM C. STICKNEY, Rutherford, N. J. Filed Dec. 27, 1924. Serial No. 758,344. 43 Claims. (Cl. 123—80.)



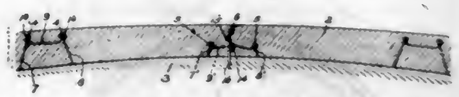
1. An engine valve in the form of a hollow-walled revolving ported shell, its porting including opposed exhaust orifices, each extending entirely through the hollow wall, and also including an intake port in a different zone from the exhaust ports to supply fluid fuel to the space within the hollow wall, said porting also including inlet ports in the interior wall and communicating with the engine cylinder.

1,641,106. CLOTHES-HANGING APPARATUS. JOSEPH VAN DUZER, Firthcliffe, N. Y. Filed June 6, 1924. Serial No. 718,328. 1 Claim. (Cl. 68—3.)



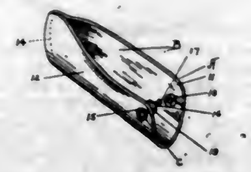
In a clothes hanging apparatus, a casing capable of being mounted in the wall of a room, a clothesline supporting arm hingedly connected to said casing and movable to horizontal and vertical positions with respect thereto within the room and capable of supporting a clothesline which is extended through said casing, and a closure for the inner end of the casing, said casing having a notch in its upper inner face for receiving the clothesline when the supporting arm is swung to the vertical position whereby said line will not interfere with the complete closing of said closure.

1,641,107. PRODUCING OF CAST METAL WHEELS. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed May 10, 1920, Serial No. 380,217. Renewed July 3, 1924. 4 Claims. (Cl. 301—65.)



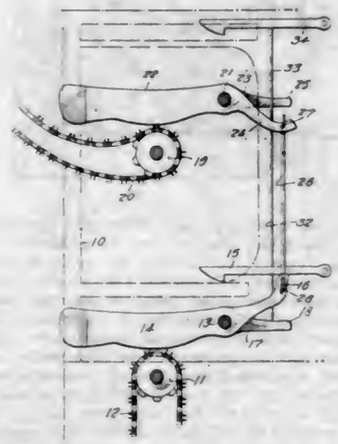
2. A cast metal wheel comprising a hub, hollow spokes and a rim, the hub having an inner tubular wall to receive bearings and an outer spoke-supporting wall extending beyond the spokes toward the outer end of the hub to form a substantially cylindrical wall and merged into the walls of the spokes, and a hub end wall joining said inner tubular wall and said outer spoke supporting wall.

1,641,108. APPARATUS FOR DRYING AND HEATING MATERIAL. LAWRENCE B. WEST, Chattanooga, Tenn. Filed Mar. 19, 1926. Serial No. 96,031. 22 Claims. (Cl. 34—5.)



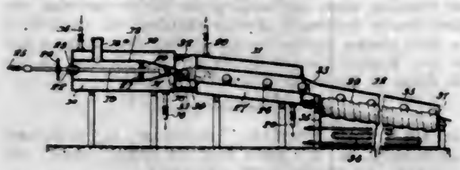
1. In an apparatus of the character described the combination of an outer drier casing; a superheater extending beyond said casing and spaced therein; a flue adapted to admit hot gas to one end of the superheater; a stationary draft chamber disposed about the extending end of said superheater and communicating with the space between said superheater and said drier casing; means to deliver material to the space between said superheater and said drier casing; means to positively convey the material to the interior of said superheater from said space including means to maintain the high temperature of said superheater; means to deliver the material from said superheater; and means to rotate said superheater and said drier casing.

1,641,109. CONCRETE REENFORCEMENT. FREDERICK R. WILSON, Canonsburg, Pa., assignor to Fort Pitt Bridge Works of Pittsburgh, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 13, 1925. Serial No. 8,984. 7 Claims. (Cl. 94—8.)



1. In combination with a pair of parallel bars each having a series of pressed cross grooves opposite each other, a series of transverse chair members tightly embracing the bars by said grooves providing intervening cross members and downwardly extending individual supporting legs.

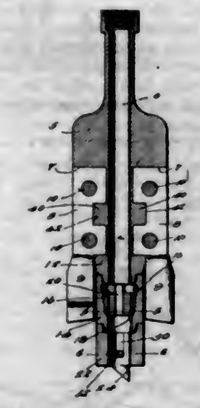
1,641,110. AUTO KEY CASE. DANIEL J. WULFING, St. Paul, Minn., assignor to The Minnesota Specialty Company, St. Paul, Minn., a Corporation of Minnesota. Filed June 3, 1925. Serial No. 34,608. 2 Claims. (Cl. 150—40.)



1. A key case for automobile keys including, a cover formed from a single piece of flexible material, said cover being folded centrally to provide side walls of a rectangular shape, stitching along one end of said cover to close the end of said key case, and snap catch locking means attaching to the other end of said key case adapted to provide means for holding keys by said snap catch for the purposes specified.

1,641,111. LOOM DOBBY. JOHN FREDERICK BLACKMON, Laurens, S. C. Filed Dec. 6, 1926. Serial No. 152,863. 7 Claims. (Cl. 139—74.)

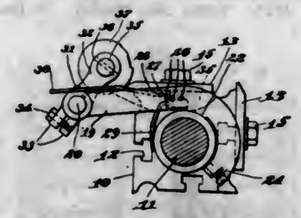
1. In a loom dobby having a main pattern cylinder and an auxiliary pattern cylinder with dobby fingers associated with each, members operatively connecting said dobby fingers at points between said cylinders and the dobby frame adjacent the shedding levers of the loom.



1,641,112. METHOD AND APPARATUS FOR TREATING FRESH FRUIT. ERNEST M. BROGDEN, Winter Haven, Fla., assignor to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed May 15, 1922. Serial No. 561,209. 32 Claims. (Cl. 91—70.)

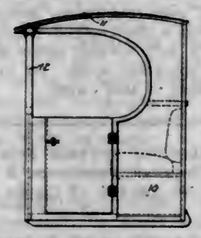
1. The process of treating fresh fruit which comprises subjecting fresh fruit to the action of revolving polisher brush rolls cooperating to provide a runway along which the fruit is caused to travel, while atomizing a fluid protective material in operative proximity to said fruit and brush rolls to effect contact of said material therewith.

13. Apparatus for treating fruit or the like which comprises the combination, with revoluble brush-roll mechanism, of means for atomizing or nebulizing protective material into contact with fruit being treated by said mechanism, said means including a receptacle for liquid protective material, provision for heating said receptacle, and a compressed air nozzle device supplied with liquid material from said receptacle.



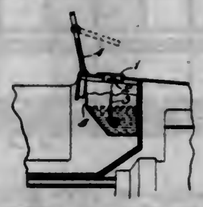
1,641,113. DRILLING TOOL. PERCY BRUNT, Meyal, Pindigheb, India. Filed Feb. 9, 1924. Serial No. 691,817. 2 Claims. (Cl. 255—72.)

1. In a device of the character described, a cutter carrying body or head having longitudinally extending grooves at its lower end, a plurality of cutters each having a shank extending therefrom and fitted into one of said grooves, a pair of securing bolts for each cutter shank, said bolts extending laterally through the walls of the body member and through the cutter shanks, and each pair of bolts securing a shank being spaced longitudinally of the cutter body, and a lug carried by the body for each shank, each lug being located to fit into a recess in the associated cutter shank at a point intermediate the securing bolts for said shank.



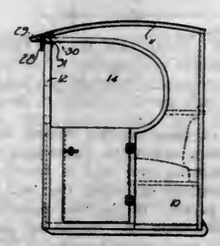
1,641,114. RADIAL SETTING GAUGE. LEWIS B. CARLSON, Boston, Mass., assignor to S. A. Woods Machine Company, South Boston, Mass., a Corporation of Massachusetts. Filed Dec. 15, 1923. Serial No. 680,878. 2 Claims. (Cl. 33—185.)

1. A setting gauge for cutter head knives, said gauge comprising a main frame having three-point suspension means whereby the frame is adapted to be rotatably mounted on the cutter head shaft, an auxiliary frame mounted on said main frame for adjustment relative thereto about an axis parallel to said shaft and having members affording edge-engaging surfaces which are adapted to be moved towards or from the axis of said shaft as a result of such adjustment, the entire gauge being movable about the axis of the shaft, by virtue of the three-point suspension, for engaging and moving radially a cutting edge.



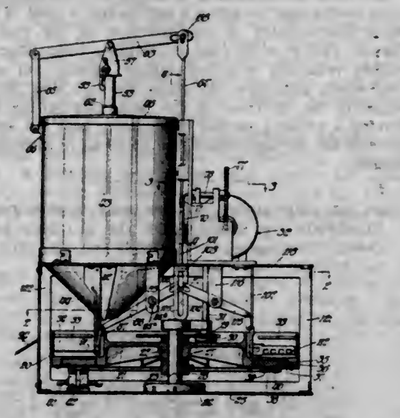
2. A setting gauge for cutter head knives, said gauge comprising a main frame, means for yieldingly and rotatably holding said frame in position on the shaft of the cutter head, an auxiliary frame mounted on said main frame for adjustment about an axis parallel to said shaft, edge-engaging devices carried by said auxiliary frame and adjustable therewith so as to vary their distance from the cutter head shaft, the entire gauge being rotatable about the axis of said shaft, whereby the cutting edge of a knife on the cutter head will be moved radially inward with respect to the center of said shaft.

1,641,115. CAB FOR MOTOR VEHICLES. PHILIP CARLSON, Bridgeport, Conn. Filed Jan. 21, 1927. Serial No. 162,629. 7 Claims. (Cl. 296—120.)



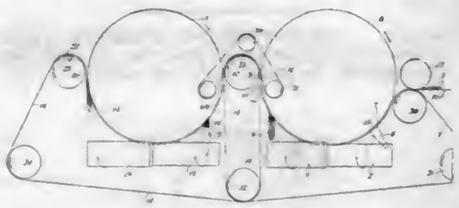
1. A cab comprising a cab frame including a roof member, a wind shield structure member upon said frame and beneath said roof member, said members being rigid with the frame, and a connection between said members to preclude the transmission to said wind shield structure of twisting strains imparted to said roof, and vice versa, said connection including closure strips secured to one of said members and engaging the other member in a manner to allow sidewise movements of said members relatively to each other.

1,641,116. LIQUID-LEVEL INDICATOR. CLARK CARSON, Los Angeles, Calif., assignor to Munson H. Lane, Washington, D. C. Filed Oct. 15, 1925. Serial No. 62,561. 1 Claim. (Cl. 73—82.)



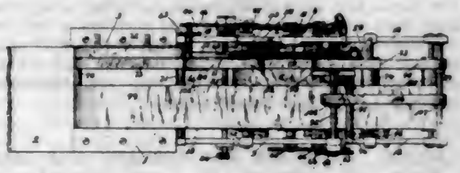
In combination with an automobile cowl having a cowl opening, and a removable cover therefor, a fuel tank located within said cowl, an apertured tank cap located beneath the cowl cover, a liquid level indicator comprising a float having a rod attached thereto, said rod extending through said aperture in the tank cap, and rendered operative or inoperative as an indicator according as the cowl cover is open or closed.

1,641,117. CAB FOR MOTOR VEHICLES. PHILIP CARLSON, Bridgeport, Conn. Filed Jan. 21, 1927. Serial No. 162,630. 10 Claims. (Cl. 296—120.)



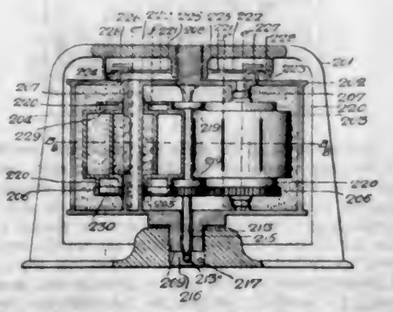
1. A cab comprising a cab frame including a roof member, a wind shield structure member upon said frame and beneath said roof member, said members being rigid with the frame, and a resilient connection between said members to preclude the transmission to said wind shield structure of twisting strains imparted to said roof, and vice versa, said resilient connection including a universal joint fixed relatively to one of said members, a telescoping element fixed to said joint, a cooperating telescoping element fixed to the other of said members, and a yieldable equalizing device associated with said telescoping elements to urge said elements apart.

1,641,118. DOUGHNUT MACHINE AND THE LIKE. CHARLES E. CARPENTER, Chicago, Ill. Filed Mar. 6, 1926. Serial No. 92,777. 15 Claims. (Cl. 53—7.)



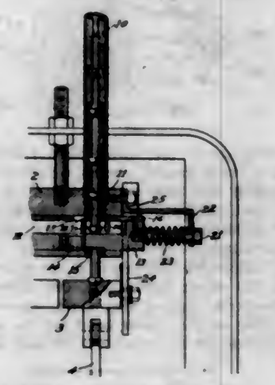
3. In a machine of the class described, the combination of a cooking vessel, means for causing said vessel to travel in a definite closed path lying in a substantially horizontal plane, a series of compartments in said vessel corresponding to individual articles to be cooked therein, means for heating the vessel during its travel, means for intermittently introducing dough batches into the consecutive compartments as they pass a given point, means for turning the cooking articles in the different compartments as they pass another point, and means for removing the cooked articles from the individual compartments as they pass another point, substantially as described.

1,641,119. DECORTICATING APPARATUS FOR THE TREATMENT OF SISAL AND OTHER FIBROUS LEAVES AND STALKS. JOHN COOK, Nairobi, East Africa. Filed Mar. 21, 1925, Serial No. 17,366, and in Great Britain Nov. 4, 1924. 24 Claims. (Cl. 19—9.)



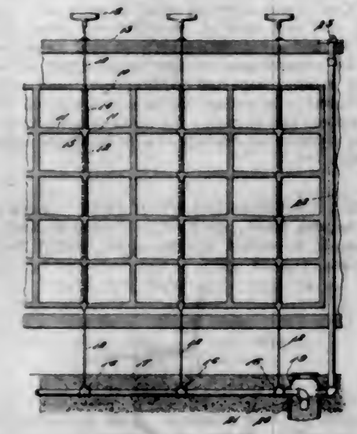
1. A method of decorticating fibrous material, which consists in crushing, shredding and scutching one part of the leaf while causing said leaf to travel in a predetermined path, thereafter diverting the leaf to cause it to move in a path parallel to the first mentioned path, and shredding and scutching the remaining part of the leaf while traveling in such second path.

1,641,120. STEMMING MACHINE. GEORGE R. CORNWALL, Rye, N. Y., assignor, by mesne assignments, to Gough Stemming Machine Corporation, a Corporation of New Jersey. Filed Dec. 16, 1918. Serial No. 266,861. 26 Claims. (Cl. 131—57.)



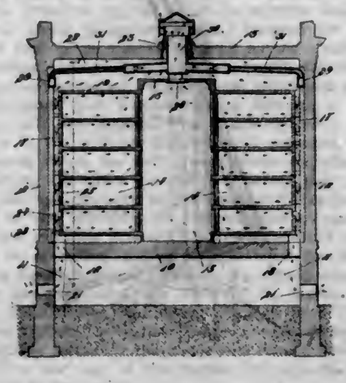
26. In a leaf-stemming machine, in combination, stripping mechanism including a belt having a field of teeth to move continuously in the direction of the feed of the leaves, and stem-drawing mechanism comprising continuously revolving co-acting rolling members to seize the leaf stems and draw the stems through said field at an angle to the direction of the feed, said rolling members having a yielding surface to securely grip the stems and provide for the accommodation of stems of different thicknesses.

1,641,121. METHOD AND APPARATUS FOR THE COMPRESSION OR EXPANSION OF A GAS. EDWIN J. CREEL, Washington, D. C. Filed Feb. 13, 1918. Serial No. 217,002. 134 Claims. (Cl. 230—22.)



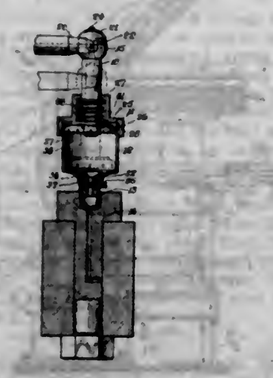
1. In combination, a vessel adapted to contain a rotating or revolving body of liquid, and mechanical means for transferring a fluid of different density, than said liquid, between one portion and another of the said liquid body, the said mechanical means being constrained to turn, substantially in unison with said liquid, about the axis of rotation or revolution of said liquid body.

1,641,122. RIVET HEATER. PATRICK J. CULHANE, Jr., Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 2, 1921. Serial No. 474,507. 5 Claims. (Cl. 219—11.)



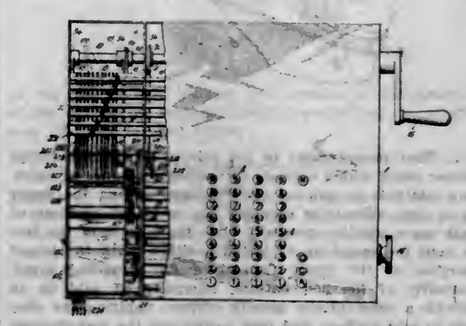
1. In a rivet heater, a clamp comprising a pair of opposed electrodes, a rivet magazine, means for operating said clamp and a reciprocating feeder operably connected to said clamp operating means for transferring rivets from said magazine to said clamp.

1,641,123. DRAINING SYSTEM FOR MAUSOLEUMS. THOMAS F. CULLINAN, Providence, R. I. Filed Oct. 4, 1926. Serial No. 139,477. 6 Claims. (Cl. 72—7.)



1. In a mausoleum having a roof and a stack of crypts or vaults under the roof, the combination of an open-ended rain receiving conductor pipe extending through the roof and means communicating with the crypts of said stack to drain the liquid from the same into said conductor pipe whereby the rain water will run down through said pipe to clean the drainage therefrom.

1,641,124. VENTILATING SYSTEM FOR MAUSOLEUMS. THOMAS F. CULLINAN, Providence, R. I. Filed Oct. 4, 1926. Serial No. 139,478. 13 Claims. (Cl. 72—7.)



1. A mausoleum having a floor and a ventilating air space beneath the floor open to the outer air, side walls, a roof supported by said walls and having a ventilating opening, and a stack of crypts or vaults within the building having a combined volume less than that of the interior of the building and spaced from said walls and roof, means for venting said crypts, and means whereby the air entering the space below the floor is caused to flow upward about said stack into the space above and thence out through said roof opening to induce a draft through said crypt venting means.

1,641,125. LUBRICATING SYSTEM. SIDNEY DAWSON, Chicago, Ill., assignor, by direct and mesne assignments, to Edward J. Morse, Chicago, Ill. Filed Dec. 27, 1921. Serial No. 525,111. 4 Claims. (Cl. 184—45.)

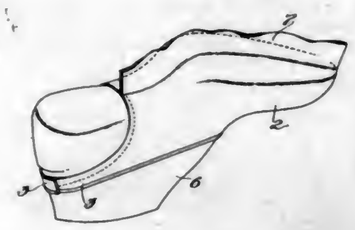
1. In a lubricating device, the combination of a lubricant container, a piston arranged in the container, said piston having a recessed portion, a piston stem, said piston stem having a passage through which the lubricant is passed into the container, a valve structure arranged in the recessed portion of the piston, a portion of said valve structure being adapted to be passed through the piston, said valve structure being provided with means to retain it in cooperative relation in said piston and piston stem, said means consisting of a valve stem having a valve at one end thereof on one side of the recessed portion of the piston, and a head at the other end thereof on the opposite side of the recessed portion of the piston and within said piston stem, and a spring coacting between said piston and said head.

1,641,126. COMPUTING MACHINE. ISAAC S. DEMENT, East Orange, N. J., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 9, 1904. Serial No. 188,389. 54 Claims. (Cl. 235—60.)

14. The combination of a plurality of adding devices, means for taking the totals thereon, and controlling means for controlling the totaling means to take the totals in a predetermined order.

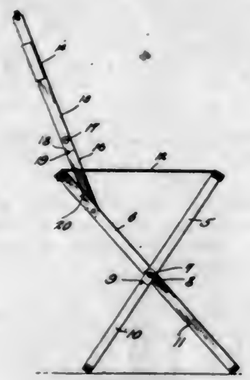
40. In combination, a plurality of sets of accumulating devices, means for operating the same, means for connecting any one of said sets of devices with said operating means, and mechanism for automatically controlling the sequence of connection of said sets of accumulating devices with the actuating means.

42. In a machine of the class described, a plurality of accounting devices, means for accumulating amounts thereon, a printing mechanism and means for automatically clearing said accounting devices and for transferring their indications to said printing mechanism in a definite order.



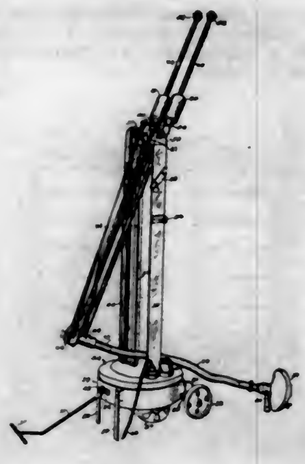
1,641,127. SANITARY CASTER. RUTH W. DENSLOW, Houston, Tex., assignor of one-half to Robert L. Cole, Houston, Tex. Filed Dec. 3, 1924. Serial No. 753,595. 1 Claim. (Cl. 43—109.)

In a caster, the combination of a floor engaging element, mating cylindrical members secured together end to end to form a cage operatively confining said element therein, said members being provided externally with



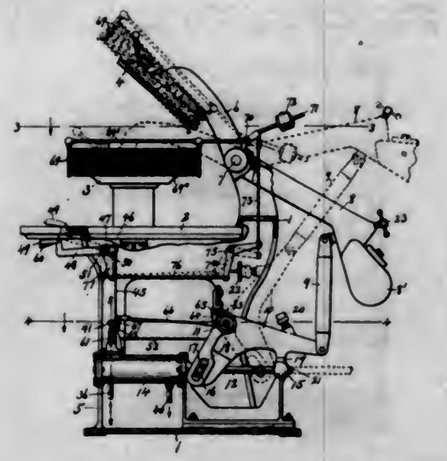
annular flanges, a cylindrical insecticide pad surrounding said cage and confined between said flanges, and a cylindrical perforated sheath confined between said flanges to surround said pad.

1,641,128. PROCESS FOR MANUFACTURING RUBBER SHOES. ERNEST W. DUNBAR, Hudson, and HERMAN WESTLING, Boston, Mass., assignors to Cambridge Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed May 5, 1924. Serial No. 711,006. 3 Claims. (Cl. 12—142.)



2. That improvement in the process of manufacturing rubber shoes which consists in cutting an upper of excessive width from unlined sheet rubber, placing the upper on a last, adhesively securing the marginal portions of said upper together centrally upon the bottom of the last to hold the upper in its lasted position, with the joined margins of the upper forming a fin extending longitudinally of the last bottom, trimming off said fin to provide a substantially smooth surface, applying the shoe sole to said surface, and then completing the manufacture of the shoe in any convenient manner.

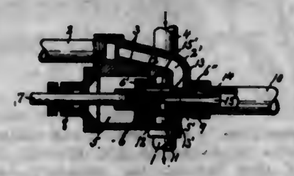
1,641,129. STOOL AND CHAIR CONSTRUCTION. WALTER EDWARDS, Kokomo, Ind. Filed Oct. 19, 1926. Serial No. 142,689. 2 Claims. (Cl. 155—147.)



1. A chair including pivotally connected leg sections, a seat portion connecting the upper ends of the leg sections, a back rest pivotally connected with one of the leg sections, a substantially wide back engaging member extending across the back rest and having offset end portions, said offset end portions defining pockets to receive portions of the leg sections when the chair is in its folded position.

1,641,130. FLEXIBLE-SHAFT DRIVING STAND. WINFRED W. ELLIOTT, Johnson City, N. Y., assignor to Himself and Arthur H. Shear, Copartners, Binghamton, N. Y. Filed Aug. 4, 1921. Serial No. 489,921. 11 Claims. (Cl. 74—21.)

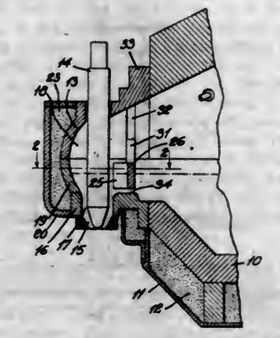
1. A driving stand for a flexible shaft comprising a ring-like base, a table mounted upon said base for rotation in a horizontal plane in relation thereto, a motor secured to the under side of said table within said base, flexible shaft driving and carrying means, and a support for said means secured to the upper face of said table and permitting movement of said means in a vertical plane.



1,641,131. GARMENT-PRESSING MACHINE. FRANK E. BAKER and WILLARD L. TAYLOR, Syracuse, N. Y., assignors to Chapin-Skelton Corporation, Syracuse, N. Y., a Corporation of New York. Filed Nov. 5, 1924. Serial No. 747,969. 9 Claims. (Cl. 68—9.)

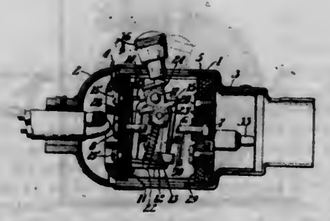
1. In a steam-power-operated garment pressing machine, a frame, cooperative pressing elements, one of which is movable toward and from the other toggle connection between the frame and movable pressing element, a steam cylinder, a piston movable in the cylinder and provided with a rod extending through one end of the cylinder and connected to one of the toggle members, means for introducing steam into the cylinder for operating the piston and means for controlling the admission of steam to said cylinder, said means including a valve and means actuated by one of the toggle members when approaching its straightened position for opening said valve an increased amount as the piston approaches the limit of its pressure stroke.

9. In a garment pressing machine, a frame, cooperative pressing elements one of which is movable toward and from the other, toggle connections between the movable element and frame, a steam cylinder having a valve chamber communicating through a passage with one end of the cylinder and provided with a steam inlet port and with an additional port communicating through a separate passage with the opposite end of the cylinder, a piston movable in the cylinder between said passages, separate self-closing valves for said ports, means operable at will for opening the valve for the first named port to admit steam through the first named passage for operating the piston in one direction, an exhaust port communicating with the cylinder between the ends of said passages, means for operating said valve operating means to release the first named valve and to open the second named valve as the piston reaches the limit of its steam operated stroke for allowing the steam to pass from the valve chamber through the second named passage to the cylinder for partially returning the piston and connections between the piston and one of the toggles for imparting motion from one to the other.



1,641,132. VALVE FOR GARMENT-PRESSING MACHINES. FRANK E. BAKER, Syracuse, N. Y., assignor to Chapin-Skelton Corporation, Syracuse, N. Y., a Corporation of New York. Filed Apr. 23, 1925. Serial No. 25,258. 1 Claim. (Cl. 68—9.)

In a valve mechanism, a valve case having a steam chamber provided with an inlet port, an exhaust port and an additional port, means for supplying steam to the steam chamber through the inlet port and an ejector nozzle movable in the valve case and projecting into the exhaust port across the adjacent port, said nozzle having means when in one position for closing the inlet port and with additional means when adjusted to another position for connecting the inlet port to the additional port and simultaneously cutting off communication between the inlet port and the exhaust port, said nozzle being adjustable to a third position and provided with means when in that position for receiving steam from the inlet port and discharging it through the exhaust port past the additional port and with additional means for opening communication between said additional port and the exhaust port.

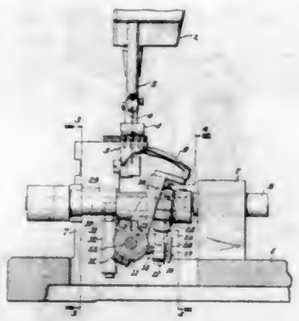


1,641,133. APPARATUS FOR FEEDING MOLTEN GLASS. JULIUS H. O. BUNGE, London, England, assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Oct. 22, 1925. Serial No. 64,123. 8 Claims. (Cl. 49—55.)

1. Glass feeding apparatus comprising a container including a cylindrical discharge chamber having an outlet, a discharge-controlling plunger in working alignment with said outlet, and an arcuate gate adjacent to and

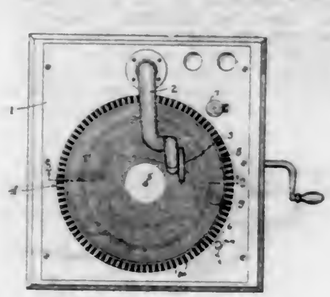
at one side of said plunger and forming a continuation of the wall of the said chamber for controlling the admission of glass to said outlet.

1,641,134. ELECTRIC SWITCH. DANIEL H. CHASON, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 23, 1925. Serial No. 4,156. 2 Claims. (Cl. 173—346.)



1. An electric switch comprising a cylindrical insulating support split transversely of its axis into two separable sections the meeting faces of which are formed with registering channelways, a centrally disposed bolt for holding said sections in assembled relation, an angle bracket having its bottom portion secured to the bottom wall of the channelway in one of said sections, stationary contact means mounted in the channelway in the other section, and a spring-toggle-operated movable contact mechanism mounted on the side portion of said angle bracket at one side of said bolt and including a movable contact element adapted to engage the stationary contact means.

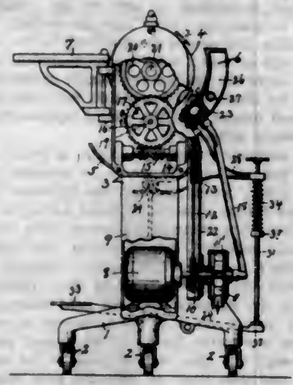
1,641,135. LOOPER-ACTUATING MECHANISMS FOR SEWING MACHINES. ANDREW B. CLAYTON, Union, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 5, 1922. Serial No. 579,806. 11 Claims. (Cl. 112—200.)



1. A looper-actuating mechanism for sewing machines comprising a main-shaft, an eccentric thereon, an arbor, a sleeve slidingly mounted upon said arbor, a tubular member supported upon said sleeve, a looper-carrier secured upon said tubular member, a looper secured upon

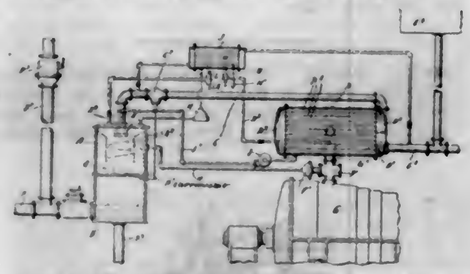
said looper-carrier, a connection between said tubular member and said eccentric for imparting lengthwise movements of said looper, a second eccentric on said

main-shaft, and means connecting said second eccentric with said sleeve for imparting sidewise movements to said looper.



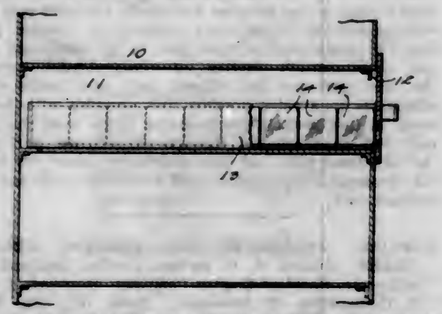
1,641,136. PHONOMETER. HARRY P. DORN, Cleveland, Ohio, assignor to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 27, 1922. Serial No. 547,000. 4 Claims. (Cl. 88—14.)

4. As a new article of manufacture, a disc adapted to be supported on a phonograph turn table to turn in unison therewith and having an annular uniform series of marks approximately equal in number to twice the number of cycles per minute of the commercial alternating electric lighting current divided by the normal number of revolutions per minute of the phonograph turn table.



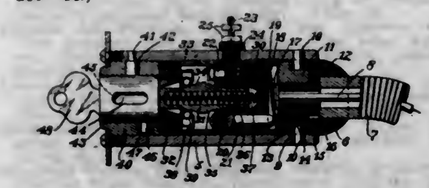
1,641,137. IRONING-MACHINE STEAM REMOVER. PETER E. GELDHOF, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of New York. Filed May 22, 1925. Serial No. 32,161. 1 Claim. (Cl. 68—9.)

In an ironing machine of the character described, a horizontally extending feed roller, a feed table extending lengthwise along the front face of the roller with its upper surface in a plane above the axis of said roller, a lever pivotally supported in a plane below the roller, an ironing shoe mounted on the lever in a vertical plane at the rear of the lever pivot to extend along the rear side of the roller and movable toward and from said roller as the lever is rocked in reverse directions, said ironing shoes having a heating chamber and a suction chamber between the heating chamber and pivot of the lever, said suction chamber having perforations extending through the ironing face of the shoe, means for rotating the feed roller, a suction producing device, a flexible pipe connection between the suction producing device and



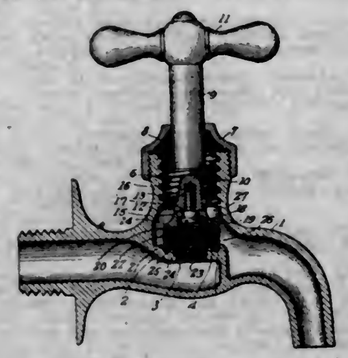
suction chamber of the shoe, and pedal operated means for operating said lever to move the ironing shoe into pressing co-action with the feed roller.

1,641,138. HEATING BOILER FEED WATER. GEORGE H. GIBSON, Montclair, N. J. Filed June 29, 1922. Serial No. 571,632. 5 Claims. (Cl. 60—67.)



1. In a feed water heating system, the combination with a primary heater, a secondary heater, separate steam supply connections to each heater, and means for passing the water to be heated first through the primary heater and then through the secondary heater, of a means responsive to the temperature in the secondary heater for regulating the supply of steam to the primary heater.

1,641,139. FREEZING PROCESS. WILLIAM S. GLENNAN, Norfolk, Va. Filed July 12, 1927. Serial No. 205,145. 3 Claims. (Cl. 62—172.)



1. A process of forming ice in small units in a refrigerator having a freezing unit including a freezing crypt therein, which consists in entirely enclosing a congealable substance in small containers, and placing said containers within the crypt until the substance has been frozen.

1,641,140. IGNITION SYSTEM AND SWITCH THEREFOR. WILSON HEMINGWAY, Jr., Vicksburg, Miss., assignor to The Electro-Lock Manufacturing Company, Vicksburg, Miss., a Corporation of Mississippi. Filed Apr. 28, 1924. Serial No. 709,696. 15 Claims. (Cl. 200—44.)

1. A locking device comprising a switch and a locking mechanism with means whereby the locking device operates at a time not later than the instant of opening the switch.

1,641,141. VALVE. SALVATORE C. CALDARA, New York, N. Y. Filed Apr. 13, 1927. Serial No. 183,316. 2 Claims. (Cl. 251—159.)

1. In a faucet or like structure, a valve body having a port surrounded by an annular ridge which in turn is surrounded by an annular groove, said ridge and groove affording a valve seat, a valve stem having a screw engagement in the valve body over said seat and provided with a flat lower end having a screw seat therein, a cupped valve head having a flat upper end in abutting engagement with and of substantially the same diameter as the lower end of the valve stem, said cupped valve head having a depression in the center of the same, a screw having a shank engaged in the screw seat of the stem, a shoulder in abutment with the end of the valve stem and a head freely received in the depression in the valve head and a lead valve disc having a shouldered upper portion swaged within the cup of the valve head, the upper face of said valve disc being substantially flat and the lower face of said valve disc having an outer rim fitting in the groove of the valve seat, an annularly grooved portion within said rim fitting over the ridge of the valve seat and a central projection entering the port inside the valve seat.

1,641,142. PHONOGRAPH RECORD. ARTHUR A. JOHNSON, Bridgeport, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Jan. 3, 1924. Serial No. 684,166. 7 Claims. (Cl. 274—44.)

7. A molded sound record formed of a wax-like record material and having an internally fluted surface the lands of the flutes being flat to have substantial engagement with a record support, and a reinforcing foraminous cloth embedded in said record material and lying adjacent the root of the flute, said cloth being stiff and open mesh so as to withstand the pressure of the molten record material against it without deforming, and permit the molten record material to flow through the foramina of the cloth in the molding operation.

Aug. 2, 1927

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

Abbott Laboratories, North Chicago, Ill. Bismuth arsphenamine sulphonate. 230,625; Aug. 2; Serial No. 246,877; published May 24, 1927. Class 6.

Acme White Lead & Color Works, Detroit, Mich. Painters' materials. 66,757; renewed Dec. 24, 1927. Class 16.

Addressograph Company, Chicago, Ill. Machines for making printing plates. 230,603; Aug. 2; Serial No. 246,801; published May 24, 1927. Class 23.

Alliance Art Products Company, The, Alliance, Ohio. Face powders, face creams, face packs, toilet waters, etc. 230,631; Aug. 2; Serial No. 247,513; published May 24, 1927. Class 6.

American Ribbon & Carbon Co., Rochester, N. Y. Typewriter ribbons and carbon paper. 64,330; renewed Aug. 6, 1927. Class 11.

American Woolen Company, Boston, Mass. Woolen piece goods. 230,604; Aug. 2; Serial No. 246,806; published May 24, 1927. Class 42.

American Writing Paper Company, assignor to American Writing Paper Company, Incorporated, Holyoke, Mass. Typewriter paper. 64,956; renewed Sept. 3, 1927. Class 37.

American Writing Paper Company, assignor to American Writing Paper Company, Inc., Holyoke, Mass. Writing and printing paper. 65,783–4; renewed Oct. 22, 1927. Class 37.

American Writing Paper Company, assignor to American Writing Paper Company, Inc., Holyoke, Mass. Cover paper. 65,873–4; renewed Oct. 29, 1927. Class 37.

American Writing Paper Company, assignor to American Writing Paper Company, Inc., Holyoke, Mass. Writing paper and printing paper. 65,974–6; renewed Nov. 5, 1927. Class 37.

American Writing Paper Company, assignor to American Writing Paper Company, Inc., Holyoke, Mass. Writing and printing paper. 66,435; renewed Nov. 26, 1927. Class 37.

Angelo Parodi fu Bartolomeo Societa Anonima, Genoa, Italy. Canned sardines, anchovies, and tunny fish. 230,769; Aug. 2; Serial No. 222,573; published May 24, 1927. Class 46.

Ansonia O & C Company, The, Ansonia, Conn. Elastic webbing. 230,719; Aug. 2; Serial No. 245,822; published May 24, 1927. Class 42.

Antiseptic Gum Co., Denver, Colo. Medicated chewing gum. 230,722; Aug. 2; Serial No. 246,144; published May 17, 1927. Class 6.

Arden, Elizabeth. (See Lewis, Florence N.)

Armouid Oil Company, Quincy, Ill. Gasoline. 230,705; Aug. 2; Serial No. 245,318; published May 3, 1927. Class 15.

Armstrong Cork Company, Pittsburgh, Pa. Linoleum and felt-base floor coverings. 230,733; Aug. 2; Serial No. 246,906; published May 24, 1927. Class 20.

Armstrong Cork Company, Pittsburgh, Pa. Linoleum and felt-base floor coverings, both piece goods and rugs. 230,752; Aug. 2; Serial No. 247,406; published May 24, 1927. Class 20.

Astrom, John, doing business as Progress Technical Company, Fort Wayne, Ind. Apparatus for filtering and softening water. 230,691; Aug. 2; Serial No. 241,554; published May 17, 1927. Class 31.

Atlantic Mills, The, Olneyville, R. I., and Stottville, N. Y. Woolen textile fabrics in the piece. 230,741; Aug. 2; Serial No. 247,118; published May 24, 1927. Class 42.

Atlantic Mills, The, Olneyville, R. I., and Stottville, N. Y. Woolen dress goods and dress fabrics of silk and wool and cotton and wool. 230,824; Aug. 2. Class 42.

Austin, Nichols, & Co. Inc. (See Ethridge, A., & Co.)

Automatic Musical Instrument Company, Grand Rapids, Mich. Pianos, organs, player pianos, etc. 230,652; Aug. 2; Serial No. 237,012; published May 17, 1927. Class 36.

Baker, Mary E., Philadelphia, Pa. Hair grower. 230,657; Aug. 2; Serial No. 238,151; published May 17, 1927. Class 6.

Baldwin-Haggard Company. (See Wills, Leon C.)

Bass, E. & J., Inc., New York, N. Y. Gold-plated candlesticks, fruit bowls, salt and pepper shakers, etc. 230,574; Aug. 2; Serial No. 242,041; published May 3, 1927. Class 28.

Bass, E. & J., Inc., New York, N. Y. Silver-plated candlesticks, fruit bowls, salt and pepper shakers, etc. 230,696; Aug. 2; Serial No. 242,040; published May 3, 1927. Class 28.

Bausch and Lomb Optical Company, Rochester, N. Y. Ophthalmic mountings and parts thereof, lenses, Mangin mirrors, etc. 230,592; Aug. 2; Serial No. 243,993; published May 24, 1927. Class 26.

Bayer Company, Inc., The, New York, N. Y. Antirheumatic, analgesic, and antipyretic medicines. 230,644; Aug. 2; Serial No. 235,874; published May 17, 1927. Class 6.

Bayer Company, Inc., The, New York, N. Y. Medicines. 230,645–6; Aug. 2; Serial No. 235,877–8; published May 17, 1927. Class 6.

Bear Brand Hosiery Co. (See Paramount Knitting Company.)

Beaudreau, Lucinda F., Fallon, Nev. Preparation for use in the treatment of asthma and all bronchial troubles. 230,594; Aug. 2; Serial No. 246,460; published May 17, 1927. Class 6.

Bergman Tool Mfg. Co., Buffalo, N. Y. Tools. 230,677; Aug. 2; Serial No. 244,976; published May 24, 1927. Class 23.

Berry's, James B., Sons Company of Illinois, Chicago, Ill. Gasoline. 230,830; Aug. 2. Class 15.

Bianchini, Ferier, Lyon, France. Piece goods of silk, wool, cotton, and hair. 230,806; Aug. 2. Class 42.

Bikoff, Jacob, & Company, Inc., New York, N. Y. Watches, watchcases, watch movements, and parts thereof. 230,813; Aug. 2. Class 27.

Bilt-Rite Baby Carriage Co., Brooklyn, N. Y. Baby carriages. 230,702; Aug. 2; Serial No. 245,135; published May 24, 1927. Class 19.

Blumenthal, August, to Heinrich Wernthal, doing business as August Blumenthal, Hamburg, Germany, successor. Portland cement. 60,060; renewed Jan. 29, 1927. Class 12.

Blumenthal, Sidney, & Co. Inc., New York, N. Y. Pile fabrics. 230,796; Aug. 2; Serial No. 245,419; published May 24, 1927. Class 42.

Boardman, William, & Sons Co., The, Hartford, Conn. Cocoa. 230,837; Aug. 2. Class 46.

Borcherdt Malt Extract Company, Chicago, Ill. Malt preparations. 64,467; renewed Aug. 6, 1927. Class 48.

Borcherdt Malt Extract Company, Chicago, Ill. Medicinal malt preparations, plain and medicated malt extracts. 64,481; renewed Aug. 6, 1927. Class 48.

Boston Artificial Leather Company, New York, N. Y., to The Zapon Company, Wilmington, Del., successor. Artificial leather. 66,093; renewed Nov. 12, 1927. Class 50.

Brown, Charles, & Company, Inc., New York, N. Y. Canton silk in the piece. 230,606; Aug. 2; Serial No. 246,884; published May 24, 1927. Class 42.

Brunswick-Balke-Collender Company, The, Wilmington, Del., and Chicago, Ill. Phonographs and parts thereof and supplies therefor. 230,779; Aug. 2; Serial No. 245,888; published May 10, 1927. Class 36.

Buck and Rayner, Chicago, Ill. Almond cream, bandoline, benzoin lotion, bath salts, etc. 230,587; Aug. 2; Serial No. 243,412; published May 24, 1927. Class 6.

Bunte Brothers, doing business as Bunte, Chicago, Ill. Candy. 230,605; Aug. 2; Serial No. 246,813; published May 24, 1927. Class 46.

Bark, Louis, Inc., Philadelphia, Pa. Minced pork. 230,808; Aug. 2. Class 46.

Burks, P. L. & Co., Louisville, Ky. Phonographs and phonograph sound boxes. 230,660; Aug. 2; Serial No. 244,217; published May 17, 1927. Class 36.

Cameron-Sprowls Pharmacy Co., Superior, Wis. Preparation for the treatment of the skin, etc. 230,617; Aug. 2; Serial No. 246,589; published May 24, 1927. Class 6.

Matches. Jönköpings och Vulcans Tändsticksfabriksaktiebolag. 230,635; Aug. 2; Serial No. 228,192; published Apr. 12, 1927.

CLASS 10.

Fertilizer. Merchants Fertilizer & Phosphate Company. 230,685; Aug. 2; Serial No. 240,871; published May 24, 1927.
Germicide, insecticide soil builder, and plant food for lawns, etc., Combined. Kalon Products Company. 230,703; Aug. 2; Serial No. 245,273; published May 24, 1927.

CLASS 11.

Typewriter ribbons and carbon paper. American Ribbon & Carbon Co. 64,330; renewed Aug. 6, 1927.

CLASS 12.

Cement, Portland. A. Blumenthal. 60,060; renewed Jan. 29, 1927.
Roofing and wall-covering purposes, Stamped metal parts used for. Cortright Metal Roofing Company. 62,452; renewed May 7, 1927.
Roofing and wall-covering purposes, Stamped metal parts used for. Cortright Metal Roofing Company. 62,468–9; renewed May 7, 1927.
Roofing and wall-covering purposes, Stamped metal parts used for. Cortright Metal Roofing Company. 62,531; renewed May 14, 1927.

CLASS 13.

Cooking utensils. Illinois Pure Aluminum Co. 230,828; Aug. 2.
Faucets. A. E. Tomlinson. 230,823; Aug. 2.
Metal braces for furniture. Enamel Products Company. 230,786; Aug. 2. Serial No. 246,019; published May 24, 1927.
Pins, Picture-frame-holding. C. E. Willis. 230,724; Aug. 2; Serial No. 246,189; published May 24, 1927.

Screws, lock washers, rivets, etc., Wood. L. A. Harris. 230,674; Aug. 2; Serial No. 244,864; published May 24, 1927.
Sheet metal and piping. La Belle Iron Works. 65,360; renewed Sept. 24, 1927.

CLASS 14.

Metals and alloys. T. Goldschmidt. 66,044; renewed Nov. 5, 1927.
Metals, Nonferrous. Henry Gardner, Guiterman & Co. 230,650; Aug. 2; Serial No. 236,548; published Mar. 29, 1927.

CLASS 15.

Gasoline. Armould Oil Company. 230,705; Aug. 2; Serial No. 245,318; published May 3, 1927.
Gasoline. James B. Berry's Sons Company of Illinois. 230,830; Aug. 2.
Gasoline. Northern Iowa Oil Co. 230,581; Aug. 2. Serial No. 242,737; published Apr. 26, 1927.
Gasoline. White Star Refining Co. of Delaware. 230,776; Aug. 2; Serial No. 245,771; published May 3, 1927.
Gasoline and lubricating oils. Looboyle Refining Company. 230,700; Aug. 2; Serial No. 245,100; published May 10, 1927.
Gasoline and motor oils. Shaffer Oil & Refining Company. 230,820; Aug. 2.
Gasoline, kerosene, and lubricating oils. Primrose Petroleum Company. 230,793; Aug. 2; Serial No. 246,119; published May 3, 1927.
Gasoline, kerosene, motor oils, etc. H. B. Van Dyne. 230,593; Aug. 2; Serial No. 244,036; published May 10, 1927.
Gasoline, oil, and greases. John Hancock Oil Co. 230,641; Aug. 2; Serial No. 231,540; published Apr. 26, 1927.
Grease, Lubricating. Masury-Young Company. 230,767; Aug. 2; Serial No. 221,753; published Apr. 26, 1927.
Oil for Lubricants, Diluting. Willhelm Oil Company. 230,707; Aug. 2; Serial No. 245,387; published May 17, 1927.
Oil, Mineral. R. T. Vanderbilt Company. 230,577; Aug. 2; Serial No. 242,358; published May 10, 1927.
Oils and greases, Lubricating. E. de Haën A.-G. 230,679; Aug. 2; Serial No. 239,295; published Apr. 26, 1927.
Oils and greases, Lubricating. Jenkin-Guerin Oil Company. 230,714; Aug. 2; Serial No. 245,560; published May 3, 1927.
Oils, Gasoline and kerosene. Herington Oil Company. 230,730; Aug. 2; Serial No. 246,346; published May 17, 1927.
Oils, Lubricating. E. M. Page. 230,680; Aug. 2; Serial No. 239,542; published May 3, 1927.
Oils, Lubricating. Specialty Products Co. 230,701; Aug. 2; Serial No. 245,115; published May 3, 1927.
Oils, Lubricating. P. B. Sullivan. 230,781; Aug. 2; Serial No. 245,935; published May 10, 1927.
Petroleum and products of petroleum. Standard Oil Company of New York. 230,780; Aug. 2; Serial No. 245,934; published May 10, 1927.
Petroleum products. Panhandle Refining Company. 230,770; Aug. 2; Serial No. 223,137; published Apr. 26, 1927.

CLASS 16.

Oil and spirit stains, varnish stain, varnish, etc. S. C. Johnson & Son. 230,757; Aug. 2; Serial No. 182,100; published Sept. 25, 1923.
Paint. Elco Paint Products, Inc. 230,708; Aug. 2; Serial No. 245,480; published May 17, 1927.
Paints. United States Gutta Percha Paint Company. 230,771; Aug. 2; Serial No. 227,376; published May 17, 1927.
Painters' materials. Acme White Lead & Color Works. 66,757; renewed Dec. 24, 1927.
Polish, Furniture. Orchard & Wilhelm Carpet Co. 65,598; renewed Oct. 8, 1927.
Polish, Furniture. Orchard & Wilhelm Carpet Co. 65,727; renewed Oct. 22, 1927.

CLASS 17.

Cigars. Louis Kindling Co. 66,710; renewed Dec. 24, 1927.

CLASS 19.

Automobiles. H. H. Franklin Manufacturing Company. 230,768; Aug. 2; Serial No. 222,023; published May 24, 1927.
Automobiles. Studebaker Corporation. 230,726–7; Aug. 2; Serial No. 246,237–8; published May 24, 1927.
Carriages, Baby. Bilt-Rite Baby Carriage Co. 230,702; Aug. 2; Serial No. 245,135; published May 24, 1927.

CLASS 20.

Linoleum and felt-base floor coverings. Armstrong Cork Company. 230,733; Aug. 2; Serial No. 246,996; published May 24, 1927.
Linoleum and felt-base floor coverings. Armstrong Cork Company. 230,752; Aug. 2; Serial No. 247,406; published May 24, 1927.

CLASS 21.

A batteries, etc., Dry-cell radio. Underwood Battery Company. 230,807; Aug. 2.
Batteries, Storage. Electric Motor & Repair Co. 230,835; Aug. 2.
Battery containers. Continental Rubber Works. 230,826; Aug. 2.
Electric apparatus. Hemco Electric Manufacturing Company. 230,827; Aug. 2.
Electric power current supply devices for radio receiving sets, etc. Stewart Battery Co. 230,821; Aug. 2.
Flatirons, Electric. Chicago Flexible Shaft Company. 230,798–800; Aug. 2.
Fuse plugs. Renu-A-Fuse Company. 230,822; Aug. 2.
Radio apparatus. G. O. Maher. 230,805; Aug. 2.
Radio receiving sets and parts. B. D. Keller. 230,823; Aug. 2.

CLASS 23.

Braces and chucks, Carpenters'. United Hardware & Tool Corporation. 230,739; Aug. 2; Serial No. 247,107; published May 24, 1927.
Conveyers, machinery guards, etc., Power. Logan Company. 230,764; Aug. 2; Serial No. 215,803; published Sept. 28, 1926.
Cutter heads for woodworking machinery. Wisconsin Knife Works, Inc. 230,783; Aug. 2; Serial No. 245,946; published May 24, 1927.
Dusters, heaters, and coolers and parts thereof for printing and enameling machines. B. L. Nicholes & Co. Inc. 230,744; Aug. 2; Serial No. 247,140; published May 24, 1927.
Machines for making printing plates. Addressograph Company. 230,603; Aug. 2; Serial No. 246,801; published May 24, 1927.
Razors. Wester Bros. 230,740; Aug. 2; Serial No. 247,109; published May 24, 1927.
Scoops and shovels. Philadelphia Shovel Co. 230,836; Aug. 2.
Shortening mixer. P. D. Merrill. 230,743; Aug. 2; Serial No. 247,138; published May 24, 1927.
Tools. Bergman Tool Mfg. Co. 230,677; Aug. 2; Serial No. 244,976; published May 24, 1927.
Typewriters. General Typewriter Exchange. 230,716; Aug. 2; Serial No. 245,705; published May 24, 1927.
Wrenches, punches, cold chisels, etc. Diamond Tool Co. 230,761; Aug. 2; Serial No. 205,913; published May 24, 1927.

CLASS 24.

Cleaning systems, Apparatus for renovating gasoline for use in dry-. Holland-Wirt Company. 230,686; Aug. 2; Serial No. 241,159; published May 24, 1927.
Presses, Garment. United States Hoffman Machinery Corporation. 230,637; Aug. 2; Serial No. 229,530; published May 24, 1927.

CLASS 26.

Measuring instruments. Sarco Fuel Saving & Engineering Co. 63,202; renewed June 11, 1927.
Ophthalmic mountings and parts thereof, lenses, Mangin mirrors, etc. Bausch and Lomb Optical Company. 230,592; Aug. 2; Serial No. 243,993; published May 24, 1927.
Pyrometer tubes. Champion Porcelain Company. 230,639; Aug. 2; Serial No. 230,383; published July 13, 1926.
Scales. Phila. Scoop & Scale Mfg. Co. 230,818; Aug. 2.
Temperature indicators for transformers, Maximum-. General Electric Company. 230,643; Aug. 2; Serial No. 235,734; published May 24, 1927.
Weighing hammocks. G. Kline. 230,738; Aug. 2; Serial No. 247,088; published May 24, 1927.

CLASS 27.

Clocks and watches. Etna Watch Company. 230,687; Aug. 2; Serial No. 241,270; published Apr. 26, 1927.
Watches. Dueber-Hampden Watch Company. 230,698; Aug. 2; Serial No. 245,086; published May 17, 1927.
Watches. Goldman Jewelry & Optical Co. 230,773; Aug. 2; Serial No. 245,709; published May 17, 1927.
Watches. Jentleson & Kaplan. 230,775; Aug. 2; Serial No. 245,719; published May 3, 1927.
Watches and parts thereof. Diel Watch Case Co. 230,659; Aug. 2; Serial No. 244,142; published May 17, 1927.
Watches and parts thereof. Diel Watch Case Co. 230,665–7; Aug. 2; Serial Nos. 244,751–3; published May 10, 1927.
Watches and parts thereof. Diel Watch Case Co. 230,668–9; Aug. 2; Serial Nos. 244,754–5; published May 17, 1927.
Watches and parts thereof. Diel Watch Case Co. 230,670; Aug. 2; Serial No. 244,756; published May 10, 1927.
Watches and parts thereof. Diel Watch Case Co. 230,671; Aug. 2; Serial No. 244,757; published May 17, 1927.
Watches and parts thereof. Diel Watch Case Co. 230,672–3; Aug. 2; Serial Nos. 244,759–60; published May 10, 1927.
Watches and parts thereof. Messingwerk Schwarzwald Aktien-Gasellschaft. 230,762; Aug. 2; Serial No. 211,368; published Apr. 26, 1927.

Rugs, Lap. I. B. Kleinert Rubber Company. 230,797; Aug. 2; Serial No. 245,498; published May 24, 1927.
Satin piece goods. R. & H. Simon Company. 230,721; Aug. 2; Serial No. 246,128; published May 24, 1927.
Sheetings and drillings, Cotton. Picken Mills. 230,841; Aug. 2.
Silk crepe in the piece, Heavy. Duplex Silk Mills, Inc. 230,653; Aug. 2; Serial No. 237,018; published May 24, 1927.
Silk in the piece, Canton. Charles Brown & Company. 230,608; Aug. 2; Serial No. 246,884; published May 24, 1927.
Silk piece goods. D. N. Cooke. 230,755; Aug. 2; Serial No. 247,525; published May 24, 1927.
Silk piece goods. Majestic Silk Mills, Inc. 230,751; Aug. 2; Serial No. 247,337; published May 24, 1927.
Silk, wool, cotton, and hair, Piece goods of. Bianchini, Ferier. 230,806; Aug. 2.
Textile fabrics in the piece, Woolen. Atlantic Mills. 230,741; Aug. 2 Serial No. 247,118; published May 24, 1927.
Woolen dress goods and dress fabrics of silk and wool and cotton and wool. Atlantic Mills. 230,824; Aug. 2.
Woolen piece goods. American Woolen Company. 230,604; Aug. 2; Serial No. 246,806; published May 24, 1927.

CLASS 43.

Thread. Gardiner Hall Jr. Company. 230,747; Aug. 2; Serial No. 247,185; published May 24, 1927.

CLASS 44.

Atomizers for perfume and the like. Marcel Franck, Inc. 230,784; Aug. 2; Serial No. 245,978; published May 17, 1927.
Cotton, gauze, etc., Absorbent. U. S. Aseptic Supply Service, Inc. 230,655; Aug. 2; Serial No. 237,426; published May 17, 1927.
Hosiery, Elastic. Horn Surgical Company. 230,839; Aug. 2.
Sanitary napkins. Paper Novelty Company. 230,736; Aug. 2; Serial No. 247,037; published May 17, 1927.
Wearing apparel, Sanitary articles of. Samstag & Hilder Bros. Inc. 230,833; Aug. 2.

CLASS 45.

Ginger ale. Queen City Bottling Company. 230,766; Aug. 2; Serial No. 219,910; published Apr. 27, 1926.

Ginger ale, carbonated water, and root beer. Peacock Ale Co. 230,642; Aug. 2; Serial No. 234,731; published Apr. 19, 1927.
Water, Carbonated. L. D. Childs. 62,830; renewed May 28, 1927.
Water, Mineral. Heinrich Mattoni Aktiengesellschaft. 62,692; renewed May 21, 1927.

CLASS 46.

Bacon, Sliced. Louis Meyer Co. 230,816; Aug. 2.
Candies. S. H. Kress & Co. 230,803; Aug. 2.
Candy. Bunte Brothers. 230,605; Aug. 2; Serial No. 246,813; published May 24, 1927.
Candy. Chase Candy Company. 230,785; Aug. 2; Serial No. 246,015; published May 24, 1927.
Canned and fresh vegetables. Puyallup & Sumner Fruit Growers Association. 230,602; Aug. 2; Serial No. 246,770; published May 24, 1927.
Canned fish. Seacost Canning Company. 230,765; Aug. 2; Serial No. 219,770; published Mar. 8, 1927.
Canned fish, cheese, rice, etc. Guthrie & Co. 230,689; Aug. 2; Serial No. 241,279; published May 3, 1927.
Canned fruits. Everett Fruit Products Company. 230,758; Aug. 2; Serial No. 185,863; published Jan. 6, 1925.
Canned fruits and vegetables. Burt Olney Canning Co. 65,905; renewed Oct. 29, 1927.
Canned fruits and vegetables except canned corn. Burt Olney Canning Co. 66,283; renewed Nov. 19, 1927.
Canned goods. Holbrook Grocery Co. 66,683; renewed Dec. 24, 1927.
Canned salmon. Deep Sea Salmon Company. 230,664; Aug. 2; Serial No. 244,749; published May 24, 1927.
Canned sardines, anchovies, and tunny fish. Angelo Parodi Fu Bartolomeo Societa Anonima. 230,769; Aug. 2; Serial No. 222,573; published May 24, 1927.
Canned sea foods. Holbrook Grocery Co. 66,684; renewed Dec. 24, 1927.
Canned vegetables. Carll Canning Co. 230,601; Aug. 2; Serial No. 246,738; published May 24, 1927.
Cantaloupes, tomatoes, lettuce, etc., Fresh. K. C. Iwata. 230,772; Aug. 2; Serial No. 227,650; published May 3, 1927.
Chicks, Baby. J. T. McClaran. 230,763; Aug. 2; Serial No. 214,606; published July 6, 1926.
Cocoa. William Boardman & Sons Co. 230,837; Aug 2.
Codfish and pure pork sausages. Louis Meyer Co. 230,815; Aug. 2.
Coffee. Levering Coffee Co. 50,048; renewed Feb. 27, 1926.
Coffee. Levering Coffee Co. 65,830; renewed Oct. 22, 1927.
Coffee. Valley City Coffee & Spice Mills. 230,636; Aug. 2; Serial No. 228,713; published May 24, 1927.
Coffee mixture. G. W. McClintock. 230,791; Aug. 2; Serial No. 246,105; published May 24, 1927.
Cookies. Robert A. Johnston Co. 230,692; Aug. 2; Serial No. 241,726; published Feb. 15, 1927.
Cookies. Robert A. Johnston Co. 230,693; Aug. 2; Serial No. 241,728; published Feb. 15, 1927.
Cows, Live. A. L. Fitz Patrick. 230,597; Aug. 2; Serial No. 246,605; published May 24, 1927.
Cows, Live. A. L. Fitz Patrick. 230,656; Aug. 2; Serial No. 237,732; published May 24, 1927.
Fish, Fresh, smoked and salted. G. C. Van Camp. 230,834; Aug. 2.
Flour, Wheat. Durst Milling Co. 230,814; Aug. 2.
Flour, Wheat and corn. J. C. Kullmann. 230,831; Aug. 2.
Fruits and fresh vegetables, Fresh citrous and deciduous. H. N. Koehler. 230,753; Aug. 2; Serial No. 247,482; published May 24, 1927.
Fruits, Fresh citrous. Mission Citrus Association. 230,754; Aug. 2; Serial No. 247,485; published May 24, 1927.
Ham. Louis Meyer Co. 230,817; Aug. 2.
Jams, jellies, and crushed fruits. Hewlett Bros. Company. 230,774; Aug. 2; Serial No. 245,715; published May 24, 1927.
Pork, Minced. Louis Burk, Inc. 230,808; Aug. 2.
Raisins and grapes, Preserved and canned. Rubyette Co. 230,706; Aug. 2; Serial No. 245,374; published May 24, 1927.
Sirup, Cane. New Orleans Coffee Company. 230,838; Aug. 2.
Tea. A. Ethridge & Co. 64,283; renewed July 30, 1927.

CLASS 48.

Malt preparations. Borcherdt Extract Company. 64,467; renewed Aug. 6, 1927.
Malt preparations, plain and medicated malt extracts, Medicinal. Borcherdt Malt Extract Company. 64,481; renewed Aug. 6, 1927.

CLASS 50.

Leather, Artificial. Boston Artificial Leather Company. 66,093; renewed Nov. 12, 1927.

ALPHABETICAL LIST OF LABELS.

Capitol Silk Washable. For Silk Piece Goods. Capitol Silk Corporation. 32,502; Aug. 2.
Carigas Emergency Gasoline Tank. For Shipping and Storage Vessels or Containers. J. C. Mewshaw. 32,513; Aug. 2.
Carlton Club. For Carbonated Table or Drinking Water. Canada Dry Ginger Ale, Incorporated. 32,501; Aug. 2.
Chic-A-Dee Need-Em. For Candy. Maine Confectionery Co. 32,511; Aug. 2.
Fearless. For Fresh Oranges. Orange Mutual Citrus Association. 32,521; Aug. 2.
Gemelli. For Olive Oil. A. L. Zamboni. 32,529; Aug. 2.
Great American. For Canned Evaporated Milk. Great American Stores Co. 32,506; Aug. 2.
Hairaide Hair and Scalp Shampoo Soap. For a Cleansing and Medicinal Soap for the Hair and Scalp. I. McEwen. 32,512; Aug. 2.
Milk Charleston Chew! For Candy. Fox-Cross Candy Company. 32,505; Aug. 2.
Nature's. For Tooth Paste. Nature's Toothpaste Corporation. 32,519; Aug. 2.
Noks. For a Chemical Liquid Which is Used for Taking Spots Out of Goods, Furniture, Leathers, and Other Materials. H. Segall. 32,525; Aug. 2.
Old Dutch Cocoa. For Cocoa. Guittard Chocolate Co., 32,507; Aug. 2.
Orange King. For Fresh Oranges. Orange Mutual Citrus Association. 32,520; Aug. 2.
Pallo. For Ladies' Footwear. Palace Clothing Company. 32,522; Aug. 2.

Proon Shine. For Prunes and Prune Sirup. E. Dencer. 32,503; Aug. 2.
Pullman Loaf. For Bread. Preston E. Roberts, Inc. 32,523; Aug. 2.
Q-Boy. For Macaroni. Joliet Macaroni Company. 32,508; Aug. 2.
S. M. A. For Food Product for Infants. Laboratory Products Company. 32,509; Aug. 2.
Savex. For Granulated Soap. Sierra Chemical Company. 32,526; Aug. 2.
Septoline. For a Chemical Liquid Which is Used in Healing as an Antiseptic, as a Prophylactic, and as a Deodorant. H. Segall. 32,524; Aug. 2.
'Spike' Kelly. For a Near Beer or Nonalcoholic Cereal Beverage. W. D. Elrinberg. 32,504; Aug. 2.
Stony Brook. For Eggs. C. R. & W. J. Sutherland. 32,527; Aug. 2.
Wood's Fut Fix. For Wood's Fut Fix. E. H. Wood. 32,528; Aug. 2.
World's Guaranteed Best, Sure Insect Exterminator, Denverado Roach Bouncer. For Insect, Rat, and Mice Poison. C. E. MacDonald. 32,510; Aug. 2.
Yorkshire Farm. For Pimiento Cheese. John Morrell & Co. 32,514; Aug. 2.
Yorkshire Farm. For Limberger Cheese. John Morrell & Co. 32,515; Aug. 2.
Yorkshire Farm. For Brick Cheese. John Morrell & Co. 32,516; Aug. 2.
Yorkshire Farm. For Sharp Cheese. John Morrell & Co. 32,517; Aug. 2.

ALPHABETICAL LIST OF PRINTS.

Always Found in Good Company. For Coffee. J. A. Folger & Co. 10,092; Aug. 2.
Black Admiral Block. For Coal. W. S. Harman. 10,094; Aug. 2.
Efficiency Hocking. For Coal. W. S. Harman. 10,095; Aug. 2.
Kolynos. For Dentrifices. Kolynos Co. 10,096; Aug. 2.
Pleaso Breath. For Pleaso Breath Tablets. J. C. Crowe. 10,091; Aug. 2.
Red Man Hocking. For Coal. W. S. Harman. 10,093; Aug. 2.
The Champagne of Orange Drinks! For Orange Drink. T. G. Soffos. 10,098; Aug. 2.
Tigerloy Brake Drums. For Brake Drums. Massillon Steel Casting Company. 10,097; Aug. 2.
Tune in on Your Radio Thursday Night Clicquot Club Ginger Ale Eskimos. For Ginger Ale. Clicquot Club Company. 10,090; Aug. 2.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 2d DAY OF AUGUST, 1927.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Aab, William, New Ulm, Minn. Aligning and reaming machine for connecting rods. 1,637,508; Aug. 2.

Aalborg, Christian, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electrode for electrolytic condensers. 1,637,328; Aug. 2.

Aalborg, Christian, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Insulator. 1,637,329; Aug. 2.

Abbe, George C., and R. C. Williamson, assignors to American Road Machinery Company, Inc., Kennett Square, Pa. Road roller and scarifier. 1,637,720; Aug. 2.

Abbott, Geoffrey J., London, England. Power-transmission pulley. 1,637,402; Aug. 2.

Abbott, Henry H., New York, N. Y., assignor to American Telephone and Telegraph Company. Telephone system. 1,637,403; Aug. 2.

Abel, Frederick H. (See Lowry, C. A., and Abel.)

Abrams, Solomon, Hayward, Calif. Foldable bed. 1,637,845; Aug. 2.

Acme Printing Appliance Co., The. (See Daane, Arthur J., assignor.)

Adams, Arthur J., Bay City, Mich., assignor to W. S. Ferris, Elkhart, Ind., now trading as Domore Chair Company. Swiveling chair. 1,637,846; Aug. 2.

Adams & Westlake Company, The. (See Levan, John F., assignor.)

Adler, Victor E., Los Angeles, Calif. Ring for a banjo. Des. 73,154; Aug. 2.

A'Hearn, Frank M., and E. F. Richardson, Greenville, Pa. Wheel-machining apparatus. 1,637,330; Aug. 2.

Ainsworth Manufacturing Company. (See Potter, A. T., and Medville, assignors.)

Aird, Clarence W. (See Riches, C. H., and Aird.)

Airship Guarantee Company. (See Wallis, B. N., and Burney, assignors.)

Alemite Die-Casting & Mfg. Co. (See Gullborg, John S., assignor.)

Alexander, Carl Z., West Livingston, and E. S. Alexanders, Newark, assignors, by mesne assignments, to E. C. Seward, Jersey City, N. J. Steam-boiler attachment. 1,637,721; Aug. 2.

Alexander, Earl S. (See Alexander, Carl Z. and E. S.)

Allatt, Thomas, Westfield, N. J., assignor, by mesne assignments, to Millie Patent Holding Co. Inc., New York, N. Y. Bag-closing machine. 1,637,509; Aug. 2.

Alleman, Gellert, Swarthmore, assignor to Sun Oil Company, Philadelphia, Pa. Mineral-oil derivative and making same. 1,637,510; Aug. 2.

Allen, Frederick C., Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Boring machine. 1,637,759; Aug. 2.

Altgelt, Herman E., assignor to Oliver Chilled Plow Works, South Bend, Ind. Cultivator. 1,637,925; Aug. 2.

Altorfer, Alpheus W., Peoria, Ill. Wringer. 1,637,630; Aug. 2.

Amargós, José L., San Manuel, Cuba. Stalk-cutting attachment for plows. 1,637,926; Aug. 2.

American Chain Company. (See Fageol, Rollie B., assignor.)

American Engineering Company. (See Schultz, John L., assignor.)

American Laundry Machinery Company, The. (See Waream, Charles E., assignor.)

American Liquid Meter Company. (See Bassler, Carlos J., assignor.)

American Machine & Foundry Company. (See Bronander, Wilhelm B., assignor.)

American Machine & Foundry Company. (See Bronander, W. B., and Leary, assignors.)

American Machine & Foundry Company. (See Hawkins, Wilford J., assignor.)

American Multigraph Company, The. (See Osborn, Henry C., assignor.)

American Road Machinery Company. (See Abbe, G. C., and Williamson, assignors.)

American Steel Pipe and Tank Co. (See Kilham, Oliver W., assignor.)

American Stove Company. (See Nicolaus, Frederic G., assignor.)

American Telephone and Telegraph Company. (See Abbott, Henry H., assignor.)

American Telephone and Telegraph Company. (See Bown, Ralph, assignor.)

American Telephone and Telegraph Company. (See Klein, Charles H., assignor.)

American Tool Works Company, The. (See Sosa, Augustus M., assignor.)

Anderson, Charles E., Sioux Falls, S. Dak. Smoker's tray. 1,637,978; Aug. 2.

Anderson, Frank O. (See Atkins, D., jr., Anderson, and Lindsey.)

Andrews, Edward F., assignor to Andrews-Hammond Corporation, Chicago, Ill. Electrode for rectifiers and electrolytic condensers. 1,637,795; Aug. 2.

Andrews-Hammond Corporation. (See Andrews, Edward F., assignor.)

Andrews, Isaac, Spartanburg, S. C. Loom harness support. 1,637,796; Aug. 2.

Angell, Earl B., Troy, Mont. Memorandum device. 1,637,672; Aug. 2.

Angle, Glenn D., Detroit, Mich. Articulated connecting rod. 1,637,979; Aug. 2.

Ansco Photoproducts, Inc. (See Bornmann, Carl, assignor.)

Ansco Photoproducts, Inc. (See Slocum, Benjamin A., assignor.)

Ansingh, Herman K. (See Randall, K. C., and Ansingh.)

Arbon, Paul, Tulsa, Okla. Making drilling jars. 1,637,511; Aug. 2.

Armour & Company. (See Heicke, Adolf, assignor.)

Arnold, Edgar, Kent, Ohio. Planter. 1,637,980; Aug. 2.

Arrow Electric Company, The. (See Nero, Arvid H., assignor.)

Arton, John A., Chicago, Ill. Convertible furniture. 1,637,797; Aug. 2.

Ash, Horace W., Winchester, Mass. Storing and handling apparatus for asphalt. 1,637,889; Aug. 2.

Ashby, Brodie H., et al. (See Liles, Thomas O., assignor.)

Atkins, Charles H., Palmer, Mass. Drainage of steam chambers. 1,637,327; Aug. 2.

Atkins, Dudley, jr., F. O. Anderson, and E. E. Lindsey, Minneapolis, Kans. Ditch-maintaining drag. 1,637,673; Aug. 2.

Austin, Raymond L., assignor to Bovaird & Seyfang Manufacturing Company, Bradford, Pa. Control mechanism. 1,637,722; Aug. 2.

Automotive Valves Corporation, The. (See Burtnett, Everett R., assignor.)

Axe, Roy T., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y. Window-sash construction. 1,637,723; Aug. 2.

Backeland, Leo H., Yonkers, assignor to Bakelite Corporation, New York, N. Y. Resinous condensation products from dihydroxydiphenylethane and reactive methylene bodies and making same. 1,637,512; Aug. 2.

Bakelite Corporation. (See Backeland, Leo H., assignor.)

Baker, Erle K., assignor to Baker Reduction Gear Company, Detroit, Mich. Planetary reduction gear. 1,637,847; Aug. 2.

Baker, George E., Chicago, Ill. Collapsible tube with an unlosable cap. 1,637,890; Aug. 2.

Baker Reduction Gear Company. (See Baker, Erle K., assignor.)

Baldwin, Donald C., New York, N. Y. Picture hanger. 1,637,981; Aug. 2.

Ballew, James C., Akron, Ohio. Tire and rim. 1,637,599; Aug. 2.

Banninga, Herman P., Muskegon, Mich. Dustless ash system. 1,637,982; Aug. 2.

Barber Asphalt Company, The. (See Forrest, Charles N., assignor.)

Barber Asphalt Company, The. (See Moriarty, John H., assignor.)

Barber, Howard M., assignor to C. B. Cottrell & Sons Company, Westerly, R. I. Driving mechanism for printing presses. 1,637,848; Aug. 2.

Barbieri, Angelo, Milan, Italy. Electric musical recorder. 1,637,674; Aug. 2.

Bardwell, Ralph S., assignor to Solar Lighting Fixture Co., Los Angeles, Calif. Lantern roof. Des. 73,155; Aug. 2.

Bardwell, Ralph S., assignor to Solar Lighting Fixture Co., Los Angeles, Calif. Lighting-fixture bracket. Des. 73,156; Aug. 2.

Barrows, Alford C., assignor to Economy Baler Company, Ann Arbor, Mich. Bale-dividing device. 1,637,543; Aug. 2.

Barrows, Donald S., Rochester, N. Y. Side frame. 1,637,724; Aug. 2.

Bartlett Hayward Company, The. (See Wagner, Frederick H., assignor.)

Bartol, George E., jr., Ardmore, Pa., assignor to C. Howard Hunt Pen Company, Camden, N. J. Pencil sharpener. 1,637,849; Aug. 2.

Bassick Company, The. (See Moore, Raymond G., assignor.)

Bassler, Carlos J., assignor to American Liquid Meter Company, Portland, Oreg. Variable valve-operating means for fluid meters. 1,637,850; Aug. 2.

Bates, Adelmer M. deceased; C. H. Bates, administratrix, assignor to Bates Valve Bag Company, Chicago, Ill. Method of and apparatus for packaging material. 1,637,891; Aug. 2.

Bates, Clara H., administratrix. (See Bates, Adelmer M.)

Bates Valve Bag Company. (See Bates, Adelmer M., assignor.)

Batts, David A., Atlanta, Ga. Combined shade roller and holding means for windows. 1,637,798; Aug. 2.

Baxter, William C., assignor to E. M. Trimble Mfg. Co., Inc., Rochester, N. Y. Canopy or tent. 1,637,725; Aug. 2.

Beardsley, Robert, Chicago, Ill. Lamp. Des. 73,157; Aug. 2.

Becker, Albert H. (See Nichol, Orr T., assignor.)

Beckley, Joseph C., Tampa, Fla. Orchard heater. 1,637,983; Aug. 2.

Beintema, Tjebbe D., Leighton, Iowa. End-gate scoop board. 1,637,631; Aug. 2.

Bell & Howell Company, The. (See Howell, Albert S., assignor.)

Bendix Brake Company. (See Dodge, Adiel Y., assignor.)

Benjamin Electric Manufacturing Company. (See Benjamin Reuben B., assignor.)

Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Combination electrical connecter and fixture support. 1,637,463; Aug. 2.

Benner, Winthrop W., Cuyahoga Falls, and E. A. Hoener, assignors to The Firestone Tire and Rubber Company, Akron, Ohio. Compensating mechanism. 1,637,892; Aug. 2.

Bennett, Ashley C., assignor to I. E. Bennett, Minneapolis, Minn. Apparatus for supplying fuel oil to furnaces. 1,637,368; Aug. 2.

Bennett, Elmar W. (See Davis L., and Bennett.)

Bennett, Irene E. (See Bennett, Ashley C., assignor.)

Berg, Charles C., Detroit, Mich. Lubricating apparatus for internal-combustion engines. 1,637,600; Aug. 2.

Bergeim, Frank H., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing explosives. 1,637,726; Aug. 2.

Berkowitz, Aaron, Newark, N. J. Attachment for parasol and umbrella handles. 1,637,434; Aug. 2.

Berman, Joseph. (See Hilton, Roland C., assignor.)

Beskow, Bernhard M., Clearwater, Fla. Hair waver or crimper. 1,637,893; Aug. 2.

Bessemer, Gottlieb, Chicago, Ill. Smoker's article. 1,637,984; Aug. 2.

Bianca, Joseph C., jr., Scranton, Pa. Mortising machine. 1,637,464; Aug. 2.

Bierman, Edwin W., assignor to Standard Four Tire Co., Keokuk, Iowa. Tubular molding apparatus. 1,637,465; Aug. 2.

Bierman, Edwin W., assignor to Standard Four Tire Co., Keokuk, Iowa. Tube-splicing method. 1,637,466; Aug. 2.

Bierman, Edwin W., assignor to Standard Four Tire Co., Keokuk, Iowa. Cuffing device for inner tubes. 1,637,467; Aug. 2.

Bierman, Harry C., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Molded gear. 1,637,331; Aug. 2.

Birchfield Engineering Company Limited. (See Chisholm, Douglas W., assignor.)

Bishop, Joseph W., Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del. Phonograph record. 1,637,544; Aug. 2.

Bishop, Oakley M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Chloro-derivatives of N-dihydro-1,2,1',2'-anthraquinone-azine and making same. 1,637,851; Aug. 2.

Blanchard, Frederick C. (See Lea, Charles, assignor.)

Bloser, Edward G., jr., Philadelphia, Pa. Rubber heel. 1,637,675; Aug. 2.

Boe, Hans M., Minneapolis, Minn. Pump construction. 1,637,727; Aug. 2.

Boehringer, John A., Springfield, assignor to Star Chandelier Co. Inc., New York, N. Y. Shield for lighting fixtures or similar articles. Des. 73,158; Aug. 2.

Boehringer, John A., Springfield, assignor to Star Chandelier Co. Inc., New York, N. Y. Shield for lighting fixtures or similar articles. Des. 73,159; Aug. 2.

Boehringer, John A., Springfield, assignor to Star Chandelier Co. Inc., New York, N. Y. Shield for lighting fixtures or similar articles. Des. 73,160; Aug. 2.

Bogan, Edgar P., Detroit, Mich. Control device for heating apparatus. 1,637,369; Aug. 2.

Boner, Halbert E., Los Angeles, Calif. Contacting means. 1,637,468; Aug. 2.

Bonn, Carl R. H., Hillhead, Glasgow, Scotland. Flow meter. 1,637,927; Aug. 2.

Bonnemaison, Paul, Paris, France. Ship's hull. 1,637,677; Aug. 2.

Bonus Candy Corporation. (See Lanzl, Elmo G., assignor.)

Bornmann, Carl, assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Safety catch for shutters. 1,637,513; Aug. 2.

Bosworth, Arthur H., Wichita, Kans. Container for eyebrow pencils and the like. 1,637,545; Aug. 2.

Bourke, Edmund, Footscray, near Melbourne, Victoria, Australia. Riddle. 1,637,728; Aug. 2.

Bovaird & Seyfang Manufacturing Company. (See Austin, Raymond L., assignor.)

Bowers, Frank, assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich. Soot blower. 1,637,546; Aug. 2.

Bown, Ralph, East Orange, N. J., assignor to American Telephone and Telegraph Company. Signaling system. 1,637,404; Aug. 2.

Bradley, Linn, Montclair, N. J., and E. P. McKeefe, New York, N. Y. Production of caustic alkali, etc. 1,637,514; Aug. 2.

Bradley, Linn, Montclair, N. J., and E. P. McKeefe, New York, N. Y., assignors to Bradley-McKeefe Corporation. Treatment of residual liquors. 1,637,515; Aug. 2.

Bradley-McKeefe Corporation. (See Bradley, L., and McKeefe, assignors.)

Brandenburg, Wilson C., Weston, W. Va., assignor to General Electric Company. Recording instrument. 1,637,822; Aug. 2.

Brantford Oven & Rack Co, Limited, The. (See Riches, C. H., and Aird, assignors.)

Braun, Philip N., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y. Pressing-machine control. 1,637,729; Aug. 2.

Bredt, Charles E., Mahanoy City, Pa. Clinical thermometer. 1,637,760; Aug. 2.

Brewer, Robert W. A., Philadelphia, assignor to H. F. Pitcairn, Bryn Athyn, Pa. Construction and mounting of a valve-sealing mechanism for internal-combustion engines. 1,637,799; Aug. 2.

Brilliant, Morris R., Roxbury, Mass. Muffler. 1,637,516; Aug. 2.

Bristow, Bruce A., assignor of one-third to W. A. Chamberlain and one-third to D. Z. Bristow, Toronto, Ontario, Canada. Game apparatus. 1,637,517; Aug. 2.

Bristow, Dudley A., et al. (See Bristow, Bruce A., assignor.)

Bronander, Wilhelm B., Montclair, N. J., assignor to International Cigar Machinery Company. Device for feeding scrap tobacco. 1,637,800; Aug. 2.

Bronander, Wilhelm B., Montclair, N. J., assignor to Standard Tobacco Stemmer Company. Tobacco-stemming mechanism. 1,637,801; Aug. 2.

Bronander, Wilhelm B., Montclair, N. J., assignor to American Machine & Foundry Company. Cigarette-machine cut-off. 1,637,803; Aug. 2.

Bronander, Wilhelm B., Montclair, and J. W. Leary, Bloomfield, N. J., assignors to American Machine & Foundry Company. Package and making the same. 1,637,802; Aug. 2.

Bronson, Adelbert E., assignor to The Dill Manufacturing Company, Cleveland, Ohio. Quick detachable cap. 1,637,332; Aug. 2.

Brookby, Harry E., Evanston, assignor to United States Gypsum Company, Chicago, Ill. Light-weight gypsum product. 1,638,001; Aug. 2.

Brooks, Lucile A., Seattle, Wash. Cording device. 1,637,804; Aug. 2.

Broslus, Edgar E., Pittsburgh, Pa. Mud gun. 1,637,405; Aug. 2.

Brown Company. (See Richter, George A., assignor.)

Brown, Haughton, Minneapolis, Minn. Insulating material. 1,637,547; Aug. 2.

Brown, James C., Newark, N. J., assignor to E. Frederics, Inc., New York, N. Y. Hair-treating method and composition. 1,637,469; Aug. 2.

Brown, Leslie A., assignor to International Silver Co., Meriden, Conn. Hollow handle for metal vessels. 1,637,853; Aug. 2.

Brown-Lipe Gear Company. (See Carhart, George C., assignor.)

Brown, Thomas G., St. Laurent de Montreal, Quebec, assignor to Gurney Foundry Company, Limited, Toronto, Canada. Electric oven. 1,637,435; Aug. 2.

Brown, William F., Tottenville, N. Y. Vehicle fender. 1,637,632; Aug. 2.

Brumder, William C., Milwaukee, Wis. Golf goggles. 1,637,406; Aug. 2.

Brumder, William C., Milwaukee, Wis. Putting apparatus. 1,637,407; Aug. 2.

Brunk, Mary V., and D. D. Harrison, Kansas City, Mo. Frock. 1,637,518; Aug. 2.

Brunswick-Balke-Collender Company, The. (See Bishop, Joseph W., assignor.)

Buckeye Steel Castings Company, The. (See Bush, Samuel P., assignor.)

Buckeye Steel Castings Company, The. (See Stertsbach, H. W., and Hansen, assignors.)

Budd Wheel Company. (See Tarbox, John P., assignor.)

Bugbee, Lucian W., jr., Indianapolis, Ind., assignor, by mesne assignments, to Continental Optical Corporation, New York, N. Y. Curvature-measuring device. 1,637,408; Aug. 2.

Burbach, John, Bangor, Wis. Draft coupling. 1,637,854; Aug. 2.

Burbank, Louis S., Worcester, Mass. Dispensing top. 1,637,546; Aug. 2.

Burgess Battery Company. (See Ring, Hans A., assignor.)

Burney, Charles D. (See Wallis, B. N., and Burney.)

Burns, Jabes, & Sons, Inc. (See Kopf, Joseph L., assignor.)

Burtnett, Everett R., Los Angeles, Calif., assignor to The Automotive Valves Corporation, Reno, Nev. Cylinder head for sleeve-valve internal-combustion engines. 1,637,519; Aug. 2.

Bush, Samuel P., assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Car truck. 1,637,928; Aug. 2.

Bussey, Hugh, East St. Louis, Ill. Spreader. 1,637,601; Aug. 2.

Buswell, Cecil J., Wallingford, England. Harrow. 1,637,633; Aug. 2.

Butler, Henry R., assignor of one-half to T. H. Cook, Oakland, Calif. Muffler cut-out. 1,637,761; Aug. 2.

Butler, William J., Cranston, assignor to Henry Lederer & Bro. Inc., Providence, R. I. Cigar lighter. 1,637,855; Aug. 2.

C. Howard Hunt Pen Company. (See Bartol, George E., jr., assignor.)

Campbell, Harry E., assignor to Campbell Metal Window Corporation, Baltimore, Md. Window frame and sash construction. 1,637,731; Aug. 2.

Campbell, Harry E., assignor to Campbell Metal Window Corporation, Baltimore, Md. Window frame and sash construction. 1,637,732; Aug. 2.

Campbell, Harry E., assignor to Campbell Metal Window Corporation, Baltimore, Md. Window frame and sash construction. 1,637,733; Aug. 2.

Campbell, J. B., Manufacturing Company, The. (See Campbell, John B., assignor.)

Campbell, John B., assignor to The J. B. Campbell Manufacturing Company, Salem, N. J. Floor covering. 1,637,762; Aug. 2.

Campbell Metal Window Corporation. (See Campbell, Harry E., assignor.)

Cameron, Lyle J., Blundellsands, near Liverpool, England. Harvesting machine. 1,637,730; Aug. 2.

Cameron, Oscar J., Luling, Tex. Chuck. 1,637,436; Aug. 2.

Camilla, Stefano, and F. Pagliani, Turin, Italy. Apparatus for cleaning, peeling, or shelling corn, grains, and the like. 1,637,678; Aug. 2.

Canfield, Henry H. (See Isbell, W. A., and Canfield.)

Cannon Manufacturing Company. (See Flannery, Burt V., assignor.)

Carhart, George C., assignor to Brown-Lipe Gear Company, Syracuse, N. Y. Friction clutch. 1,637,734; Aug. 2.

Carlson, Charles J., and O. M. Elton, Helena, Mont. Steam boiler. 1,637,929; Aug. 2.

Carpenter, David E., New York, N. Y., assignor to Dictaphone Corporation, Bridgeport, Conn. Container. 1,637,333; Aug. 2.

Carr Fastener Company. (See Elwell, George H., assignor.)

Carson, J. A. (See Prowense, Joseph S., assignor.)

Carter, Charles J., Kansas City, Mo. Flooring. 1,637,634; Aug. 2.

Case, Francis M., Cleveland Heights, assignor to The Enterprise Manufacturing Company, Akron, Ohio. Fishing reel. 1,637,437; Aug. 2.

Catucci, Pliny, Newark, N. J. Click check for reels. 1,637,334; Aug. 2.

Cauda, Ernesto, Quinto al Mara, Genoa, Italy. Cinematic apparatus. 1,637,409; Aug. 2.

Celanese Corporation of America. (See Small, F. T., and Dickie, assignors.)

Celentano, Frank. (See Davis, W. H. H., and Celentano.)

Central Electric Tool Company. (See Weyandt, Carl S., assignor.)

Chace, William M., Detroit, Mich. Thermometer. 1,637,805; Aug. 2.

Chamberlain, W. Allen, et al. (See Bristow, Bruce A., assignor.)

Chandler, Daniel L., Boston, Mass. Puzzle. 1,637,602; Aug. 2.

Chandler, Daniel L., Worcester, assignor, by mesne assignments, to William H. Whitcomb, Newton, Mass. Coin receptacle. 1,637,549; Aug. 2.

Chaplin, Walter L., Syracuse, assignor to The Smith-Lee Company, Oneida, N. Y. Bottle cap. 1,637,470; Aug. 2.

Chapman-Stein Furnace Co., The. (See Culbertson, Albert L., assignor.)

Chase Companies. (See Recker, Adolph C., assignor.)

Cheetham, George A., Manchester, England, assignor to Westinghouse Electric & Manufacturing Company. Volt-ampere-hour meter. 1,637,370; Aug. 2.

Chicago-Cleveland Car Roofing Company. (See Finney, H. F., and Jacobs, assignors.)

Chicago-Cleveland Car Roofing Company. (See Russell, Thomas N., assignor.)

Chicago-Cleveland Car Roofing Company. (See Wright, William, assignor.)

Children's Clinical Laboratory. (See Vaughan, Robert J., assignor.)

Chilton, Roland, Keyport, N. J., assignor to Healey-Aeromarine Bus Company, Inc. Self-aligning gear mounting. 1,637,806; Aug. 2.

Chisholm, Douglas W., Garnkirk, Scotland, assignor to The Birchfield Engineering Company Limited, Cardiff, Wales. Tube-welding machine. 1,637,679; Aug. 2.

Christensen, Christen, Chicago, Ill. Lawn mower. 1,637,603; Aug. 2.

Christie, Charles H. (See Stilwell, R. O., and Christie.)

Christman, Peter J., jr., assignor to Paper Converting Machine Co., Green Bay, Wis. Interfolding machine. 1,637,550; Aug. 2.

Chrome Steel Works. (See Currie, William, assignor.)

Chryst, William G., Philadelphia, Pa. Screen inclosure. 1,637,335; Aug. 2.

Cincinnati Butchers' Supply Company, The. (See Schmidt, O. C., and Klawitter, assignors.)

Cincinnati Grinders Incorporated. (See Kern, Fred M., assignor.)

Cirelli, Francesco, Philadelphia, Pa. Amplifying horn. 1,637,488; Aug. 2.

Clark, Edward E., Kansas City, Mo., assignor, by mesne assignments, to H. W. Jacobs and U. S. Weary, Junction City, Kans. Antivibrating device. 1,637,604; Aug. 2.

Clark, J. R., Company. (See Kalgren, John E., assignor.)

Clarke, John Q., Crawfordsville, Ind. Safety burial vault or casket. 1,637,471; Aug. 2.

Clarkson, Thomas, London, England. Steam generator or water heater. 1,637,680; Aug. 2.

Clarkson, Thomas, London, England. Steam generator or water heater. 1,637,681; Aug. 2.

Clarkson, Thomas, London, England. Steam generator. 1,637,682; Aug. 2.

Clarkson, Thomas, London, England. Steam generator or water heaters. 1,637,683; Aug. 2.

Clausing, George, assignor to The Vulcan Last Company, Portsmouth, Ohio. Golf tee. 1,637,551; Aug. 2.

Clegg, Edwin R., La Fayette, Ind. Roller-shade bracket. 1,637,763; Aug. 2.

Clemence, Magnien, Coffeyville, Kans. Method of and apparatus for waving hair. 1,637,605; Aug. 2.

Cléret, Albert, Paris, France. Signaling apparatus for road traffic. 1,637,684; Aug. 2.

Cleveland Rock Drill Company, The. (See Nell, G. M., and Kale, assignors.)

Cline, Daniel L., Medford, Okla. Mercantile credit form. 1,637,985; Aug. 2.

Clow, James B., & Sons. (See Wernlé, Karl A., assignor.)

Coblentz, William W., Washington, D. C., assignor to Secretary of Commerce of the United States as trustee for the Government of the United States and the People of the United States. Eye-protective glass. 1,637,439; Aug. 2.

Coleman, William C., Wichita, Kans. Centrifugal machine. 1,637,552; Aug. 2.

Coleman, William C., Wichita, Kans. Receptacle-supporting means. 1,637,553; Aug. 2.

Coleman, William C., Wichita, Kans. Heating stove. 1,637,554; Aug. 2.

Coles, Thomas, Homestead, Pa. Pressure regulator. 1,637,764; Aug. 2.

Collins, Charles W., Seattle, Wash. Power device for operating car brakes. 1,637,440; Aug. 2.

Collinson, Stanley E., Newton Center, Mass. Golf club and making the same. 1,637,735; Aug. 2.

Commercial Shearing and Stamping Company, The. (See Cushwa, Charles B., assignor.)

Comstock, Charlie A., Fullerton, Calif. Piston and connecting-rod construction. 1,637,765; Aug. 2.

Conant, George M. (See Conant, Leon B., assignor.)

Conant, Leon B., Cambridge, assignor to G. M. Conant, Bridgewater, Mass. Mold for combination heels. 1,637,441; Aug. 2.

Conrader, Rudolph, Erie, Pa. Gate valve. 1,637,736; Aug. 2.

Continental Optical Corporation. (See Bugbee, Lucian W., jr., assignor.)

Cook, Albert E., Evanston, assignor to C. B. Cook, Chicago, Ill. Sectional pontoon. 1,637,336; Aug. 2.

Cook, Charles B. (See Cook, Albert E., assignor.)

Cook, Harry, Sag Harbor, assignor to Joseph Fabys & Co., New York, N. Y. Making watchcases. 1,637,337; Aug. 2.

Cook, Theodore H. (See Butler, Henry R., assignor.)

Cooper, Allyn R., Marshalltown, Iowa. Dash control. 1,637,737; Aug. 2.

Coote, John M., Elizabeth, N. J., assignor to Coote Products Corporation, New York, N. Y. Electrical testing apparatus. 1,637,472; Aug. 2.

Coote Products Corporation. (See Coote, John M., assignor.)

Cordo-Hyde Co. (See Eddins, Sextus A., assignor.)

Corley, Marshal D., Norphlet, Ark. Lubricant-transporting receptacle. 1,637,635; Aug. 2.

Corona Corporation. (See Dahl, Thure, assignor.)

Coryell, William C., assignor, by mesne assignments, to Truscon Steel Company, Youngstown, Ohio. Coated metal lath. 1,637,410; Aug. 2.

Cottrell, C. B., & Sons Company. (See Barber, Howard M., assignor.)

Cough, Adoniram B., Watertown, Mass. Dental cleansing device. 1,637,738; Aug. 2.

Cowles, Charles E., El Paso, Tex. Directory. 1,637,685; Aug. 2.
Cox, Abram, Stove Company. (See Mott, Abram C., jr., assignor.)
Coyle, Joseph L., Los Angeles, Calif. Processing machine. 1,637,686; Aug. 2.
Crane, John T., Los Angeles, Calif. Brake. 1,637,894; Aug. 2.
Crewdson, Eric, Kendal, England. Control of prime movers. 1,637,636; Aug. 2.
Cross, Frank L., Port Washington, N. Y., assignor to Cross Paper Feeder Company. Sheet-feeding machine. 1,637,555; Aug. 2.
Cross Paper Feeder Company. (See Cross, Frank L., assignor.)
Culbertson, Albert L., assignor to The Chapman-Stein Furnace Co., Mount Vernon, Ohio. Furnace and operating the same. 1,637,473; Aug. 2.
Cullinan, Michael P., Laredo, Tex. Glareshield for headlights. 1,637,895; Aug. 2.
Culver, Edwin S. (See Oliver, W. H., and Culver.)
Currie, William, assignor to Chrome Steel Works, Carteret, N. J. Screen grate for ball mills. 1,637,986; Aug. 2.
Cushwa, Charles B., assignor to The Commercial Shearing and Stamping Company, Youngstown, Ohio. Pallet. 1,637,411; Aug. 2.
Cyclo Corporation. (See Lee, J. H., and Honig, assignors.)
Daane, Arthur J., assignor to The Acme Printing Appliance Co., Chicago, Ill. Ink-distributing roller. 1,637,807; Aug. 2.
Dahl, Thure, assignor to Corona Corporation, New York, N. Y. Lamp-shade holder. 1,637,739; Aug. 2.
Dake, Charles W., Chicago, Ill. Turbo blower. 1,637,474; Aug. 2.
Davis & Bennett, Inc. (See Davis, L., and Bennett, assignors.)
Davis, John. (See Lorenz, E. H., and Davis.)
Davis, Lewis, Worcester, and E. W. Bennett, Westboro assignors to Davis & Bennett, Inc., Worcester, Mass. Wax emulsion. 1,637,475; Aug. 2.
Davis, Ralph C., Brockton, assignor of one-half to J. J Moriarty, Boston, Mass. Card index. 1,637,856; Aug. 2.
Davis, William H. H., and F. Celentano, assignors of one-half to said Davis and one-half to H. White, San Francisco, Calif. Hairpin. 1,637,766; Aug. 2.
Day, Percy C., assignor to The Falk Corporation, Milwaukee, Wis. Elevator drive. 1,637,476; Aug. 2.
Dayton Steel Racquet Company, The. (See Norton, Harold W., assignor.)
De Armond, William C., and W. R. H. Watt, Philadelphia, Pa. Mixed-beverage-vending apparatus. 1,637,808; Aug. 2.
Delano, William H., Saugus, Calif. Sanitary straw-vending machine. 1,637,767; Aug. 2.
De Laval Separator Company, The. (See Hapgood, Cyrus H., assignor.)
Delgado, Vernon N., Waco, Tex. Insect-exterminating machine. 1,637,477; Aug. 2.
De Luxe Lamp Mfg. Co. (See Rekar, Jay J., assignor.)
Dement, Isaac S., assignor to Printing Index Company, Dayton, Ohio. Registering device. 1,637,606; Aug. 2.
Denaro, James, Cambridge, Mass. Edible container for ice cream. 1,637,556; Aug. 2.
Depue, Roy, Milford, Iowa. Barber's dispensing bottle. 1,637,557; Aug. 2.
Derujinsky, Gleb W., assignor to Sterling Bronze Company, New York, N. Y. Emblem for automobile hoods and radiators. Des. 73,161; Aug. 2.
De Ville, Walter, assignor to East Liverpool Potteries Company, East Liverpool, Ohio. Plate or similar article. Des. 73,162; Aug. 2.
Diamond Power Specialty Corporation. (See Bowers, Frank, assignor.)
Dickie, William A. (See Small, F. T., and Dickie.)
Dictaphone Corporation. (See Carpenter, David E., assignor.)
Dill Manufacturing Company, The. (See Bronson, Adelbert E., assignor.)
Dimatos, Archie, and G. D. Michal, Sydney, New South Wales, Australia. Combined laundry washing machines and hydro-extractor. 1,637,930; Aug. 2.
Dimond, Clark W., Minneapolis, Minn. Manifold heat retainer. 1,637,768; Aug. 2.
Dingman, Thomas C., South Bend, Ind., assignor to The White Motor Company, Cleveland, Ohio. Instrument panel. Des. 73,163; Aug. 2.
Di Stefano, Salvator, Troy, N. Y. Automobile lamp. Des. 73,164; Aug. 2.
Dlouhy, August, Wallingford, Conn., assignor to H. L. Judd Company, Inc., New York, N. Y. Curtain crane. Des. 73,165; Aug. 2.
Dlouhy, August, Wallingford, Conn., assignor to H. L. Judd Company, Inc., New York, N. Y. Curtain crane. Des. 73,166; Aug. 2.
Dodge, Adiel Y., South Bend, Ind., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill. Brake-control-actuating mechanism. 1,637,520; Aug. 2.
Domore Chair Company. (See Adams, Arthur J.)
Dorman, William R., assignor to Johnson & Johnson, New Brunswick, N. J. Surgical dressing and making it. 1,637,857; Aug. 2.
Dorsey, Herbert G., assignor to J. H. Hammond, jr., Gloucester, Mass. Alternating-current selector. 1,637,442; Aug. 2.
Downs, Mona, Glendale, Ohio. Musical-instruction toy apparatus. 1,637,478; Aug. 2.
Doyle, Frank M., Brooklyn, N. Y. Surface condenser and method. 1,637,558; Aug. 2.
Duchatel, Emile E. H. (See Mestre, C. A., and Duchatel.)
Duff Manufacturing Company, The. (See Schwerin, Frank H., assignor.)
Dunbar, Alexander G., Glasgow, Scotland. Piston. 1,637,987; Aug. 2.
Du Pont, E. I., de Nemours & Company. (See Bergeim, Frank H., assignor.)
Du Pont, E. I., de Nemours & Company. (See Bishop, Oakley M., assignor.)
Du Pont, E. I., de Nemours & Company. (See Manss, Walter A., assignor.)
Duriron Company, The. (See Jacobsen, Oystein, assignor.)
Dykes, John L. G., Chicago, Ill. Auxiliary sole for footwear. 1,637,809; Aug. 2.
Dzierzenga, Frank, Brooklyn, N. Y. Electric window-closing device. 1,637,740; Aug. 2.
Earle, Eldon A., Bloomfield, N. J. Device for promoting combustion. 1,637,741; Aug. 2.
Eassie, Fitzpatrick, Rathfarnham, Ireland. Saddle panel. 1,637,810; Aug. 2.
East Liverpool Potteries Company. (See De Ville, Walter, assignor.)
Echelberger, Clark C., Hutchinson, Kans. Battery-terminal lifter. 1,637,687; Aug. 2.
Eclipse Machine Company. (See McGrath, William L., assignor.)
Economy Baler Company. (See Barrows, Alfred C., assignor.)
Eddins, Sextus A., assignor to Cordo-Hyde Co., Quincy, Mass. Shoe-upper support. 1,637,896; Aug. 2.
Eddins, Sextus A., assignor to Cordo-Hyde Co., Quincy, Mass. Shoe and making the same. 1,637,897; Aug. 2.
Edge, Walter S., and R. C. Olmsted, New York, N. Y. Reenforced concrete construction. 1,637,742; Aug. 2.
Edwards, John, et al. (See Knofe, Karl R., assignor.)
Edwards, O. M., Company, The. (See Axe, Roy T., assignor.)
Eells Milton M. (See Lewis, W. T., and Eells.)
Egan, Patrick D., Fort Smith, Ark. Sign. 1,637,988; Aug. 2.
Eggers, William M., and G. Mahr, jr., assignors of one-third to J. R. Townsend, Los Angeles, Calif., and two-thirds to said Mahr. Spring-opened clipping shears. 1,637,607; Aug. 2.
Ehrlichman, Albert A., Milwaukee, Wis. Antiglare attachment. 1,637,608; Aug. 2.
Eliers, Jan, assignor of one-half to Tjoen Siang Ie, Meester Cornelis, Java, Dutch East Indies. Safety device for apparatus for forced lubrication in combustion engines. 1,637,412; Aug. 2.
Eisler, Charles, Newark, N. J. Machine for making glass mounts. 1,637,989; Aug. 2.
Elder, Donald, Onehunga, New Zealand. Apparatus for watering areas of land. 1,637,413; Aug. 2.
Elder, Emil M. (See Stern, J. M., and Elder.)
Elliott, Harmon P., Watertown, Mass. Stencil machine and stencil therefor. 1,637,443; Aug. 2.
Ellis, Carleton, Montclair, and H. M. Weber, Bloomfield, N. J., assignors to Ellis-Foster Company. Recovery of values from nitrocellulose material. 1,637,990; Aug. 2.
Ellis-Foster Company. (See Ellis, C., and Weber, assignors.)
Elton, Oscar M. (See Carlson, C. J., and Elton.)
Elwell, George H., Cleveland, Ohio, assignor to Carr Fastener Company, Cambridge, Mass. Shank and socket fastening device. 1,637,521; Aug. 2.
Emel, Joseph, Seabeck, Wash. Holder for clothes and other articles. 1,637,688; Aug. 2.
Endersby, Joseph P., Vancouver, British Columbia, Canada. Steam shovel. 1,637,680; Aug. 2.
Engle, George S., Washington, D. C. Primary battery. 1,637,991; Aug. 2.
Ennisson, Edith A., executrix. (See Ennisson, Walter J.)
Ennisson, Walter J., deceased, Brooklyn, N. Y.; E. A. Ennisson, executrix. Landing and taking-off station for aircraft. 1,637,769; Aug. 2.
Enterprise Manufacturing Company, The. (See Case, Francis M., assignor.)
Enyart, Ralph C., assignor to The P. H. & F. M. Roots Company, Connersville, Ind. Stuffing-box vent. 1,637,371; Aug. 2.
Equipment Specialties Co. (See Hull, George A., assignor.)
Eschholz, Otto H., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Baffling and separating structure. 1,637,372; Aug. 2.
Eustis, Harry C., Los Angeles, Calif. Snap-action valve for flush tanks and the like. 1,637,444; Aug. 2.
Evans, Edward S., Detroit, Mich. Two-part tie down. 1,637,992; Aug. 2.
Evans, Frank J., and H. C. Hansen, Minneapolis, Minn., assignors, by mesne assignments, to Louden Machinery Company, Fairfield, Iowa. Automatic oil burner. 1,637,898; Aug. 2.
Evelyn, Harry C., Chicago, Ill. Electric toy. 1,637,479; Aug. 2.

Evensen, William, Chicago, Ill., assignor to Goss Printing Press Company. Plate-clamping mechanism for printing presses. 1,637,690; Aug. 2.
Everhot Heater Company. (See Shuell, Frank W., assignor.)
F. and H. Mfg. Co. (See Hennings, Charles H., assignor.)
Fageol, Rollie B., Los Angeles, Calif., assignor to American Chain Company, Inc., Bridgeport, Conn. Fender guard. 1,637,770. Aug. 2.
Fahys, Joseph, & Co. (See Cook, Harry, assignor.)
Falk Corporation, The. (See Day, Percy C., assignor.)
Federal Telegraph Company. (See Kolster, Frederick A., assignor.)
Ferad, Edward, New York, N. Y. Ice creeper. 1,637,691; Aug. 2.
Ferguson, Harry, Belfast, Ireland. Agricultural implement. 1,637,811; Aug. 2.
Ferguson, Ivan P., assignor to Towson Body Co., Detroit, Mich. Removable closure for vehicles. 1,637,812; Aug. 2.
Ferris, William S. (See Adams, Arthur J., assignor.)
Finch, John H., et al. (See Minnis, Henry M., assignor.)
Fine, William H., Los Angeles, Calif. Device for testing safety valves on tank cars. 1,637,743; Aug. 2.
Finley, Sam E., Atlanta, Ga. Maturing and stabilising road structures. 1,637,993; Aug. 2.
Finn, Charley N. (See Walker, Arthur W., assignor.)
Finney, Harry F., Chicago, Ill., and F. A. Jacobs, Warren, Ohio, assignors, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill. Car-uncoupling mechanism. 1,637,899; Aug. 2.
Firestone Tire and Rubber Company, The. (See Benner, W. W., and Hoener, assignors.)
Firestone Tire and Rubber Company, The. (See Semler, Clyde M., assignor.)
Fisher, Wilbur H., Ottawa, assignor to A. Stein & Company, Chicago, Ill. Work feed for sewing machines. 1,637,373; Aug. 2.
Fitzpatrick, Keene, Princton, N. J., and R. T. Mullins, Brooklyn; said Fitzpatrick assignor to H. R. Hart and said Mullins assignor to A. G. Spalding & Bros., New York, N. Y. Helmet. 1,637,692; Aug. 2.
Flannery, Burt V., Philadelphia, Pa., assignor to Cannon Manufacturing Company, Kannapolis, N. C. Towel or the like. Des. 73,167; Aug. 2.
Fontaine, Robert A., Martinsville, Va. Power hoist. 1,637,338; Aug. 2.
Fontana, Paul P. M. A., Cluses, assignor to Societe des Appareils Mephisto Jules Manfredi and Cie., Cluses, (Haute-Savoie), France. Vulcanizer. 1,637,931; Aug. 2.
Ford Motor Company. (See Galamb, Joseph, assignor.)
Forrest, Charles N., Rahway, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa. Joint for stucco bases. 1,637,994; Aug. 2.
Fortescue, Charles L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Insulator. 1,637,374; Aug. 2.
Foster, Raymond L., Apponaug, R. I. Liquid-fuel burner. 1,637,900; Aug. 2.
Foster, Thomas J., Ridgewood, N. J. Reenforced concrete construction. 1,637,932; Aug. 2.
Fowler, Fred D., Watertown, Mass. Tire. Des. 73,168; Aug. 2.
Fox, Harold E., Pittsburgh, Pa., assignor to National Electric Manufacturing Company. Reciprocating electric motor. 1,637,813; Aug. 2.
Franic, Adolph, assignor to Tamboritza Manufacturing Company, Fort Recovery, Ohio. Stringed instrument. 1,637,559; Aug. 2.
Franklin, Albert W., assignor to Chas. Freshman Co. Inc., New York, N. Y. Variable mica condenser. 1,637,445; Aug. 2.
Frederics, E., Inc. (See Brown, James C., assignor.)
French, Harold G., South Haven, Mich. Toy striking bag or the like. 1,637,561; Aug. 2.
Frengle, Frederick, Cotati, Calif. Adjustable brooder hover. 1,637,637; Aug. 2.
Freshman Chas., Co. Inc. (See Franklin, Albert W., assignor.)
Frog Switch and Manufacturing Company. (See Whiteman, George W., assignor.)
Fruehauf Trailer Company. (See Reid, Frederick M., assignor.)
Frye, Robert R., Worcester, Mass. Automatic bottle cap. 1,637,562; Aug. 2.
Gage, Robert B., Trenton, N. J. Paving construction. 1,637,480; Aug. 2.
Galamb, Joseph, assignor to Ford Motor Company, Detroit, Mich. Lamp and bracket therefor. 1,637,875; Aug. 2.
Gallagher, Dennis J., Brooklyn, N. Y. Cigar-box moistener. 1,637,814; Aug. 2.
Galloway, James W., Waterloo, assignor of one-half to A. C. Haffner, Des Moines, Iowa. Humidifier. 1,637,693; Aug. 2.
Galvin, Charles B., New York, N. Y. Protractor. 1,637,933; Aug. 2.
Galvin, Wade S., Akron, Ohio. Tire tread. Des. 73,169; Aug. 2.
Gambill, William M., Merkel, Tex. Articulator. 1,637,934; Aug. 2.
Gary, Charles L., Kenmore, assignor to Spencer Lens Company, Buffalo, N. Y. Binocular microscope. 1,637,563; Aug. 2.
Garza, Daniel, New Orleans, La. Porous composition building material. 1,637,935; Aug. 2.
Gat Gun Lubricating Corporation. (See Hundemer, Walter F., assignor.)
Gay, Norman H., Los Angeles, Calif. Ice-can dump. 1,637,901; Aug. 2.
Geloso, John, New York, assignor to Pilot Electric Manufacturing Company, Inc., Brooklyn, N. Y. Escutcheon plate for a vernier dial. Des. 73,170; Aug 2..
General Electric Company. (See Brandenburg, Wilson C., assignor.)
General Electric Company. (See Hoxie, Charles A., assignor.)
General Electric Company. (See Jump, George H., assignor.)
General Electric Company. (See Linn, Frank C., assignor.)
General Electric Company. (See Weiler, Wilhelm, assignor.)
General Electric Company. (See Wilson, Robert M., assignor.)
General Motors Research Corporation. (See Wallace, Hugh, assignor.)
Gentsch, Frank F., Cincinnati, Ohio. Direction signal for motor vehicles. 1,637,744; Aug. 2.
Gentzcke, Fritz. (See Kruckenberg, F., and Gentzcke.)
Gibney, James J., Minneapolis, Minn. Dishwashing machine. 1,637,376; Aug. 2.
Giles, Henry G., assignor of one-half to W. H. McFarland, Pittsburgh, Pa. Tire mounting and dismounting device. 1,637,815; Aug. 2.
Gillette, George T., Los Angeles, Calif. Clip and retainer. 1,637,564; Aug. 2.
Gillette, King C., et al. (See Schmidt, Benjamin F., assignor.)
Gillette-Schmidt Gear Shift Company. (See Schmidt, Benjamin F.)
Gilmore, Thomas S., La Grande, Oreg. Pneumatic sander. 1,637,609; Aug. 2.
Girten, Charles E., Houston, Tex. Belt clamp. 1,637,694; Aug. 2.
Glaeser, Walter, Brooklyn, N. Y. Producing mercury. 1,637,481; Aug. 2.
Glen, John. (See Simpson, J., and Glen.)
Glennon, Michael J., Summit, and H. G. Higham, Murray Hill, N. J. Instructing golf strokes. 1,637,339; Aug. 2.
Glick, Isaac M., Boston, Mass. Antitheft device. 1,637,858; Aug. 2.
Globe Lighting Fixture Manufacturing Co. (See Petersen, Thorvald J.)
Gminder, Emil, Reutlingen, Germany. Elimination of fibrous waste from machines. 1,637,340; Aug. 2.
Godshalk, Clarence A., Philadelphia, Pa. Locked-nut apparatus. 1,637,995; Aug. 2.
Gold, Louis, Chicago, Ill. Lamp shade. Des. 73,171; Aug. 2.
Gold, Louis, Chicago, Ill. Lamp shade. Des. 73,172; Aug. 2.
Goldsbrough, Robert E., Consett, England. Burner for hydrocarbon and similar fuel. 1,637,695; Aug. 2.
Goodall, Clyde S. (See Hull, Harry B., assignor.)
Goodrich, B. F., Company, The. (See Martin, Frederick H., assignor.)
Goodyear Tire & Rubber Company, The. (See Oyler, Kimball, assignor.)
Goodyear Tire & Rubber Company, The. (See Teppema, Jan, assignor.)
Goodyear Tire & Rubber Company, The. (See Williams, Dayton L., assignor.)
Gordon, Abraham L., New York, N. Y. Physical-development shoe. 1,637,565; Aug. 2.
Gosper, Amos, Brighton Le Sands, New South Wales, Australia. Expansible boring machine. 1,637,745; Aug. 2.
Goss Printing Press Company. (See Evensen, William, assignor.)
Goss Printing Press Company. (See Henzl, Albert A., assignor.)
Gould, Allen A. (See Wellman, S. K., and Gould.)
Graham, James H., Wilkinsburg, Pa., assignor, by mesne assignments, to Johns-Manville, Incorporated, New York, N. Y. Shingle covering. 1,637,522; Aug. 2.
Graham, Percy, Chicago, Ill. Pneumatic-tire tread. Des. 73,173; Aug. 2.
Graves, Harry S., assignor to Spiral Piston Ring Company, Detroit, Mich. Method and apparatus for testing piston rings. 1,637,482; Aug. 2.
Greene, Frederick E. (See Hinman, G. L., and Greene.)
Greenwich, Anna J., assignor of one-half to W. M. Roewer, Chicago, Ill. Marcel water waver. 1,637,816; Aug. 2.
Grégoire, Joseph J., Hollywood, Calif. Internal-combustion engine. 1,637,746; Aug. 2.
Greist Manufacturing Company. (See Hinman, G. L., and Greene, assignors.)
Greuloch, Emil. (See Riegel, Jacob, assignor.)
Griewank, Arthur C., Oakland, Calif. Concrete railway cars. 1,637,817; Aug. 2.
Gross, Christian, Paris, France. Money holder. 1,637,936; Aug. 2.
Grout, Martin B., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Tension device. 1,637,483; Aug. 2.
Grueter, William B. (See Langill, R. E., and Grueter.)

Guilborg, John S., assignor to Alemite Die-Casting & Mfg. Co., Chicago, Ill. Die-casting machine. 1,637,566; Aug. 2.
Gurney Foundry Company. (See Brown, Thomas G., assignor.)
Guttridge, Harry W., Liberal, Kans. Power roller. 1,637,996; Aug. 2.
Hadfield, Frederick H., Auckland, New Zealand. Automatic roll-film camera. 1,637,414; Aug. 2.
Haffner, Alwin C. (See Galloway, James W., assignor.)
Hagmann, Ulrich, New York, N. Y., assignor to The Quaker Oats Company, Chicago, Ill. Plate or similar article. Des. 73,174; Aug. 2.
Halliwell-Shelton Electric Corporation. (See Jancke, Benno F., assignor.)
Halstead, Albert, jr., Milwaukee, Wis. Apparatus for curving printing plates. 1,637,747; Aug. 2.
Ham, Clayton S., San Francisco, assignor to A. Turner, Oakland, Calif. Electric self-winding clock. 1,637,997; Aug. 2.
Hamilton, Burton C., Brookline, Mass. Garden-hose supporter. 1,637,523; Aug. 2.
Hamilton, Paul H., assignor to The Sands Manufacturing Company, Cleveland, Ohio. Heater. Des. 73,175; Aug. 2.
Hammond, John H., jr. (See Dorsey, Herbert G., assignor.)
Hankins, Cyrus, Baltimore, Md., assignor to The Symington Company, New York, N. Y. Side frame. 1,637,696; Aug. 2.
Hanly, Charles E. (See Strubble, L. O., and Hanly.)
Hansen, Herman C. (See Evans, F. J., and Hansen.)
Hansen, Merritt R. (See Stertzbach, H. W., and Hansen.)
Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Vacuum pump. 1,637,484; Aug. 2.
Harmon, Roy E., Lockland, Ohio. Supporting the contents in freight cars. 1,637,748; Aug. 2.
Harper Electric Furnace Corporation. (See Kelleher, James, assignor.)
Harriman, James H., San Francisco, Calif. Locking means for rotary members. 1,637,524; Aug. 2.
Harrison, Charles F., Levenshulme, Manchester, England. Automatic safety shutter and motor control for picture-projecting machines. 1,637,740; Aug. 2.
Harrison, Daisy D. (See Brunk, M. V., and Harrison.)
Hart & Cooley Manufacturing Company. (See Wessel, Howard H., assignor.)
Hart, Frank J., and D. W. McGee, Fort Worth, Tex.; said McGee assignor to said Hart. Sash fastener. 1,637,937; Aug. 2.
Hart, Henry R. (See Fitzpatrick, K., and Mullins, assignors.)
Hartford-Empire Company. (See Lorenz, E. H., and Davis, assignors.)
Hartford-Empire Company. (See Nelson, Ernest G., jr., assignor.)
Hatzfeld, Charles V., Mineral Wells, Tex. Opener and closer for jars and the like. 1,637,638; Aug. 2.
Haug, Thaddeus L. E., Berkeley, Calif. Wedge. 1,637,771; Aug. 2.
Hawkins, Orlie A., Lamar, Colo. Manufacture of brooms. 1,637,639; Aug. 2.
Hawkins, Wilford J., Montclair, N. J., assignor to American Machine & Foundry Company. Electric capstan. 1,637,818; Aug. 2.
Hawkins, Wilford J., Montclair, N. J., assignor to American Machine & Foundry Company. Automatic heater. 1,637,820; Aug. 2.
Hawley, Charles G., assignor to Locomotive Firebox Company, Chicago, Ill. Locomotive-boiler fire box. 1,637,819; Aug. 2.
Healey-Aeromarine Bus Company. (See Chilton, Roland, assignor.)
Heaney Mfg. Co. (See Marchione, Lewis, assignor.)
Heckel, Charles F., Newport, Ky., and E. Messer, Pittsburgh, Pa.; said Heckel assignor to said Messer. Air-blast gas burner. 1,637,772; Aug. 2.
Heicke, Adolf, assignor to Armour & Company, Chicago, Ill. Pellet-forming apparatus. 1,637,377; Aug. 2.
Heideman, Fred J., assignor to T. C. Whitehead, Detroit, Mich. Compression valve. 1,637,821; Aug. 2.
Heltzel, John N., Warren, Ohio. Curb and gutter form. 1,637,998; Aug. 2.
Hendricks, Walter, Pendleton, Oreg. Hand truck. 1,637,640; Aug. 2.
Hendry, William F., Ossining, assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y. Dry cell. 1,637,446; Aug. 2.
Hennings, Charles H., assignor to F. and H. Mfg. Co., Chicago, Ill. Bird-cage stand. Des. 73,176; Aug. 2.
Henzi, Albert A., Chicago, Ill., assignor to Goss Printing Press Company. Stereotype-plate mechanism. 1,637,641; Aug. 2.
Hermann, Otto, assignor to Thermo Electric Battery Company, Chicago, Ill. Thermocouple. 1,637,822; Aug. 2.
Hernandez y Perez, Francisco, Habana, Cuba. Clamp. 1,637,654; Aug. 2.
Herold, Lawrence C., Rocky River, Ohio. Brush. 1,637,823; Aug. 2.
Herrick, Rufus F., Winchester, Mass. Rubber-compound paving block. 1,637,507; Aug. 2.
Herron, Ollie L. (See Zimmers, J. B., and Herron.)
Herz, Alfred, Chicago, Ill. Current-interrupting device. 1,637,610; Aug. 2.
Heuzé-Beauregard, Edmond, Ste.-Adresse, France. Addressing machine. 1,637,938; Aug. 2.
Hidzick, Joseph F., San Francisco, Calif. Wire-cutting machine. 1,637,824; Aug. 2.
Hiering, William C., assignor to J. E. Mergott Co., Newark, N. J. Desk-pad holder. 1,637,485; Aug. 2.
Higham, Harry G. (See Glennon, M. J., and Higham.)
Hilgers, Marie A., Pawtucket, R. I. Culinary utensil. 1,637,859; Aug. 2.
Hilgert, Mathew, New York, N. Y. Shoe. 1,637,447; Aug. 2.
Hill, Orla C., Pawtucket, R. I. Snap link. 1,637,860; Aug. 2.
Hilton, Roland C., Hollywood, assignor to J. Berman, Los Angeles, Calif. Friction hinge. 1,637,642; Aug. 2.
Hinman, George L., and F. E. Greene, assignors to The Greist Manufacturing Company, New Haven, Conn. Combination robe rail and handle. Des. 73,177; Aug. 2.
Hiscock, John T., Chicago, Ill. Boring mechanism. 1,637,611; Aug. 2.
Hoagland, Will G., Independence, Kans. Boiler. 1,637,930; Aug. 2.
Hoefelmayr, Karl, Kempten in Allgau, Germany. Apparatus for preparing liquid from milk powder. 1,637,415; Aug. 2.
Hoener, Edmund A. (See Benner, W. W., and Hoener.)
Hofmann, Conrad, Berirk Schluckenau, Czechoslovakia. Child's rocking horse. 1,637,643; Aug. 2.
Hofmann, William F., Brooklyn, assignor to H. L. Judd Co., New York, N. Y. Curtain-pole end. Des. 73,178; Aug. 2.
Hofmann, William F., Brooklyn, assignor to H. L. Judd Co., New York, N. Y. Curtain-pole end. Des. 73,179; Aug. 2.
Hofmann, William F., Brooklyn, assignor to H. L. Judd Co., New York, N. Y. Curtain-pole end. Des. 73,180; Aug. 2.
Holan, James, Cleveland, Ohio. Heating system. 1,637,341; Aug. 2.
Holland, Ralph, Laramie, Wyo. Liquid-level-controlling means for dry-cleaning systems. 1,637,902; Aug. 2.
Holmes, Morris P., Claremont, N. H., assignor, by mesne assignments, to The Jeffrey Manufacturing Company, Columbus, Ohio. Rotary fluid-pressure motor. 1,637,568; Aug. 2.
Honig, Frank. (See Lee, J. H., and Honig.)
Hope, Ernest. (See Woodcock, R. B., and Hope.)
Hosch, Mathias J., Randolph, Nebr. Hog water fountain. 1,637,940; Aug. 2.
House, Milus M., Kansas City, Mo. Dental triturating appliance. 1,637,569; Aug. 2.
Houston, Harold A., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Truck structure. 1,637,342; Aug. 2.
Howell, Albert S., assignor to The Bell & Howell Company, Chicago, Ill. Motion-picture mechanism. 1,637,378; Aug. 2.
Hoxie, Charles A., Schenectady, N. Y., assignor to General Electric Company. Production of phonographic records. 1,637,903; Aug. 2.
Huber, Matthew W., Chicago, Ill., assignor to Motor Wheel Corporation, Lansing, Mich. Running board. 1,637,570; Aug. 2.
Hughes, Henry G., Mendon, Utah. Automobile lock. 1,637,343; Aug. 2.
Hull, George A., assignor to Equipment Specialties Co., Chicago, Ill. Ventilating door for the hatchways of refrigerator cars. 1,637,861; Aug. 2.
Hull, Harry B., Olilton, assignor of one-half to C. S. Goodall, Yale, Okla. Fan-belt pulley. 1,637,773; Aug. 2.
Hundemer, Walter F., Alameda, assignor, by mesne assignments to Gat Gun Lubricating Corporation, Oakland, Calif. High-pressure grease coupling. 1,637,612; Aug. 2.
Hunt, Clarence, Beulah West, Victoria, Australia. Feeding or conducting tube for agricultural drills or cultivators. 1,637,416; Aug. 2.
Hunt, Harry L., Bigelow, Mo. Pitman boxing. 1,637,904; Aug. 2.
Hunter, Irving J., Medina, N. Y. Vapor-utilizing device. 1,637,941; Aug. 2.
Hunter, John S., Coalinga, Calif. Pump. 1,637,942; Aug. 2.
Hürttle, Karl, Akron, Ohio, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Gas-inflated airship. 1,637,774; Aug. 2.
Hurwitz, Israel R. (See Morrison, William E., assignor.)
Huston, Tom, assignor to C. R. Medley, Columbus, Ga. Tractor plow. 1,637,525; Aug. 2.
Hyatt, Samuel W., assignor to Indiana Lamp Corporation, Connersville, Ind. Adjusting device. 1,637,417; Aug. 2.
Hyde, A. Fillmore. (See Simonds, Francis M., assignor.)
Hyman, Henry, & Co. (See Rubin, Abraham, assignor.)
Ice, Herbert H., Muskogee, Okla. Duplex oil-well pumping power. 1,637,571; Aug. 2.
Imus, James H., Boardman, Oreg. Weeder. 1,637,862; Aug. 2.

Indiana Lamp Corporation. (See Hyatt, Samuel W., assignor.)
Ingersoll-Rand Company. (See Redfield, Snowden B., assignor.)
International Cigar Machinery Company. (See Bronander, Wilhelm B., assignor.)
International Motor Company. (See Leipert, August H., assignor.)
International Motor Company. (See Masury, Alfred F., assignor.)
International Silver Co. (See Brown, Leslie A., assignor.)
Isago, Gensuke, Ely, Nev. Beet-topping machine. 1,637,644; Aug. 2.
Isbell, Willard A., and H. H. Canfield, Woodbury, Conn. Making shears. 1,637,572; Aug. 2.
Iseman, Minnie, assignor to M. A. Vierling, Pittsburgh, Pa. Brush attachment for washing machines. 1,637,418; Aug. 2.
Jacobs, Francis A. (See Finney, H. F., and Jacobs.)
Jacobs, H. W., et al. (See Clark, Edward E., assignor.)
Jacobsen, Oystein, Dayton, Ohio., assignor to The Durion Company, Inc. Mixing nozzle. 1,637,697; Aug. 2.
Jaeger, Adolph W., Newark, N. J. Vehicle tail lamp. 73,181; Aug. 2.
Jancke, Benno F., Brooklyn, assignor, by mesne assignments, to Halliwell-Shelton Electric Corporation, New York, N. Y. Air-purifying device. 1,637,448; Aug. 2.
Janesville Products Company. (See Kohler, Walter R., assignor.)
Jeffrey Manufacturing Company, The. (See Holmes, Morris P., assignor.)
Jensen, Robert, Fredericksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Resilient gearing. 1,637,379; Aug. 2.
Johansson, Gustaf, Bay City, Mich. Display rack. 1,637,573; Aug. 2.
Johns-Manville, Incorporated. (See Graham, James H., assignor.)
Johnson, Carl E., assignor to United States Electrical Manufacturing Company, Los Angeles, Calif. Mold. 1,637,613; Aug. 2.
Johnson & Johnson. (See Dorman, William R., assignor.)
Jonas, Jacob F., Bellevue, Ky., assignor to The Krippendorf-Dittman Company, Cincinnati, Ohio. Shank stiffener for shoes. 1,637,943; Aug. 2.
Jones, George H., administrator. (See Jones, Harold C.)
Jones, Harold C., deceased, Chicago, Ill., G. H. Jones, administrator. Fencepost. 1,637,645; Aug. 2.
Judd, H. L., Company. (See Dlouhy, August, assignor.)
Judd, H. L., Co. (See Hofmann, William F., assignor.)
Jump, George H., Buffalo, N. Y., assignor to General Electric Company. Frequency changer. 1,637,863; Aug. 2.
K. W. Battery Company. (See Nordhaus, William H., assignor.)
Kadel, Byers W., Baltimore, Md. Door mechanism for railway cars. 1,637,905; Aug. 2.
Kale, William G. (See Nell, G. M., and Kale.)
Kalgren, John E., assignor to J. R. Clark Company, Minneapolis, Minn. Ironing table. 1,637,526; Aug. 2.
Karikas, Elizabeth, McKeesport, Pa. Life-saving device for children. 1,637,574; Aug. 2.
Kasch, Henry J., Dayton, Ohio. Knob or similar article. Des. 73,182; Aug. 2.
Kasch, Henry J., Dayton, Ohio. Knob or the like. Des. 73,183; Aug. 2.
Kaufmann, Jacob, Elkins Park, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Loom harness. 1,637,380; Aug. 2.
Keaton, Robert H., San Francisco, Calif. Combination advertising folder and gauge. 1,637,775; Aug. 2.
Keeney, Gordon H., Sacramento, Calif. Card holder. 1,637,344; Aug. 2.
Kelleher, James, Chippawa, Ontario, Canada, assignor to Harper Electric Furnace Corporation. Electric furnace. 1,637,486; Aug. 2.
Keller, Alfred R., assignor to Morgan Construction Company, Worcester, Mass. Coupling device. 1,637,944; Aug. 2.
Kellogg Switchboard and Supply Company. (See Grout, Martin B., assignor.)
Kemp, Evina A., et al. (See White, Phillip A., assignor.)
Kern, Fred M., Detroit, Mich., assignor by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Sizing and finishing articles of fiber. 1,637,487; Aug. 2.
Kershaw, Frederick, assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Veneer drier. 1,637,945; Aug. 2.
Kersten, Jacob, Kalamazoo, Mich. Radio loud speaker. Des. 73,184; Aug. 2.
Kilham, Oliver W., assignor to American Steel Pipe and Tank Co., Los Angeles, Calif. Joint for casing sections and making the joint. 1,637,750; Aug. 2.
Killinger, Paul, Shippensburg, Pa. Wheel attachment for sleds. 1,637,999; Aug. 2.
Kimura, Hisaich, Los Angeles, Calif. Variable condenser. 1,637,646; Aug. 2.
Kinnard, Edward H., assignor to Universal Postal Frankers Limited, London, England. Postal franking machine. 1,637,647; Aug. 2.
Klann, Rudolph, Chicago, Ill. Flush valve. 1,637,825; Aug. 2.

Klawitter, August G. (See Schmidt, O. C., and Klawitter.)
Klein, Charles H., Jersey City, N. J., assignor to American Telephone and Telegraph Company. Nail-expansion anchor. 1,637,419; Aug. 2.
Klein, Clarence J., Bellevue, assignor to United Engineering and Foundry Company, Pittsburgh, Pa. Material-handling apparatus. 1,637,420; Aug. 2.
Klein, William C., Allentown, Pa. Roller-bearing free wheel. 1,637,906; Aug. 2.
Kloss, Charles F., New Haven, Conn. Safe. 1,637,381; Aug. 2.
Knofe, Karl R., Dresden, Germany, assignor of one-half to T. Mamen and one-half to J. Edwards, Brooklyn, N. Y. Making imitation marble. 1,637,946; Aug. 2.
Knoll & Co. (See Schmidt, K. F., and Zutavern, assignors.)
Knopp, Otto A., Oakland, Calif. Heater and drier. 1,637,488; Aug. 2.
Kohler, Walter R., assignor to Janesville Products Company, Janesville, Wis. Coaster wagon. 1,637,614; Aug. 2.
Kolster, Frederick A., Washington, D. C., assignor to Federal Telegraph Company, San Francisco, Calif. Radiocompass. 1,637,615; Aug. 2.
Kolster, Frederick A., Palo Alto, assignor to Federal Telegraph Company, San Francisco, Calif. Electron-tube apparatus. 1,637,864; Aug. 2.
Kopf, Joseph L., East Orange, N. J., assignor to Jabez Burns & Sons, Inc., New York, N. Y. Coffee product and making it. 1,637,648; Aug. 2.
Kops Bros, Inc. (See Kops, Waldemar, assignor.)
Kops, Waldemar, assignor to Kops Bros. Inc., New York, N. Y. Apparel garment. 1,637,826; Aug. 2.
Kosiancic, Valentine J., Crescent Valley, British Columbia, Canada. Hand feed for drag-saw machines. 1,637,616; Aug. 2.
Kottmann, August, Sommerda, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Coupling device for calculating machines. 1,637,827; Aug. 2.
Kotzebue, Meinhard H., Tulsa, Okla. Separator. 1,637,947; Aug. 2.
Kralik, Blanche R., Chicago, Ill. Baking utensil. 1,637,617; Aug. 2.
Krapf, Jacob H., Chicago, Ill. Carton-blank separator. 1,637,560; Aug. 2.
Krippendorf-Dittman Company. (See Jonas, Jacob F., assignor.)
Kronauer, Frank C., Glen Rock, N. J. Rail joint. 1,637,449; Aug. 2.
Kruckenberg, Franz, and F. Gentzcke, Heidelberg, Germany; said Gentzcke assignor to said Kruckenberg. Arrangement for changing the machinery of high-speed suspension. 1,637,776; Aug. 2.
Kuhl, John, assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif. Breather valve. 1,637,489; Aug. 2.
Kühtz, Friedrich, Cannstatt, Germany. Baking oven. 1,637,618; Aug. 2.
Kups, Stanley, Chicago, Ill. Inductance. 1,637,649; Aug. 2.
Kurzer, Solomon, New York, N. Y. Hose supporter. 1,637,948; Aug. 2.
Kushlan, Max, and H. E. Young, Chicago, Ill. Gate mechanism. 1,637,575; Aug. 2.
La Brie, Ludger E., South Bend, Ind., assignor to Motor Industries, Inc., Chicago, Ill. Wheel. 1,637,527; Aug. 2.
Lacerda, Harry A., Watervliet, N. Y. Boiler tool. 1,637,949; Aug. 2.
Laher, Frank J., Oakland, Calif. Automobile luggage carrier. 1,637,751; Aug. 2.
Laher, Frank J., Oakland, Calif. Combined automobile luggage carrier and bumper. 1,637,752; Aug. 2.
Lambeth, Thomas M., Seattle, Wash. Automatic oil burner. 1,637,576; Aug. 2.
Lane, Annie M., Los Angeles, Calif. Tire structure. 1,637,753; Aug. 2.
Lange, Henry, Quincy, Ill. Combination range. 1,637,950; Aug. 2.
Langill, Ross E., and W. B. Grueter, assignors to The Prescott Company, Menominee, Mich. Sawmill dog. 1,637,907; Aug. 2.
Lanzi, Elmo G., assignor to Bonus Candy Corporation, Chicago, Ill. Chocolate-dipping machine. 1,637,577; Aug. 2.
Larter & Sons. (See Larter, Warren R., assignor.)
Larter, Warren R., assignor to Larter & Sons, Newark, N. J. Cord-attaching device. 1,637,698; Aug. 2.
Latour Corporation. (See Latour, Marius, assignor.)
Latour, Marius, Paris, France, assignor to Latour Corporation, Jersey City, N. J. Electrical apparatus. 1,637,828; Aug. 2.
Laurie, William A., New Orleans, La. Binder for securing medical electrodes. 1,637,829; Aug. 2.
Lauterbach, Samuel, New York, N. Y. Jewelry clasp. 1,637,699; Aug. 2.
Law, Henry Y., Marced, Calif. Tractor chain. 1,637,777; Aug. 2.
Lea, Charles, Boston, Mass., assignor, by mesne assignments to F. C. Blanchard, Dorchester, Mass. Lubricating apparatus. 1,637,908; Aug. 2.
Leach Company. (See Runge, Richard W., assignor.)

Leary, James W. (See Bronander, W. B., and Leary.)
Lederer, Henry & Bro. Inc. (See Butler, William J., assignor.)
Lee, John H., and Frank Honig, Oak Park, assignors to Cyclo Corporation, Chicago, Ill. Drawing and spooling mechanism and method. 1,637,700; Aug. 2.
Lehmann, Wesley G. (See Owen, D. T., and Lehmann.)
Leipert, August H., assignor to International Motor Company, New York, N. Y. Cooling system. 1,637,382; Aug. 2.
Le Rouge, Jean, Boulogne, assignor to Societe l'Air Liquide (Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude), Paris, France. Separation of the elements of air or of other gaseous mixtures by liquefaction and rectification. 1,638,005; Aug. 2.
Levan, John F., Elkhart, Ind., assignor, by mesne assignments, to The Adams & Westlake Company, Chicago, Ill. Sash construction. 1,637,865; Aug. 2.
Levernier Martin W., Winnetka, Ill. Soap dispenser. Des. 73,185; Aug. 2.
Levitt, Samuel, Brooklyn, assignor to United Metal Hose Company, Inc., New York, N. Y. Pipe coupling. 1,637,701; Aug. 2.
Lewis Walter W., San Francisco, Calif. Display rack. 1,637,578; Aug. 2.
Lewis, William T., Racine, Wis., and M. M. Eells, Chicago, Ill., assignors to Western Coil & Electric Co. Radio-cabinet. Des. 73,186; Aug. 2.
Libbey, Edwin S. (See Libbey, Harry S., assignor.)
Libbey, Harry S., assignor to E. S. Libbey, Arlington, Mass. Combined glareshield and bracket therefor. Des. 73,187; Aug. 2.
Liebrich, John E., Indianapolis, Ind. Automobile signal accessory. 1,637,528; Aug. 2.
Lightfoot, Caddie B., East Orange, N. J. Drip pan for food choppers. 1,637,866; Aug. 2.
Liles, Thomas O., Tyler, assignor of three-eighths to D. C. Matthews and four-eighths to B. H. Ashby, Dallas, Tex. Testing device for internal-combustion engines. 1,637,867; Aug. 2.
